Mr. BURDICK. Mr. Speaker, in 1955 an Australian newspaper carried a long scholarly article by Prof. G. Giovannini, of the Catholic University of America, Washington, D. C., entitled "The Strange Case of Ezra Pound." Last September Dr. Giovannini prepared a statement which brought his 1955 article up to date and which was included as appendix J to the report on Ezra Pound, prepared for me in the Legislative Reference Service of the Library of Congress.

Under leave to extend my remarks in the RECORD, I include part 4 of the Legislative Reference Service report on Ezra Pound by H. A. Sieber:

APPENDIX J

STATEMENT ON EZRA POUND BY DR. G. GIOVANNINI,[1] PROFESSOR OF ENGLISH, CATHOLIC UNIVERSITY OF AMERICA, WASHINGTON, D. C.

(Fourth installment)

(The following statement, prepared by Prof. G. Giovannini, of the Catholic University of America, critically reviews recent articles in the American press since 1954 on the Ezra Pound case. Professor Giovannini's statement serves as an addendum to his paper the Strange Case of Ezra Pound, published in the New Times (Australia) in 1955.)

I

In the summer of 1954 when I was gathering material for my article on Pound, I found that the American press had shown no interest in the case of Pound the prisoner, and I had to build my argument largely from statements in the foreign press. Even the heated controversy over the Bollingen award to the poet in 1949 failed to arouse interest in the juridical aspect of the case. The failure may perhaps be assigned to a facile assumption, tacitly made on political or other passions, that Pound was manifestly a fascist and a traitor and that therefore the juridical question of guilt is a purely academic matter. Pound the prisoner was almost forgotten even among professors of literature. In a group I was with several years ago at a meeting of the Modern Language Association, only one scholar knew of his whereabouts (and then mistakenly believed that Pound did not want to be released: he was enjoying himself at St. Elizabeth's), and another thought that Pound had been set free and was living again in Italy. But since the summer of 1954 the American press has broken its silence. When Hemingway was awarded the Nobel prize, it reported the novelist's strong plea for Pound's release (Time, December 13, 1954); it noticed Giovanni Papini's appeal to American traditional toleration of political nonconformists (Gerriere della Sera, October 30, 1955), editorialized on Pound's release (Life, February 6, 1956), etc.; and in magazines it featured articles which, though at times deficient in information and analysis, did at least make attempts to penetrate the surface of the case.

In part II, which follows, the brief notes I make were occasioned largely by articles in the American press of the last 3 years since my article appeared. Some of the articles, notably Arthur Gordon's (Look, February 19, 1957) and Robert S. Bird's (New York Herald Tribune) which link Pound with the activities of John Kasper and the racial fracas in Tennessee, must be set aside as sensational and untrustworthy journalism that misunderstands Pound the man and his works. I have also set aside the large bulk of material in literary magazines and scholarly journals (see the annual bibliography in Publications of the Modern Languages Association of America and in every issue of the journal American Literature): this scholarship makes clear his signal importance in literary history as a poet and critic, but it is not relevant to Pound's case as such. What remains is a substantial body of popular or semipopular material which now tends to favor, or at least report opinion in behalf of Pound. This change, which may indicate a change in the policy of the American press, is due perhaps to a number of causes, some of which are touched on in part II: (1) Pound's continued production of original verse and translations which have

[1] This statement, prepared by Dr. Giovannini, is appended to this report in order to expand his paper published in the New Times, 1955. The views expressed are Mr. Giovannini's and not necessarily the Legislative Reference Service's.

increased his reputation (they have been widely reviewed) and called readers' attention to his existence with the inevitable query as to his whereabouts and status; (2) the growing sense of embarrassment among Americans, especially intellectuals, that their Government has been holding in detention for so long a time, and in an indeterminate status, a man of letters of international stature whose career is at the center of modern literary history; (3) the feeling among the thoughtful with some knowledge of the case in the context of Pound's career, that the terms fascism and treason do not fit Pound the man,[3] whether or not they legally fit his action as such in time of war; (4) the sharp criticism of the Roosevelt administration, especially since the reports on the Yalta Treaty, and the feeling that Pound's imprisonment is perhaps another inherited mistake deserving attention; (5) the feeling, now becoming more vocal, that Pound has sufficiently suffered for what the Government charges against him (the minimum sentence for treason is 5 years and Pound has been in detention for almost 13), and that the Government ought to enter a nolle prosequi in the record of the case and set free a man who is now 72 years old.

II

Pound's international stature

Pound began his career as a comparatist in literary values, with the determination to discover the norm operative in the best poetry, that part of it which is "indestructible" in any language at any time, and for this end he says, "I learned more or less of nine foreign languages" (How I Began, T. P.'s Weekly, June 6, 1913, p. 707). The multilingual feature of the Cantos is a concrete illustration of the attempt to realize the permanent thematic and technical values interrelating various cultures, and to point up the fact that disciplined minds, remote from one another in time and place, will strike out in the same direction—a fact Pound pictures in a startlingly manner by inserting a translation of the Old English Seafarer in the middle of translations from Chinese poetry (Cathay, 1915). Pound has often been attacked for polyglot cultural interests in his poetry, but the attacks have had an unexpected result: they have increased his international reputation (he has been translated into German, Swedish; Greek, Italian, Spanish, Japanese) and made students conscious of the historical importance of his work in the American literary tradition, that part of it which searched for materials and values in foreign cultures. Pound's international stature has been recently indicated by the appearance of Hayden Carruth's article analyzing the poet's career in Perspectives (summer 1956), a magazine published by Intercultural Publications and distributed in translation in European countries: "The Canton," says Carruth (p. 146), "draw allusively upon many cultural depths, many literatures and strata of history." He also draws directly, and his many translations from occidental and oriental literatures (see his recent Sophocles' Women of Trachis and the translation of the Chinese odes collected by Confucius) have reinvigorated English poetry and made more solid his reputation as a master of his craft. The master was recognized, appropriately enough, by the Secretary General of the United Nations who cites him in the context of the artist's conquest of past and present realities:

"Modern art teaches us to see by forcing us to use our senses, our intellect, and our sensibility to follow it on its road of exploration. It makes us seers—seers like Ezra Pound when, in the first of his Pisan Cantos, he senses the enormous tragedy of the dream in the peasant's bent shoulders. Seers—and explorers—these we must be if we are to prevail." (Dag Hammarskjold, address on the 25th anniversary of the Museum of Modern Art, October 19, 1954, issued in mimeograph form by the Museum of Modern Art, New York.)

The intellectual's embarrassment

This is alluded to by Carruth, (p. 158) but strongly marked in Sam Hynes' The Case of Ezra Pound (Commonweal, December 9, 1955, p. 251), which refers to one room of St. Elizabeths as 'a closet which contains a national skeleton'—a phrase that is becoming a commonplace. As more details of his career are uncovered, the American intellectual feels strongly that Pound's case is both fact and symbol of democracy's failure to find a place for a highly gifted and individual mind. During the first 5 years of his career he succeeded, he says (How I Began, p. 707), in getting only one poem printed in an American magazine. He followed the example of other American artists, among them Henry James, whose work he values, and became the expatriate, publishing his first volume of verse in Venice in 1908—a revealing incident that may prompt future historians to scrutinize the level of American culture, and of the American publishing business at the turn of the century. His first American volume (Provenca, 1910) appeared after his London success, and it did not sell (I remember that circa 1926 the edition was "remaindered" and copies sold for a few pennies). Details such as these, and there are many in his career, outline a mistake we made, and made against our professed principle of utilizing the best in human resources. This sense of embarrassment can be traced in A. MacLeish's review of his recent cantos (New York Times Book Review, December 16, 1956) in a passage describing the horror felt at seeing "a conscious mind capable of the most complete human awareness," as his poetry abundantly shows, "incarcerated among minds which are not conscious and cannot be aware"—a passage quoted by J. La Zebnik in a reportorial article (New Republic, April 1, 1957, p. 6) which is largely inconclusive but at times suggestive of uneasiness at the continued action of the Government in detaining him after the barbarous treatment he suffered during his imprisonment for 6 months near Pisa. This embarrassment and uneasiness are sometimes accompanied by vexation with the stiff-necked attitude and official frigidity of the Government, and anger over the treatment of him which cannot be excused on any ground (Ezra Pound, a pamphlet "written on behalf of the committee formed to obtain his release," London, 1956).

The position of the Government

The Government's inaction in the case, with the implication that Government authority can do nothing because Pound is committed by court order, has been criticized with ill-concealed impatience, especially after Hemingway's forthright and oft-repeated plea for his release:

"Ezra Pound is a great poet, and whatever he did he has been punished greatly and I believe should be freed to go and write poems in Italy where he is loved and understood." (Time, December 13, 1956; cf. Hemingway in A Tribute to Ezra Pound, a program by Yale undergraduates, Yale Broadcasting Co., December 5, 1955, and in Ezra Pound at Seventy issued 1955 by New Directions publishers.)

The editorial in Life (February 6, 1956, p. 30), on the occasion of the release of Tokyo Rose after 10 years of imprisonment, reminded the Government that however technically complicated the case may be, it has the power to quash the indictment; and that European commentators are aware of this power and using "the Pound case to argue that American civilization is indifferent to its own poets and artists." To readers who have kept in touch with the European press, the summary of its opinion in the Life editorial is very much of an understatement. European critics have castigated Americans and their Government, and the opinion expressed in one British editorial is representative:

"Deprived of his freedom, Ezra Pound remains a reproach to the American love of freedom and its capacity for clemency. And it may be argued that his 10 years of captivity—a longer term than many Nazis or any Fascists have had to serve—have in any case purged his offense. A disinterested gesture of mercy could scarcely be misrepresented now." (Blackfriars, December 1954, p. 505, a monthly of the Dominican Order.)

A "grave concern" over the Government's inaction was expressed by the narrator at the end of A Tribute to Ezra Pound, and he expressed it for the eminent men of letters—Hemingway, Auden, MacLeish, Marianne Moore, W. C. Williams, and E. E. Cummings—who had spoken in praise of the poet:

"Ezra Pound's continuing confinement in St. Elizabeths Hospital is a source of grave concern to those who are familiar with his life and work. One of the aims of tonight's broadcast has been to present the feelings of some of the most distinguished of these men." This concern is registered at the end of the editorial in Life, which suggests the nascent feeling that Pound's allegedly treasonable act is now remote in time, somewhat faded and less weighty than we once thought:

"Pound's room at St. Elizabeths has been called a closet which contains a national skeleton. There may be good arguments for keeping him there, but there are none for pretending he doesn't exist. The crimes of World War II have aged to the point of requital, parole, or forgiveness. For this reason, if no other, the arguments for quashing the indictment against Ezra Pound should be publicly considered."

Life insists there is no acceptable reason for the government's inaction, for a review of war crime cases turned up the startling fact that "the Nazi storm trooper responsible for the Malmédy massacre in 1944, General Dietrich, is also out of jail, one of a growing line of commutees and parolees." This side of the history of war crimes is used by Richard H. Rovere to score the government in a detailed article on The Question of Ezra Pound (Esquire, September 1957), an article with much fanciful nonsense on the contradictions in pound and idle conjecturing on the state of his mind and soul, but commendable in the charitable direction it takes on the question of his release:

"Since he is not dangerous and since he receives no therapy at the hospital, he might be released * * * in the custody of his wife and friends" (p. 80). Rovere's conclusion is important as a lucid and forceful summary of feeling and opinion often heard and now appearing in print for the first time: that the government could and should act generously (cf. the editorial in the New Republic, April 1, 1957, p. 6, which expresses a common feeling: "We would like to see the government give this old man and this eminent poet his freedom"); that the government has not been so intransigent in other cases far more

[3] The statement on Pound's intention not to betray has often been repeated: "after continued opposition obtained permission to use Rome radio for personal propaganda in support of United States Constitution, continuing after America's official entry into the war only on condition that he should never be asked to say anything contrary to his conscience or contrary to his duties as an American citizen. Which promise was faithfully observed by the Italian Government." Ezra Pound, Selected Poems, a new ed. New Directions paperbook, 1957, p. viii. CF. British Who's Who 1957.

serious than Pound's (cf. Life quoted above); that in a long-range view of history his action in speaking over the enemy radio is of no moment, and that what should be considered is his extraordinary service to letters and his brillian achievements in verse which history will remember with gratitude; that at this late date after the war a cogent reason for the government's intransigence is hard to find and that American intellectuals, perhaps many of them, favor his release (Carruth, p. 158):

"The Government, if it wished, could act not on grounds of justice but on grounds of largesse. It has sat by while some pretty low characters have been sprung in Germany, Italy, and Japan—real war criminals, now given positions of trust. The war-criminal side of Pound is as trivial in terms of history as his poetry is great. As Hayden Carruth wrote in Perspectives U. S. A., the publication distributed abroad to the intelligentsia abroad in bundle lots, 'It is hard to think of a good reason why Pound should not have his freedom immediately' (Rovere, p. 80)."

The prisoner's rights and the Government

None of the articles and editorials raises the question of constitutional rights. His treatment in the Disciplinary Training Center near Pisa is reported (LaZebnick, p. 18; Rovere, p. 80), or alluded to in passing (New Republic, p. 6), sometimes with a sense of shock (Carruth, pp. 153–4) but without curiosity as to the constitutionality of such treatment. David Park Williams (cited below), who as a guard at the Center had direct knowledge of the treatment Pound suffered, never confronts the case with amendment VIII of the Constitution which prohibits 'cruel and unusual punishment.' Nor is the long delay of 6 months between arrest and arraignment ever confronted by a prisoner's rights assured by the Constitution—all of which is a deplorable reflection on those who profess to enlighten public opinion (I do not exclude myself speaking in the article of 3 years ago), and who are unaware of the foundation of our liberties in the greatest state document yet written (Pound, Culture, p. 270). Hynes (p. 251) is an instance in point. "Few thinking people," he says, "would question the right of the Government to act as it did," and he laments vaguely on "circumstances, or the system, or the nature of things in the modern world" which forced the Government to take action against a distinguished artist. Hynes has in mind the necessary restraint on liberty in the interest of national self-preservation. But Hynes' generalization is one sided: It looks to the responsibility of the Government in restraining for the common good, and never suggests the Government's responsibility to the person restrained. The Constitution is sensitive to the fact that an act of restraint is never simple, and therefore rules on the manner, duration, treatment under restraint—in short, on the quality of the act. Pound was taken into custody by the American military authorities in Italy on May 5, 1945, and detained virtually incommunicado in the Center near Pisa until early November of that year when he was brought back to the United States for arraignment. Detaining a civilian prisoner for so long a time as 6 months without arraignment, access to counsel, right of bail, and a speedy trial appears as violation of clauses in the Constitution:

1. Amendment V which assures citizens the right not to be deprived of liberty "without due process of law."

2. Amendment VI which states that "in all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial" and "have the assistance of counsel."

3. Article I, section 9, which states that "the privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it."

There was neither rebellion nor invasion of the United States between May and November of 1945 (the war in fact had ended in all theaters by September), but during this time the authorities in Poland's case in effect suspended the writ. Moreover, his treatment at the center was, judging from Williams' account (Background of the Pisan Cantos, Poetry, January 1949, pp. 216–221), of the "cruel and unusual" type prohibited by amendment VIII. He was confined in a cage of heavy grillwork especially constructed for him—"the gorilla cage" of the poet's Canto 83—and he slept on the cement floor of it "with only a tar paper roof above him by day; at night he was permitted to rig a pup tent inside the cage to keep out the cold." One British commentator (Harvey Black, the Story of Ezra Pound, the European, November 1956, p. 164) refers to this treatment as "one of the more notorious scandals of recent history." It is difficult to believe that an animal's cage was the only available way of confining him, or that the Government could not have brought him back sooner, or that the Government did not know about the treatment. It was its responsibility to know, and to observe due process of law lest a successful prosecution of so serious a crime be jeopardized. But all this is past history, and what is more relevant is the present moment: Pound, who is now 72, has been in detention for almost 13 years—enough punishment for what the Government charges against him. Further detention, as Hemingway says, "should be classified as cruel and unusual punishment, and contrary to the Constitution of the United States" (A Tribute to Ezra Pound cited above).

World Brotherhood Community Award

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. OSTERTAG. Mr. Speaker, Rochester, N. Y., has been designated to receive a World Brotherhood community award for its outstanding record of communitywide activities promoting international understanding and friendship with communities overseas. It is a great pleasure for me to call this award to the attention of my colleagues here because one-half of the fair city of Rochester is included in the district which I am privileged to represent here.

Rochester has been chosen for this honor by the World Brotherhood organization, a nonprofit organization with headquarters in the United States, Europe, and Asia devoted to promote understanding and cooperation between people of the world. Cochairmen are Arthur H. Compton, Carlos P. Romulo, Paul-Henri Spaak, Konrad Adenauer, and Mme. Vijaya Lakshmi Pandit.

In announcement of the award, Rochester's community effort was said to have few parallels in the history of peacetime international action. No one person or group was credited with inspiring this activity; instead, the judges said, the sense of international responsibility which permeates the Rochester scene is intrinsically the product of individual citizen response to the challenge of the world outside.

This is, indeed, a wonderful tribute to the people of Rochester, and one which is highly deserved.

The Rochester Democrat and Chronicle, which also played its role in this communitywide effort, has reported the award in its news columns and I would like to include this report:

CITY WINS BROTHERHOOD AWARD FOR WORLD FRIENDSHIP EFFORTS

(By Constance Gomperts)

Rochester, a city with a sense of international responsibility, yesterday was named 1 of 2 recipients of the first annual world brotherhood of community awards.

The awards went to Rochester and Worthington, Minn.—a city of about 6,000—for "communitywide activities promoting international understanding and friendship with communities overseas."

The 2 brotherhood awards were made in 2 city population categories, with the 100,000-mark as the dividing line. Winners were selected after a nationwide survey of community programs in such fields as student exchange, hospitality for foreign visitors, foreign affairs education, and affiliation with a foreign city.

A local delegation will go to New York June 3 to receive an engraved bronze plaque and a Pan American World Airways community friendship grant presentation will be made by Gen. Carlos P. Romulo, Philippines Ambassador to the United States and cochairman of the World Brotherhood organization.

In announcing Rochester's selection for the award, the judges agreed, "Rochester is unique in that no single project, such as an affiliation with a specific overseas community was needed to mobilize its resources in a community effort which has few parallels in the history of peacetime international action."

Contributions by local industry and the Rochester Association for the United Nations won special mention in the judges' statement.

"The quality and extent of industrial participation in Rochester's international life is manifest at once through the many corporate gifts to worthy international causes, but also through the initiative and leadership shown by employees and management groups in inventing and carrying out specific plans for the international exchange of people, ideas, and friendship," the statement read.

The RAUN, with some 4,000 members devoting themselves to various international activities, is an obvious source of energy and enthusiasm within the city, and has provided the community with competent and highly valuable guidance, the judges remarked.

Rochester's entry for the World Brotherhood community award was prepared under the auspices of the RAUN. Information was gathered from more than 150 community leaders in the fields of government, religion, culture, education, industry, and social work.

"The sense of international responsibility which permeates the Rochester scene," commented the judges, "is intrinsically the product of individual citizen response to the challenges of the world outside."

Rochester received the award for the work of institutions and organizations such as these:

University of Rochester: A pioneer in the world awareness study program of nonwestern civilizations, founder of the high-energy nuclear physics conference with top East-West scientists and an active worker in plans for twin-city affiliation with Rennes, France.

Rochester Association for the United Nations: Largest United Nations group outside of New York City, sponsors International

Hospitality Committee for foreign visitors, cooperates with international projects of local groups.

City of Rochester: Reveals rich ethnic pattern without nationality problems, thanks to such activities as International Day music and dance festival. Also cited for exchange program with Rennes, and planned hospitality for international visitors.

Federation of Churches of Rochester and Vicinity: Leads the Nation, with the exception of New York City, in giving to World Council of Churches.

Catholic Diocese of Rochester: Outstrips any other diocese in per capita efforts for refugee resettlement.

Rochester business: Exceptional number and diversity of international companies, which attract more foreign visitors and study teams than any other city its size in the country.

Rochester City Club: Continues its 49th year of bringing top international speakers here.

Rochester public schools: Attract national attention for foreign language program.

Rochester International Friendship Council: Provides foreign students and trainees with a "home away from home" with American families.

Rochester Rotary Club: Sponsors United Nations scholarships for young people and and overseas student program.

Rochester Teen-Age Diplomats: One of most active programs in the American Field Service.

Rochester newspapers: Cited for quality and scope of international news coverage.

Rochester Museum of Arts and Sciences: Leads the Nation in broad community support of the UNESCO-sponsored Asia Month.

Rochester Chamber of Commerce: Shows interest in international relations by annual new citizens dinner.

Those were some of the main items compiled by Faith Wright in the report submitted by Rochester for the award. Miss Wright, a University of Rochester graduate and the winner of a Rotary International Fellowship, was hired by the RAUM to collect evidence of Rochester's qualifications for the award.

The local delegation that will receive the award will be chosen by a civic committee to be appointed by Mayor Peter Barry. The committee will include representatives from several principal organizations responsible for bringing the award to Rochester, Barry said.

The Pan American World Airways Community Friendship Grant, presented through the World Brotherhood organization, is for a reciprocal visit to a selected overseas city by a local community affairs leader. Judges said that the American communities should explore the possibilities of arranging these exchanges with cities in underdeveloped areas or behind the Iron Curtain.

Honorable mention for the World Brotherhood Community Awards went to San Jose, Calif.; Hagerstown, Md., and Montclair, N. J. Worthington received the award for its 10-year program of affiliation with Grailsheim, Germany.

The World Brotherhood organization, with headquarters in the United States, Europe, and Asia, is a nonprofit organization devoted to promote understanding and cooperation between peoples of the world. Judges in the contest were Edward H. Barrett, of the Columbia School of Journalism; Mrs. Ogden Reid, of the New York Herald Tribune; A. L. Cole, of the Reader's Digest; John Loeb, of Carl H. Loeb, Rhodes & Co.; and Dr. Everett R. Clinchy, president of World Brotherhood.

Fitting Emblem of Our National Life, History, Traditions: The Corn Tassel

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mrs. KNUTSON. Mr. Speaker, the "Corn Tassel Lady" is the name given Miss Margo Cairns, of Minneapolis, Minn., by the Portland Oregonian. She sends a message to us recalling the claim our native corn has on our allegiance in this country, and the intimate part it has played in our short history. Under unanimous consent I insert in the RECORD, this short, stirring message, as follows:

When only 5 years old my grandfather lifted me to his knee and told me of the strange, yet marvelous, native plant he found growing in this land when he came from England. He sowed the seed of reverence in the fertile soil of a child's consciousness by calling it the Wonder Plant.

As I grew into the teens I became very fond of history. I frequently read of the role corn or maize played in building our Nation, from Jamestown in Virginia to Sutter's claim in California.

Searching back for a possible beginning I was, and still am, fascinated by corn's antiquity. Before the beloved Nazarene trod the hills of Judea maize was mothering teeming civilizations in the Andes. And farther back there was a long, long period of service—"a period to be expressed in milleniums rather than in centuries."

When I asked grandfather where the Wonder Plant came from, he earnestly replied: "God spoke, child, and it sprang forth." That answer satisfied me then, it satisfies me now. Henry Longfellow was right when he called maize "the gift of the Great Spirit."

Our Nation is so young that it seems only yesterday that valiant patriots made the dream of the ages come true—a home, a land, a Nation founded on the principles of freedom for all.

Patriots, gathered in tense meetings in Independence Hall during the stirring years of our national beginnings, relied on corn, not only for food, but as currency. They had shut the door on England and English coinage. There was no American mint until April 2, 1796. John Adams, Thomas Jefferson, Benjamin Franklin relied on corn in financial transactions in the conduct of the War of Independence.

In the entrance to the law library of the United States Supreme Court there are six graceful columns carved in the likeness of bundles of cornstalks and topped with open ears of corn. They were ordered by our third president. Thomas Jefferson well knew the great debt the colonists owed corn.

Americans must wake up to an appreciation of the divine gift. No flower that blooms has so tender a claim on our history, our traditions, and our hearts as the corn tassel. As a man thinks, so is he. As a nation thinks, so is it. Gratitude, or the lack of it, powerfully affects the destiny of nations as well as individuals. History gives full proof of that.

During the birth throes of our Nation—in Philadelphia, in Boston, in Richmond, in the settlements, and at Valley Forge, maize or corn mothered, sustained and strengthened a visionary and determined people. Let us never forget.

MARGO CAIRNS.

Dynamiting and Its Lesson

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. MULTER. Mr. Speaker, the recent bombings in our country by fanatical bigots have aroused all right-thinking Americans. I can think of no conduct more ungodly or un-American or that would give more encouragement to the Communists than such outrageous actions. It is encouraging to be able to call to the attention of our colleagues the following editorial from the May 2, 1958, edition of the Catholic Week, the official publication of the Catholic Church in Alabama and northwest Florida:

THE ATTEMPTED DYNAMITING OF A JEWISH TEMPLE AND ITS LESSON

We thank God that the attempt last Monday to dynamite the Jewish synagog, Temple Beth-El in Birmingham failed. We thank God that His imposing house of prayer erected to the honor and glory of God was spared. We thank God that whereas human lives could have been destroyed, no one was injured.

In the name of the Catholic people of the community, we express our horror that such a reprehensible attempt to blow up a house of God could have been made. We join with the community in our expression of sympathy with Rabbi Abraham J. Mesch and his people that their temple could be subjected to such indignities. We rejoice with them that the attempt failed and that no one was hurt.

The local authorities are to be congratulated on the speed and determination with which they have attacked this case. Every effort must be made to uncover these guilty of such hoodlumism and bring them to full justice. We wish our officials every success and urge them to presevere in their investigations until justice is satisfied.

Such an outrageous attempt to dynamite a house of prayer is a time of conscience for us members of the Birmingham community. The city is now placed in dishonor until the wrong deed is righted. Public opinion will want to know what failing in our community makes such an act possible.

We, the people of city, while we lament this act, must look to ourselves, to our own thinking and to what we have been doing or allowing, that hoodlums can intimidate and bully and frighten and even perpetrate actual acts of violence with impunity.

Our complacency in the face of other similar acts of violence now comes back to haunt us. This is not the first house of prayer to be bombed in recent times. We have had many homes similarly dynamited. We have had families blown out of their beds in the dead of night.

But now a leading and imposing temple of God has been brazenly attacked. Where will this violence end if the community does not rid from itself the atmosphere that makes such acts possible.

The attempt to dynamite Temple Beth-El is a shameful sore on the face of our community but like sores it can indicate some interior decay that must be healed. And so it is, that this act of violence may prove of benefit for it can wake us up to the dangerous feelings of ill-will and hatred that we have allowed to develop within our community, and, which we have abetted by our complacency and indifference to those who openly and secretly propagate such hate and ill-will.

Military Pay

EXTENSION OF REMARKS
OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1958

Mr. KNUTSON. Mr. Speaker, at the request of a constituent, Mr. Howard L. McLeod, of Bemidji, Minn., I insert in the RECORD his protest against an inequity in the military disability schedules:

APRIL 30, 1958.

For: Attention of Members of the House of Representatives.

From: A disabled first lieutenant on maximum benefits.

Subject: Retired pay provisions of military pay bill H. R. 11470.

One across-the-board-percentage increase is just an easy out, merely sounding like equal justice for all. There is a lot of difference in the plight of 100 percent disabled junior officers where most of the casualties exist both from past wars and current accidents, who are largely unemployable and provided for now at hardship rates way under what the Veterans' Administration is paying 90-day married recruits with 100 percent disability, and the situation of the employed 20-year retired or the employed retired getting three-fourths pay of old laws for minor disability. It is discrimination to treat all the retired alike. The 6 percent of above bill does not overcome the inequity at all.

Only last session of Congress, compensation for the 100 percent disabled was raised 24 percent and the lesser disabled only 10 percent. I am being paid now, $248 per month compensation by the Veterans' Administration versus $206.19 the Career Incentive Act awards me for maximum disability retired pay set for anyone with 80 percent to 100 percent disability in first lieutenant category in short service, as World War I was only 19 months' hostilities. Any first lieutenant or second lieutenant caught early in a long war or in a short war with heavy disability, even the current crop, is similarly crucified. Please see the table attached hereto.

Thank you to take steps now to insert a provision in section 4 of the above bill to the effect that ranks O–1 (second lieutenant), O–2 (first lieutenant), O–3 (captain), shall receive $10, $20, $30 respectively over the $248 VA allows a married 90-day recruit entitled to 100 percent compensation, if such officers are entitled to a 100 percent rating at VA, and are entitled to maximum disability retired benefits of current laws for 80 percent to 100 percent disability. You will quickly see this eliminates the inequity fairly at little extra costs. Only about 6 percent of disabled service connected ever rate 100 percent; they are the ones that need more than the readily employable, longevity-retired, building up further retirements.

Respectfully,

HOWARD L. MCLEOD,
First Lieutenant, United States Army, Emergency Officers' Retired List.

Memorandum of data on military disability retired pay

	What a married 90-day E–1 recruit on 100 percent compensation gets from VA	What ranks O–3, O–2, and O–1 get from services as maximum disability retired pay for 80 to 100 percent disability World War I, World War II, Korean conflict and up to H. R. 11470 passage		
		Under 2 years	Over 2 years	Over 3 years
		Captain		
1949	$171	$235.13	$235.13	$235.13
1952	202	244.53	244.53	244.53
1955	202	259.20	259.20	263.25
1958	248	[1] 262.75	[1] 262.75	[1] 277.16
		1st lieutenant		
1949	171	$186.04	$197.72	$197.72
1952	202	194.52	205.63	205.63
1955	202	206.19	217.97	251.55
1958	248	[1] 218.56	[1] 230.05	[1] 266.14
		2d lieutenant		
1949	171	$160.32	$171.00	$171.00
1952	202	166.74	177.84	177.84
1955	202	176.72	188.51	222.30
1958	248	[1] 187.31	[1] 199.81	[1] 235.69

[1] Proposed 6 percent.

Please note there are no dependency allowances for wife or children in retired pay; nor are there any statutory awards for loss of use or loss of arms, legs, eyes, etc. with retired pay.

As to men of the above ranks in disability status as above, it appears they will merely be getting three-fourths of the 1952 base pay rate, if they become disabled after passage of the bill. That will be the rates shown above, opposite 1952, because of no raise in base pay in 1955 and 1958.

WHO GOT NO RAISE UNDER CAREER INCENTIVE ACT OF 1955 (AUTHORITY: P. 205, SENATE HEARINGS)

About half the entire enlisted population, 1,312,237 (enlisted men).

Corporals to master sergeants, 652,411 (E–3 to E–7).

About half of all first and second lieutenants (lieutenants O–1 and O–2 comprise about half the entire officer corps), 64,963 (O–1 and O–2).

Captains, 601 (O–3).

Majors, 572 (O–4).

Lieutenant colonels, 20 (O–5).

Few people realize that half the services are being deliberately underpaid in the lower brackets of pay. It gets cheap labor all right, but it should bother anyone's conscience a party to it.

No man is master of when disability hits, but the tables below show you the ridiculous differentials that exist between lieutenants of the same rank and degree of disability, because of only a mediocre difference in length of service:

80 to 100 disabled on maximum disability retired pay

	Under 2 years	Over 3 years	Difference per month for a year and 1 day
1st lieutenant:			
1955 law	$206.19	$251.55	$45.36
1958 proposed	218.56	266.14	47.58
2d lieutenant:			
1955 law	176.72	222.30	45.58
1958 proposed	187.31	235.69	48.38

Thus, a ridiculous premium is put on when a disability occurs. At all other points of service longevity is worth about one-fourth the above figures for 2 years.

Here's some more inequity: About 80 percent of all retired disabled officers are rated 30 percent to 60 percent disabled and 55 percent of these are rated only 30 percent disabled. Most of these 30 percent disabled get three-fourths base pay of old laws with some increases such as the one proposed in H. R. 11470 which would give a first lieutenant with short service $175.29 which is $5.84 per 1 percent of disability. A 100 percent disabled first lieutenant with the proposed 6 percent increase of H. R. 11470, also in short service gets $218.56 which is but $2.18 per 1 percent of disability. I am sure you get the idea: the higher the rate of disability the less the rate of payment—the opposite of Veterans' Administration policy.

Most of these anomalies or contradictions are traceable to the no-raise theory of the Department of Defense. The 6 percent increases of disability retired pay did not offset the two cuts in base pay for ranks O–1 and O–2 in 1955 and 1958 as proposed.

Tyrant parents used to sell their lads into bondage to ostensibly learn a trade, but actually to furnish cheap labor. It appears that is exactly what the Defense Department wants from civilians in line with Mr. Charles R. Hook's statement in 1949 that he worked for nothing to learn his trade. Modern business offers $350 to $500 per month with freedom from discipline, with expenses, and fringe benefits equal to the services, to college graduates, who, if the industry is defense strategic, get 4–F classification. Actually, 1 percent under the much lauded Hook Commission recommended rates of 1949 is what 1958 starting rates are. To say these rates are up to date is a falsehood on the face of it.

It would be an easy matter to cut out the 3-year column in the pay tables of H. R. 11470 and figure normal longevity back from the 4- or 6-year rates to establish under 2 and over 2 rates so symmetry and justice would prevail again.

One more statistical fact that is more startling than all the above: The Bradley report (p. 214) and the hearings on the Survivors' Benefits Act (p. 174), both in 1956, state that about 3 percent only out of all who enter the services ever stay in even for the 20-year longevity retirement where I suspect most get out or walk out after getting good specialized training, still young. Just 3 percent, apparently, like the services. Few people, also, do not want to be policemen or preachers or bartenders. I refer to the peacetime, more mercenary motives that go to work. Hard times may increase enlistments, but human nature's likes and dislikes won't change the ratios much, regardless of price tag.

So long as 97 percent of those who enter services are noncareer men, yet are a fine backlog of semitrained men, it would seem equal-pay consideration should be given them by a democracy. Service careers should not make anyone a superman. The tendency of the 3 percent is to disparage the 97 percent who also have careers affected.

Remarks of Senator Lehman at Birthday Dinner Tendered Him by the New York Board of Rabbis

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. MULTER. Mr. Speaker, it was my privilege to attend a dinner honoring Senator Lehman's 80th birthday, given by the New York Board of Rabbis, in New York City on May 1, 1958. Senator Lehman's remarks on that occasion are worthy of the attention of our colleagues, and were as follows:

I want to thank you for the honor which you do me here tonight, and for this very wonderful birthday party. If there was any single thing which could have added to the rewards of this 80th birthday, it is this party, and the opportunity which you have given me to speak to you tonight. This invitation was a particularly happy one for me, for the New York Board of Rabbis is an organization with which I feel completely comfortable. Jewish community life in America is replete with factional organizations. Personally, I have never been disturbed by the ritualistic and theological differences which sometimes have divided Jew from Jew. I am interested in Judaism as Judaism, just as this group has always been interested in Judaism. During the war and on many other occasions, you demonstrated that Jews can operate in union, if they are united by common concerns.

Today our common concerns are no fewer—our sense of kinship no less. And today we have, I believe, an additional bond holding us together—our common problems.

Our age is one of tremendous technological advance—and perhaps even greater technological potential. The 19th century believed in and accepted the laws of nature as immutable, the speed of sound, the science of behaviorism. At every turn, man felt that he was but a step away from ultimates. The 20th century brought discoveries which destroyed those limits. The law of relativity brought a new understanding of immutability as it relates to the laws of nature; the sound barrier is in our jet age little more than another speedometer reading; psychoanalysis and psychiatry have shown us a new dimension in human behavior which the behaviorists did not even suspect.

The striking thing in all of our progress is that it is progress beyond what, just a few decades ago, man conceived as goals. What has shaken, our civilization perhaps even more than our knowledge of the unprecedented destructive forces we have unleashed, is our sudden perception of our ignorance. Whereas in the nineties we thought ourselves on the verge of final answers, today we are aware that we may not even be asking the right questions.

There is great hope in this situation, for we know now that, far from being on the verge of knowing all the answers, what we have done is to push far forward the frontiers of knowledge. We know too that there is room for more and more probing and investigation. We have made great progress, and in the process, have freed ourselves from chains of superstition so that we understand that there is still much more to be learned and to be done.

But there is also real peril in our situation. Aside from the obvious danger that we will abuse our new technological knowledge, and, in a single error, destroy the world, there is also the risk that we will become enamored of technological progress for its own sake, and learn to move faster and faster, without pausing to wonder about our direction.

To avoid this pitfall, we must study our scientific achievements in terms of their human values—we must relate technological progress to human progress, and our newly discovered technological potiential to our eternal hopes and dreams of a better world. Our civilization is one in which sources of power can make the difference between a prosperous, secure nation, and an impoverished nation, between people contentedly working for their happy families and healthy children, and people suffering and hopeless. Knowing this, as we all do, is it not strange that even our most progressive and internationally oriented citizens have been more energetic in their protests against the destructive power of the atom, than in their pressure for the constructive use for the benefit of all humanity of the tremendous source of power which the atom represents?

How are we to assure ourselves that our scientific discoveries, present and future, will be used for human betterment, and not for human destruction? Of one thing I am certain. We will not accomplish these objectives by turning our civilization over wholly to the scientists, nor yet, as people have been urging recently, by training all of our children and grandchildren to be scientists. Without in any way detracting from the value of scientific achievement, we must recognize that achievement is a tool which can be used for good or evil, and we must learn to educate ourselves and our children and grandchildren, to use that tool for human betterment.

How is this to be accomplished? We must learn to ask the right questions, and then to seek their answers, using the same rigorous techniques which have been crowned with such conspicuous success in our laboratories. Certainly one of these questions is how our technological progress can bring prosperity and happiness to the underdeveloped areas of the world, and to the "have not" nations. Another is how we can use science to bring us world peace, instead of world annihilation. If the dimensions of these problems appear somewhat frightening, perhaps we ought to ask ourselves whether we are using all the means at our disposal to block out the answers. Are we, for example, making full use of the human resources available? So long as there are children of superior ability who do not get an education commensurate with their ability, the answer is "No." So long as there are men and women tied to degrading jobs solely because of their color or their religion, the answer is "No." I am forced to conclude that in spite of our technological progress, in spite of our potential, our world is not advancing as it might because we are not seeking right answers to compelling questions, because we are not relating knowledge to human betterment, and because we are not utilizing the available human progress, and in the process, have freed ourselves from chains of superstition so that we understand that there is still much more to be learned and to be done.

In 1937, the major threat to world freedom came from Hitler's Germany. Today it comes from Soviet Russia. Surely it is no accident that the threat to freedom has so frequently come from the godless states, who regard man as an instrument of national politics, rather than recognizing him as one endowed by his Creator with certain inalienable rights.

Another area in which we Jews have special and bitter experience is that of minority rights. Having ourselves been members of a minority since the destruction of the temple, we have a special understanding of the role and frequently the suffering of a minority. If I were asked to pinpoint one single problem as the most serious and urgent facing the world today, I should unhesitatingly point to the problem of the world's colored populations. This is a deep-rooted problem for the United States, because every blunder we make, every setback we suffer in the area of race relations, is used by the Iron Curtain countries, and even by the friendly nations of Western Europe, to challenge the strength and the integrity of our democratic form of government. It is a problem for the world, because racial discrimination is depriving us of some of our finest minds and some of our best potential leadership and because prejudice and injustice does even more damage to those who practice it than it does to its victims.

During the period of the Hitler terror, Jews, as the victims, were quick to see that the danger was not a Jewish problem, but a problem for all civilization. The world came very slowly to a realization of the correctness of this judgment. The problem and tragic effect of racial discrimination, too, is a world problem. To refer to it as "the Negro problem" indicates either an inaccurate use of language, or a failure to grasp the basic issues involved. All men, mindful of the concept of the brotherhood of man, must play an uncompromising and rigorous part in the struggle for equal rights for all men.

There is a third area in which it seems to me that all of us, as Jews and as Americans, should assume vigorous and dedicated leadership. In this area, as in the area of discrimination, I believe that we have a unique moral responsibility. Just as the problem of discrimination should have top priority on our agenda, so what happens to the new State of Israel should be accorded high priority by all. In the struggle of the past decade to keep the state alive, some of the idealism which surrounded its creation has been forgotten. The world needs to be reminded of Israel's role—and we must remember that almost as important as national survival is the preservation of the ideals upon which Israel was founded. Israel must always fulfill its traditional role as a Messenger of Peace, an example of religious freedom for all, a refuge for the homeless, and a meeting ground for East and West.

I believe that the problems which I have outlined this evening are universal problems in a transcendent sense. By addressing ourselves to these problems, we may be able to raise the sights of our entire generation to goals which are worthy of the best human effort. Even if solutions elude us, our society will be transformed by its very concentration on such goals. Our technological discoveries will become truly our servants rather than potentially our masters. It is because the 19th century regarded scientific progress as an end in itself that we have today knowledge of the structure of the atom which may be used to annihilate society rather than to serve it.

The goals toward which man was moving in the 19th century were inadequate goals. The very fact that we passed them by is proof of their inadequacy. While men pursued such ends, he saw himself as the potential ruler of the world. Now that the goals are passed, we have the opportunity to set new and worthier goals, which will enable us once more to see ourselves as creatures in a universe beyond our powers of understanding. And too, we are freed to make constant further technological progress, because we have learned to distrust ultimates. Thus, while the 19th century scientist tended to be a mechanist, and spoke of the conflict between science and religion, the 20th century scientist is aware of an order that transcends his understanding, and finds his faith constantly buttressed by his knowledge. The newly established community of discourse between scientist and religious leader, combined with society's discovery of the folly of accepting inadequate goals, offers new opportunity to us as Jews to assume

once more our traditional role. With opportunity, inevtiably, comes responsibility—and in that responsibility lies the challenge of our society to all of us. We must put aside our factional differences, and through the teaching of freedom, through the example of human brotherhood, we must share with our society the universal values of our religious heritage.

President of American Farm Bureau Calls for Balanced Budget

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. SHEEHAN. Mr. Speaker, during the last several months little has been heard of the necessity for budget sanity. It is a treat to know that Mr. Charles B. Shuman, president of the American Farm Bureau Federation, calls attention to the fact that the Farm Bureau believes a balanced budget is essential.

Mr. Shuman warns against Government intervention as a cure-all and points out that after having experienced 25 years of price regulation and production controls, the Government programs have failed.

Mr. Shuman's thoughts, as reported in the Chicago Tribune of April 23, are as follows:

PUMP PRIMING UNSOUND: SHUMAN

(By Richard Orr)

LAFAYETTE, IND., April 22.—The head of the Nation's biggest farm organization today called for a halt in Government deficit spending and pump priming, and asserted that a balanced budget is essential to the welfare of the economy.

Charles B. Shuman, president of the American Farm Bureau Federation, said that agriculture must move toward a relatively free market and away from Government pricing of agricultural products. He spoke at the closing session of the 2-day national institute of animal agriculture at Purdue University.

Farm experts from 27 States and Canada attended the conference.

BALANCED BUDGET ESSENTIAL

"Farmers have a vital interest in Government fiscal and monetary policies, both as taxpayers and as businessmen," Shuman said. "The Farm Bureau believes that a balanced budget is essential and that it can be provided even though new emphasis seems to be necessary on certain phases of our military effort.

"The times require that Government exercise strict economy and promote efficient operation. If increases in spending are needed for some Government functions, they should be offset by reductions in other items.

"Deficit spending and pump priming by Government do not represent a sound approach to solving the problems of either recession or inflation."

Shuman asserted that farmers will have a better future if Government programs permit them to follow traditional competitive patterns.

TWENTY-FIVE-YEAR EXPERIMENT

"The family farm is secure if the Government gives farmers the opportunity to compete with each other—and that means the opportunity to go broke as well as to succeed—and earn their living under a competitive free-enterprise system," he said. "We have had 25 years of experience in attempting to establish prices and control production by Government action.

"As a result, almost everyone who has any knowledge of the subject will admit, either privately or publicly, that these Government programs have failed.

"I mention that private admission because we still have folks who have a part to play politically who will not admit it publicly."

Shuman said that among the major areas in which agriculture is lacking is the field of human nutrition. Studies show, he said, that, if the diet of the American people is upgraded and improved as it should be, it would require most if not all of the country's current surplus food production to feed the people.

Neither Suicide Nor Surrender

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Norman Cousins which appeared in the Saturday Review for April 12, 1958:

NEITHER SUICIDE NOR SURRENDER

(By Norman Cousins)

The same set of facts about the ideological struggle and nuclear terror has produced two opposing and fast-growing viewpoints.

The facts are profoundly disturbing, but at least they are visible. The Soviet Union is in a considerably stronger position than it was only a short time ago and is getting even stronger with each passing year. This strength is measured not solely by scientific advances or the ability to make nuclear weapons in quantity but by the increasing acceptance of Soviet leadership by the peoples of Asia and Africa who constitute the majority of the world's people. The imaginative thrust of the Soviet in ending its bomb tests has given dramatic momentum to this claim for leadership. Within a few years the West may be confronted with the bristling and bulging reality of a Soviet sphere of influence embracing perhaps two-thirds the globe.

Meanwhile, there has been a steady and costly shrinkage of American influence in the world, especially among peoples of darker skins, which is to say, the preponderance. While we have managed from time to time to come before the world with bold visions, such as the Marshall plan and economic assistance for underdeveloped areas, by and large our standing and influence have been steadily receding. What we have said and done in our relations with other nations have not always reflected careful knowledge about the actual conditions in those nations. Indeed, it has sometimes seemed that we were actually playing to a domestic gallery with our foreign policies rather than to living history. We constructed a fantasy in which security was compounded at least partially of self-serving legends and myths of invulnerability and superiority.

Every now and then, however, a moment of stark truth punctured the fantasy and produced brief flurries of searching doubt. The Soviet's earth satellite, for example, exploded the notion of an ignorant and inept opponent. And the initiative of the Soviet Union in the matter of radioactive fallout is akin to a moral disaster for the United States. True, the Soviet Union waited until its own big nuclear tests were completed before making its dramatic appeal to the world's conscience on the issue of nuclear testing. Even so, the fact remains that the Soviet Union and not the United States acted first in this vital matter.

This political and ideological clash has been taking place in the context of a continuing military revolution. Soon big hydrogen bombs will be fitted into missile delivery systems which will bring the Soviet and the United States within 15 minutes of each other. In the name of security, both nations are fashioning continental pulverizing weapons against which no defense can possibly exist. But the result of these weapons will be to intensify, not reduce, the existing insecurity.

Two extreme and conflicting viewpoints, as we say, have grown out of these facts.

One viewpoint, now openly expressed, is that nuclear war is inevitable and that the United States is not under the obligation to wait until it is hit first. According to this argument, our only chance of victory is to be the first to drop the hydrogen bomb. Besides, it is contended that the advantage of surprise attack is so great that we can almost count upon it as certain that the Soviet Union will strike the moment it is ready. Therefore, we have to hit whether we like it or not.

The contrasting viewpoint, generally identified with Bertrand Russell, is that the West should submit to the Soviet Union as the best way of preventing a nuclear war that would expunge life on earth. The price of submission may be high, Lord Russell admits, but it will not continue indefinitely, for communism may eventually succumb to its own weaknesses. But if war should come, then all life will be expunged.

The first viewpoint leads to mutual suicide, for it precipitates the very nuclear war it ostensibly seeks to limit. The second viewpoint leads to the annihilation of the freeman, for it equates survival with surrender.

But it is false—tragically and hideously false—to say that these are the only alternatives. We don't have to be run by our jitters and drop the big bombs that could put an end to the age of man. Nor do we have to fall on our knees before a colossus in order to keep him from waging nuclear war.

What can we do, first of all, is to stop deceiving ourselves as to the nature of peace and the requirements of peace. We can recognize that peace and unfettered national sovereignty cannot go together in a world which can be circled in 90 minutes by a device that can vaporize whole cities in one blow. We can make a total commitment to the cause of a United Nations with the effective powers of government adequate to deal with the basic causes of tension and conflict.

We can emancipate ourselves from the seductive nonsense to which we have given our energies and allegiances in such large measure since the end of the war. We can decide that the most important thing in our lives is not the height and sweep of automobile tail fins but the height and sweep of our ideas on creating a world under law.

"This is what we own, this is what we believe, this is what we can do," we can say to the world. "We make a total and unequivocal commitment to a safe world and a better one. Our preoccupation is to sustain and serve the gift of life. We state our readiness to accept and support the concept of a federated world to replace the present anarchy. We will work for such a concept to any extent that may be required."

The alternative to either suicide or surrender is still sanity.

Remarks of Hon. Thomas J. Lane, of Massachusetts, Before Knights of Columbus

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. LANE. Mr. Speaker, I wish to include a part of my remarks as guest speaker at the annual communion breakfast of Father Gabriel Druillette Assembly, fourth degree, Knights of Columbus, held Sunday, May 4, 1958, at the Tavern, Gloucester, Mass.

This assembly is made up of members of the fourth degree Knights of Columbus from several cities and towns in Essex County, Mass., and the faithful navigator of this active and energetic organization is Russell W. Parks, of Gloucester, ably assisted by Rodolph J. Pelletier, of Peabody, who acted as master of ceremonies:

Greetings. In the peaceful spring of 1914, Russia was the largest nation in the world, as measured by area, and one of the most backward.

The majority of its people were barely existing; for them there had been scant change or progress during the preceding century.

Under the harsh rule of the Czars, enforced by the secret police, Russia became known as the land where the slightest dissent meant exile to Siberia.

The people outside of the gay and glittering palaces of the aristocracy, lived out their grim and hopeless lives, sustained by black bread and cabbage soup, and faith in a merciful hereafter.

Like the bitter cold and snow which come early to Russia, and leave late, the memory of Ivan the Terrible and his successors, lay heavy upon the land:

And the people were numbed by despair.

Except for the conspirators.

Hate and terror reap the wild harvest of revenge.

Here and there throughout feudal Russia, a few people organized underground cells of resistance. There was little they could do to convince the czars of the imperative need for social, economic and political reforms. In their desparation, they resorted to hit-and-run bombings and assassinations.

Some time before, in the musty halls of the British Museum, a harmless-looking theorist named Karl Marx, had painstakingly selected the data from history to support his claim that only through international socialism, could the people of this world free themselves from their misery.

Young and ambitious radicals like Nicolai Lenin, who had managed to escape from Russia before the secret police caught up with them, were scheming and quarreling in the garrets of various European capitals.

Lenin was the first to realize the propaganda possibilities of the revolutionary book written by Marx and to use it as a springboard to power.

With instinctive cunning, he sensed that the Russian people would grasp at any straw—any promise no matter how visionary it might be—that would offer some way out of the poverty and oppression under which they and their forefathers had suffered so long that it seemed eternal.

Lenin knew that he must prepare for the moment of opportunity.

Meanwhile, from his headquarters in Switzerland he directed the propaganda seeding, and the sporadic terrorism, of his agents operating from the Russian underground.

How long would he have to wait?

In early 1914, the world was at peace.

The Czar had brushed aside the request of moderate elements for some minor changes that would lead to an improvement in the government of Russia, and in the living conditions of its people. His control was absolute. He held all the cards as did all the Czars before him. Russia was regimented and that was it.

Then it began, with a remote and unrelated incident.

A Serbian student assassinated Archduke Francis Ferdinand of Austria-Hungary. This touched off stern reprisals that—through the chain reaction of alliances—brought on the tragedy of World War I.

Nations were fighting nations, and it happened with such suddenness that no one understood why it had to be.

A student had killed a member of the royal family.

But this was no reason for plunging most of Europe into a long and exhausting war, from which some nations have never recovered.

Imperial Russia joined Britain and France against Germany and the Austro-Hungarian Empire.

For a time, the Russians fought well, even though they were poorly equipped, poorly led, and had nothing to fight for.

Defeats on the battlefield, and increasing shortages of food on the home front were more than the stolid and long-suffering Russians could stand.

Even the czar had to recognize that the situation was critical.

Under pressure from some of his advisers, and from responsible elements, he gave way to a provisional government under Alexander Kerensky. It was hoped that the effort to build a parliamentary form of government would inspire the people to carry on the war with renewed vigor.

For victory would mean a new life for the people of Russia.

Most of the people, however, with the sacrifices of war added to the privations they endured in peace, were too weary to care about anything.

Kerensky tried to organize and firm up a government by moderate methods.

But the small band of Communists, led by the fanatics who returned to Russia as soon as they heard that the moment of opportunity was at hand, were not bothered by such scruples.

They knew what they wanted.

They were a tightly knit band.

And they were sure that reasonable men would be no match for the brute force, the lies, and the treachery which they employed to gain their ends.

In the confusion and the indecision which they skillfully promoted to paralyze the moderate groups, the Communists quickly seized the nerve centers of control.

The tragedy of 1917 is that a handful of conspirators were able to take over the great and sprawling nation that is Russia; to consolidate their power; and to subject the people to the iron-handed oppression of a Stalin whose brutality far exceeded the oppressions which have stained so much of Russian history.

Although its western frontiers are in Europe, the vast distances and primitive communications had separated Russia from the European community.

The Communists, fearing the influence of western ideas during the period when they were training their people to accept the new slavery, permitted a few diplomats and technicians to enter that land of mystery, but kept them under constant watch, and allowed them to travel only within a restricted area.

In spite of all the regimentation, and the formidable power they possess, the Russian Communists are not sure that the Russian people really love them.

They saw what happened in Hungary, where years of Communist indoctrination had failed to brainwash the yearning for freedom. At the first real chance, the Hungarians rose in revolt. After days of heroic fighting they had succeeded in winning their independence. Then the Russians summoned their leaders to a conference, from which they never returned. Having betrayed the popular leaders, the Russians then moved into the country with overwhelming force to crush the Hungarian people and enslave them again under a puppet regime, backed by Russian tanks.

This lesson has not been lost upon the Communists.

Although their goal is the establishment of a materialistic society in Russia, and then throughout the world, that will be completely subservient to them, they realize that they must employ different weapons, at different times.

First it is the bloody purge of the opposition within their own country and of deviationists within the party.

Then there is the Iron Curtain period during which they force their people, by enormous sacrifices, to build heavy goods industries, and military hardware.

This is followed by a "peace propaganda offensive," a cynical but adroit campaign to hypnotize the rest of the world and to promote the complacency which makes things so much easier for the Communists.

Now, under Khrushchev, they are copying from the American book on salesmanship.

To make people forget about Lenin, and Stalin, and the facts about communism in practice, Khrushchev is smiling for all the cameras, and frequently manages to work himself into a position where he is gently patting some youngster on the head when the flashbulbs light up the scene.

They have just sent a new Ambassador to the United States who must have memorized that book on How to Win Friends and Influence People.

Exuding charm, he started out immediately on a rugged social schedule, that had him visiting every top official in the American government, and having his pictures taken with them for distribution around the world, of course, and to prove that the United States and Russia are getting very chummy.

It took some weeks for our Government to wake up to the fact that through the agency of this Ambassador, specially trained for this assignment, the Communists were beating us at our own game.

And the logical question came up: Why don't we insist that our Ambassador to Russia be given the same public-relations opportunity over there, in return for the privileges enjoyed by their representative here? If they fail to cooperate, we should restrict the activities of the Russian Ambassador in the same way that the Russians limit ours.

This American reaction is logical and fair.

It illustrates, in a minor way, the difficulties experienced in working out any agreement with the Communists that they will honor.

Having rejected Christian morality because it interferes with their lust for power and their determination to dominate the lives of others, they have become a law unto themselves.

The Soviets have solemnly signed many treaties, and have subsequently broken their pledged word on most of them.

There is no room for mutality in their policy, which is based on one factor and only one factor; whatever is done, or undone, must always exploit others for the benefit of Soviet Russia—first, last, and always.

The Communists insist on a suspension of nuclear tests, and on the strength of this they fool many gullible people who have not yet learned the basic treachery of Soviet foreign policy.

When the United States speaks up for a system of mutual inspection to guarantee that any agreement will be kept on both sides, the Kremlin delays, injects new issues, or changes the subject.

Unfortunately, there are hundreds of millions of ignorant people in this world, and the Soviets are playing on their credulity. The Reds know that these simple and unsuspecting souls, without the training to observe, and compare, and separate the true from the false, are easy game for their never-resting propaganda barrage.

Did I say ignorant people?

At least they have an excuse.

But what about those who have had the advantage of an education, and still are taken in by the Communist line?

Or the officials in some nations who should know better because the record of Communist cruelty and betrayal is no secret who cling to the hope that the Communists will reform?

This leads us back to the question: Why does any human being become a Communist in the first place?

We can understand why some underprivileged people in backward countries who have never known anything but misery all of their lives, will be attracted by the Communist promises, because anything seems better than their present lot.

We are also aware of the radicals who could never get along with anybody, and who see communism as the short cut to positions of absolute power over their fellowmen.

There are also the self-seekers who, without a qualm of conscience, would jump on any bandwagon that seems to be going places.

Saddest of all are the idealists who believed the false promises of communism, and became so deeply enmeshed before they woke up, that it was too late to turn back.

The plans of Karl Marx called for an international revolution by the workers, and the abolition of private property.

This was supposed to lead to a "withering away of the state."

How has Communist Russia carried out this objective? It maintains the largest bureaucracy, and army, and secret-police force, in the peactime history of the world.

Marx proposed a leveling-out or the elimination of distinctions between cities and towns. In Russia today the cities are swollen by the influx of millions from the countryside who exist one family to a room.

Marx wrote of a future society where all would work according to their ability, and receive according to their needs. In Russia today, the gap between the standard of living enjoyed by the top bureaucrats, and the wretched condition of the peasants, mocks the Marxian dream.

According to him, exploitation of one human being by another was going to be eliminated. His Communist pupils, through the power of the state, have kept wages far down and prices up high. That's how they live lavishly, maintain a huge military machine to further their ambitions; and build the heavy industries to catch up with and surpass American production, not to provide consumer goods to improve the lives of their people, but military hardware to enslave the world.

This is not all. Never were so many people tortured and murdered and driven to exhaustion under cover of hypocritical slogans about the abolition of exploitation and oppression as in Soviet Russia during the 40 years of the Communist Party's tyrannical rule of that country.

Marx was convinced that socialism would bring a classless society.

If he could come back from the grave, he wouldn't recognize his theories as the Communists have put them into practice.

Under the guise of the great deceit, they have replaced the older upper class with a new one, their own.

Some Communists have detected the fraud, and a few have spoken out against it.

The most notable was Milovan Djilas, once Vice President of Yugoslavia, and President of its so-called Parliament. He was the right-hand man of Tito from the days when they were fighting as guerrillas against the Nazis. Being intelligent and sincere, he could not forever lie to himself. In time he realized "that communism corrupts those it gives power, turning them into bureaucrats exerting power solely for their own ends."

His conscience would not let him rest.

In 1954, he resigned from the party.

He began to speak and write in a manner that did not parrot the Communist line. He was warned, but he continued to speak his mind. Because he had been one of the top Communists, he was not liquidated. That would be too obvious. Instead, he was thrown into the silence of a prison.

Before this, he had been working feverishly to put his thoughts down on paper. The book he wrote was smuggled out of Yugoslavia, and was published in this country.

Fittingly, it was titled "The New Class."

He describes his growing distrust of communism, as he saw it operate, from a high position and from the inside.

"For what doth it profit a man or a group to gain the whole world and lose its soul?"

Torture, and murder, and grinding tyranny, are no excuse for building up the material power of a nation to serve the whims, or ambitions of a few.

Thousands of slaves died under the lash in the building of the Pyramids, but what happened to ancient Egypt?

The millions who toil for bread alone in the labor camps of Russia, and the millions more outside who are cruelly exploited by their Communist masters will not forever resign themselves to this death-in-life.

And what about the scientists, and writers, and artists, and engineers, and managers of industry? In its drive to become an all-powerful state, and the ruler of the world, the Communists must develop and encourage these skills. Here they run their greatest risk. For people of intellectual ability who are trained to think cannot help but compare the life in Russia with the life outside. The Soviets give the greatest honors and awards to these people, but their greatest need is for freedom in which to develop their talents. Some observers in the Western World count on this group, whose influence is increasing, to bring about a moderation in the rigid controls and the expansionist policies of Russian communism.

This may, or may not happen, sometime in the future, but it would be folly on our part to sit back and wait for communism to disintegrate from internal pressures.

Communism is gambling, cooly and cleverly, for nothing short of world domination.

The Russians have extended their control, and have increased their prestige among the uncommitted nations, at a small cost to themselves.

Communist propaganda is wide awake.

It is constantly harping on peace out of one side of its mouth, while stirring up trouable of all kind from the opposite corner.

It is not enough to point out that some of its charges are ridiculous.

They have a psychological impact that fools many people, and keeps the free world on the defensive. They are designed to keep us so busy answering these accusations, that we have no time to put forward those constructive proposals that would appeal to world opinion.

The man who coined the phrase "cold war" sized up Russian policy in these 2 words.

The Communists are trying to wear us down by every stratagem short of war. Being realists, they are aware that we have the power to retaliate, which they could not knock out at one blow. Hence, their diplomacy is maneuvering for some trap to disarm us, while they secretly increase their own strength to the point where it would become overwhelming, and we would have no choice but surrender.

Our officials see through the twists and turns of Soviet policy to its central purpose.

We hope that the American people, and the people of the whole free world, will never "be taken in" by any Communist offer, no matter how relaxing it may appear on the surface.

Communism never relaxes.

It is always probing for a weakness to exploit.

Remember how Hitler did it for awhile?

Then he became impatient and overreached himself, plunging most of the world into a long and destructive war that finally revealed his own weaknesses, and the defects of a totalitarian system that he had imposed on his own people.

It is doubtful if the Kremlin will repeat his mistake.

They will not resort to war until they are certain they can win it.

While they carry on a relentless campaign to confuse, divide, and paralyze the free world, they are concentrating on the production of intercontinental ballistic missiles, and a huge submarine fleet. Under this plan, our cities could be devasted, and our allies would be cut off from our reinforcement and supply.

Basically, of course, the Communist menace depends on blackmail, and intrigue, backed by the means to destroy.

Allen Dulles, Director of our Central Intelligence Agency, has recently warned us that the steel production of the Communist bloc exceeded ours during the first quarter of 1958.

In 1917, Russia, as an industrial nation, was 50 to 75 years behind the rest of Europe.

Now it is in second place, and is making every effort to surpass the United States.

This backbreaking demand has taken its toll of the Russian people, who are beginning to groan and grumble under the load.

Khrushchev is not blind to this.

He may consider it expedient to work for some disarmament agreement that would result in a cutback of conventional armed forces. He needs more civilian manpower for agriculture and industry in order to provide the Russian people with more food and consumer goods, so that they will work even harder in the service of communism and its global objectives.

We must never forget that communism, being atheistic, demands complete and slavish obedience to the state.

Hoving no scruples, it is tricky.

The Communists look at other people, not as human beings endowed by their creator with certain unalienable rights and responsibilities, and with a soul that is answerable only to God.

To them, people are just mechanical parts to be assembled, and run until they break down, when they will be replaced by other parts to serve the complex machinery of the state, and the new class that sits in the driver's seat.

Religion, democracy, humanism, reverence of God, respect for the dignity of man, kindness, and cooperation—all the values that helped us to climb from the Stone Age to the present level of civilization—are threatened by this evil force.

What can you and I do about it?

As Americans of the Catholic faith, we must, in all our actions, work to promote the spiritual as well as the material strength of the United States, which is the champion of freedom.

It is necessary that we give greater support and encouragement to the education of our youth, so that mental and spiritual power shall build for us the strength that communism can never challenge.

It is our duty to help those peoples less fortunate than ourselves. Surely we can give some assistance to backward and undeveloped nations, particularly those that have recently won their freedom. Like infants just learning to walk, they are a little unsteady. If we give them just a small portion of our strength so that they may develop theirs, we will win their trust and confidence. For the greatest virtue of democracy is not merely the life-giving freedom and opportunity that it has created for us. It is, rather, in the generous spirit that would lend a hand to others so that they, too, will be able to earn these blessings.

When we speak of the United States and its resources, we mean more than its material progress.

More than its scientific farms and its amazing industries.

More than its government which is the agent of the people.

We mean its churches, and schools, and homes—and the American character that is developed by their example and their inspiration.

Here is the real strength for good of our new world.

I do not underestimate communism. It is powerful and dangerous. It is determined to enslave us or destroy us by one means or another.

But we have the greatest resource of all—our faith in God and in freedom.

If we truly live this faith, we shall seize the initiative, and we shall find the means to reach through to the Russian people.

That is the challenge and the responsibility.

As Knights of Columbus, we, too, place our faith in God, as we set out to discover a way of reaching our brothers in Christ who suffer behind the Iron Curtain.

There is no convenient compass, or road map, to guide us.

And the unknown obstacles in the way will prove to be many.

But, like Columbus and the pioneering spirit that he brought to America, we must, and will establish contact with the Russian people.

The secret fear of all Communists is that Russians and Americans will meet and discover their unity as human beings.

When that day comes, communism is doomed.

Conservation of High Seas Salmon Fishery

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, March 28, 1958

Mr. PELLY. Mr. Speaker, Japan and Russia have concluded their discussions on the subject of a 1958 fishery agreement. Now our State Department should press the Japanese to abstain from taking Alaska-spawned salmon on the high seas in the spirit of their treaty with Canada and ourselves.

In this connection, under unanimous consent, I include the views of the editor of the Fishermen's News, John H. Wedin, on this subject which are realistic and timely.

A LESSON IN RESPECT

Though Japanese fishery authorities are hastening to minimize any importance in the proposed closure to their fishing fleets of the Okhotsk Sea area beginning in January of next year, their undue emphasis should serve to convince the doubting United States State Department.

Japan has clearly established a precedent. They have agreed to refrain from fishing the Okhotsk Sea because there is reason to believe they are causing depletion. They may answer that the Russians have agreed to withdraw also, but the argument does not alter the parallel between the Okhotsk area and our own north Pacific problem with the Japanese mothership fleets, for United States fishermen are also banned from the high seas area.

The soft United States State Department policy in allowing the Japanese to violate the basic rules of conservation to deplete Bristol Bay, is justified in our efforts to keep the respect of Japan in the more important battle of international defense.

We, therefore, let the Japanese go scot-free in a few days at Vancouver, B. C. late last year. The Russians have negotiated 4 months and the Japanese came away less than satisfied.

And, in Japan, which nation now commands the most respect?

The Late Lorenzo Caputo

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. ANFUSO. Mr. Speaker, today, Tuesday, May 6, is a very sad day in my life, probably the saddest since I first came to Congress in 1950. Today a very dear friend of mine, Lorenzo Caputo, is being bought to his eternal rest in New York. The Commandatore, as he was affectionately and respectfully called, was more than a friend to me—he was like a brother.

Lorenzo Caputo would have been 59 years old this month. He was born on May 27, 1899, in Italy, and came to this country in 1921 as a youth of 22. During those early years in the United States he had his share of difficulties in adjusting himself economically and in becoming assimilated in this great land of ours. He started out as an iceman, delivering ice from door to door to people of humble means. The friends he made in this early period he has never forgotten. Later he was in the pastry business, then in the jewelry business. In 1934, during the depression, he founded the Rite Fuel Corp., worked hard, almost around the clock, and made a success of it. Ten years later he established the Caputo Bros. Coal & Fuel Corp. Last year he became head of the Waterway Fuel Transportation Corp., which operates in New York Harbor.

These brief facts in the life of Lorenzo Caputo, however, do not tell the full story of the man, who he was, what he did, how he helped the community and his fellowmen. His religious and civic activities began almost from the day of his arrival in this country. In 1923, only 2 years after his immigration to the United States, he founded the St. Joseph's Society when his dear friend, Msgr. Ottavio Silvestri, was the pastor of St. Joseph's Patron Church. He and other stanch supporters helped Monsignor Silvestri build the church and its youth center.. He was for many years in the forefront of every activity connected with the church and the society, and later became life president of the St. Joseph's Society. Even after he had moved to Douglaston, Long Island, in 1952, he would come every Sunday to his old beloved parish of St. Joseph's Patron Church. I was privileged and honored to take up the collection with him at the 12:15 p. m. mass.

As for his civic and charitable activities, he spared neither time nor effort nor money. He was president of the Federation of Pugliesi Societies of Greater New York and New Jersey. He was an honorary member of St. Anthony Society of Oceanside, Long Island. He was a fourth-degree Knight of the Bushwick Council, a member of the Holy Name Society, the Italian Charities of America, the Italian Board of Guardians, the Catholic Charities of Brooklyn, and others.

Lorenzo Caputo visited Italy many times and sought in every way possible to help his kinsmen. In 1948, he sent an ambulance to his hometown of Palo Del Colle, in the Province of La Puglia, where he was born. On other occasions he arranged for shipments of flour and medicines to help alleviate the distress of the poor and the needy, as well as to aid the cause of the Democratic Christian Party which he felt is best able to steer Italy into the direction of western democracy.

Caputo was an implacable foe of communism, and was particularly anxious to see that it made no great inroads in Italy. He believed that if communism could be routed in Italy, it would strike a deathblow to it in other western European countries. In 1954 he was awarded the Medal of Solidarity by the then Premier Alcide De Gasperi on behalf of the Republic of Italy for his fight against communism.

He was the recipient of other awards, the most cherished of which was the decoration of Knighthood of St. Sylvester in 1952 by Pope Pius XII. Lorenzo Caputo was a close friend of His Eminence, Marcello Cardinal Mimmi, Archbishop of Naples.

These are but a few facts and highlights in the life of Lorenzo Caputo. Men like him, with his tenacity and character, are not born every day. When such a man passes on, the whole community is shaken to its depths and feels the great loss. He was a pioneer and an adventurer in the great tradition of his forebear Christopher Columbus and in the spirit of the great founders of our country.

Lorenzo Caputo is survived by his dear wife Antoinette, by his 5 children Frank, Pat, Jack, Angelo, and Beatrice—my adorable godchild—and by 9 grandchildren. He also leaves behind a sister, Mrs. Laura Schiraldi, and 4 brothers, Jack, John, Michael, and Joseph. To all of them and to his myriad of friends his death is a terrible and tragic blow.

Already his family and many of his friends are planning a memorial for Lorenzo Caputo in such a manner that he will live forever in the hearts and minds of those he left behind. Said his oldest son, Frank:

He will never die. He will be an inspiration for all of us. He will guide us from Heaven.

I find I have not the words with which to properly extend my condolences and my deepest sympathy to his dear wife and children and to the others of his family in this hour of their great bereavement. I, too, who had the great benefit of his friendship, will always cherish his memory. I shall always remember him for his sincerity and kindness, for his untiring efforts in behalf of many people less fortunate than he was. I am consoled, as I hope his family will be, by the thought that he leaves behind an honorable name and a monument of good deeds for his fellowmen, of which they can be justly proud.

Mr. Speaker, I can think of no more apt prayer on this occasion than the famous Prayer of Peace of St. Francis of Assisi:

Lord, make me an instrument of Thy peace.
Where there is hatred, let me sow love.
Where there is injury, pardon.
Where there is doubt, faith.
Where there is despair, hope.
Where there is darkness, light.
Where there is sadness, joy.
O divine Master, grant that
I may not so much seek
To be consoled, as to console;
To be understood, as to understand;
To be loved, as to love;
For it is in giving, that we receive.
It is in pardoning, that we are pardoned.
It is in dying, that we are born to eternal life.

The Attorney General Declares War on Organized Crime

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. KEATING. Mr. Speaker, no problem facing this Nation today should cause greater concern than the rise in power of organized crime organizations. These gigantic octopi have stretched their tentacles across State borders until they have enveloped our Nation, reaching into the homes and businesses of Americans everywhere. Unless a death blow is struck at the heart of these monsters they can stifle our whole economy and threaten our very existence as a nation.

No State alone is equipped to deal effectively with these nefarious organizations. What is needed is a national crusade spurred on by the combined efforts of top crime fighters in both State and Federal Governments.

The Attorney General of the United States has announced his determination, as head of the Department of Justice, to conduct the kind of concentrated, coordinated, and sustained drive against organized crime that is needed to rid it from our land. In a speech delivered last night before the Advertising Council, Inc., he ably identified the target and outlined the plan of attack. It is a speech which every Member of Congress and, indeed, every American should read.

Mr. Speaker, we cannot expect the Department of Justice, any more than our Armed Forces, to fight effectively without the proper weapons. Existing laws do not provide an up-to-date arsenal, and for some time I have urged Congress to supply one.

There are several bills, which I have introduced for a number of years, pending before the Committee on the Judiciary now. I intend to offer several more in the near future. The Department of Justice no doubt will have additional proposals.

I am especially pleased to note the indications in the Attorney General's speech that the Department is swinging around to the view that legislation embodying the principal of my bill, H. R. 258—to permit the Federal Government to crack down when interstate conspirators are breaking State felony laws—is the most effective and direct means for annihilating organized crime.

I am confident that this Congress will want to join in the battle against crime by giving early and favorable consideration to such measures before it adjourns.

I commend the Attorney General for his courage and determination in undertaking this enormous and vital task. I am sure that law-abiding citizens everywhere wish him every success, and will cooperate in every way possible.

Under leave previously granted, I insert Attorney General Rogers' fine speech at this point in the RECORD:

ADDRESS BY HON. WILLIAM P. ROGERS, ATTORNEY GENERAL OF THE UNITED STATES, BEFORE THE ADVERTISING COUNCIL, INC., HOTEL STATLER, WASHINGTON, D. C., MAY 5, 1958

Tonight I want to talk about a problem which I believe requires serious attention. These days, quite naturally, we are concerned with the economy of our country and our national defense. In a very real sense, the problem of crime is related both to our economy and to the future strength of our Nation.

As you know, this year the Nation will spend more than $40 billion on national defense. But how many people know what crime costs our country? Most people are wholly unaware of the staggering proportions to which it has grown—unmindful of the fact that it is second only to national defense in terms of cost. The estimated cost of crime in the United States in 1 year is about $20 billion.

Twenty-five years ago the Attorney General was appalled by the fact that in 1933 1½ million major crimes had occurred—one for each 84 persons in the Nation. In 1958, it appears now that about 3 million major crimes may be committed—twice as many as in 1933. This means that in 1958 one major crime will be committed for every 60 persons in the United States.

Since 1950 the rate of crime in our country has been exploding at a rate four times as fast as the rate of growth of our population. The rate of crime in 1957 increased 9 percent over 1956.

These statistics only begin to tell the story. One of the facts which stands out in bold relief is the alarming increase in the number of crimes committed by young people. Almost half of the persons arrested for major crimes last year were under 18 years of age. Somehow there has been a failure properly to inculcate our people, particularly our young people, with a sense of moral values—with an awareness of how destructive crime is to them and to the country. These figures indicate that there is a tremendous job to be done by schools, churches, parents and organizations such as this in the years ahead.

Tonight I want to talk not about general problems relating to crime but rather about some of the things we hope to do in the field of law enforcement. Let me mention that I would hope too that this influential organization which has contributed so much to solving important problems of our Nation in the past, will want to give its thoughtful attention to what it can do to help reduce the rate of crime in our country.

What is one of the most obvious facts about the growth of crime in our country? It is the growth of organized crime and the success of its operation.

Syndicates made up of criminals have coordinated and extended their operations over many States and in many cases, across national boundaries. Why is this true? It is true because organized racketeers and hoodlums have learned how to make crime pay.

The top echelon of organized criminals have been able to remove themselves from exposed positions and now operate by scheming, directing and organizing. Organized criminals exert general control over those types of criminal activities that yield the most profits—gambling, narcotics, and extortion, to name the big three. And obviously they pay only a small portion of their taxes on these activities because if they paid all of their taxes as ordinary citizens do, a life of crime would not pay.

In order that you may have a better understanding of the problem from the standpoint of a law enforcement official let me make some general observations.

First, I notice that there is a widespread lack of awareness as to the respective roles of Federal responsibility as compared with the State and local responsibility in the field of law enforcement. Generally speaking responsibility for law enforcement in our country rests in large measure on the States and localities. The fact is that less than 10 percent of all crimes violate Federal law.

Yet almost every time a serious local crime is committed which gets national publicity some senator, congressman, governor, or civic group will immediately demand that the FBI investigate it. This is a very fine tribute to the FBI but it demonstrates a lack of understanding of the law and tends to shift the responsibility away from the States and localities where it belongs.

Consider the recent atrocious bombings of schools, churches, and synagogues which have occurred in Florida and other Southern States. At first there were demands that the FBI take over the investigation. The Federal Government did not have jurisdiction in those cases because no Federal law was involved. The Federal Government does not have jurisdiction merely because the perpetrators of the crimes may have crossed State lines or because a conspiracy may be involved or because a series of crimes are involved. Unless a Federal law has been violated the FBI has no jurisdiction to investigate.

The law enforcement officials of the States and localities involved have recognized their responsibility. Officials from 29 southern cities have conferred for the purpose of taking cooperative action to solve these shocking crimes. Those responsible are to be complimented for taking this affirmative, determined action.

The FBI stands ready to help the local authorities in every way possible. Its laboratories, identification facilities, information from its files, etc., have been made available. It is maintaining the closest liaison with the responsible authorities and will give them every assistance possible.

The point I hope you will remember is that it is important for the public to place responsibility where it belongs. Communities get the kind of law enforcement they deserve and the public must know where the responsibility lies.

Another fact which is not always fully appreciated is that within the Federal Government itself jurisdiction for investigating crime is divided. The jurisdiction of the FBI is limited to general crimes and crimes involving national securty. Internal Revenue has its own investigating staff which has jurisdiction of matters pertaining to tax frauds. The Narcotics Bureau in the Treasury Department has primary responsibility for investigating narcotics violations. The Secret Service is responsible for investigating counterfeiting and crimes relating to the public moneys. The Post Office investigates misuse of the mails.

All of these investigating agencies have compiled outstanding records in their respective fields but organized criminals have not seen fit to compartmentalize their activities so as to fit neatly into these niches. The Department of Justice has complete and sole responsibility for the prosecution of all crimes. It seems obvious then that the information obtained by separate investigating agencies must be fitted together more effectively by the prosecutors than in the past if we are to meet today's crafty challenge of the organized criminal.

About a month ago, I announced a long-range program for combating organized crime in this country. Although as I have mentioned, the Federal Government has a limited jurisdiction we do have some powerful weapons. The main ones are the income-tax laws, the tax laws relating to narcotics, and the Hobbs Act and the Taft-Hartley Act relating to extortions and payoffs in union activities.

Let me briefly sketch the three main points of the program.

1. The program will be concentrated.

We will give top priority to 100 of the top racketeers in the United States. That is not to say we will ignore the others for we plan to attack crime on as many fronts as we can. It does mean, however, that we will give immediate and concentrated effort to the 100 worst hoodlums and racketeers in the country.

The list of names will not be made public for two reasons. In the first place, it would tip our hand and make the investigative work more difficult. In the second place such publication of the names might be attacked as prejudicial in the event of trial. After there have been convictions or deportations we will announce the names and will replenish the list with others who are deserving.

You may wonder why a list of 100. Of course, it is an arbitrary figure to be used principally for purposes of concentration of effort. A brief discussion of how organized crime functions today will indicate why this concentration, I believe, will be effective.

Last November at Apalachin, N. Y., a meeting of 64 top racketeers and hoodlums took place. A majority of those in attendance came from New York, New Jersey, and Pennsylvania, but there was a fair representation from the South, Midwest, and even the west coast. A few of those in attendance had been in a similar meeting as far back as 1928 in Cleveland. Many of them were in attendance at a meeting in 1952 in the Florida Keyes, in 1953 at Miami, in 1954 at Chicago, and in 1956 at Binghamton, N. Y. Meetings such as these at Apalachin, attended by what amounts to the board of directors of organized crime for a given area, serve many nefarious purposes. Lines and means of communication are established, methods of distribution are agreed upon, territorial arrangements are made. As a result, gang wars of the twenties and thirties have been almost completely eliminated.

The members of these top-level planning boards are also the key figures in organizations with headquarters in New York, Miami, Chicago, and other cities in the United States. Here the multimillion dollar businesses take shape. Those on top seldom come in contact with the local hoodlums who are responsible for maintaining discipline, bribing local officials, or actually dispensing the products of crime. But through strong arm tactics carried out through subordinates in a chain of command and with the power to shut off necessary financing, production, and sources of supply, they exercise control over most of the profitable forms of illegal activities. The dope peddler, the bookie, the numbers runner, the vender of obscene magazines, are all largely dependent for their illicit merchandise and for permission to engage in these activities upon these overlords of crime.

These overlords of crime in many instances have invested their ill-gotten gains in hotels, night clubs, coin-operated machines, scrap iron trucking, etc., and hide behind these legitimate fronts while directing their criminal activities.

It is our purpose to concentrate on these overlords. We plan to find out everything that we can find out about them—their sources of income, their present activities, how they invest their money, and how they avoid paying their taxes. Without in any way denying them any of the rights which our citizens have under our system of justice we will attempt to find out what Federal law they have violated and to obtain the necessary evidence to prove it.

2. The program will have a Government-wide coordination of effort.

After consultation with the Secretary and Under Secretary of the Treasury, the Director of the FBI, the Commissioner of Narcotics, the Commissioner of Immigration, the Secret Service and the other investigative agencies we concluded that we would turn the combined strength and resources of all Federal investigative and law enforcement agencies in a common effort against the organized criminal.

Of course we have not been oblivious in the past to the activities of organized crime and the need for cooperation. What seemed to be lacking and what we are in the process of establishing is a unified prosecutive command, where all information on racketeers from all investigative agencies will be correlated, studied and acted upon.

Let me cite an illustration of what I mean. The distribution and sale of narcotics, particularly to young people, is one of the most reprehensible of all crimes. Almost all of it is imported, and it lends itself peculiarly to the control and distribution practices of the organized criminal conspiracy. Most heroin comes from Turkey, Syria, and Iran in the Near East and China in the Far East. Organized crime has built up a giant transmission belt for securing this drug, for providing for its safe importation, and ultimately for its distribution to the dope peddlers. One pound of heroin is worth about $150,000. The Bureau of Narcotics seized about 1,700 ounces of heroin in 1957.

Most marihuana comes from Mexico. Over 26,000 ounces of marihuana were seized at ports and borders, and over 11,000 ounces were seized within the United States in 1957. So you can see that the sale of narcotics is a huge business.

In many instances it is possible to identify top racketeers who traffic in narcotics but not to obtain the necessary evidence to seek an indictment. Now the important thing is to put this criminal out of circulation—the crime for which he may be convicted is of secondary importance. So we will study all the evidence which the Government has in its possession from all the investigative agencies. Perhaps we can prove a tax-fraud case, possibly he may be subject to deportation, the FBI may have information which, placed together with all other information obtained from the Narcotics Bureau, may show the violation of some other Federal law, or in some instances we may be able to supply local law-enforcement officers with evidence sufficient to convict for a local crime.

3. It will be a long-range, sustained program.

From my experience in law-enforcement work I have noticed that efforts directed on organized crime are apt to be sporadic. A series of vicious crimes occur or a congressional investigation is held and a drive on crime is started. When the excitement dies down the drive is apt to die down.

The program we have in mind is not intended to produce quick or sensational results. Rather, it will be a long-range program built on policies which will be lasting and intended to meet a continuing and constantly changing problem.

Recently we have seen instances of how effective racketeers have been in taking over control of a few powerful labor unions. They not only steal money from the union treasury but they use the unions to extort huge sums of money from contractors.

Obviously, the efforts of the racketeers to penetrate these unions are well planned and sustained. A few years ago the most powerful racketeer in southern Illinois was Evan Dale, who was president of a union of hod-carriers and common laborers. For years he exercised complete control over the rank and file of his union, responsible to no one. During his trial for extortion Dale described himself in the following language:

"I am a Chicago boy. When I left Chicago I threw away my shovel for a blackjack and I have been using it effectively ever since. I came to southern Illinois 15 years ago to carve out an empire. I have carved out an empire. I have 38,000 laborers and 28 business agents under me."

For his part in the multi-million-dollar shakedown of contractors during the construction of a powerplant for the Atomic Energy Commission, he was sentenced to 15 years in jail.

There is only one way to combat successfully the activities of such racketeers who have taken over a few labor unions—and that is with a sustained and long-range program of law enforcement. Of course it is not possible or desirable to spell out in any detail all the plans of the Department in this field. What I have said represents a general approach to the problem.

The policy of the Department of Justice can be expressed this way:

1. We will attack the problem of crime on all fronts within the limit of our jurisdiction.

2. We will give top priority to concentrating on the top 100 racketeers.

3. We will urge the courts to impose maximum penalties and within the procedures laid down by the law will seek to expedite the trial of cases.

4. We will urge Federal legislation to give the Federal authorities more weapons to cope with organized criminal activities that have interstate ramifications.

5. We will cooperate with State and local authorities to the greatest extent possible.

The program which I have discussed this evening deals only with one phase of the crime problem in the United States. The problem is a much broader and more serious one than anything that improved law enforcement alone can solve.

There are many things which must be done. For example, the public must be more alert to the tieup between crime and local politics. Experience shows that organized crime on a profitable basis cannot exist for long in any area without the connivance of local law enforcement officers.

Then too the public must be made more aware that their support and cooperation in giving information about crime especially in the field of extortion is essential if our law enforcement agencies are to cope effectively with the ever increasing rise of crime in the United States.

Finally, there is a heavy responsibility which rests on all of us more effectively to instill young people with the basic traits of character which are so vital to our free way of life.

The Advertising Council, which has given so generously and so successfully of its time and talents to programs for human betterment, may want to give some of these and other broader aspects of the problem its future consideration. If you do I assure you that all of us in the Department of Justice will give you our enthusiastic cooperation. I can think of nothing which would be more helpful to the Nation than to have the benefit of your thought and counsel and your active participation in helping to solve this grave national problem.

Senator Humphrey "Going Strong"

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. McGOVERN. Mr. Speaker, since Minnesota's great Senator, HUBERT H. HUMPHREY, is a native South Dakotan and also my next-door neighbor in Washington, I have taken a special interest in his remarkable career. His political courage, his dedication to the public interest, and his ability to speak with force on the central issues of the day have been a challenge to me and to countless other citizens.

Recently I have noted several articles which recognize the unusual ability and energy that Senator HUMPHREY displays in his role in the Senate. In the April 28, 1958, issue of the New Republic, the editors have described the Minnesota Senator as a "pace-setter for his party" who is "proving himself on issue after issue to be one of the most impressive members of the United States Senate." William V. Shannon, writing in the April 23, 1958, issue of the New York Post, said that Senator HUMPHREY has enhanced his reputation in this session of the Congress "probably more than any other figure."

The New Republic article referred to above was included with the remarks of Senator NEUBERGER, of Oregon, in the RECORD of April 26, 1958. Under leave previously granted I include the following article by Mr. Shannon:

GOING STRONG
(By William V. Shannon)

WASHINGTON.—The time is nearly midnight. Those gathered in the hotel room are growing weary; the pace of conversation slows as the mounds of cigarette stubs grow in the ashtrays and the glasses are repeatedly refilled.

At this point, a dark-haired, still young man of medium height and build with a high, prominent forehead enters the room. Within 3 minutes, he is sitting on the edge of a chair, expounding, exhorting, gesturing.

The other persons present have revived and are sitting forward in their chairs, listening with a new alertness to this tireless, bemusing, fluent outpouring of words. The evening has come alive again. The visitor responsible for this transformation is the pride of Minnesota Democrats, HUBERT HORATIO HUMPHREY, JR.

HUMPHREY, now 47 and a veteran of 10 years in the Senate, is no longer a boy wonder. The junior Senator from Minnesota, the dominant leader of the Democrats in his home State, the foremost spokesman in the Senate on disarmament policy, a key strategist in both the farm and labor blocs, still a durable day-to-day battler for civil rights, and a figure with fair, though not brilliant, prospects for national office in 1960, HUMPHREY has become one of the half-dozen movers and shapers of the Democratic Party today.

Probably more than any other figure he has enhanced his reputation in this session of Congress. His gains have not been spectacular; he is not leading any public opinion polls. But by serious, substantial work on several issues he has grown in stature and respect.

He is a man worth watching. What makes HUMPHREY tick?

The scene described above is hypothetical but it is very much grounded in fact. HUBERT HUMPHREY has such unflagging energy, such zest, such fluency that he makes everybody else in a room seem tongue-tied or victims of "tired blood." He can dictate correspondence, attend a committee meeting or two, and film a television interview before lunch, make an appearance on the Senate floor, fly out of town, address a convention banquet (an hour talk is a routine effort), tour the hotel rooms shaking hands of convention delegates, and wind up around midnight in some smoke-filled caucus where he will go strong for another couple of hours. What is more, he will be up at 7 or 8 the next morning ready to start the same routine over again. All this is done without stimulants; HUMPHREY quit smoking several years ago and drinks very little.

The ceaseless drive in generated from within; it originates in a happy union (less common among major politicians than one might expect) of the ego and the dream. On the one side, he wants power, likes to run things, is competitive, ambitious, and normally vain. On the other side, he has a relatively clear, uncomplicated picture of the good society and what he ought to do to help bring it about.

He is an unreconstructed liberal with few doubts or hesitations. He functions at high efficiency and because his personal ambition gives an edge to his ideals while his ideals, happily vivid and unspoiled, provide the gusty enthusiasm that refreshes a man convinced he is doing the Lord's work, and that it is very, very important.

HUMPHREY is not, of course, a stranger to the traffickings and expediencies of politics. Over these 10 crowded years, however, he has shown a rather high level of consistency.

He came to the Senate in 1948, the year of the false dawn of postwar and post-New Deal liberalism. In the lusty spring of 1949, Harry Truman was calling for FEPC, compulsory health insurance, the Brannan farm plan and repeal of the Taft-Hartley Act. Freshman HUMPHREY was in the frontlines on these issues in the Senate, adding swipes of his own at HARRY BYRD's Joint Committee for the Reduction of Non-Essential Expenditures, and other conservative sacred cows. Serving at the same time as national chairman of Americans for Democratic Action, HUMPHREY literally personified the new liberalism.

But 1948 proved an afterglow, not a dawn. One by one the lights guttered out; 4 years of McCarthyite obscenities overlapped 5 years of Eisenhower apathy and smugness.

HUMPHREY, the young Lochinvar who rode out of the West, found himself fighting many more rear-guard withdrawals and delaying actions than glorious advances.

The portents of political change now suggest that events are finally beginning to move with rather than against HUMPHREY. If a liberal trend persists and gains force, can he personally capitalize on it?

HUMPHREY makes no pretense of unavailability. He actively wooed the Vice Presidency in 1956. He will probably be a regional favorite son in the next convention.

His plans have naturally not matured this far ahead, but his activity may include entering the tactically important Wisconsin and Nebraska primaries. These States, together with Minnesota and the Dakotas, could give him approximately 100 delegates, almost one-sixth the number needed to nominate. A bloc of this size would make him a person of power in the convention.

Israel's Position in the World's Eastern Problems

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. HOLLAND. Mr. Speaker, today, we hear much regarding Israel's position in the world's Eastern problems. I was very much impressed with the address made by the Honorable Abba Eban, Ambassador of Israel, at the B'nai B'rith awards dinner on April 20, 1958, at the Mayflower Hotel, Washington, D. C.

I believe that he expresses very sincerely, and in exacting words, the position that Israel is to take to solve the many problem that are so necessary, not only to Israel, but to the world at large.

Israel's approach is one of peace, of good will, and of friendship to her neighbors in the Far East as well as to the other countries throughout the world.

It is most important, I believe, that the Members of Congress should read the sentiments expressed in this speech by Israel's capable Ambassador to the United States.

TEXT OF ADDRESS BY AMBASSADOR ABBA EBAN, OF ISRAEL, AT B'NAI B'RITH AWARDS DINNER, APRIL 20, 1958, WASHINGTON, D. C.

I shall never cease to be moved by this testimony of your abiding friendship. Even to those of you who have endangered the balance of my sanity by the excess of their praise, I offer my complete forgiveness. If I really possessed the radiant qualities ascribed to me this evening, I should be unfit to live not only within the human race, but

even in our diplomatic corps. But it is not my function, Mr. Chairman, as your guest, to come here and quarrel with your judgments. It is not for me to exclude the possibility that you may be right. So, when I go home this evening, I shall put out the lights and look into the mirror and if a phosphorescent halo gleams about my head, I shall be the first to acknowledge your perceptiveness; if not, I shall still think tenderly of your generous intention and strive, within human imperfection, to deserve something of what you have said and done this night.

I shall, especially, treasure this emblem of your tribute. If you observed a certain anguish in my countenance when you presented it to me, it is because I was gripped by an icy fear lest you propose to accompany it with that intimate embrace which my colleague, the French Ambassador, uses when he adorns deserving recipients of his country's honor.

I should like, also, to endorse whatever has been said this evening about the supremacy of the female sex. I do so not only in sheer masculine prudence and self-defense, but, also, because there are ample foundations for that belief in our tradition. To the women's division of B'nai B'rith I bring the tribute of gratitude and appreciation for that which they have done for us tonight. To the women of your great movement I can only recall the wisdom of our tradition which describes a woman's valor in deathless words: "Honor and glory are her garment, and she shall rejoice in the latter end." These words are attributed by our history to King Solomon—and if that remarkable potentate was not the world's greatest authority on women, it is not because he deprived himself of any opportunity so to become.

My friends, I stand before you as the recipient of your praise because our people's history has set me, in this past decade, at a special point of vantage where I have seen the impact of Israel's resurgence on the mind and conscience of the world. Within the pattern of that tempestuous decade, it has been my task to give utterance to the impulses which have moved Israel in this hour of her transition. Nobody can seek to interpret Israel's renascence without moving into the vast hinterland of eternal Jewish history.

Stretching back beyond that summer morning, 10 years ago; far into the midst of antiquity, the journey of our people across the stage of time has been full of sharp and vivid transitions. Pain and anguish have walked with us, but their companion has been an everlasting hope—the deathless, poignant desperate hope of eventual restoration to a creative and normal dignity. In our day, this hope has been fulfilled.

At this anniversary season we now pause in memory before the most exalted decade amongst all the Jewish epochs. Its people multiplied, its land revived, its institutions strong and constant in their freedom, its kinsmen gathered in from lands of havoc and cruel memory, its frontiers defended, its enterprise and commerce in full spate of growth, its soil redeemed for ever richer harvests, surrounded by the friendship and recognition of many nations, sustained by the love and fraternity of its kinsmen throughout the world, Israel enters its second decade.

We enter it in perfect confidence that what has been built in these 10 years, is destined forever to flourish and endure. Never in history has any purpose been achieved against heavier calculations of chance. All the circumstances of time and of place argued against our success. The people were scattered, its land distant, its sons alienated by time and strangeness of tongues from the original sources of their union, its morale shattered by grievious martyrdom, and the very connection between this people and that land had no status or recognition in the jurisprudence of nations.

Rising up in revolt against these towering obstacles, this people has, within our own lifetime and memory, achieved its reunion with the land and the language of whose previous coalescence the deepest message of human salvation was born. The perspectives of history enlarge the dimensions of this achievement. It is well that on such a milestone in our journey we should pause for a backward glance of historic appraisal. Envisage and think what has happened here:

Thousands of years ago, in the darkness of barbarism and paganism, a people lived in the cragy rocks of the small land on the shores of the east Mediterranean, amidst the darkness of apathy, resignation, and determinism which surrounded it. It saw a sudden vision of the universal order. The cosmic pattern in the eyes of these people was revealed not as a wild chaos of arbitrary, ruthless, incalculable forces, but as a system of order and progress governed by a merciful intelligence and an articulate law. From this concept of order and progress in the universal design, this people evolved the revolutionary doctrines of individual morality, social justice, and international peace. The original stream of this tradition nourished the great rivers of Christianity and Islam while keeping its own native waters of Judaism refreshed.

Crushed by great empires and scattered to all the four winds, this people remained the custodian of these original ideals. In exile it longed for restoration of the conditions of its previous creativity. It hung its harp upon the willow tree and wept when it remembered Zion. In our own day and age, at the very ebb and climax of its weakness and agony, it summoned up the courage, the resilience and the vitality with which to turn the wheel of history full circle, and to become again the master of its destiny in the conditions of its original greatness. This, then, is the majestic pattern of this people's history. It is at the end of such a cosmic revolution that this people has become the master and no longer the victim of its fate.

Sometimes we are deeply moved by the concern which others feel for us. Doubts have recently been expressed at a peak and pinnacle of world authority, whether this people possesses creative collectivity, whether its intellectualism has not sapped the original sources of its vitality. My friends, when I see in other people accomplishments against the obstacles and torments of history that can rival this in sheer potency of will and tenacity of purpose, I shall listen to these lectures with a deference which, at this moment, I find it difficult to command. The world is obeying a true instinct when it, therefore, heralds the epic of Israel's endurance and revival, gives to it the fruit of its works and let its praises declare themselves in its gates.

The central theme of this anniversary celebration is, therefore, the stability and permanence of Israel in the life and law of the world community. The issue that faces us is, in our view, no longer survival, for this is assured. We believe that the judgment of history has fallen beyond recall. The choice is between survival in peace, as we would prefer, or survival in stress and turmoil, which we shall accomplish if we must.

We could not always speak with such candor and confidence about our very prospect of endurance. At this anniversary season we evoke that perilous and glorious morning, 10 years ago, in which Israel's statehood was proclaimed. Those were hours when our independence seemed a fragile thing. Faced by threats of massacre, threatened with destruction of our people's redeeming hope, cut off from any sustaining contacts with the world by land, sea, and air, Israel fought breathlessly for sheer life itself in the greatest hazard of all its history. There was no measure to the price of our success or to the consequences of failure. A solitude at once dreadful and sublime attended us in that incomparable hour. These memories come vividly before us at this season of festivity, when we measure the sacrifice by which our statehood was born. This is to be measured not only in terms of millions, out of whose immaculate martyrdom the world's conscience was aroused. It is our custom at this anniversary season to have the armed forces of Israel parade before us in proud review, but, alas, there are missing faces in those marching columns of thousands who have marched away forever, and consecrated Israel's statehood with the highest sacrifice which any man can bring. These memories attend us when we express the ardent hope that the next decade will have everything that the first decade possessed in creativity, without the violence, the bloodshed, and theanguish which marred and disfigured its career.

In the 10 years which have passed since Israel's independence was proclaimed, every possible device has been tried for our undoing. It is hard to imagine that Israel can ever, in the future, face a peril the like of which she has not met and surmounted in the past. But, if our dangers have not changed, surely, a sharp transformation has occurred in our capacity to meet them. Then, after all, we were a mere 650,000; now we are 2 million. Then we were a slender piece of territory along the coastal plain and its adjoining valleys. Now the rhythm of a nation's life is felt across the land from the upper Jordan to the approaches of the Red Sea. Then we stood for many weeks outside the shelter of the international law. Now we live so organically within it that we could not be swept away unless the foundations of international order were themselves engulfed. Surely, then, there must be thoughtful minds in the neighboring world which will soon begin to compare the sterility of conflict with the rich, untasted fruits of tolerance and peace.

We pray that every peace-loving nation will measure its policy in our region by one single standard: Does any proposed action help to confront the Arab world and Israel inexorably with the historic compulsion of living together in peace? Standing at a point of observation in this drama, where it intersects with the opinions of mankind, I have been impressed with the conclusion that the rise of Israel must not be understood as an exclusive act of self-reliance. The primary impulse came, of course, from our own people, resolved to win its just inheritance. But strong currents of international power, in diplomacy, material aid, and sentiment have carried us forward on a swift tide of progress. We shall neither honor, nor serve our future, by denying the gifts which other peoples have brought to the fulfillment and reinforcement of our sovereignty. Many of the vital forces which today sustain the balance of our strength are those which flow towards us from the outside world. The first amongst those which rallied to us, in the hour of peril and solitude, was the United States. The concept of a free Israel had lived in pious American thought and sentiment for 200 years before Israel arose to statehood. Your Founding Fathers were steeped in the ancient traditions of which Israel's eventual restoration was a central and organic part. They knew the debt which they owed to the Hebrew tradition for the truths of individual, social, and international virtue upon which their dream of a new civilization was built.

When this idea entered the domain of practical international relationships, America was the first to recognize Israel in her embattled hour. The United States was first to advocate our recognition by other nations. Joined with her two Western allies in a solemn commitment to oppose any change

in the territorial structure of the Middle East by force, it enacted a doctrine offering further aid and protection to Middle Eastern countries whose integrity and independence was subjected to certain contingencies of aggression, and reinforced its political relationship by a massive infusion of economic, social, and technical aid. And thus, within the past 7 years, we saw the spectacle of a great nation not contenting itself with the formalities of diplomatic relationships with us, but actually taking off its coat and rolling up its sleeves and going down with us into farm and valley and factory to build the physical fabric of a reviving democratic civilization.

In this country, governmental relationships were deepened and enriched in special measure by the deep impulses of public sentiment and support. The special intimacy of these relationships, even in times of transient divergence, have helped to determine the contours of Israel's relations with the whole of this American hemisphere, from its Canadian north, to its Latin south.

Across the seas, the continent of Europe has awakened, more and more acutely to a sense of common destiny with us. Not only because its civilization is born of Israel's original ethical insights, but also because the facts of geography and strategy have created an affinity of fate. It is difficult to see how any threat could engulf either Israel or Europe while the other was left immune from its impact.

In recent months, this pattern of friendships in America and in Europe has been further extended by the first warm winds of harmony and fraternity reaching us from the awakening continents of Asia and Africa. Nations arising to the responsibilities of their freedom, many of them younger, in independent statehood than we ourselves, are integrating something of our pioneering experience and surplus technical and scientific skills into the pattern of their own renascent nationhoods. This intricate pattern of international friendships also has its collective expression. Membership in the United Nations is the foundation of Israel's status in international law. It determines our personality as an evolving unit in the law and life of nations. It determines the responsibility of all others to help us in the extremity of attack. Above all, the presence of our flag in that union of sovereign peoples is, perhaps, the greatest psychological obstacle to the pretense of certain states that we do not exist, or that if they pray hard enough, we might fade away.

The great tribunal of nations, despite the weaknesses and imperfections which have attended its development, has written its story large upon the fabric of our history. In its work for an armistice, in denunciation of the doctrine of nonbelligerency, and, above all, in that undoubted equality which it gives us in the juridical structure of the world community, the United Nations has played an affirmative role in all the movements which have brought Israel to her present stability and strength.

Moreover, any idea, however imperfect in its implementation, must, in the eyes of our people, have its own transcendent identity. No concepts in the modern world of ideas conforms more closely to Israel's ancient heritage or to her modern hope of freedom than this vision of the family of nations united in links of restraint and of law. Striking this balance sheet in Israel's international evolution, I cannot endorse those appraisals of Israel as a kind of orphan of the international storm, a waif thrown up upon the doorstep of nations, subjected only to misunderstanding and to frustration. Many nations longer established than we and greater in material power have languished in ostracism and isolation long after the facts of their sovereignty and their regimes were firmly established.

Those who accomplished the American, the Russian, and the French revolutions had to wait many years before the concert of nations accepted the legitimacy of their power, or regarded them as fit for orderly international intercourse. There are many reasons then why we should abandon an unduly negative appraisal of Israel's international fortunes. First, a people which goes around proclaiming that it is weak and frustrated and that its existence hangs on a fragile thread, is more likely to invite compassion than support; for in this hard world the race belongs to the swift. Second, the decisions and conclusions reached by a nation on the assumption that it is everywhere betrayed and nowhere cherished, are not likely to be correct judgments or wise decisions; despair is not counselor of prudence. Above all, these descriptions of Israel's international status in terms of weakness must be discarded for the cogent, if old fashioned, reason that they are not true. At the peak of this edifice of world support, there stands the faithful Jewish dispersion, sustaining Israel in all the elements of her strength and spirit. The rise of our Nation, in this special context of its universal history, has fascinated the writing and the intellectual preoccupation of our age. But it has, of course, made a special appeal to millions throughout the world who share with us the matchless dignity of descent from the Hebrew faith and tradition.

We are reminded on an evening such as this that Israel, as a historic idea, is much broader than Israel as a geographic fact. And Israel will prosper to the extent she can live within the terms of her history. She is comprehensible, after all, only as a climax in the history of the Jewish people, as the sanctuary of a Jewish civilization, eternal in time and universal in space. We should be making a profound error if, in the quest for normal geographical statehood, we were to cut ourselves adrift from this great enriching complex of sentiments and associations.

As we enter the second decade, Israel's sentiment for American Jews is exclusively one of gratitude, pride, and deep undying brotherhood. We respect the fruitful impact of your zeal and spirit on the life of this great Nation. We admire the unparalleled measure of confidence and creativity to which your community has attained within the vast scope of American history. to which your community has attained America is the citadel of freedom's embattled cause, and your community has fortified its foundations with the strength of the Hebrew ideal. We pray, therefore, for the continued welfare, pride, and strength of your institutions. I fail to imagine any circumstances in which weakness or disaster could come to the main bodies of Diaspora Jewry without weakness and disaster coming to Israel as well. We are truly sons of a single uniting covenant.

Within this broad and common historic fidelity, I bring the tribute of Israel's gratitude and appreciation to the great movement of B'nai B'rith. It has, throughout the years of its growth and service, given faithful support to the basic ideals of democracy, of civic equality, or fundamental human rights, of international peace. Two great traditions merge in the life and consciousness of your movement. The ancient Hebrew pieties with their insistence upon moral standards, with their strong family solidarities, with the deep and impregnated memories of other lands—and this stream of experience converges with the American spirit, with its great fidelity to the concept of enterprise, with its deep passion for liberty, its belief in the forward-looking, progressive character of scientific and technological progress, and its constant sense of lineal derivation from the ancient moral civilization which first flourished in the hills and valleys of our land. It is natural that a movement such as this should have been uplifted by the spectacle of Israel's resurgence, and that it should have played a role of alleviation and of harmony in the relationships between America and Israel in many crucial days.

My friends, the first decade of Israel hangs on the unfinished task. It will never be eclipsed in Israel's memory, for in the eyes of a weary people it kindled the glory of a youthful dawn. But this decade is a prelude, it is not a climax. Before us stretch the challenges of the future. The chief amongst them is the need of progress toward some harmony with the neighboring world. Justice and advantage both command that the second decade shall see us emerge from the rancors and antagonisms which have beset us in the years which have so far unfolded. I say justice, because Israel's existence in her territory of 8,000 miles inflicts no hardship, incurs no injury, justifies no grievance, in the neighboring world. We look without any grudge or envy upon the great pattern of their emancipation.

Ten years ago we came to birth in the Middle East which contained six independent Arab states. And even then the world conscience was so impresed with the disparity between their vast domain of freedom, and the absence for the Jewish people of any sanctuary of life and spirit that it sought an act of remedy through the establishment of Israel's statehood. Since then five new vast sovereignties have been added to the Arab domain, and in each case Israel's hand has been uplifted to admit them by unanimous consent into the family of nations. Surely the world, and especially those nations of the world who have done so much, rightly, to promote this vast emancipation, can rightly expect that our neighbors will not find it difficult, in the triumph of their own political victory, to live at peace with a little nation established in a small corner of their huge domain.

This it is which argues the basis inequity for Israel's approach to the all tormenting problem of its regional relations. We have no ambition to expand, but we are determined not to contract. We do not believe that any statesman in all the five continents of the world, need lose any sleep at night wondering whether Israel is too big.

But even if the vision of peace commands our fidelity, there may be wisdom, at this stage, in a moderate approach toward the problem of its attainment. Peace cannot be imposed. Peace cannot be dictated. Peace is a voluntary impulse of the human will. It may be that Israel's emergence has created wounds that impact too deep to be healed without assistance from the passage of time. In these circumstances, we doubt the wisdom of a constant impatient rush for what is sometimes called a peace settlement. Peace will not be achieved by brooding on its absence or by artificially forcing the pace of its attainment. In the years to come, the beginning of wisdom in international diplomacy may lie not in the pursuit of the ultimate ambition of peace, but rather, in the pursuit of a more modest but crucial ambition—that of security. The greatest need, in my government's judgment, is for greater clarity and precision to be given to existing international commitments to prevent the change of the existing situation of fact and law by force.

This perhaps, if achieved, can lead to an eventual affirmation of common kinship between us and our neighbors. Peace is more likely to arise out of prolonged tranquillity, carefully nurtured, than by some spectacular acts of diplomacy or the clash and thunder of public debate.

Whether the pursuit of this ambition takes short or long time, our hands are full of work. The second decade beckons to us with the challenge of its opportunity.

There is the Negev wilderness to be revived and settled. There is the Jordan River, now running wantonly to waste, to be developed for the sake of greater productivity in field and farm, in Israel and in neighboring states. There is the domain of international communications, in maritime and aerial enterprise, in which we seek a rank which many small nations before us have achieved. There are friendships in the world to be fortified and won. There are vistas of industrial and commercial progress which we have so far barely approached. And there is, above all, the unlimited horizon of intellectual and spiritual effort, the search for symmetry in form and harmony in sound, and the ageless quest of the Hebrew mind for some answer to the question of purpose in the life of nature and the journey of man.

Israel, in her modern revival, cannot promise you that she will rise to her previous levels of inspiration. But at least we have restored to these people the conditions of a creative culture, pride of soil, deep roots in a superbly aristocratic cultural tradition, the possibilities of interaction with other cultures and civilizations and the special dynamism which attends a people in the formative period of its youthful growth.

What we offer you, then, is the spectacle of Israel as a 10-year-old possessing most of the qualities which 10-year-olds of human origin possess. That is to say, we are still growing, but no longer of negligible size. We are full of youthful wonder, but our innocence is not complete. To our elders, amongst the nations, we give a deference that sometimes falls short of adulation. And, of course, nobody really knows, or understands our innermost thoughts.

But with all these 10-year-old qualities there is much in mature accomplishment which justifies thanksgiving and praise. The roads that we have built in these 10 years, the trees that we have planted, the soil that we have redeemed from desolation, the water that we have made gush forth in desert places, the enterprise of commerce and industry that we have promoted, the Hebrew life and letters that we have fostered, the friendships that we have made with other nations, the Jewish pride that we have everywhere exalted—all these pass before us in the panorama of our memory. Perhaps it is fitting that, looking back upon this rich harvest, we might echo the words of your Founding Fathers, the pilgrim fathers, which they uttered when they had endured the rigors of their first winter upon these shores. They said, "We have made a clearing in the wilderness, and another year will see a larger clearing, a better land. We have made a good beginning in an arduous world."

In echoing these words of thanksgiving, we are convinced that you and all your fellow citizens will continue, all your lives, to be moved by the revival of our civilization in that land where the arts of morality were born, and whence the call for universal brotherhood came down across the ages to successive generations of mankind.

Statement on Proposed Area Redevelopment Act Bills

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. HIESTAND. Mr. Speaker, the big show before the House Banking and Currency Committee, staged, not so much by the committee or its chairman, but the political management of the Democratic Party, involving testimony from ex-President Truman, some 10 governors, radical labor leaders, including Walter Reuther, and radical economists and spokesmen, included in the way of honorable mention 1 or 2 business groups.

There was no space for the testimony of the Investors League, for instance. Under unanimous consent, I include the statement by William Jackman, their president, in the RECORD:

STATEMENT OF INVESTORS LEAGUE, INC., TO THE UNITED STATES HOUSE OF REPRESENTATIVES, COMMITTEE ON BANKING AND CURRENCY, ON PROPOSED AREA REDEVELOPMENT ACT BILLS, H. R. 6215, H. R. 5459, AND H. R. 5468 MAY 7, 1958

My name is William Jackman. I am president of Investors League, Inc., a nonpartisan, nonprofit, voluntary membership organization of individual investors, large and small, residing in every State, with national headquarters at 234 Fifth Avenue, New York, N. Y.

I wish to thank the chairman and other members of the committee for the privilege of presenting the views of the American investor on the bills now before you which propose methods of extending Federal aid and assistance to areas suffering from chronic unemployment. The investor has a great interest in seeing the manpower of the Nation fully and profitably employed in the production of goods and services that are needed and wanted by our steadily increasing population. It is the utilization of such productive capacity that brings general prosperity to all of our people and creates that favorable climate under which the investor will gladly risk his capital in providing more and more job opportunities not only for our present working force but for those millions of our citizens who are being added to it every year.

It is unfortunate, indeed, that the problems of how best to help the chronically depressed areas have now become so seriously compounded by the present general business recession which seems to be feeding on itself each day.

Gentlemen, the owners and managers of business, whether large or small, need today as never before, constructive assurance from government at all levels, that hard and intelligent effort, inventive genius, risk-taking and bold ventures into new enterprises will bring them real rewards that will not be siphoned off by incentive-destroying methods of taxation, extravagant waste in government spending, further encroachment of government into private business, outmoded and unnecessary government controls and regulations, and a timid national labor policy which permits and coddles coercive practices and disregard of law enforcement in labor and management relations.

There is ample legislation pending in this Congress which would largely remove these shackles of business and industrial progress and open the floodgates of a new era of job abundance and prosperity.

The most effective force for checking the recession and putting the worker back on the job would be provided by immediate enactment of a sound tax reduction bill—one that would be considered permanent, not just a temporary shot in the arm. Tax reduction bills proposing increases in personal exemptions to be made up by further soaking investors and corporations would further ruin business and investment incentive and help feed the fire of unemployment.

The tax bill before Congress that would cost the Treasury the least, and would instill the greatest business confidence, is the bipartisan Sadlak-Herlong bill which would provide for a gradual reduction in both individual and corporate income taxes over a 5-year period whereby at the end of the period, individual rates would start at 15 percent as against 20 percent as at present, and individual maximum rates would not exceed 42 percent as against 91 percent at present and maximum corporate rates would be reduced to 42 percent as against 52 percent at present. To this bill there could be added provisions to completely eliminate, or cut drastically, the excise taxes on automobiles, communication, and railroad freight and passenger transportation, and last, but not least, a provision that would cut the maximum tax on long-term capital gains from 25 percent to 12½ percent.

This cut in the capital-gains tax would do more than anything else to free billions of locked-in capital for investment, large portions of which would find their way into new and small businesses. And this is one tax cut that would bring increased revenues to the Treasury and help substantially to make up any loss in revenues to the Government resulting temporarily from the other tax cuts.

Several weeks ago the Investors League conducted a limited survey of its average membership, to determine what action investors would take if the long-term capital-gains tax were cut in half. To date we have received 300 replies to our questionnaire indicating that if this tax cut were made 300 individual investors, scattered across the country, would sell stocks having a market value of $25 million, which were acquired at a cost of $10 million and pay a tax of over $1,850,000 on the profits. We are confident that such a survey, conducted on a far broader scale, would indicate that the wealthy investor could be tapped immediately for several billions of taxes which he otherwise wouldn't pay, because, after all, he doesn't have to take his profits.

It is our considered opinion that the Proposed Area Redevelopment Act bills (H. R. 6215 and 5459–5468) should not be acted upon until other legislation designed to relieve overall national unemployment has been disposed of. Otherwise, there is grave danger of opening floodgates of billions of such Federal aid that might be claimed by thousands of additional communities suffering drastically from temporary unemployment which the proposed acts were not designed to cover.

Furthermore, there still remain the gravest doubts as to whether the proposed Federal aid to chronically depressed areas will do more harm than good. There are basic economic and social reasons for the existence of these areas. The industrial frontiers of the Nation are constantly shifting and will continue to do so as new sources of old and new raw materials are discovered, new techniques are employed and new industries are born. New energy resources, shifting methods of freight transportation, overcrowding of big cities, an increasing population, area dispersion of basic defense industries—all these factors and a myriad more must determine plant locations. Proximity to raw material sources, proximity to markets, transportation facilities, adequacy of water supplies, attitudes of local labor unions, courts and law enforcement agencies, and of zooming importance, local business tax attitudes—these are the more important considerations that must be evaluated before determining where to build that new factory or research center. Federal aid cannot change the natural laws of nature and economics. If an area has become chronically depressed, there is invariably a basic economic cause which cannot be cured by well-meaning Government largess.

Vocational training of unskilled workers and financial assistance in moving such workers from the depressed areas to areas where their services could be profitably employed would seem to make better economic sense than moving factories to or building new ones in, these areas which have become economically unsuitable for their existence.

It would seem that such programs, however, could be financed much better by the States and municipalities involved, and by the businessmen of the areas to be benefitted, than by Federal grants and loans.

There are many case histories of depressed communities in which the economic climate has shifted and where new industries can be operated at a profit. These communities through local bootstrap operations have largely recovered. Many more would be able to recover if Federal tax policies were changed in such manner that some of the risk capital of local investors, now sterilized by the high capital gains tax rate, were to be made available for local investment.

Various agencies of the Federal Governmen already have in effect various programs to assist labor surplus areas. The Office of Area Development of the Department of Commerce has a technical assistance program. Various programs of the Defense Department, the Department of Agriculture, the Housing and Home Finance Agency and the Small Business Administration are in part devoted to special assistance to depressed areas.

We seriously doubt whether additional Federal assistance such as provided in H. R. 6215, H. R. 5459, and H. R. 5468 would be of any real help.

H. R. 6215 calls for Federal loans and grants and provides for another new independent executive agency to administer the program.

H. R. 5459 and H. R. 5468 call for loans only and would give the responsibility of administering the program to the Department of Commerce.

For obvious reasons we would highly favor H. R. 5459 and H. R. 5468 over H. R. 6215 although we are far from convinced that any of these bills would go far toward curing the patient.

Gentlemen, I wish to repeat most emphatically my earnest conviction that the distress of the unemployed in all areas can be alleviated most effectively and most promptly by quick passage of a sound tax reduction bill such as outlined above. When general unemployment is checked and when America is back on the road to prosperity, the problems of the depressed areas can best be studied calmly and deliberately, and preferably in an atmosphere removed as far as possible from partisan political considerations. Believe me, gentlemen, I personally am, and I am sure each of the members of your committee and each of our members is deeply sympathetic to the plight of the unemployed. All of us being human, we are all selfish to some degree. But being human, we are all more or less humane. I know of no one who is not anxious to help, in one way or another, to obtain employment for any jobless fellowman who is able, ready, and willing to work.

A Tribute to Former South Dakota Governor Tom Berry

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr, McGOVERN. Mr. Speaker, Miss Eleanor Parker, a senior journalism student at South Dakota State College has written an excellent historical sketch on the role of one of South Dakota's most colorful and illustrious governors, former Gov. Tom Berry. The Cowboy Governor, as he was known, gave the people of South Dakota hope and courage at a difficult time when the State was plagued by drought, depression, and fiscal bankruptcy. Assuming office when the credit of the State was worthless, Governor Berry reestablished the fiscal foundation of the State.

Miss Parker's article appears in the April 1958 issue of the State College Dakotan, a monthly publication of the department of printing and rural journalism of South Dakota State College. Her article follows:

SODBUSTERS—TOM BERRY, DEPRESSION "DOCTOR" DURING DARK 1930'S—HAD PLAN FOR WATER CONSERVATION

(By Eleanor Parker)

Tom Berry was Governor of South Dakota during its most desperate era, the depression years of 1933–36. In this period, dust-storms, hot winds, and grasshoppers destroyed crops. The State's credit was worthless.

Berry's first job as governor was to restore the State's credit, which meant providing treasury funds. With the cooperation of the legislature, he succeeded in reestablishing the State on a sound financial basis.

PHOTOGRAPHED DISASTER

Governor Berry knew South Dakota needed help and was incapable of helping itself, to any degree. The former Jackson County rancher went about convincing President Franklin Roosevelt the State should receive Federal aid.

Berry hired a commercial photographer from Pierre to take pictures of farm damage by the drought and grasshoppers. On the back of each picture was a description of the damage and a history of the family. Many of the families had been on the land for years and had, in most cases, derived good incomes from their farms. But in 1932, the bottom fell out of farm prices, and in 1933 the crops were destroyed. The families now faced starvation.

MILLIONS FOR DAKOTA RELIEF

Governor Berry went to Washington, armed with pictures taken in a dozen counties. He showed the pictures to the President and explained the plight of South Dakota.

Berry succeeded in getting the financial aid of millions of dollars for the State and the cowboy Governor acted as the first administrator of the funds, serving without salary.

The drought taught South Dakotans a lesson their Governor had already learned—water conservation. During second term, Berry insisted that men working for Federal wages build dams, wherever practical. Hundreds of dams were constructed in all parts of the State. Each now serves as a monument to the wisdom of a rancher who learned the value of water.

The First Annual World Brotherhood Award

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. WILEY. Mr. President, "Behold how good and how pleasant it is for brethren to dwell together in unity."

This ancient biblical admonition symbolizes the expressions in all the great religious faiths of mankind on the need for cementing the ties of the brotherhood of man and the fatherhood of God.

In carrying out the great tradition of brotherhood, I am pleased to note the fine work of World Brotherhood, which was established in 1950 by men and women who believed in a spiritual or moral interpretation of the universe, so as to promote understanding, justice, and cooperation among people differing in religion, race, nation, social status, or culture.

On April 29 two outstanding champions and practitioners of brotherhood, Philippine Ambassador Carlos P. Romulo and Dr. Arthur H. Compton, cochairmen of the World Brotherhood Organization, announced the winners of the World Brotherhood award for communitywide activities promoting international understanding and friendship with communities overseas.

As a senior member of the Senate Committee on Foreign Relations, it is my pleasure to salute World Brotherhood, and to commend the winning cities: Rochester, N. Y., and Worthington, Minn.

On other occasions on the floor of the Senate, it has been my pleasure to point up other activities by dedicated individuals and organizations which have been aiding the cause of world peace, by like-minded efforts to transcend the barriers of misunderstanding and unfamiliarity.

I send to the desk the text of the release from World Brotherhood, describing the awards. I append to it the statement of the judges, describing the worthy reasons for the selection of the prize-winning communities. I include thereafter a list of the distinguished officers and members of the general assembly of World Brotherhood. The high caliber of these individuals bespeaks the worthy background of this organization. I ask unanimous consent that these materials be printed in the Appendix of the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WORLD BROTHERHOOD,
New York, N. Y., April 30, 1958.

TWO AMERICAN CITIES RECEIVE AWARDS FOR INTERNATIONAL ACTION PROGRAMS

The cities of Rochester, N. Y., and Worthington, Minn., have been named as winners of the first World Brotherhood award, for community-wide activities for promoting international understanding and friendship with communities overseas. The announcement was made today by Philippine Ambassador Carlos P. Romulo and Dr. Arthur H. Compton, cochairmen of the World Brotherhood organization from its headquarters in New York City.

The brotherhood awards were divided into two categories, one for cities of less than 100,000 population and one for cities of 100,000 or more. The selection was made after a nation-wide survey of community programs of international action in such fields as student exchange, hospitality for foreign visitors, foreign affairs education, town affiliation, and other areas of international human relations. In addition to the Rochester and Worthington awards, special citations were also announced for San Jose, Calif., Montclair, N. J., and Hagerstown, Md. Judges in the competition were Edward H. Barrett, of the Columbia School of Journal-

ism; Mrs. Ogden Reid, of the New York Herald Tribune; Mr. A. L. Cole, of the Reader's Digest; Mr. John Loeb, of Carl M. Loeb, Rhoades & Co., and Dr. Everett R. Clinchy, president of World Brotherhood. The presentations will be made by General Romulo at a reception on June 3, 1958, at the World Affairs Center in the Carnegie Endowment Building in New York City.

A special feature of the ceremonies at the World Affairs Center will be the presentation, through World Brotherhood, of a Pan American World Airways community friendship grant which will provide each city with the opportunity to send a community affairs leader on a visit to a selected overseas city, plus a reciprocal visit to the winning American city by a community leader from abroad. The American communities are being asked to explore the possibility of arranging these exchanges with cities in underdeveloped areas or behind the Iron Curtain.

In a joint statement prepared by the panel of judges and issued by Dr. Everett Clinchy, the records of Rochester and Worthington were described as "impressive testimony to the idealism, energy, and organizational ability of the citizens who make up these communities * * * a source of profound hope to all who have had the privilege of reviewing this material." Stressing the difficulty of singling out activities of specific organizations, the judges cited as samples of Rochester's achievements the work of the Rochester Association for the United Nations, the teen-age diplomats plan, the Rochester Museum's Asian Month, the Industrial Management Council's foreign visitors hospitality program, the Rochester Chamber of Commerce and its program for new citizens, Rotary's United Nations fellowships, the university's world-awareness project, and the many contributions of Rochester's churches and public schools to international understanding. Special tribute was also paid to the Rochester press for its coverage of the international scene and to Eastman Kodak and other Rochester industrial concerns.

Worthington, which has a population of less than 10,000, was selected for its successful 10-year-old program of affiliation with Crailsheim, Germany, and for its unique program of hospitality for foreign visitors—a program which has included a Russian farm group, Rumanian election observers and distinguished journalists, teachers, etc., from many continents.

Among the runners-up, San Jose was cited for its Pacific neighbors program which includes a citywide exchange with Okayama, Japan; Hagerstown for its program with Wesel, Germany, and the work of its public schools; and Montclair for its overseas neighbors program with Graz, Austria.

World Brotherhood, which has headquarters in Europe and Asia as well as in the United States, is a nonprofit organization devoted to international human relations. Its international directorate includes the 5 cochairmen, Arthur H. Compton, Nobel prize physicist; Ambassador Carlos P. Romulo; Paul-Henri Spaak, and Mme. Vijaya Lakshmi Pandit, and Chancellor Konrad Adenauer, as well as distinguished citizens of 21 countries.

The international community award will be given annually, and after this year will include consideration of communities in other countries which have developed similar programs of action for creating international and intercontinental bonds of friendship and cooperation.

[World Brotherhood, established in 1950 by men and women who believe in a spiritual or moral interpretation of the universe to promote understanding, justice, and cooperation among people differing in religion, race, nation, social status, or culture; Building for Brotherhood, 43 West 57th Street, New York, N. Y.; Telephone: MUrray Hill 8-7530; cable address: NYWORLDBRO New York. Cochairmen: Arthur H. Compton, Paul-Henri Spaak, Carlos P. Romulo, Konrad Adenauer, Mme. Vijaya Lakshmi Pandit; administrative president, Everett R. Clinchy; executive secretary, Margaret Grant]

STATEMENT BY JUDGES IN CONNECTION WITH WORLD BROTHERHOOD AWARD TO THE CITIES OF ROCHESTER, N. Y., AND WORTHINGTON, MINN.

PRELIMINARY REMARKS

It can be stated without qualification that the selection of 2 winning cities out of the 5 nominated for the World Brotherhood community awards was a difficult and almost impossible task. The record of accomplishments by all of these five cities, as evidenced by the material submitted to World Brotherhood is impressive testimony of the idealism, energy and organizational ability of the citizens who make up these communities and a source of profound hope to all who have had the privilege of reviewing this material.

In making our final choices we had, of course, to establish certain carefully thought out criteria based upon the objectives of World Brotherhood as developed by the founders and administrators of this organization. For example, although recognizing fully the potential impact of these programs abroad, as they reflect favorably upon the American scene, or serve to advance our national interests, we felt called upon to give an even higher priority to international community action as a two-way street leading toward a mutuality of interest, with concern and respect for mankind as a single family unit. Thus, in examining the local "hospitality" programs for foreign visitors, we looked not only for evidences of "impact" upon the foreign visitor, but also for evidences of opportunity for both parties to share their ideas, traditions and experiences. We also found ourselves concerned with each community's efforts, through press, radio, television, and public meetings, to supplement the action phase of its program with broader aspects of international education. In this connection, we tried to pay particular attention to the extent to which each community had utilized the resources of national nongovernmental organizations specializing in areas of international action.

Another point which came up frequently in our deliberations was that of "community-wide participation." In other words, was the continuing burden of the overseas program carried by a limited group of enthusiasts, or was it an "across the board" operation involving a true cross section of the community? Was leadership diversified, or did it seem to fall upon 1 or 2 individuals or organizations? What efforts had been made within the communities in question to utilize the resources of local minority groups whose experiences reflect, in microcosm, the worldwide problems of understanding?

It was felt that the 2 awards should be given to cities in different categories, 1 to a city with population over 100,000, the other to a smaller city. Thus the awards would point up the fact that a city need not necessarily be large to achieve real results in international relations.

In short, in addition to all the obvious criteria for selecting a winner, many factors were involved which caused a considerable amount of soul searching on the part of the five judges. Recognizing this fact, we were surprised and frankly pleased to find that we had, somehow, each in our own fashion, reached similar conclusions as to the cities of Rochester, N. Y., and Worthington, Minn. Here are those conclusions:

ROCHESTER, N. Y.

Rochester is unique in that no single project, such as an affiliation with a specific overseas community, was needed to mobilize its resources in a community effort which, in the opinion of the judges, has few parallels in the history of peacetime international action. By the same token no one community leader, organization, or industrial group can claim credit for launching or maintaining the total program. It is true that the Rochester Association for the United Nations has provided the community with competent and highly valuable guidance, and that Rochester has had unique advantages in developing world perspectives through its great university, its Eastman School of Music, and the presence of outstanding international industrial institutions. The fact remains, however, that the sense of international responsibility which permeates the Rochester scene is intrinsically the product of individual citizen response to the challenges of the world outside. Rochester's highly successful Teen-Age Diplomats plan originated as a result of a car-pool discussion. Its program of scholarships for young people to study the workings of the United Nations came out of a series of Rotary lunches. Its concern for the American Farm School in Greece and the Salzburg Seminar in American Studies (to mention but a few of Rochester's specialized overseas interests) grew out of the experience of local citizens, and Rochester's pride in their accomplishments.

In view of the variety and scope of Rochester's international effort, we find it difficult to single out individual projects for special attention. The Rochester Association for the United Nations, with some 4,000 members devoting themselves to various international activities, is an obvious source of energy and enthusiasm with the city. Rochester University's world awareness study program has made a unique contribution, as has the accelerated foreign-language program of the city's school system. Rochester's support, through its churches, of the program of the World Council of Churches, is matched only by that of New York City; its UNESCO-sponsored Asian Month, held at the Rochester Museum, leads the Nation as far as local support is concerned.

Furthermore, in Rochester, the judges were impressed by the quality and extent of industrial participation in Rochester's international life. This is manifest at once through the many corporate gifts to worthy international causes, but also through the initiative and leadership shown by employee and management groups in inventing and carrying out specific plans for the international exchange of people, ideas, and friendship.

We wish it were possible to pay tribute to each and every group or individual who has contributed to the story of Rochester and World Brotherhood, but that is manifestly impossible. To sum up the case, we would like to give hearty endorsement to the words of Representative KENNETH B. KEATING, Congressman from the 28th District, New York. Congressman KEATING when informed of

Rochester's nomination for this award, wrote:

"The city by promoting brotherhood on a local level, and through its cognizance of the need for the worldwide extension of this concept, is making a substantial and effective contribution to world peace. Rochester is truly an example of living brotherhood in action. It is certainly worthy of the recognition of the World Brotherhood community award."

WORTHINGTON, MINN.

Worthington is one of many small American communities which, shortly after World War II, experimented with a new formula for international understanding called town affiliation. As early as 1947, it paired off with the city of Crailsheim, Germany, and began the first American community exchange of friendship and ideas with the citizens of a former enemy country.

Today, 10 years later, the Worthington affiliation with Crailsheim is still going strong, and is recognized throughout America as one of the most successful and promising programs of this type. Its impact in Crailsheim and in Worthington alike, as evidenced by the material sent in from Worthington, is growing steadily.

The judges were impressed by the tone of this affiliation. The initial statement of purpose drawn up in 1947 is a solid and impressive outline of Worthington's determination to organize its efforts along realistic lines, avoiding undue fanfare, and stressing the mutuality of interest that must be cultivated before people can learn to appreciate and understand one another. Worthington has not deviated from these basic principles. When, during the early stages of the program, the emphasis was upon material aid, Worthington gave generously without condescension, and with a deep sensitivity to the pitfalls of overdone charity. In 1957, when they sent their two community ambassadors to Crailsheim to live for one year, these young men were given comprehensive and successful training, before their departure, in the German language and in backgrounds of German history and life. The Worthington newspaper and radio station have utilized this affiliation to present the broader aspects of German-American understanding in a lively and comprehensive fashion. German visitors have become one of the family, and one gets the impression that the distances separating these sister cities has somehow lost meaning.

In considering the Worthington story, the judges soon realized, however, that the Crailsheim affiliation, remarkable as it has been, was merely the triggering mechanism for a communitywide response to world issues which, as documented in the Worthington exhibits, left several of the judges wondering how the people of Worthington found time for anything else. Foreign student hospitality programs, a continuous stream of distinguished foreign visitors (including Russian farmers, Rumanian election observers, Indian editors, etc.), Hungarian refugee programs, pen-pal activities, and overseas exhibits are merely a few of the specialized activities which Worthington seems to take as a matter of course in the pursuit of international brotherhood. Here, again, in all of these programs the judges noted a genuineness, a desire to be impressed rather than to impress and an almost total lack of self-consciousness in dealing with men and women from every corner of the world.

As in the case of Rochester, Worthington seems to be thoroughly self-reliant in the conduct of its international affairs, calling upon the appropriate governmental and private national agencies when they are needed, and knowing exactly where to turn to find them. There is evident desire, however, to remain unexploited for any but the broadest international purposes, and a healthy insistence on deeds rather than words with respect to the large amount of national and world publicity Worthington has received.

With regard to the communitywide aspects of the Worthington story, there is no question whatever but that leadership and initiative is built upon the broadest possible foundations. The list of participating organizations and individuals is a roster of the community itself.

As for the extent of Worthington's challenge, the judges could not fail to note the amount of intelligent self-questioning that went on in the 1947 selection of an enemy city; they noted Worthington's comparative isolation from the great cosmopolitan centers on either coast, its lack of large industrial resources or habitual world travelers and the predominately rural background from which these manifestations of world responsibility have developed.

Worthington, in short, was a source of deep inspiration to the entire committee. It was a privilege to review its remarkable story and to select it as the winner of the World Brotherhood Community award for towns within its population range.

SPECIAL CITATIONS

Having chosen Rochester, N. Y., and Worthington, Minn., as recipients of the first annual World Brotherhood Community Awards, we were not content to close the case without expressing our recognition of the impressive records of 3 other communities—Hagerstown, Md., Montclair, N. J., and San Jose, Calif. These cities, each in its own way, have developed magnificent programs which bid fair to go on paying handsome dividends, in terms of goodwill, mutual appreciation and enjoyment, to their own citizens and to the citizens of the communties with which they have developed bonds of friendship.

In fact, we felt that each of these communities merited a special citation for the prodigious efforts put forth and the results achieved.

HAGERSTOWN, MD.

For its enduring and energetic program with the city of Wesel, Germany out of which has developed, among other things, a 2-way exhibits program which is unequalled by any other community in the United States;

For a school participation program in world affairs that is unique in the experience of the World Brotherhood judges;

For its energy and warmth in the development of local hospitality programs for foreign visitors, and for the many ambassadors it has sent abroad;

For its enthusiasm in providing the facilities and community background to meet the program requirements of United States governmental agencies and private organizations working in the field of international citizen diplomacy.

SAN JOSE, CALIF.

For exceptional imagination and progress in the development of an outstanding program of affiliation with the city of Okayama, Japan during the year 1957;

For its long and expanding tradition of education in world affairs; its attention to local minorities and their inclusion within its overseas programs;

For having given, during the past year, exceptional meaning to the name "Pacific neighbors," by the staging of impressive ceremonies and the development of hospitality and exchange programs with the Far East which give promise of producing immediate and continuing contributions to citizen understanding between East and West.

MONTCLAIR, N. J.

For initiating and developing since 1950 an "overseas neighbor" program with citizens of Graz, Austria, which has become a model for many cities of the world and which has unfailingly demonstrated the oneness of the family of man wherever human beings can meet face to face and freely exchange their thoughts and aspirations;

For its modest but highly effective programs in the field of student and trainee exchange; and for the warmth of its hospitality to foreign visitors and foreign students in nearby universities;

For its joy and exuberance in promoting appreciation of differing world cultures through folk dance, music, and all the arts, and for sharing its technical skills in the field of medicine, government, and social organization with others in many areas of the world.

Appendix

Law Is a Way of Life for Charles I. Francis, of Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 7, 1958

Mr. JOHNSON of Texas. Mr. President, when the University of Texas School of Law recently observed its sixth annual Law Day, the program carried the following dedication:

Law Day, 1958, is gratefully dedicated to Charles I. Francis, who, because of his unselfish and tireless efforts in behalf of our law school, has been recognized by the faculty and students as the year's outstanding alumnus.

The recognition is well deserved, as those of us who know Charles I. Francis readily understand. He is a Texan of whom other Texans are proud. He is a man of knowledge and understanding, an attorney of distinction, an American patriot of great vision, and my genuine and valued friend.

Mr. President, I ask unanimous consent that an article outlining the career and dealing with the personality of Mr. Francis, published in the Houston Post, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Houston (Tex.) Post of April 27, 1958]

LAW AND UNIVERSITY OF TEXAS ARE WAYS OF LIFE FOR CHARLES FRANCIS

(By Nathan Broch)

The skipper of the German freighter *Kassel* was probably livid with rage.

But Charles Inge Francis didn't care.

He was swimming ashore with all his might. From buoy to buoy. Reaching toward the German shoreline and the city of Bremerhaven.

When Francis finally got into town that July day of 1914, his Galveston-bought seersucker suit began to shrink fast under the onslaught of the summer sun.

"I looked like someone in a Buster Brown suit," he chuckles. "Particularly after I got on one of those Bremerhaven streetcars. You see, I had made arrangements to have my baggage brought ashore through a friend. So I had to wait a little while * * *."

While waiting, Francis purchased a bicycle. He used it for his first tour of Germany and other parts of Europe.

The Francis who literally jumped ship at Bremerhaven was a 20-year-old Texan from Denton, a junior at the University of Texas, eager to see the world—even if he had to sign on as a humble hand abroard a freighter to do so.

The Francis who told the story of that adventure is 64 years old, a fascinating combination of country lawyer, criminal defense attorney corporation counsel, and scholar.

He was destined to return to Europe several times in the next 44 years. But he would never have to jump ship again. He would be traveling in comfort to the Old World as one of the most distinguished legal minds of the New World.

OUTSTANDING UT LAW ALUMNUS

The distinguished Francis career found high recognition Friday when the Houstonian was the center of attention in Austin for Law Day of the University of Texas Law School. The school dedicated the day to Francis. What's more, it named him the outstanding alumnus of the year.

This is as it should be. Francis' life and career have been closely tied with the university where he obtained his bachelor of arts, bachelor of law, and master of law degrees. He also played on the university's baseball teams and served on its debating groups.

Also, Francis is directly responsible for one of the most unusual funds in the country: The University of Texas Law School Fundation, which, so far, has raised some $400,000. Proceeds from this fund are used to supplement the salaries of distinguished professors of the law school.

"We have to stop the migration of our finest faculty members to such places as Harvard, Princeton, and Yale," says Francis. "If we can keep them in our law school, it's worth supplementing their salary. That's what the foundation is doing, mostly upon recommendation of the school's dean."

But these salary supplements are not handouts.

"A professor must really do something for the money," says Francis. "He is usually engaged in some special research or busy writing a book. A good teacher is always doing some research."

FIRST, LAST, ALWAYS A TRIAL LAWYER

Francis' attachment to the law school is more than the traditional affection a man feels for his alma mater. It is an integral part of his ever-searching love and respect for the law as a living thing, a part of America that keeps growing in scope and refinement along with the growth of the country.

The widening scope of the law was found by Francis in oil and gas litigation, a field of deepening complexities that has many of its roots right here in Texas. It is here that the country lawyer and corporation counsel combine in Francis to explore America's youngest legal frontier.

This is also the foundation on which he built his association with the Texas Eastern Transmission Corp., which he serves as counsel, vice president, and director. Francis will retire as an officer of the firm when he reaches 65 in September.

"I'm only the legal quarterback of the team that started and runs Texas Eastern," he says with a smile.

The same thing was the driving force behind his efforts to modernize the Texas judiciary in 1954, when he served as chairman of the special State bar committee on constitutional revision. The modernization effort failed when a majority of Texas lawyers voted against it. But Francis remains convinced that the State "one of these days" will revamp its judicial system.

It is only natural that a man so deeply and broadly concerned with the law should have formulated a distinct view on the South's problem of desegregating its public schools.

"I agree with United States District Judge Ben Connally that desegregation must proceed with deliberate speed," says Francis. "However, if it's done too fast, it will hurt the Negroes and if it's done too slowly it will hurt all of us."

Despite his immense scholarly background—or possibly just because of it—Francis is first, last and always a trial lawyer.

He was the defense attorney in the first Texas murder trial ever to bring special reporters down here from such places as New York and Chicago.

That was in the twenties when a mayor of Wichita Falls, where Francis practiced law for many years before coming to Houston in 1934, was on trial for murder in the killing of his son-in-law. The mayor's wife was tried separately.

PAYS TRIBUTE TO CRIMINAL LAWYERS

When Francis completed his defense of the mayor, his client drew a manslaughter conviction but was paroled by the governor after serving a very short term. The mayor's wife was later tried and convicted. She never served her sentence, as the governor pardoned her.

Says Francis after many years in the ranks of corporation law, "I don't know of any higher calling a lawyer could have than the practice of criminal law."

James V. Allred, who was to become attorney general and later Governor of Texas, was the prosecutor in the famous Wichita Falls murder trial.

Years later, Allred was to retain Francis as his defense attorney before the Judiciary Committee of the United States Senate when Allred's appointment to the United States fifth circuit court of appeals was being contested.

Francis pioneered as a codiscoverer of the important Church-Fields Pool in Crane County in 1926. A sand-stuck driller brought in a profitable well at 3,100 feet. This was in west Texas, the really wild and woolly west, and there wasn't anyway to get the oil out of the place economically.

"So, we sold out to Magnolia Petroleum Co.," says Francis. "Sure we made a good profit—but they made many, many millions on the deal in the years that followed."

Does he consider himself a lawyer-oilman?

"No," smiles Francis, "I'm a lawyer—that's all."

And that's plenty, the way Francis breathes and lives the law. Just take a quick look:

Admitted to the bar in 1917, he joined the Wichita Falls law firm of Weeks & Weeks in 1919, soon rising to partner in the team of attorneys. By 1933 Francis was established as a noted legal specialist in oil and gas matters. He had married the former Adelle Adickes of Wichita Falls and had become the father of two daughters. Now Mrs. S. P. Farish, Jr., and Mrs. Jack R. Winston, both live in Houston and each has three children.

In September 1933, Francis was appointed special assistant to the United States attorney general and served as counsel for the Petroleum Administrative Board in Washington. He represented the Federal Government in some of its most important oil and gas litigation. In 1934 Francis took the

advice of a fellow Denton County man, Hugh Roy Cullen, and moved to Houston, where he was a partner for 16 years of one of the biggest law firms in the Nation, Vinson, Elkins, Weems, and Francis.

In 1940 Francis served as a special consultant to the secretary of war and in 1941 he served another stint as special assistant to the United States attorney general. In 1944 he was on duty as an expert consultant to the United States Department of the Interior. Intermittently he also represented the State of Texas in important cases involving oil and gas conservation.

While doing all these things, Francis also served as a regent of the University of Texas for several years and was chairman of the university's land committee. He was twice elected president of the university's ex-students association and of the alumni association of its law school. He has also given of his time as a regent of Denton's North Texas State College and trustee of Dallas' Hockaday School.

Francis is very modest about his major achievement, the part he played in the creation of the Texas Eastern Transmission Corp., one of the world's pipeline giants. "I did my little bit," he says. "We worked as a team."

The story of the company's purchase of the Big and Little Inch pipelines from the Federal Government for $143,127,000 is now American industrial history. Texas Eastern was the highest bidder on the pipelines and won the award. The property consisted of 3,182 miles of pipeline and 1,993 miles of valuable right-of-way, extending from Texas to the east coast.

"It is rapidly becoming one of the Nation's largest pipeline systems," says Francis.

But Francis feels now that the gulf coast's traditional markets in the East are being cluttered up by imported oils. He sees Texas Eastern's future as a product carrier in America's heartland, the Midwest.

The aggressive sales policies of Texas Eastern were demonstrated recently when the company offered reduced rates for oil shipments scheduled over the lines 2 to 4 months in advance.

Francis has come a long and enviable way from the swim toward Bremerhaven to his near-austere offices in the Mellie Esperson Building.

But somehow, the young Texan in the shrinking seersucker suit and the mature attorney and grandfather, clad in conservative brown, are still very much in the swim of those things that are essential to make a good, full life.

Remarks of the Honorable John E. Fogarty at the 75th Annual Meeting of the Maryland State Dental Association, at the Lord Baltimore Hotel, Baltimore, Md., on Monday Evening, May 5, 1958

SPEECH

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

Last winter when I had the opportunity of addressing the annual meeting of your parent organization in Miami I also had the pleasure of meeting your own Dr. Joseph P. Cappuccio, who as you probably know has roots in my own State of Rhode Island. Dr. Cappuccio comes from a well-known family in the town of Westerly, R. I. His mother and father are among the most respected people I have been privileged to know. His two brothers, Frank and Louis, enjoy a statewide reputation in the field of law and are considered to be two of the outstanding attorneys in our State. Dr. Cappuccio very kindly invited me to meet with you here at your 75th anniversary, and I somewhat eagerly accepted for a number of reasons.

The first set of reasons has to do with my own particular view of the dental profession. I know your field, of course, from personal experience not only as a husband and father, but also as an individual who has benefited from the professional care I have received. As a Member of Congress, I can perhaps represent with a fair degree of accuracy the attitudes toward dental health of my own constituents in the State of Rhode Island. I also chair the committee in Congress which bears primary responsibility for the health appropriations of the Federal Government, and thus have gained some insight into both the past accomplishments and the future problems of your profession.

The second set of reasons has to do with my own attitude toward annual meetings, especially those of a professional nature. Annual meetings are a time for interchange of knowledge, a time for solidifying professional and organizational relationships, a time for comradeship and relaxation, a time for rededication by the individual to the goals and principles of the group. And they are a time for looking ahead for definition of tomorrow's problems, and for consideration of how those problems can best be met.

I would not presume to discuss or even to state what those problems may be; but I do have some thoughts to share with you observations and questions reflecting my views of dental health.

In my 15 plus years in Congress, serving on a committee considering, among other things, the national support of medical and dental public health programs conducted through the Public Health Service, one thing stands out prominently in my mind. It is this: tremendous progress has been made in those years toward the concept of man as a single biological entity and not merely a conglomerate of parts. Associated with this has been progress toward a concept of the interdependence of all science that seeks to protect man in this increasingly complex environment that he has created. This unity, strangely enough, becomes more apparent even as the range of the problems and the number of approaches to their solution increases. Thus we see around us today a proliferation of specialties and subspecialties, of disciplines and subdisciplines. We see categorical programs, both public and private, and subcategories within each major group. And yet, with all this, as man's knowledge grows, the artificial boundaries tend to disappear.

I have observed in the past few years that those who comprise the specialties and disciplines of the dental profession are gaining ever-increasing stature in the health field. Associations such as yours, as well as the smaller and larger ones in your field, share in bringing about this justly deserved measure of prestige. I am sure I need not remind you that recognition such as this is of a somewhat temporary and fleeting nature. The lasting image of your profession, I am sure you will agree, depends upon demonstrated competence and thoughtful leadership and quality service. If you find your image to be to your satisfaction today, it means that you must redefine your goals, set them at a higher level, and plan their achievement in the years ahead.

As I mentioned at the Miami meeting, the American dental profession has a peculiar added responsibility, especially when dentistry is considered as a categorical disease problem along with others such as heart disease, cancer, arthritis, and others. Most of the disease categories are represented nationally by voluntary health agencies, which, among other functions, help the profession in obtaining public understanding and support for needed activities. There is no voluntary organization for the dental profession, and I am sure that the American Dental Association recognizes this fact by acting both as the voluntary agency and the professional group. State, district, and other regional professional organizations should also give special emphasis to the inherent voluntary aspects of their respective roles.

Several questions come to mind in this connection. Do the people of Maryland know the nature, the extent, the importance of dental illness? Do they know what you have done, either as a group or as individuals, to improve the quality and distribution of trained individuals who can help them achieve better dental health? Apart from tooth decay, do they understand the meaning of dental illness? Have they been given every opportunity to be informed concerning the scientific evidence in support of fluoridation of public-water supplies, the topical use of fluorides, and other measures for the prevention of tooth decay?

Questions such as these suggest the rapid changes that have been taking place in dental practice. Just a few years ago, one had to be almost fatalistic about tooth decay and other types of dental diseases. In recent years, as advances in dental science have been applied in dental and public-health practice, we know that there is much that can be done. Even in the face of revolutionary advance in scientific knowledge, remnants of the fatalistic view remain. This view should be combated, primarily for the sake of the people who, if they understand, will find ways to support both your professions and your practices in order to achieve better total health for themselves and the members of their families.

Communication immediately suggests itself as one means of overcoming the fatalistic view; communication not only within your profession, but also between your profession and the people you serve. The soundest basis for this type of activity perhaps begins, as charity, at home. Once having established an effective means for communication within your organization, it becomes much easier to proceed to effective communication with those you serve. I am happy to know that the Maryland State Dental Association has established a fine professional journal of its own. I am sure that all of your members and, in turn, their patients will benefit from this very effective medium of communication. As I paged through the first issue of the Journal, I was impressed by the role that Maryland has played in the development of dental literature. In fact, I found that the first dental periodical, the American Journal of Dental Science, was edited and published here in Baltimore over a hundred years ago. Although that journal yielded to others, many of which similarly were published here, each made its own contribution to better understanding among the dental profession in Maryland and throughout the Nation. As the first issue of the new Journal states so aptly: "The altered conditions of the present day have been created by revolutionary developments that have come to the world during the past quarter of a century. Every social institution of service to mankind has been affected by the changes that have taken place in the social, scientific, economic and political attitudes of the people of the world. The Journal is coming on the scene at this opportune time to take its place and to do its part in the

adjustments which must be made to fit dentistry to the demands of the modern era."

Now I should like to focus a bit more closely on some of the altered conditions and revolutionary developments referred to in that editorial. They have to do with the relationship between you, your profession, and the Government. This is a matter of deep interest and concern to me, and elements of that relationship have been revealed to me with increasing frequency as each year for the last 16 years I have considered the Public Health Service's dental program in terms of their appropriation needs.

I have found that there has developed in the dental field during this period of time a pattern of cooperation which assures rapid progress toward objectives which the Public Health Service and the dental profession share. I have found that the Service seeks in all of its activities to supplement, and to complement, and not to duplicate or dictate. One measure of how well it achieves this goal is the degree to which it receives the support of your association, other State associations, and the national organization.

One program of the Public Health Service is concerned with developing methods for relieving personnel shortages in the dental field and extending services to patients. These studies include the educational resources for dentistry and dental hygiene, techniques for determining the efficiency of specific dental operations, and devices for better recording of dental services and needs. One of the studies in this program was conducted in my own State of Rhode Island, where over 5,000 children were followed for a 7-year period to see how the problems of accumulated and maintenance dental care were met in a specific segment of the population. The study provided evidence that dentists can be utilized more effectively if there are three dental asistants available to support every 2 dentists. It also showed that regular dental care, including application of topical fluorides, reduces the amount of teeth decay dramatically.

As a footnote to this problem of personnel needs, you may be interested to know that the House Interstate and Foreign Commerce Committee conducted a study of medical and dental schools, which included a summary of practicing dentists related to the population of each State. In Maryland, for example, we found that for the period included 1900 to 1955 the ratio stood at the lowest level in 1955: some 34 dentists per 100,000 population as compared with 56 in 1900 and 50 in 1930. The pattern I have cited for Maryland was generally repeated throughout all sections of the country. For the United States as a whole, the number of practicing dentists declined from 58 per 100,000 population to 46 in 1955. These facts are all the more serious today when more and more people are becoming aware of the need for more and better dental care.

The American Dental Association, through its Council on Dental Education, has taken a realistic view of the current and impending national shortage of dentists. Several steps have been taken and are being planned to meet this problem. One step has been in the establishment of new dental schools. Since 1946, seven new dental schools have been opened, and another four are currently being planned. Based upon the assumption that the number of dental graduates will increase to 3,360 by 1961 and continue at that level through 1975, and that the United States population will rise to about 221 million by 1975, the disparity between the number of practicing dentists and the number needed to regain 1930 levels will be even wider.

Another facet of your profession that can be supported to improve the level of dental care in this Nation is in the improvement and expansion of research facilities. A relatively new program, now in its second year, is giving asistance to dental schools under the Health Research Facilities Act. Under this program, 9 grants in the amount of 938,000 were made to dental schools to aid in the construction of research facilities; in addition a few grants have been approved for combined medical and dental research facilities. This $90 million, 3-year program is limited to research construction. In the last session of Congress I introduced a broader bill under which $300 million would be available under a 5-year period of either teaching or research construction. Under this plan $40 million would be earmarked for dental schools. Legislation of this kind is badly needed, and I intend to continue to press for passage of this bill.

Another area of Public Health Service responsibility is in the support of research projects through grants. Since 1950, through the National Institute of Dental Research, dental schools and other non-Federal institutions have received research grants, and more recently, fellowships of various kinds. Two years ago, in the hearings held by the Appropriations Subcommittee, we found general agreement that the ultimate answers to the problem of dental disease must be found by research on etiologic factors, fundamental tissue changes, metabolism, heridity and epidemiologic techniques. We heard many good reasons for the expansion of the research grants program, stimulating the individual participation of dental schools, hospitals, and other scientific institutions.

We found that under the dental research grant program that then existed, it was possible to support only about 1 of every 6 projects that the National Advisory Dental Research Council recommended for approval to the Surgeon General. Consequently, in fiscal year 1956, only 45 projects were supported in some 22 non-Federal institutions. My committee in the House of Representatives recommended a 5-fold increase to about $2.5 million for dental research for fiscal year 1957. The National Advisory Dental Research Council set up a special committee, in light of this new support, to encourage and stimulate research in neglected areas. In the 12 months that followed, the number of pending requests for research project grants increased more than 10-fold, and the number of projects supported rose from 45 to 240. We found that not only the number of grants increased, but there was also a very striking increase in the number of different types of institutions participating in the research program. Today, the number of research projects now supported is at about 300, distributed among 82 institutions in 32 States and 3 foreign countries. I am happy to see, too, that over 90 percent of the dental schools now have active research projects.

It seems clear that the increased opportunities which have been provided during the past 2 years will deeply affect the course of research in dental schools, and, in addition, also have a significant effect on the quality of dental education. Another benefit of this special effort is that presently available funds have been expended largely for the purpose of continuing, on a broader and firmer base, the support of individuals who had received grants in prior years. Thus investigators, for the first time, now benefit from the assurance of stability through long-range support.

Now I would like to turn for a moment to the dental research program conducted at the National Institute of Dental Research in Bethesda. In the past few months, I have found that dentists throughout the country are aware of this program and its future needs. I, and members of my committee, have received countless letters from members of your profession in practically every State, urging construction of the Dental Research Building in Bethesda. Despite a lack of suitable laboratory facilities, the scope and variety of dental research there has grown appreciably. The committee has been particularly impressed by studies showing that many dental defects are heriditary, studies using the electron microscope indicating the precise way in which tooth decay attacks tooth enamel, and studies of the chemical composition of saliva in persons with and without dental caries.

It was somewhat distressing to the committee, therefore, to note that the administration's proposed budget for fiscal year 1959 omitted this project in spite of the fact that it had already been authorized by the Congress, that the final plans would be completed before July of this year, and in spite of the present high rate of unemployment and generally depressing economic outlook. In response to the need, expressed by the general public and members of your profession, the House Subcommittee on Appropriations has included $3,700,000 for construction of this greatly needed facility authorized by the 80th Congress.

In closing, I would like to leave you with this thought relevant to the Federal Government's role in all health programs. I sincerely believe that the primary responsibility for all activities designed to provide better health and care for people rests with States, communities, individuals, and their institutions and organizations, such as this one. We know, of course that there are important areas in which the State and local resources need and must be given appropriate Federal support. The primary burden of responsibility in considering these matters is to assure that the Federal Government does not usurp those functions which States and communities must carry out themselves. Although I see for the future a continued expansion of certain Federal health programs that can best be accomplished on a national basis, I shall continue to support only those Federal programs that maintain the freedom and integrity of individuals and groups of individuals, an imperative tenet for the growth and prosperity of our democracy.

Statement on Proposed Labor Legislation

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. KNOWLAND. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD the statement I made before the Labor Subcommittee of the Senate Committee on Labor and Public Welfare last Monday.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF UNITED STATES SENATOR WILLIAM F. KNOWLAND BEFORE THE LABOR SUBCOMMITTEE OF THE SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE, MAY 5, 1958

Mr. Chairman, I appreciate this opportunity to testify in behalf of S. 3068, the legislation in labor union democracy which was introduced in the Senate on January 23. I want to repeat what I stated during the recent debate in the Senate, that there is no more important legislative matter that can come before the Congress this year than legislation which will assure the establishment and continuance of democratic processes in

union affairs to the 18 million men and women who now belong, and to those in the future who will belong, to organized labor unions.

If we fail to live up to our responsibilities during this session of the Congress, after the Senate's select committee expending over a million dollars investigating union officers representing 14 percent of the entire union membership throughout the Nation, the uncontested evidence of widespread corruption, arrogance, and abuses in the operations of internal union affairs will stand as a permanent indictment of the record of the 85th Congress. The citizens, voters, and union members of America will be following, with great concern, the activities of the Senate in this field in the forthcoming weeks.

At the beginning of these hearings, I want to state that I have no desire to insist on the specific language of the legislation I have introduced. If the committee or the Senate can improve upon S. 3068, this should, of course, be done. Further, I am prepared to support any constructive legislation designed to remedy existing evils in the internal affairs of unions, or to carry out the recommendations of the Senate select committee.

I do want to point out that, in my judgment, there is an immediate and pressing need for legislation guaranteeing to union members in America the following minimum rights and protections.

1. The right periodically to elect union officials by secret ballot.

2. The right to recall union officers who misuse their positions of trust and responsibility.

3. Protection against arbitrary control of local unions by their national or international unions through trustees.

4. The right to amend or modify, revise, or repeal any provision of the constitution, bylaws, or rules of their unions.

5. The right to control decisions of their union officers concerning the collection or use of union funds.

6. The right to a voice as to strike activities of their union.

7. Protection against conspiracies between management and union officials against the interests of union members.

8. The right as workers represented by a union, to become and remain a member of that union without discrimination.

To assure the establishment of the democratic processes in union internal affairs, it is my strong belief that this objective can be accomplished with a minimum of Federal regulation and a maximum of membership initiative. This philosophy is in keeping with our traditional concepts of a limited Government jurisdiction over the activities of free men, and such principles are embodied in the legislation I have now pending before your subcommittee.

It has been discouraging and incomprehensible to note the criticism and opposition of the leaders of national and international unions to the constructive efforts being made to establish minimum guaranties of union democracy.

The Senate's Select Committee hearings have made clear and irrefutable principle of Government, that when special privileges and protections are extended to a special group, these must be balanced by adequate safeguards to prevent their abuse. Laws which do not contain such checks and balances, in reality retard, not promote, the aims and legitimate objectives of the groups they are designed to benefit.

The Taft-Hartley Act, approved over a Presidential veto by the Congress in 1947, was a major step forward in restoring a semblance of responsibility in collective bargaining controversies. Union membership has increase over three million members since its enactment, and labor disputes have been reduced in scope and number. Today, our citizens and union members demand that we take another constructive step forward and, by establishing a bill of rights for labor, guarantee that the democratic rights of our working men and women are protected by responsible authority.

It cannot be any longer contended that union organizations are purely voluntary associations and therefore exempt from internal supervision or regulation. Unions, in fact, although necessary to our society, are organizations which have been granted an extensive variety of Federal, State and local immunities and, therefore, stand forth in a privileged position:

1. They are exempt from our antitrust and monopoly laws.

2. They are exempt from taxation.

3. They have been declared, legislatively and judicially, as protected from the injunctive process in our courts.

4. They have been granted the rights of exclusive bargaining.

5. In the vast majority of collective bargaining units, they have been allowed to violate freedom of individual contracts under compulsory-membership agreements.

The economic power of organized unions has been accelerated through the enactment of law. We must now, through the enactment of law, make certain that with such power, responsibility goes hand in hand.

I would now like to explain the specific provisions of S. 3068.

1. ELECTION OF OFFICERS (SEC. 402)

As members of this subcommittee are aware, there is presently no requirement in our labor laws that democratic procedures be complied with in the election of union officers. Section 402 seeks to remedy this defect. Under its provisions, the membership would be assured of the right to choose their officers at least once every 4 years by secret ballot.

(a) To be eligible to serve as the officer of a labor organization, that officer must have been elected by popular vote of the union membership at an election held within the preceding 4-year period, and further that the voting at such elections shall be done through the medium of a secret ballot.

(b) The National Labor Relations Board will have the authority to receive petitions filed by any member or groups of members of the labor organization in question, or any nonemployer representative of such union members, alleging violations of the election provision, and the Board upon sufficient supporting evidence shall proceed in the matter as in the case of an unfair labor practice charge.

(c) If the Board discovers that under the petition the individual in question is serving illegally as an officer of the labor organization, the union in question, as long as it shall continue to maintain such an illegally elected individual as an officer, will be deprived of the privileges and benefits granted to it under existing law. Specifically, this will result in the loss of its certification under the National Labor Relations Act as the representative of such members, the exemption from Federal income tax laws under section 501 (a) of the Internal Revenue Code, and the exemption under the antitrust and injunction protections of various Federal statutes. The amendment also provides that the individual who knowingly serves as a union officer while ineligible to serve shall be subject to prosecution and, upon conviction, punishment and a fine, for the commission of a misdemeanor. There is also a provision to protect the right of individual union members to file a petition under this proposed law.

(d) The final provision in the pending amendment authorizes that wherever a union is deprived of its representation protections under existing law for being in violation of the election provisions of this amendment, another election for union representation of the employees may be held despite the prohibition in existing law which limits to 1 the number of such elections that can be conducted during a 12-month period.

2. REMOVAL OF OFFICERS (SEC. 403)

Labor unions are organizations formed by the voluntary action of workingmen and women. They are organizations established for the purpose of being of direct benefit to the membership. Under these circumstances, the membership is certainly entitled to control the activities of the union. Such activities are carried out by elected officials. Therefore, if, in the opinion of the membership, those officials are not properly carrying out their duties, a right to remove them must exist.

Many unions presently provide for the recall of officers. Others do not, or if they do, the mechanism is hazardous, not for the offending union officers but rather for the instigators of the recall procedure.

Section 403 of my bill would remedy this situation. It would provide a workable method by which the membership can recall officers for misconduct by submitting to the National Labor Relations Board a petition signed by 15 percent of their number. The NLRB would then conduct a recall election by secret ballot.

The Federal Constitution provides a means by which even so important an officer of our Government as the President may be removed from office for misconduct. Needless to say, inferior Federal officers, judges and Members of Congress may also be removed or expelled.

The recall procedure provided by the amendment is as follows:

(a) Upon a petition filed by 15 percent of the members of the labor organization, the National Labor Relations Board shall conduct an election by secret ballot of the membership of the union on the recall of official or officials named in the petition. The election shall be decided by a majority vote of the membership voting and if the official or officials voted upon are recalled, the Board shall declare such office vacant.

(b) Not more than one election for recall of any one officeholder can be held during any 12-month period.

(c) If a recalled union official continues to hold his office, the Board, on the petition of any union member, shall proceed, after investigation, against the union as in the case of an unfair labor practice.

(d) The Board is granted permission to delegate to public or private agencies its authority to conduct recall elections under this amendment.

(e) Where a union member is disciplined by his union organization so as to deprive him of his right to vote under the constitution and bylaws of his union or under the recall procedures set forth in this amendment, the Board can proceed on prima facie evidence against the union and if the results of the election were affected by the vote or votes suppressed, it shall set aside such election.

(f) Any individual who, after being recalled, continues to serve as a union officer is subject to prosecution, punishment, and fine for the commission of a misdemeanor.

(g) Any individual, group, or organization who willfully coerces an individual from initiating or participating in the recall procedures established by this amendment is subject to prosecution, punishment, and fine for the commission of a felony.

(h) Whenever a union permits a recalled union official, or an official convicted of a felony under article G to continue his office, the union upon determination of that fact by the Board shall be deprived of its protections of representation, income-tax

exemption, and antitrust and injunction exemptions under existing laws.

3. INITIATIVE AND REFERENDUM ON INTERNAL AFFAIRS (SEC. 404)

Section 404 of my bill of rights for labor provides a means whereby 15 percent of the membership may initiate a referendum at which they may democratically vote on questions of importance to union members. Matters upon which such a referendum may be held include changes in the governing rules of the organization, decisions by union officials affecting financial activities of the union, and matters relating to the disciplining of the membership.

Collective-bargaining negotiations and matters authorized by the governing rules of the organizations are, however, exempt from the referendum procedure, as are those governed by the constitution, rules, or regulations of a national or international union to which the local is affiliated.

(a) Fifteen percent of the membership of a union may initiate a referendum at which they may vote to determine the will of the entire membership on questions of importance to the union.

(b) Matters on which such a referendum may be held involve changes in the governing rules of the union as well as decisions of the officers of the union which affect the financial affairs of the organization, certain activities of the union, and matters relating to the disciplining of the membership.

(c) A referendum would not be authorized to change or modify decisions made by a union representative during collective-bargaining negotiations, or those which are authorized by the governing rules of the organization or by law. Additionally, no referendum would be allowed among the membership of a local union alone on any matter governed by the constitution, rules, or regulations of a national or international union to which it is affiliated.

(d) A mechanism is provided to insure the enforcement of the will of the union as expressed in such referendum, whereby any violation of the referendum would be investigated as an unfair-labor charge as defined in section 10 of the National Labor Relations Act.

(e) Any member of the union or his representative may file a petition with the Board alleging noncompliance.

(f) Failure of a labor organization to comply with the results of a referendum would, under the amendment, result in the union's loss of existing privileges as the representatives of its membership under the National Labor Relations Act, its special position under the antitrust and injunction laws, and its income-tax exemption.

(g) Further, special criminal penalties are provided against individual officers of the union who fail to follow the results of a referendum or who coerce union members seeking to initiate Board action against such conduct.

This amendment in no way affects the laws of any State.

4. STRIKE BALLOTS (SEC. 405)

At present, the National Labor Relations Act contains no requirement that notification be given by a union to its members, employer, and to the NLRB of its intention to strike. Section 405 would impose such a duty. Under it, 30 days' notice would be required to all parties concerned.

Additionally, this section would provide a means whereby employees in the bargaining unit could vote to determine the will of the majority on the issue of whether or not to strike after the notice to strike had been given.

It is plain that in the ordinary case, where a union truly represents its membership, there would be no strike referendum. Only in the case where very real opposition to the decision of the leadership to strike existed can I conceive that a petition would be filed. And, it should be remembered, the filing of the petition would in no way affect the strike call. Only after the majority of the employees in the bargaining unit thereafter voted to reject the decision of the leadership would a strike be postponed.

Nor have privileges been extended in this section without corresponding protection against abuse. Section 405 has safeguards built into it. First of all, a decision by the majority against a strike would only postpone that strike for a 90-day period. Thereafter, the leadership could again resort to the strike procedure if they felt it to be in the interest of the union. A majority vote in favor of a strike could likewise not be challenged for a 90-day period and then only if 30 percent of the employees in the bargaining unit signed a new referendum petition.

It is my purpose, in including this section in my bill to strengthen the right to strike by returning the power to its proper sphere—those represented by the union—in a working partnership with the leadership of the union. I believe it is the American tradition to give all persons notice and an opportunity to be heard on all matters affecting them—especially where their economic livelihood is at stake. Section 405 accomplishes this purpose.

(a) This amendment would require the notification, by specified means, of the membership, the employer, and the Board, of a labor organization's intention to strike at least 30 days prior to the commencement of such strike.

(b) Upon the submission to the Board of a petition, signed by 15 percent of the employees represented by the union in opposition to the strike, a referendum would be held. A majority voting against the strike in such referendum would require its postponement for at least 90 days.

A vote in support of the strike would, on the other hand, prevent the filing of a new petition for a second referendum for an additional 90 days. Any such subsequent petition would also require the endorsement of at least 30 percent of the employees in the bargaining unit.

(c) Participation by an individual in an illegally called strike under this amendment would result in the loss by that individual of his employee status under the National Labor Relations Act.

(d) Violation by a union of an employee's right to vote in any duly called election or referendum under this section would, on a petition of the Board, be investigated and, if a determination was made that such rights had been violated, the provisions of section 10 of the National Labor Relations Act would apply as in the case of an unfair labor practice charge. If the findings of the Board supported the allegations of the member that his voting rights had been denied, the union would be ordered to desist from its action and, where the deprivation of the voting right had affected the results of an election, that election would be set aside.

(e) Any violations by a labor organization of the provisions of the amendment would result in the union's loss of its existing privileges as the representatives of the employees in the bargaining units under the National Labor Relations Act, its special position under the antitrust and injunction laws, and its income-tax exemption.

(f) Further, special criminal penalties are provided against individual labor union officials who violate the provisions of this amendment.

5. PROCEDURE (SEC. 406)

This section spells out who may file petitions under sections 403, 404, and 405. Only employees, union members, or their representatives have a right to do so. No rights are extended to employers under the foregoing provisions except the right to a strike notice.

6. TRUSTEESHIPS OVER LOCAL UNION AFFAIRS (SEC. 407)

A rank abuse uncovered by the select committee in its investigations was the use of the trusteeship device, by national and international unions, as a means to secure and perpetuate control over the activities and funds of local unions.

There are, no doubt, legitimate reasons for establishing trusteeships, just as there are legitimate reasons for the Federal Government, on occasion, to interfere with the internal affairs of a State. In the case of such Federal interventions, the interferences are permitted only during times of extreme crisis and then only until local authority can be restored. This, it seems to me, is a good rule to follow in the matter of labor-union trusteeships, and section 407 is calculated to accomplish this result.

(a) No trusteeship can be established unless it is authorized by the constitution, charter, or bylaws of the labor organization in question. And further that the funds and assets of the local union must be used exclusively for the benefit of the local union.

(b) No trusteeship can continue for a longer period than 1 year from the date of its establishment.

(c) Where a trusteeship has been established after officers of a local union have been removed, the trustees are authorized to conduct elections for new local-union officers.

(d) Upon violation of provisions of this amendment, members of the local union are authorized to bring court action in the Federal court of the United States for equitable relief to compel compliance and to enforce restitution of the funds and assets of the local union.

(e) Where officers of local unions are removed for the purpose of establishing trusteeships in violation of these provisions, or where a trusteeship continues in violation of these provisions, the individual who willfully participates in such action is subject to prosecution, punishment, and fine for the commission of a misdemeanor.

7. PROTECTION OF MEMBERS (SEC. 408)

The most precious gift afforded by a democratic government to its citizens is the right to vote. While our own Federal Government does not have a perfect record on this score, there can be no doubt that it is attempting to insure that no American is coercively deprived of his right to go to the polls. Can we afford to do less for the laboring man?

Under section 408, any member of a labor union may petition the NLRB if he has been denied his right to vote in a union election.

(a) Any member of a labor organization may file a petition with the Labor Management Relations Board that he has been deprived, through actions of his labor organization, of his right to vote.

(b) The Board, upon the finding of prima facie evidence of the truth of such allegations shall proceed against the union as in the case of an unfair labor practice.

(c) Upon a finding by the Board that the voting rights of such members have been denied in violation of the constitutional bylaws of the union, it shall issue a cease-and-desist order against such action and shall invalidate the election if the results thereof could have been affected by the labor union's wrongful action.

(d) Any individual or group who willfully interferes with the right of a union member to petition the National Labor Relations Board under these provisions is subject to prosecution, punishment, and fine for the commission of a felony.

8. MONOPOLISTIC ALLOCATION OF TERRITORY AMONG LABOR ORGANIZATIONS (SEC. 409)

Section 409 would prohibit labor unions from monopolistic allocation of territories among themselves. As well as extending the right to all workers to join a union, we must likewise insure that they may join unions of their choosing.

We tolerate no general monopolistic allocation of markets in our society. There is no reason why we should do so in the labor field.

This section provides:

(a) Contracts or arrangements between two or more national, international, or multilocal labor organizations to divide or allocate jurisdiction for representative purposes on a geographical, territorial or area basis are declared illegal.

(b) Petitions alleging violations of this section can be filed with National Labor Relations Board and, the Board, upon prima facie evidence, can proceed as in the case of an unfair labor practice.

9. COLLECTIVE-BARGAINING AGREEMENTS FOR EXCESSIVE TERM AND WAIVER OF RIGHT TO STRIKE (SEC. 410)

Two of the most important provisions of any collective-bargaining agreement concern (1) the terms and conditions of employment, and (2) protection of the basic right of the employee to strike or refrain from such employment if the terms of employment are not satisfactory to the workers. Some agreements have bargained away these rights under the influence of "sweetheart" type arrangements between union officials and employers. When this happens the worker is subject to an almost involuntary servitude for the period of the contract. Of course, the worker may leave his employment, but then he risks his whole economic livelihood. In no event should he be required to do so.

For this reason, I believe that union members should have a voice which will permit them a measure of control over collective-bargaining agreements that may deprive them of benefits and privileges. Additionally, I do not believe the right to strike ever should be subject to surrender by management or the union in an agreement, where it has not been approved of by the membership.

This section provides:

(a) No collective-bargaining agreement for a period in excess of 2 years shall be effective beyond that period unless it has been approved by a majority of the members of the labor organization involved, voting by secret ballot.

(b) No provision of a collective-bargaining agreement which waives the members' right to strike shall be legal unless it also shall have been approved by a majority of the membership in a secret-ballot election.

This amendment is necessary to protect the interest of the employees from unscrupulous representatives of management or labor or both, who engage in a collusive agreement to sacrifice the workingman's labor for their own purposes.

10. ANTIDISCRIMINATION SECTION

Under section 9 (a) of the Labor Management Relations Act of 1947, the labor representative selected by the majority of the employees for the purposes of collective bargaining, is designated as the exclusive bargaining representative of all the employees in the bargaining unit. The present amendment provides that where a union organization is selected to be the exclusive bargaining representative in the plant or firm involved, this privilege will be conditioned on the union's opening up its membership to all of the employees in the bargaining unit if they should choose to join, and on the same terms and conditions which apply to the present members of the labor organization. This amendment is designed to eliminate an existing situation in certain unions where either employees are barred from taking membership in the union representing them, or where the union has in effect set up a class system of membership under which only a certain class of union members are permitted to vote and participate in its activities, but all of its members must pay the initiation fees and dues.

In order that this amendment might not be used by subversive elements, a provision is included that nothing in the pending amendment shall be construed to prevent any labor organization from denying membership to members of the Communist Party or members of organizations who advocate the overthrow of the United States Government by unconstitutional methods.

This amendment would prohibit any existing discrimination against employees on the grounds of age, sex, religion, nationality, or race. If unions are interested in eliminating discrimination practices in the United States, they should be favorably disposed to the pending amendment.

11. SANCTIONS AND PENALTIES (SEC. 412)

Up to this point, the bill I introduced has been drafted to establish a framework for union democracy. It is important, of course, to provide that the rights be protected against infringement and violation. Section 412 provides the penalties to accomplish this purpose.

Continued violation by a labor union of the rights protected under the foregoing sections could result in the union's loss of status as collective-bargaining representative under the National Labor Relations Act, and the union would forfeit its special position under antitrust and injunction laws, as well as its income-tax exemption.

The NLRB is authorized to issue orders to prohibit actions prescribed in the provisions of the bill which are found to be in violation thereof.

Special criminal penalties are also provided against individual officers of the union who willfully violated the provisions of this bill.

12. AMENDMENTS TO THE NATIONAL LABOR RELATIONS ACT (SEC. 2)

Section 2 of my bill would amend the Taft-Hartley law to bring existing provisions of the act into conformity with the union democracy provisions in S. 3068.

The first such amendment would make it an unfair labor practice to call or continue a strike in violation of the provisions of section 405, that is, without a 30-day notice of intention to strike or despite a majority vote against such strike. Employees who participated in such an illegally called strike would lose their status as employees under the labor act.

In order to preserve the right of employees to select a union of their choice, the present act is amended to permit a representation election during the extension of collective bargaining contracts. Industrial stability, under this amendment, would be preserved by the further requirement that existing collective bargaining agreements would not be affected by the outcome of such elections. These agreements would continue in effect for the remainder of their terms, unless mutually modified or terminated.

Where a union, for violation of the provisions of S. 3068, loses its representative status, another election is authorized, even though an election had been conducted within the previous 12-month period.

Finally under section 2, section 9 (g) of the National Labor Relations Act is amended to require the Secretary of Labor to make public financial and other information now required to be filed by labor organizations who seek the benefits conferred under the act.

13. AMENDMENT OF "SWEETHEART CONTRACT" PROVISION (SEC. 2)

The Taft-Hartley Act made it illegal for an employer to pay, or to promise to pay, money or anything of value to a labor official representing the interests of his employees. Receipt of such gifts or gratuities was also made illegal by the act.

The labor rackets hearings brought to light, however, violations of these prohibitions, resulting in so-called "sweetheart contract" situations. Such contracts, made use of go-betweens who entered into collusive working agreements with management or labor representatives for money or merchandise of value. These arrangements were invariably beneficial to employers and union representatives but detrimental to the membership involved.

The present amendment would fill this gap in the existing law. I do not believe either labor or management voice objections to the plugging of this loophole.

In conclusion I want to reiterate what I have said in my public remarks prior to this occasion. Neither the recommendations of the McClellan committee nor the legislation I have introduced in the Senate should be construed to constitute indictments against all labor officials. Many of these officials, past and present, have labored unceasingly in the best interest of their fellow working men and I know they will continue to do so. I believe in and support strong and free unions and I am convinced that despite the code of ethical practices of the AFL-CIO or other similar self-imposed regulations, well-intentioned union leaders are incapable of enforcing compliance with democratic practices in union affairs. Many distinguished and long supporting friends of labor itself have in the interest of labor's welfare joined in the demands for legislative reforms in union organizations.

The only ones who stand to gain by the enactment of union democracy legislation are union members themselves. Their relationship with their employers will in no way be affected. The only ones who will lose are those officials in unions where union democracy is not presently assured. I am frank to say, I do not understand how such aims and goals can be criticized in any degree as being anti-union. It has been and still remains my conviction that America grew strong, because of, not in spite of democratic traditions.

I want to end by reemphasizing that union democracy legislation needs to be approved at this session of the Congress. It should provide for limited Federal intervention and encourage membership intiative; it should cover the fundamental democratic rights which free men and free societies have always enjoyed.

Commemoration of American Civil War

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Dr. Bell Irvin Wiley, at a meeting of historical societies and members of the Commission To Celebrate the 100th Anniversary of the Civil War, in Washington, D. C., on January 14, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMMEMORATING THE AMERICAN CIVIL WAR

(By Bell Irvin Wiley)

(Dr. Bell Irvin Wiley, professor of history, has been named by President Eisenhower a member of a 10-man Civil War Centennial Commission to prepare a program for the national observance to begin in 1961. A national assembly of representatives of historical societies, archives, patriotic groups, and civic organizations was held in the auditorium of the Interior Building in Washington on January 14–15. For this occasion General Grant, Chairman of the Commission, designated Professor Wiley to deliver the keynote address.)

Delegates to the national assembly, fellow members of the Civil War Centennial Commission, and friends, it is a pleasure and a privilege to talk to you for a short while this morning about some of the objectives and plans of the Civil War Centennial Commission. I should like to stress the fact that the Commission is just beginning to function and that we are still in the initial stages of our planning. We are delighted that you have assembled for this 2-day session to bring to us from the organizations that you represent ideas and suggestions about the character and scope of the Commission's work. We appreciate your taking the time and trouble to meet with us on this occasion. We shall listen with great interest to your discussions and give the most thoughtful consideration to your proposals.

Another point that I should like to emphasize is that the remarks that I am about to make are not to be considered as official statements of Commission policy, for I have not had an opportunity to discuss with General Grant and other members of the Commission the content of this introductory talk. These remarks should be regarded, then, as my personal impressions of the thinking of the Commission at this time concerning the principles that should guide it and some of the things it hopes to accomplish. These ideas have come in part from informal contacts withh many people interested in the Civil War and in part from my experience in studying and writing about the war.

First, I should like to stress the point that the Civil War Centennial Commission hopes earnestly to avoid any sort of activity that will tend to revive the bitterness and hatred engendered by the conflict of a century ago. Rather we want to commemorate the greatness demonstrated by both sides in that momentous struggle. The Civil War was a time of supreme greatness for both North and South—and for the American Nation. Never before or since have Americans been called on to make such enormous sacrifices as in the terrible years 1861 to 1865. The cost is tragically told in terms of human lives.

On the southern side about 258,000 soldiers made the supreme sacrifice; of these, 94,000 died of hostile bullets and 164,000 from other causes. On the Union side, deaths aggregated 360,222; of these, 110,070 were battle casualties and 250,112 were deaths from other causes. More than twice as many men, North and South, died of disease as perished from enemy bullets. The aggregate in soldier deaths on both sides in the Civil War was 618,000. Deaths of American servicemen in all other wars, beginning with the American Revolution and coming on down through the Korean conflict, totaled only 606,000.

But deaths of men who donned the uniform were only a part of the sacrifice. The deprivation, anxiety, loneliness, and sorrow of the folks at home, and especially of the lowly women left to care for large families during the absence of their menfolk, were so tremendous as hardly to be comprehensible to people of our generation.

These enormous sacrifices were made by the people of both sections with a fortitude and heroism that was nothing short of magnificent. The exemplary conduct of our forebears in this costly struggle should inspire in us the profoundest admiration and pride.

It is this sacrifice and heroism of Americans, North and South, that we Americans of today, their descendants, seek to commemorate. There is no desire on the part of the Commission, as I interpret its motivation, to give to the commemoration any sectional or partisan character. The war was America's greatest experience and the centennial commemoration of it should be an American activity, an American ceremonial, recognizing the sincerity of both contestants and glorifying in the greatness that they demonstrated in supporting their respective causes.

The most appropriate way to commemorate this great experience—and the one that will have the most lasting value—in my opinion, is to increase our understanding of it. We should seek to broaden and deepen our knowledge of the conflict, to determine the true facts and comprehend their real meaning.

There are many ways in which we may promote the enriching of our knowledge of the Civil War. And you people here, and the organizations that you represent, are especially well-situated to implement these means. I should like to emphasize a few of the specific proposals that have come to the attention of the Commission.

1. Utilization of the tremendous interest that the centennial may be expected to arouse to persuade people who still have manuscripts, newspapers, pictures, maps, and rare documents in private possession to bring these materials out of attics, basements, and strong boxes, take them to State and local depositories for evaluation and screening, and, if their value seems to merit, permit them to be microfilmed. One film copy of this material should be preserved in the local depository and another, preferably the negative, should be sent to Washington. Donation of material thus brought to light should be encouraged, but the most important thing is to obtain facsimiles and make these facsimiles easily available for the use of interested persons.

2. The collection, collation, and reproduction of Civil War newspapers is a project especially worthy of consideration. Newspapers are probably the greatest single, unexploited source for the study of the conflict of the 1860's. And they are one of the richest sources. It is not inconceivable that files of all Civil War newspapers should be built up from scattered holdings, filmed, and copies of the film placed in a central depository for use and loan.

3. Use of all types of materials ought to be facilitated by the preparation and publication of bibliographies, indexes, guides, and inventories. I should like to mention a few specific aids. Bibliography of State Participation in the Civil War, a most helpful guide compiled and published by the United States Government in 1913, should be brought up to date to include the many books and articles that have appeared in the 45 years since the work was originally issued. Indexes for the Official Records, Army, and the Official Records, Navy, ought to be revised to increase their usefulness and reissued to enhance their availability. These indexes have long been out of print, and they have become so scarce and expensive as to be beyond the reach of many people who want to make use of them. A general bibliography of the Civil War, including articles as well as books, ought to be prepared under competent direction and made available in printed form.

A considerable number of State and local depositories have no published guides to their manuscripts. Issuance by these agencies of guides to their Civil War manuscripts would be an appropriate centennial activity. It would, of course, be highly desirable if the guides to the Civil War manuscripts could be a part of a general project that would include all of the agencies' manuscript holdings.

The National Archives would like to prepare inventories and guides for the most important of its Civil War materials. All possible assistance should be given by the Commission and by the organizations which you represent to help the National Archives obtain the funds and the staff necessary for the preparation of these much-needed aids.

The Library of Congress several years ago projected the preparation of a National Register for Manuscripts. This register is to list and describe briefly important manuscript collections throughout the Nation. Implementation of that part of the national register project which pertains to the Civil War would surely be a highly desirable commemorative activity.

Another urgently needed aid for the study of the Civil War is a national photographic catalog. This should list, locate, identify, and provide a miniature facsimile of all individually issued pictures, prints, and photographs, relating to the Civil War.

Carrying this program forward will be costly in terms of time, money, and staff, and in order for the work to be completed in time to have any bearing on the commemorative observances during the period 1961–65, it must be initiated very soon. But it is to be hoped that the Commission, by stimulating interest, and pointing up with your aid, some of the things that need to be done, can help local, State, and national agencies to obtain the necessary means for carrying out this program.

Finally, I want to stress the point that we consider the primary role of the Commission to be that of stimulation and help. The Commission could not mastermind this vast and important program if we wished to do so. But it is not our desire in any exclusive or arbitrary fashion to tell the people or their agencies what they should do. Rather it is our aim and hope to help them do what they think needs to be done and coordinate their desires and efforts to the best interest of all.

Juvenile Delinquency

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. HENNINGS. Mr. President, an editorial discussing juvenile delinquency was printed in the Jefferson City (Mo.) News and Tribune on April 27, 1958. It contains a number of provocative ideas which I believe are of general interest. It was of particular interest to me as chairman of the Subcommittee on Juvenile Delinquency of the Senate Committee on the Judiciary.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FACING UP TO DELINQUENCY

From time to time we encounter interviews and other programs in which teenagers give their views on the causes and

cures of juvenile delinquency. Usually they blame the adult world for all the transgressions of youth.

A pretty substantial body of scientific and other opinion supports the idea that we adults, particularly in our roles as parents, must bear heavy responsibility for youthful misbehavior.

But this notion can be carried too far, and often is. Many other factors are involved. Great economic, social, and political forces mold us all with impersonal pressure.

It isn't enough to say, as is frequently said, that so many delinquents come from broken homes.

The really big question is: Who and what break the home?

Nor can the youngsters themselves escape all responsibility simply because the adults aren't measuring up or are being engulfed by forces they don't understand.

There is a shocking number of delinquents from good, unbroken homes. Conversely, countless youngsters from shattered families never join a gang or commit the smallest misdemeanor.

Obviously, individual character and discipline play a big part in determining who becomes a delinquent and who does not. A youngster may be pliable and impressionable, but he is not exactly putty.

Recently a teen-ager who was busy blaming the adults for everything pointed to the bad example they set with wars and threats of war.

His theme seemed to be that because the adult population has fought wars and is continuously menaced by the prospect of others, the youngsters of the world merited understanding—if not forgiveness—for their own excesses.

Basically this proposititon is fraudulent, and certainly it is fantastic. It allows room for the idea that one set of wrongs justifies another. Probably it is just a kind of brazen rationalization for bad behavior that offending teen-agers may only partly understand themselves.

But this much more they can understand: All the blame cannot be shifted to others. They have to shoulder some of the guilt, too.

The millions of good youngsters who walk among us are the the proof that delinquency need not be the only youthful response to the turmoil and error of the adult world.

Inequities to Retired Military Personnel

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. NEUBERGER. Mr. President, although the military pay bill has passed both Houses of Congress and is now before a conference committee to iron out the differences between the House and Senate versions of the bill, the noted military authority for the New York Times, Hanson W. Baldwin, has found serious fault with both the House and Senate versions of the bill.

One of the serious defects which Mr. Baldwin notes is that pay for retired officers and men is increased only 6 percent, while much greater pay benefits are given to those on active duty. The historic relationship which gears retired pay to active-duty pay is ended. Thus, the military pay bill discriminates unfairly against thousands of retired military personnel and raises serious questions about retirement pay for service personnel who are now on active duty.

Mr. President, in fairness to the members of the Armed Services Committees of Congress, it should be pointed out that while the Department of Defense and the administration recommend no pay increase for retired military personnel, the committees did provide for a 6-percent pay increase, and retired personnel will thus reap some benefit from this legislation.

I wish that the retired pay for military personnel could have been further increased and related, as it has been historically in the past, to a percentage of active-duty pay.

I have received numerous letters from retired military people in Oregon protesting against the unfair treatment accorded them. The ever-increasing high cost of living affects the retired personnel just as it does those on active duty.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Military Pay Plan, Discrimination Against Retired Officers Is Found in Both House and Senate Bills," written by Hanson W. Baldwin, the noted military authority, and published in the New York Times of May 6, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MILITARY PAY PLAN—DISCRIMINATION AGAINST RETIRED OFFICERS IS FOUND IN BOTH HOUSE AND SENATE BILLS

(By Hanson W. Baldwin)

The military pay and incentive bills passed by the Senate and House contain some extremely unfortunate provisions that may nullify the usefulness of this important legislation.

The bills are intended to provide material incentives for service careers and, hence, reduce the tremendous turnover of personnel and the loss of skilled men. By increasing professionalism the aim is to raise efficiency. The increases in pay would, indeed, be a stimulus to men in uniform whose morale has been lowered since World War II by the downgrading of military prestige and slights of omission and commission.

But there are serious defects in the legislation, so serious that they should be remedied in the Senate-House conference committee, where the bills are, or immediate steps should be taken to amend the plan once it becomes law.

RETIREMENT DIFFERENCES

One of the greatest deiects is the discrimination the legislation makes possible in the pay of retired officers. For years one of the chief attractions of a service career was the provision made for retirement. The Government was, for a long time, ahead of civilian industry in this respect; retirement pay of the armed services was a powerful factor in retaining the competent and increasing the incentives for a career in uniform.

But in recent years civilian industry has provided generously, and in many cases in more adequate ways than the services, for retirement benefits.

The new service pay plan breaks with tradition. All service pay laws of the past have extended their benefits proportionately to both active and retired personnel; if the pay of the active officer was increased, the pay of the retired officer went up proportionately.

Both bills deviate from this concept. In their original forms there were no provisions for an increase in retired pay, despite increases in costs of living. The bills, as amended, extend a 6-percent sop to retired personnel, an increase entirely disproportionate to the benefits extended to active duty personnel.

More important, the plan makes possible, in fact, inevitable, entirely different rates of pay for retired officers who have served on active duty for the same number of years with the same competence. A major general of 30 years' service who retires under the proposed plan would receive $2,125 more annually than a major general of 30 years' service who retired last month.

ADVERSE EFFECT SEEN

Young officers who might make the services a career will not be blind to this discrimination; if officers already retired can thus be discriminated against in the interests of a false economy, this can happen again.

The legislation must be amended to link, as one, retirement and active-duty pay, past, present and future.

But the legislation also has other faults. Its intention certainly is not to promote premature retirements, but its effect may be just the opposite. It will be surprising if the legislation, as now written, does not encourage the voluntary retirement after 20 years of numerous lieutenant colonels and commanders.

Many of these officers will feel that it is more advantageous to retire relatively young than to remain on active duty without any assurance (unless they are selected for promotion) of adequate pay increases. The laudable intent of promotion by merit instead of by longevity may have been overdone. Certainly congressional and public comment overlooks the fact that there already is a rigid system of selection for promotion, based on merit, not longevity, in all services.

There is a gimmick in the Senate version of the plan that could have other serious repercussions. This permits extra critical responsibility pay, or proficiency, or leadership, pay for officers, which varies from $50 to $150 a month.

CORRESPONDENT QUOTED

A military correspondent writes:

"This whole business of incentive pay for ostensibly superior skills is a great big trouble breeder. Who decides what are the key jobs or skills? What about the people who were denied the opportunity to acquire these skills because of overriding needs of the service in years past?"

This provision could be used, in other words, to benefit the white-haired boys, and it could become a tool of service politics.

The correspondent adds:

"We would like to know who convinced most of Congress that the services operate under a Methuselah system. When officers have to work 4 years completing correspondence courses just for the opportunity of competing for promotions in which 25 to 50 percent of one's fellows must fail to make the grade, it seems like Uncle is being very selective indeed."

The new service pay plan, despite its good features, has not received sufficient study; it should, if possible, be changed in conference, or if that is impossible, amended to remedy some of its patent defects.

Tribute to the Late Clyde Pangborn

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. JACKSON. Mr. President, one of the great pioneers of aviation died on

March 29. Clyde Pangborn, who was the first person to fly nonstop across the Pacific, died just 2 days after he was notified that he was to receive the coveted Adm. William A. Moffett Maritime Aviation Trophy. His history-making flight ended in Wenatchee, Wash., where Pangborn had lived briefly, and where his mother and brother made their home for years.

The drama of his historic flight was caught in a story published in the Wenatchee Daily World, written by Bob Woods. Summaries of Pangborn's life were also carried in the Wenatchee Daily World and in the New York Times.

Mr. President, I ask unanimous consent tht the three articles about Clyde Pangborn be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Wenatchee Daily World of March 31, 1958]

CLYDE PANGBORN, AIR HERO, DIES

Clyde Pangborn, whose nonstop flight across the Pacific Ocean in 1931 put Wenatchee on the world aviation map, died Saturday in a New York hospital.

Pangborn, who was only 63, died of a lung condition. He was stricken 2 weeks earlier while attending a testimonial banquet for aviation's pioneers in New York.

Although he spent only a few boyhood years here, a couple of coincidences have made Clyde Pangborn Wenatchee's most famous "native son."

The coincidences were the ending of the first nonstop flight from Japan in Wenatchee, and the fact that his mother and brother lived here for many years.

Pangborn was born on a farm near Bridgeport, but he attended school in St. Maries, Idaho, and that's where he started his flying career.

After graduating from high school there he worked as a logger. But his mother, Mrs. Opal Pangborn, now of Spokane, said that career ended suddenly after he rode a log down a mile-long mountain skid into a mill pond. He was uninjured.

Pangborn studied engineering and did survey work in Idaho.

He joined the aviation forces in World War I, but the war was over before he had a chance to go overseas. He wanted to stay in aviation, and a group of St. Maries businessmen bought him an old "Jennie" biplane. Pangborn became one of the outstanding daredevil pilots of the old barnstorming days.

It is claimed that Pangborn was the first man to transfer from a racing auto to an airplane's undercarriage. One time he walked away from his cracked-up plane after it crashed on some railroad ties. He had followed the rails for 50 miles trying to fly his way out of a snowstorm.

Pangborn was only 37 when he and Hugh Herndon made the historic transpacific flight that ended in Wenatchee.

During World War II Pangborn was a ferry pilot for the Royal Air Force, taking planes across the Atlantic. He spent some time as an instructor of student pilots.

During the war he and his brother, Percy Pangborn, bought a ranch up the White River above Lake Wenatchee that Clyde Pangborn hoped to use as a "hideaway" headquarters for fishing and hunting. Percy Pangborn still spends his summers there.

Pangborn was in New York earlier this month to attend a testimonial dinner in his honor. Lt. Gen. James H. Doolittle was chairman. Pangborn became too ill to attend the dinner. But Miss Ruth Nichols, first woman to attempt a solo crossing of the Atlantic, called Pangborn "one of the truly great pilots of American aviation history."

Pangborn was employed by Fleet Airlines, Inc., of Burbank, Calif., at the time of his death.

He is survived by his mother, Mrs. Opal Pangborn, in Spokane; and his brother, Percy Pangborn, of Lake Wenatchee and Everett.

[From the Wenatchee Daily World of March 31, 1958]

WENATCHEE'S GREATEST HOUR

(By Bob Woods)

Wenatchee's greatest hour in the news eyes of the world came on October 5, 1931.

That was the day Clyde Pangborn and Hugh Herndon guided a wheelless monoplane to a dusty belly landing on the unpaved runway at Fancher Field to complete the first nonstop flight across the Pacific Ocean.

It was a day for which Wenatchee had been impatiently waiting.

Pangborn was one of the flying idols of the day, along with Charles A. Lindbergh and Wiley Post. Herndon was a flying friend of Pangborn from New York who had just married the daughter of New York's boxing commissioner, one James Farley.

The two fliers had set out July 28 from Bennett Field in New York to try to better the round-the-world record set a few months earlier by Wiley Post and Harold Gatty. By the time they reached Siberia, Pangborn and Herndon were 17 hours behind Post and Gatty's mark. A wing was damaged landing in Russia. And when they reached Japan, August 3, they were so far behind the record time they abandoned the attempt.

The round-the-world record was out of their grasp, so they decided to try for another. A Japanese newspaper, Asahi, had offered $25,000 to the first plane to fly nonstop from Japan to the United States. Pangborn, just 37, and Herndon, 10 years younger, decided to go after it.

But on August 8 they were arrested by the Japanese for flying over a fortified area and taking photographs. The fliers were jailed for a week until backers in the United States could raise $2,050 to bail them out.

By the end of September their flight plans were known. They planned to leave Samishiro Beach near Tokyo, fly the Pacific via the Aleutians, and come down the Alaskan coast over Canada to the United States. Their flight plan would bring them down to Seattle, then they'd turn inland with hopes of flying to Salt Lake City. If they reached Salt Lake they would break the nonstop distance flight record and win an additional $25,000.

With Clyde Pangborn's brother, Percy, and their mother, Mrs. Opal Pangborn, living in Wenatchee where Percy ran a jewelry store, hopes were high that the fliers would accept the Wenatchee Chamber of Commerce invitation to land here.

On Saturday, October 3, the Associated Press from Japan flashed the news that Pangborn and Herndon had taken off at 2:01 p. m., Pacific time.

They had installed a special cotterpin arrangement so they could drop their landing gear, once they were in the air. The landing gear weighed 300 pounds, and Pangborn said that eliminating it would give an additional 12 miles per hour cruising speed. They dropped the gear 8 miles out.

The fliers tried to stay at 17,000 feet, but had to dip and climb to try and remove ice that was coating the wings over the Aleutians. At 3,000 miles they had a scare when the motor conked out; one gas tank was dry but they switched on the other and the motor caught again.

Deafened by the continual motor noise, they had to write notes to each other. But they weren't hungry. They were traveling with a 50-gallon drum of food, complete with chickens, bread, sweets, and beef. They were prepared for a forced landing en route.

They flew on unreported, but when the sun came up Monday morning, an unofficial welcoming committee, including Daily World reporters, was waiting at Fancher Field in Wenatchee, just in case.

The crimson Bellanca, powered by a single engine, was flying down the coast. The ground was obscured by fog. Pangborn later said he had to fly around Mt. Rainier three times before he finally got his directions right. But he did, continuing up to Seattle and couldn't break through the fog bank. They headed east, reached Spokane, only to find it fogged in. Gas was running low, they couldn't make Salt Lake City, so Pangborn and Herndon turned west.

A few miles east of Wenatchee they spotted the Columbia River, came down to it, and on in over the city. They circled Fancher Field 3 times at 500 feet, studying the landing possibilities. Then they gained altitude again, and cut the motor, hoping to stop the propeller. They came in from the south and a fire truck and ambulance raced alongside the silent plane as it glided down the runway. Pangborn was at the controls. The wheelless belly of the ship hit the ground. Pangborn fought to keep the nose up.

The ship careened on for 50 feet, hit a rock, and nosed over. The tail hovered, almost straight up, then eased back in a normal position.

Forty-one hours and thirteen minutes after leaving Japan, Clyde Pangborn and Hugh Herndon had spanned the Pacific Ocean for the first time, and the eastern terminus of the flight was Wenatchee.

"Boys, you have performed a miracle, and neither I nor the people of this city can express in mere words our congratulations and our appreciation. I want you to know that you have only to ask it, and the people of Wenatchee will do our best to provide it," were the words with which Lt. Gov. John A. Gellatly officially greeted the two pilots as they climbed out of the plane. Blossom Festival Queen Carol McGough (Mrs. Gordon Congdon) presented apples.

So great was the traffic jam caused by Wenatchee cars trying to cross the bridge to get to the airport, that the flying heroes were unable to get over to the hotel until almost 11:30 a. m.

For a week Wenatchee and the State of Washington staged a celebration meant to rival Lindbergh's welcome after his flight across the Atlantic 4 years earlier.

After 41 hours without sleep, the fliers were allowed to spend the day in bed at the Cascadian Hotel, then were paraded up and down in an impromptu celebration at 4 p. m. They attended banquets and luncheons until Thursday, then went to Seattle for another gala welcome, and returned over the weekend.

By the next week the first transpacific fliers started back to New York, flying their plane, Miss Veedol which was equipped with a new propeller and new landing gear.

The old propeller, bent back during the landing, was given to the city of Wenatchee, which later gave it to the North Central Washington Museum, where it is on display today. The red single-engined plane hangs in the Smithsonian Institution in Washington, D. C., with the placard, "First plane to fly the Pacific Ocean nonstop, Samishiro Beach, Japan, to Wenatchee, Wash., October 3–5, 1931."

[From the New York Times of March 30, 1958]

CLYDE PANGBORN, FLIER, DIES AT 63—EARLY BARNSTORMER SET MARK ON 1931 TRANS-PACIFIC FLIGHT—NOTED FOR HIS DARING

Clyde Pangborn, who set an early flying record with a nonstop flight across the Pacific Ocean in 1931, died yesterday of a pulmonary condition. He was 63 years old.

Mr. Pangborn's historymaking flight was the first nonstop hop across the Pacific. It started in Tokyo and ended in Washington State.

He had been notified Thursday that he was to receive the Adm. William A. Moffett Maritime Aviation Trophy on Maritime Day, May 22, in ceremonies sponsored by the National Maritime and Aeronautical Association at the United States Custom House here.

The rarely awarded trophy was given to Charles Lindbergh in recognition of his first nonstop flight across the Atlantic.

Mr. Pangborn was one of the early aviators who emerged from the barnstorming era to capture the fancy of the world with the unbelievable machine called the airplane.

His exploits as a transpacific flier and long-distance speed pilot won him a place of honor in aviation alongside such names as Wiley Post and Harold Gatty, the pair whose record flight around the world in 1931 Mr. Pangborn sought to outdo.

The extraordinary flying skill that earned him many honors had also brought him safely through any number of brushes with death.

Such an occasion was the takeoff on July 17, 1931, from Roosevelt Field on Long Island that was to have launched Mr. Pangborn and Hugh Herndon, Jr., his flying partner, on their attempt at the Post-Gatty mark.

The loaded Bellanca monoplane struggled the length of the runway to gain the air until last-minute dumping of fuel averted a disaster by lightening the little craft just enough to clear a gully and a barrier of high-tension lines.

Eleven days later the pair took off successfully from Floyd Bennett Field, Brooklyn. But after 5 days of racing across the Atlantic and over Europe and the Soviet Union and being forced down by a storm in Manchuria, they gave up trying to best the record of 8 days 15 hours 51 minutes of Mr. Post's Winnie Mae.

Alert to opportunity, Mr. Pangborn and Mr. Herndon flew to Tokyo for a chance at $25,000 prize money being offered by the Tokyo newspaper Asahi for the first nonstop trans-Pacific flight. Their arrival was less than auspicious, however.

TRIED FOR ESPIONAGE

Japan then was at war in Manchuria. Mr. Pangborn and Mr. Herndon flew in over Japanese fortified territory taking motion pictures.

Though Mr. Pangborn insisted that no pictures were made of military sites the Japanese tried the two as spies. The trial lasted 21 days. Each was fined $1,025. They spent another 5 weeks of bartering with authorities before being permitted to take off from Samishiro Beach, 300 miles northwest of Tokyo, on October 3.

En route, Mr. Pangborn's daring sent him clambering out on a wing over Dutch Harbor, Alaska, to remove dangling struts that might have pierced the plane in the prospective belly landing. The struts were left hanging when the craft's landing structure was jettisoned a few hundred miles out from Japan in a move to gain speed. This was before retractable landing gear.

On the morning of October 5, after flying 4,600 miles in 41 hours 13 minutes, Mr. Pangborn set the red Bellanca down in Wenatchee, Wash., the home of his mother and brother. It was a spectacular wheel-less landing on a dirt runway on which the craft skidded along on its nose in a cloud of dust. But Mr. Pangborn and Mr. Herndon hopped out to accept their $25,000 check. Mr. Herndon had cut his brow during the landing. Both were shoeless—a practice, they said, they had picked up from the Japanese.

Mr. Pangborn and Mr. Turner got lost once over the jungles of India and their engine faltered over the Timor Sea, but they managed to coax their Douglas transport to a safe landing behind the winners, C. W. A. Scott and T. Campbell Black of England, who were timed in 70 hours and 54 minutes 18 seconds.

In contrast to the ignominy of their stay in Japan, they were acclaimed publicly in this country by authorities of both nations. Seattle welcomed them wildly. Mayor James J. Walker of New York decorated them. In Washington, President Herbert Hoover and the Japanese Ambassador, Katsuji Debuchi, accorded their personal tributes.

Mr. Pangborn flew with Roscoe Turner in the England-to-Australia race of October 1934, in which twenty planes from many nations took part. Mr. Pangborn and Mr. Turner finished second in the speed section of the contest, winning $7,500 for an official time of 92 hours 55 minutes 38 seconds on the 11,325-mile course between London and Melbourne.

Mr. Pangborn was born October 28, 1894, on a Douglas County farm in Washington State. His family moved to Idaho when he was a boy. He enlisted in the aviation section of the Signal Corps in 1917 during his sophomore year at the University of Idaho. He was commissioned a lieutenant and spent his entire service until his release in May 1919, instructing students at Ellington Field, Houston, Tex.

After the war he became a barnstormer, making exhibition flights at carnivals and taking passengers for short hops at fairs. He later joined the renowned Gates Flying Circus, an organization of stunt fliers, wing walkers, and parachute jumpers that enthralled crowds in the 1920's. He was a flight leader in that group.

After the England-to-Australia race Mr. Pangborn spent several years attempting a second flight to beat the Post record but nothing much came of this. He spent a couple of years in Europe as a test pilot, during which time he married Swana Beauclaire Duval, a French dress designer.

Returning to this country in 1939, Mr. Pangborn became a representative of the Canadian Government, enlisting pilots for service in the Royal Air Force. During World War II he was a ferry pilot.

Mr. Pangborn made more than 170 transocean flights taking bombers and transports to Britain from the United States and Canada. Since the war he had flown airplanes on delivery flights to many parts of the world.

The Kennan Fables

EXTENSION OF REMARKS

OF

HON. J. ALLEN FREAR, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD The Kennan Fables, by Hon. MICHAEL A. FEIGHAN, Member of Congress from Ohio.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

THE KENNAN FABLES

(By Hon. MICHAEL A. FEIGHAN, Member of Congress from Ohio)

Last November and December the British Broadcasting Corp. featured George F. Kennan in a series of six lectures titled, "Russia, the Atom, and the West." This series of lectures was spread over a 6-week period, the last one given just as the North Atlantic Treaty Organization was meeting in Paris in an emergency setting caused largely by the worldwide propaganda victory achieved by the Russian success in launching an earth satellite. This Russian feat led to wide speculation as to the military significance of the sputnik with consequent doubts as to the adequacy of NATO to meet the Russian claims of overriding superiority in the missiles field, including the intercontinental ballistic missile. This was the setting for the NATO Paris meeting just as it was the setting for the Kennan lecture series over BBC.

A reading of the Kennan lectures leaves one with the feeling that here is a modern-day Pied Piper of Hamlin. He produces what appear to be nice, easy solutions to very complex problems—much like the sweet note on a flute—but as he rushes his listeners into an angry surf he fails to give fair warning of the relentless undertow that will pull them far out to sea. There is also a touch of Aladdin and his lamp, the magic rug and Yogi the mystic in Mr. Kennan's London performance. Yes, there are even bits of Potemkin's sleight-of-hand, skillfully interwoven with some sentimental appeals to questionable objectives.

These lectures, now published in book form, are valuable as a key to what is wrong with the foreign policy of the United States and how it got that way. Mr. Kennan once occupied positions of high responsibility and trust in the United States Government. As director of the policy planning staff of the Department of State, he was in a position to lay down deep roots both as to policy and personnel sympathetic to its implementation. As Ambassador to Soviet Russia, his evaluation and impressions of the Moscow scene were used as authoritative guides in meeting day to day problems in our Government's dealings with the worldwide Russian problem. Such influence has left its mark and accounts in a major sense for the fact that today we do not have a carefully defined, positive and dynamic national policy toward the Soviet Union. In its stead, our approach to the problems created by Russian Communist imperialism is bogged down with misconceptions about the Russians and their new empire, contradictions, self-defeating concepts and the negativism which goes with marginal goals. All these handicaps to a sound national policy toward the Soviet Russians are evident in Kennan lectures.

The Kennan discourse begins with a tribute to the Rusisans for what he describes as impressive economic success during the 10-year period since his "Mr. X" article was published. He concludes that the Russian success in launching an earth satellite is a dramatization of that program. The assumption he makes is that this success was a general end product of impressive industrial development and the result of Russian scientific and technological genius. Nowhere does he take into account the major role played by captured German scientists in developing the Russian earth satellite, a fact generally acknowledged in the free press. Also, he fails to point out the peculiar ability of the tightly controlled industrial capability of the Russian empire to put all its eggs in one spectacular basket. The Russians needed a sensational success in the field of science, and one which the free world would be able to see and evaluate.

Events of the past years such as the Marshall plan, the resolute action taken at Berlin and in Korea, the East German uprising, the Hungarian freedom revolution, and the general political unrest in Eastern Europe had seriously blunted the wave of the future long claimed by the Russian Communists. It is altogether probable that the Kremlin leaders put all their eggs in the sputnik basket. Time will tell, but it is too early for us to equate the sputnik feat with Russian impressive economic success.

In examining what he calls "the Internal Soviet Scene," Mr. Kennan sees only two problem areas from what he views as the political side. The first is the struggle at the top, in the presidium and the central committee and the second is the intelligentsia as represented by academic youth and cultural intelligentsia. As he sees it, the struggle at the top is caused by pressure from the cultural intelligentsia who are to a large extent outside the apparatus of the Communist Party. Thus he appears to be completely unaware of the fact that the greatest political problem within the entire Russian Communist empire is nationalism. The powerful political drive of nationalism is caused by the ever-increasing demand of the non-Russian nations within the empire for recognition and complete independence of action from the bureaucracy of the Russian overlords. Even the Communist elements and the managerial class within the non-Russian nations have been swept up by this political movement. This movement begins with the masses of people who refuse to become Soviet citizens, as Mr. Kennan loosely refers to them. The non-Russian people of the empire are no less in tune with the era of nationalism in which the world finds itself than the people of Asia or Africa. People the world over today want to be recognized for what they are and not what some imperialists call them as a blind for the continued enslavement of nations. In his fifth lecture, however, Mr. Kennan takes note of the force of nationalism in the non-European world and sees it as irresponsible new nationalism.

In this connection it is important to note the drastic step the Russian Communists have been forced to take as a consequence of the drive of nationalism within the Soviet Union. At no time during the 40 years since communism became the doctrine of the Russian imperialists have there been so many non-Russian figures on the presidium or in key positions of the central committee. This trend began shortly after Stalin was liquidated and Khrushchev has given great emphasis to it during the past year. Yet, in the face of these facts which Kennan ought to know as a reputed expert on Russia, he sees the struggle within the Russian empire as no more than an effort of the intelligentsia to win a few concessions from the ruling clique at the top. His reference to the Russian cultural world as a positive factor moving toward "complete intellectual and cultural freedom" discloses a deep-seated ignorance of the Russian character and some 300 years of history.

The Kennan lectures more than anything else carry a plea for a recongition of the status quo, which is, of course, the underlying objective the Russians now seek through another summit conference. In his first lecture he concludes on the note that we should show greater detachment toward events taking place within the Russian Empire. He holds that their world is not our world; which is a reserved plea for a world divided as it now is by virtue of Russian conquest and the police state. In this third lecture he advances the argument that we write off the captive nations of Central and Eastern Europe by adjusting ourselves to Russian domination of these nations. This also is a stated objective the Russians have for calling another summit conference. Here is what Kennan has to say on the subject: "There will simply have to be some sort of adjustment (to Russian occupation) on the part of the peoples of Eastern Europe, even if it is one that takes the form of general despair, apathy, demoralization, and the deepest sort of disillusionment with the West." He states as an argument for this writeoff of the once free nations: "The failure of the recent popular uprisings to shake the Soviet military domination. * * *" Here again he fails to understand the genuine political and psychological victory won by the Hungarian freedom fighters and the concessions the Polish people have been slowly but surely wringing from Gomulka and his Russian masters. It is the pressure of nationalism exerted by people of the captive nations coupled with the same type pressure which is being exerted by the people of the non-Russian nations of the Soviet Union which offer the best chances for peace and an end to the present unnatural division of humanity. Anything we might attempt to do to slow down or reduce these pressures would constitute unwarranted interference in the internal affairs of those many nations. The roots of Kenpanism within our Government have already reduced Voice of America broadcasting behind the Russian Iron Curtain to a faint and neutral whisper. There is far greater danger to our national security in broadcasting the theme of political evolution, which is a polite way of telling the enslaved people they must make accommodations to Russian occupation, than there is in the theme of individual liberty and national independence. There is little we as a Nation can do to stop the new tide of human events which had been set in motion behind the Russian Iron Curtain, a tide which originates in the headwaters of nationalism. Our long range national interests and the cause of peace strongly urge that, at minimum, we take steps to associate ourselves with the coming victory of the non-Russian nations and people.

The second Kennan lecture suggests that the United States negotiate secretly with the leaders of the Kremlin, without regard to our NATO allies or the chartered role of the United Nations as an instrument for peace. He holds that NATO is too complex and inhibited to be useful in any negotiation with the Russians. This is the same line the Russians have been pushing ever since NATO came into being. He expresses the highly personal opinion that since the United Nations did not come into being until after the predicaments of the present were well along, therefore it should not be called upon to resolve such predicaments even though the peace of the world is at stake. To begin with he is historically incorrect in the assumption that the U. N. was created after these predicaments arose. The hard, cold facts are that the U. N. was created because of the prospect of the serious problems which now confront us and with the hope that they could be resolved peacefully on the basis of justice for all nations and people. It is also important to recall at this point that the Russians also maintain that the United Nations is unsuited to bring about peaceful solutions to world tensions. The Russians, like George Kennan, are doing their best to drag the United States into secret negotiations on a bilateral basis, a course certain to wreck the defense structure of the free world and to put the United Nations out of business. The United Nations has not fulfilled all the hopes and expectations of the American people but it has served as a basis for uniting free people as in the case of Korea and in the case of Russian inhumanities in Hungary. Every time the United States has been party to secret negotiations with the Russians or any of their Communist henchmen, we have come out on the short end. Secret negotiations invariably lead to deals in which the interests of the common man are sacrificed to satisfy the vanity of the despot. The United States as a constitutional democracy is uniquely unsuited to the game of power politics but is ideally suited to the strategy of open covenants, openly arrived at.

The German people and their leaders were also struck a severe blow by Mr. Kennan in his BBC lecture series. Here is what he had to say on the question of a free and united Germany: "I wonder, in the first place, whether it is actually politic and realistic to insist that a future all-German government must be entirely free to determine Germany's military orientation and the obligations, and that the victor powers in the recent war must not in any way prejudice that freedom by any agreement among themselves." This obviously suggests that the Russians be allowed to limit the freedom of action of a united Germany to choose on which side of a divided world it will aline itself. This is so because of the finality of Mr. Kennan attaches to the present division of humanity and the fact that the people of that part of Germany, free to chart their own course overwhelmingly chose the side of free men. As to East Germany, Mr. Kennan sees little desire on the part of the people there to adjust themselves quickly to the free institutions of the German Federal Republic as he dismisses their case in the following words: "The long period of Communist rule in East Germany will have left strong marks on the structure of life there." It is interesting to note in this connection that Kennan drags in the Gomulka promise to the Polish people "that the day the Americans leave Germany he will take up with the Soviet Government the question of the departure of Soviet forces from Poland." He fails, however, to disclose just how this Aladdin lamp will close the huge gap between Communist promises and performances which has contributed so much to the present critical division of the world.

Mr. Kennan has also concocted a bitter pill for the west Europeans, even though it is sugarcoated with mysticism. He sees that scene as one in which the people are detached from the stabilizing influences of their rich heritage, reaching out for new and vague values which he fails to describe. This thesis flies in the face of the reality that Western Europe is saving itself by a return to the old values, moral and political, which had been denied them by former leaders whose materialistic philosophy led them into the unrewarding game of power politics. It is true that American economic assistance programs lent a mighty helping hand in this process but the western European people produced the leadership and moral fiber without which all of Europe would likely now be floundering in neutralism or attached to the Russian power bloc. Moreover, it was the determination of the European people to defend these old values which led to the establishment of NATO.

But this is not the way the self-designated historian, Mr. Kennan, sees the recent past. He sees the constructive purposes of the European recovery program overtaken and swallowed up in the space of a mere 2 or 3 years by programers of military assistance based on a wholly different concept of the Soviet threat and of Europe's needs. This suggests that it was not really necessary for the western European nations to construct a collective defense system or to keep it in a state of beieng comparable to the increasing Russian military threat posed in that area of the world. It seems he feels there is no geopolitical connection between the Berlin blockade and Communist aggression in Korea and Vietnam. Nor does he sense the critical shift in the balance of power caused by the Communist conquest of China, a development which forced responsible western lead-

ers to create new situations of military strength capable of deterring further Russian aggression and conquest. One can readily see that it is Kennan's limited conception of complex events taking place in the world arena which has led him into making proposals that have the ring of a wide-eyed, high-school sophomore.

After lengthy treatment of the unhappy prospect of atomic warfare, Kennan repeats his belief that possession of this weapon of defense by the United States did not prevent the Russians from overrunning Europe in 1948 or at any other time. He also argues that the Russians never wanted and do not now want a general war, therefore, they would not have moved to occupy all of Europe even if we did not have the atom bomb. Why then, it is fair to ask, did the Russians keep in being since the termination of the war, a massive military striking force and dispersed in a manner to give them a huge initial advantage had they chosen the course of sneak attack? The western nations, particularly the United States, quickly dismantled their wartime Military Establishments. So rapid and complete was the disarmament that we were caught flatfooted and ill prepared when the Russian-inspired Communist war of aggression broke out in Korea. There never has been any threat of aggression from the West so what motivated the Russians to keep such a massive military striking force in being?

Mr. Kennan also advances the idea, contrary to the reasonable estimates of responsible leaders in the free world, that the Russians are sincere in their claims for banning use of the atomic bomb, both as a military weapon and a diplomatic aid. He had this to say on the matter: "Surely everyone, our adversary no less than ourselves, is tired of this blind and sterile competition in the ability to wreak indiscriminate destruction." All sane men wish this were true but the realities of fact do not support this sweeping statement. Not quite 4 years ago the Russians launched a propaganda offensive in which they attempted to convince free people that the only alternative to an atomic war was what they called "peaceful coexistence." They used the same loose generalities peculiar to Mr. Kennan in explaining what they meant by "peaceful coexistence." The well informed on Communist doctrine knew that this was a tactic developed by Lenin to lull the non-Communist world to sleep, to cause free men to drop their defenses and thus to be easy prey to internal subversion and armed attack. More lately, Khrushchev announced that the first step necessary to peaceful coexistence was accepted by the free world of the status quo. By way of enforcing acceptance of this condition, Khrushchev threatened the people of Europe with the specter of atomic warfare unless they agreed. Even as Mr. Kennan was delivering the last of his lectures over the BBC, in which he pleaded the sincerity of the Russians, the Russians were engaged in delivering diplomatic notes to European members of NATO, the essence of which were thinly veiled threats that if they strengthened their defense capabilities they would be marked out for early treatment by atomic warfare launched from the Soviet Union by missiles. It is only fair to ask who is rattling the atomic bomb and who is threatening atomic warfare unless a settlement of differences is entered into, on terms dictated by the Russians? Mr. Khrushchev's recent demonstration of diplomacy by ultimatum can hardly be taken as proof of the peaceful intentions of the Kremlin leaders.

Mr. Kennan's greatest weakness lies in his inability or unwillingness to recognize that basic Communist doctrine calls for world conquest by any and all means. The Russian leaders reaffirmed this doctrine as late as last October by a manifesto issued in connection with the 40th anniversary of the Bolshevik revolution. This objective coincides with the centuries-long dream of the Russians, a fact which Mr. Kennan also refuses to accept. In speaking of the prospects for a political settlement in Europe he makes this startling observation: "I do not think we know what the Russians do want." He would have been in much better grace and surely more accurate had he said: "I do not think I know what the Russians do want." It is distinct disservice to thinking Americans to say that they do not know what the Russians are up to.

The BBC lecture series by Mr. Kennan leave no doubt as to what he personnaly wants at this stage of world affairs. He wants a "clean slate." But he offers no practical formula for acquiring this much-desired state of world affairs. It would be quite unfair to criticize him for not coming up with such a formula because it would require the instantaneous wiping out of the long history of man and the immediate rebirth of all mankind. Mortal man does not have that power. It can be said for the Russians that they have been engaged for several centuries in the rewriting of history to their liking and more lately have been engaged in efforts to create a new type of man called Homo Sovieticus. We trust that Mr. Kennan will henceforth not engage in the same kind of activity.

These are the main trends of thought, as I see them, expressed in the Reith lectures delivered by Mr. George Kennan. There is much marshmallow and honey interspersed between the lines, but this is the basic message he intended for his listeners.

There undoubtedly is confusion in the minds of a considerable number of people in Great Britain as to just who Mr. Kennan, former American career diplomat and now assuming the role of historian, represents. He does not carry any influence in the councils of either the Democratic or the Republican Party, the two major political parties. His containment policy was draped around the neck of the Democratic Party by the Republicans in the 1952 national elections, a maneuver which cost the Democrats the support of many millions of thinking Americans. He has never stood for public office in the United States, though it is said he did offer to do so if he could be assured of nomination with no opposition. It appears that he is rapidly losing what few public supporters he had through his newly assumed role as historian. A real disservice to Anglo-American relations will result if the BBC listeners assume that the proposals advanced in the Kennan lectures have any credibility on the American public scene.

In these circumstances, the British Broadcasting Corp. might well give thought to sponsoring another series of lectures titled "The Kennan Fables." This would clear the air and provide a basis of much good humor, because Mr. Kennan has forfeited the right to be taken seriously on the Russian problem.

Food Stamp Legislation

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, May 7, 1958

Mr. HENNINGS. Mr. President, the April 30 edition of the Clinton Daily Democrat, of Clinton, Mo., carried an editorial on the subject of food-stamp plan. I believe this editorial to be a significant analysis, and worthy of being brought to the attention of the Members of Congress. It pays much deserved tribute to one of the Congress' outstanding legislators, LEONOR K. SULLIVAN, of Missouri's Third Congressional District. For years I have backed her food-stamp plan, which would certainly prove valuable today if it could be enacted.

I therefore ask that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BETTER THAN FOOD LINES

St. Louis this week started the distribution of free cheese, flour, cornmeal, rice and dried milk to those on the public assistance rolls or otherwise eligible to receive these Federal surplus commodities. The items hardly represent a balanced diet. They are nevertheless a godsend to the hungry, and the city government deserves credit for making them available.

Standing in a food line, however, is one of the most searing aspects of involuntary unemployment. The handout would not be so grim had Washington adopted the food-stamp plan advocated for 4 years by Representative LEONOR K. SULLIVAN of St. Louis. After being certified by a suitable agency, these same people would receive, by mail, stamps to be traded in for surplus commodities, preferably at a grocery.

As a matter of fact, food-stamp legislation adopted two decades ago is still on the books. It could be used by Secretary of Agriculture Benson without waiting for a new law. More varieties of food could be made available. Under existing law, Benson receives 30 percent of all customs receipts for the purchase of perishables—meat, fruit, vegetables, etc.—when surpluses threaten to depress farm prices. And he is authorized to carry over $300 million of these receipts from year to year. But Secretary Benson annually has allowed a considerable part of this money to revert to the Treasury.

These have been prosperous years, on the whole. Still, about 6 million persons in the United States have not been getting the right kinds of food, nor enough of it for decent nourishment. Thus, the food-stamp plan is justifiable, on a small scale, even in good times. Surely it should be put into operation during a recession in preference to the dumping of a few storable commodities.

American Prestige Advanced in Yugoslavia Through USIA Efforts

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, May 7, 1958

Mr. JAVITS. Mr. President, the United States Information Agency has recently advised me of the excellent work done on an individual basis by one of its officers in Zagreb, Yugoslavia. I am calling it to the attention of the Senate because I believe it to be an interesting example of the role played by our information officers abroad in creating a climate of respect and understanding for our country.

I ask unanimous consent to have printed in the Appendix of the RECORD the citation of Philip W. Arnold, of the United States Information Service, at Zagreb.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

COMMENDATION FOR PHILIP W. ARNOLD

United States Information Service Zagreb commends Philip W. Arnold for his contributions to the USIS program in the field of personal contacts. Mr. Arnold arrived in Zagreb in May 1957 as public affairs trainee and lost no time in getting acquainted, on a friendly and social basis, with many people in the fields of press, drama, ballet, radio, television, and other cultural groups. His basic knowledge of the language acquired during 18 months with CARE in Yugoslavia, and his continued study of Serbo-Croatian, has been extremely valuable in enabling Arnold to further such acquaintances.

The following is offered as an illustration of this acceptance of the American community and Arnold as an individual in Zagreb by the theater element, as well as evidence of their appreciation of social contacts and cultural facilities offered by USIS and the consulate.

The Komedija (Comedy) Theater held its annual ball on February 4 at the Hotel Esplanade, which is considered the social event of the season and was attended by some 300 guests, including members of the consular corps. It is customary at this function to end the entertainment with a ceremony which would determine who would be the guardian of the Komedija cup for the following year. This involves a contest of wit between a master of ceremonies and three contestants. This portion of the program is planned in advance, including the contestants who are supposedly chosen by chance, the types of questions asked, and probably the ultimate choice of guardian.

This year Mr. Arnold was chosen as one of the candidates. He distinguished himself most commendably; his answers were extremely amusing, and, since the entire ceremony was conducted in Croatian, the audience was obviously delighted an American was able to hold his own so well in their language.

At the close of the contest, and amidst much applause and calls of "Amerikanac," Mr. Arnold was selected the winner. His award was a handsome scroll, 5,005 dinars, and an enormous sham cup full of beer. (The money award was returned to the theater to help defray a 17-million dinar deficit which was the subject of one of the questions asked. Arnold was asked what he—as an American business man and all Americans were businessmen—would suggest they do to eliminate this debt. Arnold suggested they close down the National Theater and the Drama Theater and cut out the competition.)

The American Consul and Branch PAO in Lagreb feel that Mr. Arnold contributed much to this event and that his selection was a personal tribute as well as appreciation of American representation in Zagreb. We would appreciate this report being made a part of Mr. Arnold's dossier.

School of Journalism of the University of Missouri, and Missouri School of Mines and Metallurgy

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. HENNINGS. Mr. President, recently two schools in Missouri have received wide attention for their distinction in two widely divergent fields of activities. I should like to have printed in the Appendix to the RECORD two excellent editorials with respect to them.

The first is from the Los Angeles Times, and describes the excellence of the school of journalism of the University of Missouri. There seems to be a consensus that Missouri has the best school of journalism in the country. It is something in which all Missourians can take pride.

The second is an editorial from the Sikeston (Mo.) Daily Standard, describing Federal grants to Missouri's School of Mines and Metallurgy for the installation of a nuclear training reactor.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

OUR SCHOOL OF JOURNALISM

Journalism is something like motherhood: it is neither a trade nor a very formal profession, yet it requires great skill and understanding from its superior practitioners, and these are hard things to teach. Consequently journalism schools, with a few honorable exceptions, are vacuous places, manipulated by teachers with little newspaper experience, much flam and no flair, who stand in the same relation to their students as the spinster social worker to the troubled bride.

Today we wish to salute one of the honorable exceptions, the University of Missouri School of Journalism, which has just weathered its first 50 years. Even disenchanted old editors show a gleam of interest when a Missouri alumnus comes along and some newspapers operate a sort of futurity stakes, picking their entries before they graduate.

The school is making quite a thing of the anniversary—a 10-month celebration beginning in August with a noble theme: "A Stronger Free Press for a Better Free World." President Elmer Ellis of the university and Dean Earl F. English of the School of Journalism said in their joint announcement:

"We believe that today the free world is confronted with the most serious threat to its existence since the dawn of western civilization, and that, more than ever before in history, the preservation of this free world depends on the ability of its citizens to exchange information and opinions openly without fear of retribution.

"We believe that the primary responsibility for keeping these avenues of expression open lies not with the Government or with any other agency or group, but with the journalism profession itself.

"We believe that the immense contributions of the communications field are too often taken for granted in democratic societies and that there is a need to emphasize these contributions through a series of events which can earn worldwide attention."

The United States has some pretty poor newspapers along with the great ones and good ones, but the lot of them averages out as the best of the free presses of the world. The Missouri School of Journalism has surely done as much as any single instrumentality of education to help the American press, and if it can, during its golden jubilee, teach a larger part of the public to believe what President Ellis and Dean English believe, it will do more for newspapering and the free world than it, or any other school, has ever done before. The enterprise has promise, for the Missouri school has the prestige to make itself heard.

Missouri's famous School of Mines and Metallurgy, at Rolla, has been designated as 1 of 3 colleges in the Nation to receive Federal grants for the installation of a nuclear training reactor.

Approximately $300,000 have already been received from the Atomic Energy Commission for the purchase of the atom trainer, and the State legislature has approved the appropriation of $50,000 for the construction of a building to house it.

Rolla's school, which is a division of the University of Missouri, along with Ohio State and UCLA, were chosen as institutions best qualified to teach the youth of America new concepts in peacetime uses of atomic energy.

The Atomic Energy Commission has long expressed a desire to get out of the education business and place nuclear engineering and science training in the universities.

Plans are rapidly being developed at the Missouri School of Mines for housing and installing the 10 kilowatt, nuclear training reactor of the open pool type. Mid-America's first atom trainer will be similar in concept to the 1955 device built by the United States in Geneva, Switzerland, for the atoms for peace international conference. In a pool of purified water, 26 feet deep, science students will study and observe effects of nuclear radiation; the development and utilization of isotopes in medicine, agriculture, engineering, and industry. The Atomic Energy Commission will supply enriched uranium on a loan basis along with other necessary supplies. Delivery of the equipment for construction of the nuclear trainer has been promised within 11 months, but work on a building to house it will start immediately.

About 3 years ago the challenge was accepted by the Missouri School of Mines and Metallurgy to teach in the field of nuclear engineering. A committee of five faculty members, headed by Dr. Daniel S. Eppelsheimer, was appointed to study the program, keep up-to-date with the latest developments and make recommendations to Dean Curtis L. Wilson. The committee decided that with the existing engineering departments and facilities, the school could provide excellent training in the various phases of nuclear engineering. A program was approved which paved the way for graduate students to work for a Master of Science degree. This included courses in nuclear physics, reactor engineering technology, radio chemistry, heat transfer, and metallurgical and ceramic problems in nuclear engineering. Special fellowships in nuclear energy science and engineering courses have been approved by the AEC, and several appointees will be attending the Rolla school during the year 1958–1959.

At present 47 students are taking nuclear engineering options, but with installation of the AEC trainer, enrollment in the field should rise rapidly.

Members of the school committee, responsible in large part for securing the AEC trainer, are as follows: Dr. Daniel S. Eppelsheimer, chairman, department of metallurgy; Dr. W. H. Webb, professor of chemistry; Dr. H. Q. Fuller, chairman of physics department; Dr. A. J. Miles, chairman of mechanical engineering; and Dr. T. J. Planje, chairman of ceramics engineering.

Junior Colleges

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have

printed in the Appendix of the RECORD, an excellent article entitled "Junior Colleges: Low-Cost Answer to Crowded Campuses?" from the May 2, 1958, issue of U. S. News & World Report.

This article reinforces the desirability of this type of college, and I hope, therefore, that the Senate Labor and Public Welfare Committee will soon act on my bill, S. 2810, providing a program of financial assistance to the States for construction of public junior or community colleges.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUNIOR COLLEGES: LOW-COST ANSWER TO CROWDED CAMPUSES?

With college costs going up and classrooms jammed are junior colleges the solution? A lot of communities think so. There's a big boom in these 2-year schools.

Why? What is it they offer?

This nationwide survey shows how much they cost, what they teach, how they operate and why they are growing.

As this country heads into a crisis of overcrowding in the colleges, you hear an increasing amount of talk about junior colleges. They are being suggested as a possible answer to the problem of providing enough classrooms for the flood of United States youngsters now approaching college age.

Already, junior colleges have had a tremendous and rapid growth. Just 25 years ago there were only about 300,000 junior-college students in the entire United States. As late as 1952, there were only 568,000. Today, there are nearly 900,000 enrolled in 637 junior colleges located in every State, as the chart on page 79 shows.

Now, another big boom in junior colleges is seen developing as State after State turns to these 2-year schools to help handle mounting enrollments. In 22 States, publicly controlled junior colleges have won financial aid from State governments. Federal aid is also being proposed in a bill now pending.

Just what is it about junior colleges that is attracting so much attention?

RESULTS OF A SURVEY

To find out what junior colleges offer, U. S. News & World Report made a nationwide survey. Questionnaires were sent to presidents of junior colleges. From their replies you get the following picture:

Junior colleges offer the same courses usually taken by freshmen and sophomores at a university. Their credits usually are accepted by 4-year schools.

In addition, most junior colleges offer courses not found at the average 4-year college of liberal arts. They train technicians, offer night classes for adults, give job training for young or old. According to the American Association of Junior Colleges, there were 335,000 adults and 106,000 special students in junior colleges last year.

All this is done, junior college officials say, at a big saving in money. Students save because most of them can live at home. A junior college is usually a community institution, drawing its students from close by. Savings to taxpayers also are claimed by some educators, who say that junior colleges cost less than 4-year schools to build and operate.

The growing trend is toward public junior colleges, supported jointly by the community and the State. Almost 90 percent of the junior-college enrollment today is in publicly supported schools.

RELIEF FOR UNIVERSITIES

The idea, expressed by numerous educators, is that junior colleges can take over the bulk of the task of providing the first 2 years of education beyond high school. This, it is said, would create more room in universities and let them concentrate on advanced studies.

Dean John E. Tirrell, of Grand Rapids, Mich., Junior College, makes this forecast: "I personally foresee the day when almost every youngster desiring post-high-school education will have to prove his capabilities and ambition by a year or more in a 2-year community junior college."

"If such a plan as this were adopted," says Director A. G. Umbreit of Muskegon, Mich., Community College, "the usual crowd of social climbers, prestige seekers and others who flock to the universities and who are eliminated during the first 2 years would have to exercise their talents elsewhere. It would leave the universities free to do a real job with people who have the mental capacity for college work."

COLLEGE AT HOME

One big advantage, stressed by educator after educator, in the U. S. News & World Report survey, is this: Junior colleges, serving a community instead of a State, bring the opportunity for college training to millions of people who are not reached by universities.

Records are cited to show that, when a junior college is established in a community, a larger percentage of the high school graduates continue their education beyond high school.

Dean M. F. Griffith, of Cosper, Wyo., college reports: "Fifty to sixty percent of our local high-school seniors are now enrolling in Casper College. Thirty percent went on to college before the local school was organized."

HOW STUDENTS SAVE

Educators' reports show how much a student saves by going to college in his home town instead of going away to school, where he would have to pay for room and board.

According to a recent study by the United States Office of Education, living expenses represent about five-sixths of the total cost of a student's education in a State college away from home, about two-thirds of the total cost in a private college.

One junior-college president Isaac K. Beckes of Vincennes, Ind., University, summarized it this way:

"Families using a community institution will be able to save some $800 or more each year in costs that are almost unavoidable in an institution away from home. Away from home, the largest cost to the families of the students is not for education, but for board and room."

HOW TAXPAYERS SAVE

Economy for taxpayers is claimed on the ground that junior colleges do not require as expensive buildings or equipment as 4-year schools. For instance, at a junior college where students live at home, there is no need to build dormitories.

For educating freshmen and sophomores, a school can get along without some of the costly laboratory and research equipment which universities require.

Often, also, a junior college can use facilities that already exist—share buildings and stadiums and auditoriums with the local high school.

On the whole, junior-college officials surveyed estimated their costs of operation as ranging between $300 and $550 per year per student. Many claim that this is less than half the cost per student in most 4-year colleges.

Here are some sample costs reported by junior colleges: Bakersfield, Calif., College, $450 per student per year; Belleville, Ill., Junior College, which shares facilities with the local high school, $320; Bismarck, N. Dak., Junior College, $400; Flint, Mich., Junior College, $520.90.

Junior-college economy claims are challenged by some officials of 4-year schools. They say that it costs more to educate upperclassmen, and claim that 4-year colleges can educate freshmen and sophomores just as cheaply as junior colleges.

BETTER EDUCATION?

Economy is not the only advantage claimed for junior colleges. In their survey replies, many educators argued that the education an underclassman gets in a 2-year school is as good as the one he would get in a 4-year school—and often better.

Records are cited to show that junior-college graduates do at least as well as other students when they transfer to a 4-year school. A recent comparison at the University of California showed that grades of junior-college graduates were slightly higher.

It also is argued that it is better for a teen-age student to start his college career in a home environment. President Marvin C. Knudson, of Pueblo, Colo., Junior College, explained it like this:

"The first benefit that accrues to most individuals is that the student has two more years to mature under the guidance and leadership of his parents and as a member of his church and other groups. He also frequently has more opportunities to exercise his leadership in social situations, athletics, drama, art, music, etc., because usually, the junior colleges are fairly small and also because he is not dominated by upperclassmen. Junior colleges can often promote closer relationships between student and faculty member and more help than is possible in larger institutions."

Robert Gordon Sproul, president of the University of California, said recently: "I would today urge high-school graduates to attend junior college unless there is a compelling reason for them to go to a 4-year college away from home."

JOB TRAINING, TOO

For the student who seeks vocational training instead of a college degree, a junior college is pictured as having a value unmatched by the ordinary 4-year college or university.

Nearly every junior college surveyed by U. S. News & World Report listed some kind of job training in addition to its academic studies.

Here are some of the courses junior colleges offer:

Secretarial and business training, nursing, agriculture, auto mechanics, drafting, machine shop, electricity, electronics, household mechanics, planning, decorating, plumbing, printing, sheet-metal working, woodworking, welding, cookery.

In some community colleges, as in Flint, Mich., Junior College, classroom teaching is combined with on-the-job experience, with students earning pay while learning their trade.

The idea is suggested by several educators that expansion of junior colleges would help fill the shortage of technicians in the United States labor force.

SCHOOLING FOR ADULTS

More than one-third of all junior-college students are adults. Some are getting a general education which they never had a chance to acquire in their youth. But many are taking courses to help them in their work—bring them up to date with technological advances, prepare them for better jobs, or teach them new trades.

In a junior college they can take these courses at night, after work. Junior college officials point out that most of these adults would never be able to go away from their homes and jobs to attend a university.

ASSET TO COMMUNITY

From a community standpoint, a junior college is pictured as an asset industrially, as well as educationally and culturally.

Benjamin K. Swarts, director of East Los Angeles Junior College, observes:

"The curricular offerings of the junior college can be adjusted to meet the educational needs of the area which that college serves. For example, as there is a very large electronics industry in our part of the city of Los Angeles, we have developed and offer a very successful electronics curriculum."

President Glen L. Bushey, of Asheville-Biltmore College, Asheville, N. C., cites this as an example of community service: "We cooperate with business, industry, community institutions, and Government agencies in providing special programs to benefit their personnel."

LESS "RAH RAH"

There are some things a youngster has grown to expect from college life that he might not find in a junior college. Some of the traditional trappings may be missing.

For instance, most junior colleges surveyed do not have social fraternities and sororities. Many do not have football teams. Some do not have campuses of their own.

Dean L. J. Elias, of Olympic College, Bremerton, Wash., suggests that many of the social traditions that are identified with American university life, such as football and social fraternities, will have to be modified in the philosophy of the community junior college. He says "adequate parking space for commuting students" should be more concern than "rolling acres of lawn."

Some junior colleges, however, are as big and fancy as universities, and have fullscale programs of intercollegiate athletics. The Junior College Directory, published by the American Association of Junior Colleges, shows 39 junior colleges with enrollments of more than 5,000, ranging up to 37,320 at Long Beach, Calif., City College.

WHERE MONEY COMES FROM

Junior colleges are financed in a variety of ways. Of the 637 in this country, 371 are public institutions, supported mainly by taxes, and 266 are private schools. Most public junior colleges depend entirely or primarily upon their local communities for support. In 26 States, they get no State aid.

Where State aid is given, communities still contribute heavily to the junior college cost.

California is perhaps the outstanding example of State-community cooperation in junior college financing. There, the State contributes $120 or more per pupil, and the junior college taxing district puts up the balance of the cost. This method has resulted in the largest statewide system of public junior colleges in the country. There are 63 such schools, with a total enrollment of more than 400,000.

In California, public junior colleges charge no tuition. They are part of the State's system of free education. In most States, however, students pay at least part of the cost of junior college education in the form of tuition.

OUTLOOK FOR FUTURE

The picture you get from this survey is one of tremendous growth in junior colleges with more rapid growth ahead.

Junior colleges are a comparatively new development in American education. The oldest public junior college in the country at Joliet, Ill., was founded in 1901. It was not until World War II that junior colleges became significant in the overall educational picture. Yet, today nearly one-fourth of all American college students attend junior colleges.

Now you find several States planning big expansion of their junior-college systems. Much of a 250-million-dollar bond issue recently voted by the State of New York will go for community colleges of the 2-year type. Illinois, Florida, and Maryland are considering proposals for statewide networks of such institutions. California and Texas are constantly adding to their already-big networks.

A special State commission on higher education in Illinois recently recommended that "Illinois should extend locally controlled public junior colleges eventually to cover the State so that all high-school graduates are within commuting distance of an institution of higher learning."

President Ralph Prator of Bakersfield, Calif., College predicts:

"In my opinion, there will be many communities and many States which will soon branch out into the community-college concept as we know it in California. The reason I believe this concept will grow is because the community college, generally speaking, is the most economical institution to operate."

The hope you find among many educators is that junior colleges may provide an answer to this country's problem of mounting college enrollments—and mounting college costs.

How junior colleges have grown

	In number	In enrollment
6 years ago (1951–52)	580	568, 559
Latest count	637	863, 513

Following, State by State, are the number of junior colleges, public and private, and their total enrollments for the school year 1956–57.

State	Public	Private	Total	Enrollment
Alabama	1	8	9	2, 169
Arizona	2	0	2	4, 243
Arkansas	2	2	4	2, 511
California	63	6	69	414, 428
Colorado	7	1	8	8, 928
Connecticut	0	8	8	11, 751
Delaware	0	1	1	225
District of Columbia	0	7	7	3, 162
Florida	7	5	12	9, 813
Georgia	9	9	18	11, 021
Idaho	3	2	5	5, 223
Illinois	16	12	28	35, 947
Indiana	15	4	19	25, 626
Iowa	16	8	24	13, 558
Kansas	14	6	20	7, 444
Kentucky	1	11	12	3, 640
Louisiana	0	1	1	45
Maine	0	4	4	646
Maryland	11	5	16	4, 567
Massachusetts	2	17	19	11, 297
Michigan	16	3	19	28, 570
Minnesota	9	2	11	9, 813
Mississippi	15	7	22	9, 888
Missouri	8	13	21	12, 326
Montana	3	0	3	693
Nebraska	4	1	5	2, 257
Nevada	1	0	1	419
New Hampshire	0	1	1	501
New Jersey	2	9	11	4, 096
New Mexico	2	0	2	331
New York	17	17	34	37, 310
North Carolina	5	18	23	9, 815
North Dakota	4	0	4	2, 151
Ohio	1	6	7	6, 614
Oklahoma	13	3	16	7, 430
Oregon	2	2	4	3, 314
Pennsylvania	13	15	28	21, 709
Rhode Island	0	1	1	377
South Carolina	0	10	10	1, 678
South Dakota	0	3	3	361
Tennessee	1	7	8	2, 580

Deportation of William Heikkila

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. HENNINGS. Mr. President, on April 30, 1958, an editorial discussing the deportation of William Heikkila appeared in the Springfield (Mo.) Leader and Press. Because it is of general interest not only to Missourians, but to Americans everywhere, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HE'S NO EXCEPTION

It was only the rather inept handling of the case of William Heikkila, San Francisco draftsman who was deported and imported again as fast as a trans-Atlantic airplane could carry him, that made it stand out from thousands of other cases very similar to it.

Actually—though the hot verbal exchanges in Washington may have made it seem otherwise—the Government had and has every right to toss Mr. Heikkila out of the country, no matter how exemplary a citizen he may have been for lo, these many years. What's more, Mr. H. brought all his troubles on himself.

Behind his case lies one of the most complex, least understood laws on the Federal statute books—the Immigration and Nationality Act, current version of which was passed in 1952. It is commonly known as the McCarran-Walter Act.

Any alien who runs afoul of its numerous provisions can be deported, no matter how long he has lived in the United States, and no matter how upright a life he has led.

Draftsman Heikkila, for example, has lived in the United States for almost 52 years. He came here with his parents from Finland when he was 10 weeks old. If his parents had become naturalized citizens while he was a child, he would have automatically derived his citizenship. But neither of his parents ever became naturalized, contrary to some published reports.

Heikkila could have applied for citizenship in his own right at the age of 18, or any time after that. Immigration records show he did file a declaration of intent to become a citizen when he was 18. But he waited until he was 39 before he filed an actual petition for naturalization. Maybe he knew what would happen to it, maybe he didn't. At any rate, it was promptly rejected because he admitted at a hearing that he had been a member of the Communist Party from 1929 to 1939. And that is all that is needed, under the law, to get an alien deported—for him to admit he is, or ever has been a member of the Communist Party after his entry into the United States. The question of whether he is still a Communist just doesn't enter into it.

Even if an alien, having carried on a youthful flirtation with Communist doctrines, later recants and becomes a violent anti-Communist, he is still subject to deportation for his earlier folly. But the law provides him with the right to appeal to immigration authorities for suspension of deportation, which may be granted if he shows he is now a person of good moral character, free of subversive tendencies, and that deportation would be an exceptional hardship to him.

Six years after the Immigration Service started proceedings to deport him, Heikkila filed such an appeal. It has been kicking around in the courts ever since, and is the basis for his swift return to the United States for further court hearings after an apparently too-hasty boot by the immigration people.

Actually, as we said at the outset, Heikkila's case is only one of thousands. During the past fiscal year, 5,082 aliens were deported—and only 12 of them were charged with a history of subversive activity. They're the ones who get the headlines. The rest—and most of them are ousted because they never had any legal right to be in this country—are just statistics.

Probably Mr. Heikkila is and would continue to be a good American citizen. Like most other American citizens, he has made some mistakes. In his case, his mistakes may cost him much more than they could ever cost a native of the country—his right to live and work in the United States.

Minshall Opinion Poll

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. MINSHALL. Mr. Speaker, early in April, it was my privilege to mail an opinion poll to the voters of Ohio's 23d District. This is the fourth year that I have polled this suburban area of Cleveland on the vital issues before the Congress and each time the response has been excellent. A tremendous voter interest was shown as over 16,000 returned the questionnaire which present some of the questions of current interest before the second session of the 85th Congress.

In addition to completing the questionnaire, over 5,000 people also sent in additional letters and comments amplifying their views on the various issues. I am pleased with this response for it shows the great interest which the residents of this congressional district have in their Government.

Following are the results of the poll with an accompanying newsletter which were mailed to all voters receiving the questionnaire:

CONGRESSIONAL BRIEFS

April traditionally marks the midway point of a congressional session. This time last year only two major pieces of legislation had been passed, the President's Mideast doctrine, and the annual extension of corporation and excise taxes. Acting at a faster, election year tempo, this session's accomplishments include passage of a $1.9 billion housing bill, a highway-construction measure, and a pay raise for military personnel. In conference between the House and Senate is the postal pay raise and postal rate increase bill. Action is yet to come on foreign aid, extension of Reciprocal Trade Act, statehood for Alaska and Hawaii, pay increase for classified employees, and numerous other measures. About half of this session's appropriation bills, which usually are about 20 in number, have already passed the House. Six of these have also passed the Senate, and four have been signed into law. The President's much discussed Defense Department reorganization bill is presently being heard by the Armed Services Committee and is in for some rough sledding, but will be passed with modifications. One thing is certain and that is: Politics will be the keynote during the remainder of the second session of the 85th Congress. With the Democrats in control of the Congress and the Republicans in the White House, no holds will be barred.

RECESSION

I reported in my January newsletter that we could meet today's challenges quickly and wisely without being foolhardy in our appropriations. The recent mail load also indicates that many share that opinion, and that there is no need for us to go hog-wild in our spending. Leading economists have just recently reported that our economic tailspin seems to have leveled off, and although the outlook is much rosier, you can be sure that if things are not what they should be by the end of June, Congress will take definite action, most likely in the form of tax relief.

HAVE PASSPORT, WILL TRAVEL

All indications are that 1958 will be one of the biggest travel years on record, and the rush will start in earnest in June, so if you are thinking of traveling abroad this summer, be sure to apply for your passport in plenty of time. The new look—if you wish, you can now have your passport picture made in color, and you can smile without violating the regulations.

DID YOU KNOW?

It's only peanuts. We spent only about $3½ million for research development and procurement in connection with our missile program from 1945 to 1952. During the same period $116 million was spent by the Government in supporting the price of peanuts. Weather note: Usually mild Washington had over 40 inches of snow during the past winter—nearly 10 inches more than fell in Cleveland.

MINSHALL OPINION POLL

Returns to my most recent questionnaire arrived back in this office by the mailsackful. This is the fourth such poll I have sent out, and again the results were most gratifying. Nearly 16,000 were returned, and an unusually high percentage of people also sent additional letters and comments. The percentage of return is much higher than in other congressional districts conducting similar polls. I am highly pleased with this response for it shows the great interest that residents of the 23d District have in their Government. It is regretted that staff limitations will not permit an individual reply, but you can be sure that all answers were read and much appreciated. Thank you for your many generous comments and your wonderful cooperation.

It is interesting to note that answers to questions we asked again this year showed very little change in thinking. For example, in comparison to the 1957 poll, a very slight difference is noted between Federal aid for school construction, the air raid shelter program, and foreign trade. There was, however, a 12 percent shift in favor of foreign aid.

I shall continue to thus sample the opinions of my constituents from time to time for I feel there is no better way to find out what the majority of people are thinking, and of course having the benefit of your views is invaluable to me in representing you in the Congress of the United States.

The results of the 1958 opinion poll follow:

	Percent		
	Yes	No	No opinion
1. Do you approve of the proposal to put pay TV on a trial basis?	23	67	10
2. Do you favor a protective tariff or quota on imports of foreign goods which compete with our own business?	62	31	7
3. Do you believe we should continue our foreign aid program which calls for the expenditure of $3,900,000,000 in military and economic aid to our allies in free countries during the next fiscal year?	80	15	5
4. Are you in favor of removing the Federal Government's present regulatory control over prices which producers can charge for natural gas?	26	65	9
5. Do you feel a need exists for some form of Federal assistance to encourage scientific education?	52	41	7
6. Would you favor a $20,000,000,000 national air-raid shelter construction program?	16	72	12
7. Do you favor increasing social security benefits with corresponding increases in individual and employer contributions?	52	39	9
8. Would you favor furnishing nuclear weapons to our NATO allies in Western Europe?	49	37	14
9. In an effort to meet the national economic situation, please indicate which of the following Federal actions you think should receive prior attention:			
1st choice: Accelerate our present public works program (highways, public buildings, etc.).			
2d choice: Income tax reductions.			
3d choice: Increase our housing program.			
4th choice: Reduce credit restrictions.			
5th choice: Initiate a massive public-works program.			
6th choice: No Federal Government action required.			
10. Do you favor Federal aid for local school construction?	45	51	4

Guesswork and Economic Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 7, 1958

Mr. PROXMIRE. Mr. President, yesterday I put in the RECORD an article from the U. S. News & World Report which reported on a survey by the National Bureau of Economic Research which showed that the American consumer now plans to reduce, not increase, his purchases, and that by a 2 to 1 margin the American people believe that this is a bad time to buy. The survey was based on interviews with 25,000 families.

An editorial in the New York Times points out the fallacy of basing plans and expectations for the future on hunches instead of firsthand information. The administration believes that people are ready to start buying again. An objective inquiry proves that just the opposite is true. Why was not the best intelligence available relied upon instead of guesswork?

Mr. President, we must not make the same mistake in the other direction. The Times editorial is right when it says that Washington should find out what is going on before action is taken—or de-

layed. It is equally true that we ought to have the best information available as to what the effect of any governmental action will be on the economy.

Because I believe we should not rely on hunches when we take action to combat the recession, because I believe that we ought to know the probable effect of a tax cut or a public works program—or any other proposed action—I have introduced in the Senate a concurrent resolution directing the Joint Economic Committee to study the effect of various Government programs on the cost of living. I believe we should eliminate the guesswork in economic policy.

Mr. President, I ask unanimous consent that the editorial entitled "The Consumer and Business," which appeared in the New York Times on May 6, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

THE CONSUMER AND BUSINESS

The National Bureau of Economic Research undertook a survey of consumer buying intentions in early April, under the supervision of Dr. F. Thomas Juster, and it has now made public its findings. It can hardly be said that these lend much comfort to Washington in its wait-and-see policy. The poll, which covered 25,000 families representing all parts of the United States, reveals that as of the time they were questioned this cross-section of the consuming public planned to buy even fewer new cars and major items of household goods now than a half year ago.

Plans to buy new cars were 20 percent lower in April than they had been last October, though the number planning to buy used cars was sufficiently large to reduce the deficiency as it applied to cars of all kinds to 10 percent. Similarly, intentions to buy major consumer durable goods, such as ranges, refrigerators, TV sets, freezers, etc., dropped, on the average, by more than 10 percent. Information was also sought by those in charge of this survey on buying intentions 12 months ahead. Here, plans to buy new cars were almost 30 percent lower than they had been in October 1956, when the last comparable survey was taken. In the case of no fewer than 15 items the drop in buying intentions ran to 40 percent.

The households included in this survey of the National Bureau were member subscribers of Consumers Union of the United States, a nonprofit organization that tests, rates and publishes the results of its findings on various products. This group was selected because the record of its buying intentions was available for 10 years back. Despite the fact that these 25,000 families are above the national average by such tests as size and stability of income and of the degree of formal education, their buying plans have forecast with considerable accuracy the actual changes realized by the Nation's consumers as a whole.

One wonders whether Washington wouldn't be in a better position to play a leading role in combating the recession if it went out itself and inquired into the general state of the national psychology, rather than trying to persuade itself that the curve of business activity was showing signs that it might be getting ready to approach an initial stage of deceleration that could conceivably lead ultimately to a condition favorable to the first phase of the process of flattening out.

Defense Unification

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. HENNINGS. Mr. President, the April 28, 1958, edition of the Kansas City Star carried editorials on the subject of defense unification and medical care for the aged. I believe these editorials to be significant analyses and worthy of being brought to the attention of the Members of Congress, and I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

DEFENSE UNITY DOESN'T MEAN ONE SERVICE

The possibility of 1 armed service instead of 4 is a favorite bugaboo of those who fight defense unification. This 12-year-old scarecrow has been hauled out again by Congressmen who are leery of the administration plan for more central authority in the Pentagon.

President Eisenhower had his dander up when he replied to the allegation at his most recent news conference. He told a reporter that it is just as sensible to say Congress is going nuts and will abolish the Defense Department as it is to suggest that he wants a single military service.

Neil McElroy, Secretary of Defense, has found the going hot and heavy before the House Armed Services Committee. Under a barrage of questioning, McElroy has agreed to try to reword the White House proposal to meet a chief congressional objection. The change would make it impossible to merge the Army, Navy, Air Force, and Marine Corps into a single service.

In the era of atomic warheads the once-separate jobs of the four forces tend to overlap. This is why the President wants the power to accomplish greater unity of command. But he has shown no desire to tamper with the military and naval traditions of the United States.

That isn't the purpose of the plan to reorganize the Defense Department. But some Members of Congress won't be satisfied until they see it in writing. This can be done in the interest of a clear understanding on purposes. In order to get action it should be possible to make some compromises without defeating the principle of more effective coordination in the Pentagon.

MEDICAL CARE FOR THE AGED

If Missouri can find the money to increase old-age assistance the logical method is a State-Federal partnership to provide medical care for the indigent. A new Federal program is available and about 40 other States are taking advantage of it.

In the next fiscal year, old-age assistance in Missouri will cost about $82 million. Fifty-five million of this is from Federal taxes and 27 million is the State contribution. For each $60 check, the State pays $21 and the Federal Government $39. Any amount above $60 would be paid entirely by the State. If the maximum were increased to $70, as has been suggested, the cost to Missouri would be about $15 million a year.

The indigent who are ill, the ones who need help most, could receive aid to the extent of $14 million with Missouri paying half the cost. Under the program, a maximum State appropriation of $7 million would be matched by Federal funds. In most States the money is used to pay for drugs, hospitalization, and other medical needs. And it can be used for the extra expense incurred in nursing homes for the ambulatory patients who require much special care.

Only those who already are on the assistance rolls would receive the aid. So we do not see this as a wedge for socialized medicine. Apparently a majority of Missouri's doctors agree. A poll of the members of the Missouri State medical association brought a 3-to-1 vote in favor of a neutral stand if the bill is introduced in the 1959 legislature.

The Current Economic Situation

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. HUMPHREY. Mr. President, as a part of the statewide conference sponsored by the State Democratic-Farmer-Labor Central Committee at Minneapolis, Minn., on April 26, 1958, the former Chairman of President Truman's Council of Economic Advisers, the Honorable Leon Keyserling, made an important address.

His remarks dealt with the current economic situation and deserve to be widely read. I ask unanimous consent that excerpts from his address on that occasion be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS OF LEON H. KEYSERLING[1] AT THE ECONOMIC CONFERENCE OF THE DEMOCRATIC-FARMER-LABOR STATE CENTRAL COMMITTEE, MINNEAPOLIS, MINN., APRIL 26, 1958

As the American economic situation continues to deteriorate, the administration in Washington continues to dawdle. Its actions, or lack of actions, are internally self-contradictory and externally confusing. While the country suffers, the administration stalls.

The administration which promised to stabilize the dollar has generated the greatest peacetime inflation in the United States in the 20th century. The administration which promised prosperity without war has sparked by far the biggest economic recession since World War II. The administration which promised to balance the Federal budget is now almost weekly revising upward by a billion dollars or so its own shaky estimates of the size of the deficit in the Federal budget during the approaching fiscal year.

Official Government sources, including the Secretary of the Treasury, now indicate that the Federal budget is likely to show an

[1] Former Chairman, President's Council of Economic Advisers. Consulting economist and attorney. President, Conference on Economic Progress.

$8 billion deficit for the fiscal year starting July 1. (The Chairman of the Federal Reserve Board, that sturdy ally of the administration's dizzy economic policies, has just estimated this deficit as high as $10 billion.) This contrasts with the President's budget estimate, as recently as mid-January, that there would be a surplus of almost half a billion dollars for the same fiscal year starting July 1. What explains this $8½ billion changeover in so short a period of time?

The explanation is simple. First, a deteriorating nationwide economic situation is already forcing upon a reluctant administration some speedup, though inadequate, of expenditures for many programs including national defense which since the new Republican era have been carried forward at too low a level—recession or no recession. Second, the economic recession means that, in the fiscal year under consideration, the Treasury now expects to collect about $4 billion less in tax revenues, even assuming existing tax rates, than it had estimated as recently as mid-January.

This in turn can mean only 1 of 2 things, or both: (1) Either the administration in mid-January did not correctly appraise the adverse economic outlook when it made its overoptimistic revenue estimates; or (2) even now the administration's complacent economic outlook is refuted by its own revised budget estimates as of today.

This most recent development illustrates vividly the fallacy of Republican economic policies which have persistently tried to balance the Federal budget at the expense of the national economy. Rising unemployment, falling production, and a dwindling tax base do not and cannot balance the Federal budget, Messrs. Humphrey, Anderson, and Martin notwithstanding.

But even this most recent revelation of the obvious has not yet induced the administration to alter its course. Even now, high Government officials use the worsening budget picture, which reflects a worsening nationwide economic picture, not to revise their policies, but rather to justify their existing policies. These officials are now using this worsening budget picture, reflecting this worsening nationwide economic picture, to support their inflexible resistance to the spending programs and tax reductions which are now imperatively needed to restore the economy and thus restore the Federal budget.

Recent Government statistics also reveal that our total national economic activity in first quarter 1958 was down $8.6 billion below fourth quarter 1957, contrasted with a decline of about $7.4 billion from third to fourth quarter 1957. These figures refute assertions still being made to the effect that the recession is leveling off or has just about hit bottom. Unemployment in March, when properly adjusted for seasonal variation, was about 250,000 higher than in February. Our total national economy in first quarter 1958 was operating at an annual rate about $63 billion below full production, and about 4 million jobs below full employment. We now have a true level of unemployment of about 6 million, taking fair account of the full-time equivalent of part-time unemployment, contrasted with the 2 million or so unemployed that would be the frictional unemployment consistent with full employment.

We now need a drastic and immediate tax reduction of five to seven billion dollars, concentrating upon increasing the purchasing power of low and middle income groups. We now need also an increase of five to seven billion dollars in the annual rate of Federal spending. This spending should not be for made-work projects nor merely to combat the recession. Instead, such spending should have the broader and more permanent purpose of closing the huge and dangerous gaps in our national security, education and health services and social security, natural resuorce development and highways and housing, as well as the huge gaps in our economic strength and human well-being resulting from depressed farm income, inadequate minimum wage laws, and gross neglect of the whole problem of persistent poverty in a land of plenty. In addition, unemployment insurance should be vastly expanded with Federal aid.

Through this bedrock assumption of responsibility by the Federal Government, the climate can be created for the vast reactivation of private business investment, the vast reactivation of jobs in private industry, and the sound restoration of consumer confidence among 173 million Americans. Through this sound program, we can by mid-1959 reduce unemployment by several million, and increase the annual rate of national production by about $35 billion above the current level, thus making great strides toward the fair goal of full employment and full production. By the end of 1959 or early 1960, we can completely achieve the full prosperity for all which is the rightful heritage of our people. And in consequence of this economic restoration and consequently larger tax base, we could go through the approaching fiscal year 1959 with a smaller deficit in the Federal budget than the $8 billion deficit which the administration now foresees, not to speak of the $10 billion deficit which Chairman Martin of the Federal Reserve Board— the architect of the devastating tight money policy—now foresees. Assuredly, it is better to have in the coming year a smaller Federal deficit in a revived economy, rather than a larger Federal deficit in a stricken economy. And surely, we can most rapidly get back to a balanced Federal budget, a consummation devoutly to be wished, in a fully expanding economy than in a further contracting economy. The time has come, therefore, to reverse the Republican national economic policies which have turned out to be so penny foolish and pound foolish.

Catholic Mother of the Year

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7, 1958

Mr. NEUBERGER. Mr. President, Mrs. Leo J. Stupfel of McMinnville, Oreg., was recently named Catholic Mother of the Year by the National Catholic Welfare Conference and will receive a gold medal signifying her selection from Archbishop Edward D. Howard of Portland, Oreg., at a ceremony on May 15, 1958.

Mrs. Stupfel is an Oregon farm mother, 4 of whose 8 children have entered religious life. Other children have succeeded impressively in professional careers. Mrs. Stupfel has been a devoted mother who richly deserves this honor, and I extend to her my congratulations and respect.

Both Mrs. Neuberger and I have made public addresses under the auspices of the National Catholic Welfare Conference, which is an organization dedicated to the advancement of social welfare and the family unit.

Mr. President, it is indeed an honor to my State of Oregon that Mrs. Leo Stupfel of McMinnville has been selected as the 1958 National Catholic Mother.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the news release by the National Catholic Welfare Conference announcing Mrs. Stupfel's selection as the National Catholic Mother for 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON FARM MOTHER, WITH 4 OF 8 CHILDREN IN RELIGIOUS LIFE, NAMED CATHOLIC OF THE YEAR

WASHINGTON, May 8.—An Oregon farm mother, 4 of whose 8 children have entered religious life, has been named 1958 National Catholic Mother.

She is Mrs. Leo J. Stupfel, of McMinnville, Oreg., in the archdiocese of Portland in Oregon. Mrs. Stupfel was selected by a committee of the National Catholic Family Life Conference, which has headquarters here.

For the first time in the 17-year history of the mother-of-the-year award, the selections committee also chose 3 other Catholic mothers to receive silver medals of honorable mention.

They are: Mrs. Raymond L. Morrow, of Kansas City, Mo.; Mrs. Magdalene Frey, of Vincennes, Ind.; and Mrs. Ernie J. Broussard, of San Antonio, Tex.

Selection of the four women was announced jointly by Bishop Peter W. Bartholome, of St. Cloud, Minn., episcopal moderator of the Family Life Bureau, National Catholic Welfare Conference, and Dr. Frances Rothert, of Little Rock, Ark., president of the family life conference.

The mother of 5 boys and 3 girls, Mrs. Stupfel (the former Mary Morrison) has been married for 39 years. All of her children have been educated in Catholic schools, and four have entered religious life.

Two are nuns—Sister Theresa Maurees, a teacher in an Oswego, Oreg., school, and Sister Mariella Rose, a nurse in a convent infirmary. One son, Father Leo Stupfel, is a priest of the Baker, Oreg., diocese, and another, James Stupfel, will be ordained a Holy Cross father in May 1959, and will then go to Pakistan as a missionary.

Mrs. Stupfel's married children are: Clifford Stupfel, an engineer in Seattle, Wash.; Dr. J. F. Stupfel, Portland physician and surgeon, and Rosaleen, a graduate nurse. A fifth son, Joseph Stupfel, is a dental student at the University of Oregon.

Asked to comment on the honor, Mrs. Stupfel said her family's approach to happiness has centered on prayer and frequent reception of the sacraments.

"You can get the blessed mother to help raise your family by praying the rosary," she said. She added that the sacred heart was enthroned in her house and that the family gathered for 1 hour of prayer each first Friday night.

Mrs. Stupfel disclosed that she and her husband, who is now retired, plan to leave the six bedroom house they now occupy and move nearer to town because "we'd like to get closer to mass."

Mrs. Stupfel will receive a gold medal signifying her selection as mother of the year from Archbishop Edward D. Howard of Portland, Oreg., after an evening mass on May 15. The archbishop will also preach at the ceremony.

When informed of Mrs. Stupfel's selection, Archbishop Howard issued a statement in which he declared himself "extremely pleased that so high an honor has come to a mother in our archdiocese."

"In the person of Mrs. Stupfel," he added, "every Catholic mother in the United States is being honored. My sincere congratulations to her and to her family."

The selections committee remarked that a combination of qualities brought Mrs. Stup-

fel her award as Catholic mother of the year. It observed that there are regular religious devotions in the Stupfel home, including daily recitation of the rosary.

The committee pointed out that Mrs. Stupfel's devotion to Catholic education prompted her to take her own children, as well as those of two other neighboring families, to Catholic schools for 20 years. It also called attention to the fact that she has found time to lead 4–H Clubs, work with farm groups and the Red Cross, represent her area on the Archdiocesan Council of Catholic Women, and be active in the work of the National Office for Decent Literature and Sunday observance programs.

At present, Mrs. Stupfel is grand regent of the Catholic Daughters of America in her area.

International High Fidelity Music Festival of 1959

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, May 7, 1958

Mr. CASE of New Jersey. Mr. President, I note with interest that an International High Fidelity Music Festival has been planned to take place in Washington early in 1959. I understand that this event will be staged for the benefit of the National Symphony Orchestra, which will play a special concert in Constitution Hall on January 31, and that an exposition will follow at the Shoreham Hotel from February 5 through 8.

I am informed that the International High Fidelity Music Festival of 1959 will, for the first time, combine international cultural interchange with a trade-showing of high-fidelity equipment from all countries, including, of course, our own.

I ask unanimous consent to have printed in the Appendix of the RECORD an article by the Honorable Sherman Adams, the Assistant to the President of the United States, which appeared in the Washington Post and Times Herald of March 9, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Next weekend I hope it will be my good fortune to share with all of you the excitement of passing through electronic gates of Washington's High Fidelity Music Show of 1958. Here we shall see some of the specialized achievements of this electronic age. We are really only on the threshold of all it holds for us.

Already, as we know, giant computers perform calculations almost beyond human comprehension. Various electronic devices steer our airplanes through good weather and bad. Electronic controls assist in guiding manmade satellites into their orbits in space, and through electronics we keep in communication with these traveling bodies and learn scientific secrets that we can discover in no better way.

The list goes on and on, reaching into every branch of human endeavor, affecting our safety, comfort, health, and progress.

We fortunate people who will gather at the hi-fi show are especially interested in the application of electronic devices to our cultural life. Most of us are music lovers. We are not only intrigued by the engineering aspects of high fidelity, but we are profoundly impressed by the new appreciation it has given us and the new horizons opened for us in the world of music.

Some of us may put more emphasis on tweeters and woofers than we do on Bach and Beethoven. But it is a remarkable phenomenon that if you enter this field through your addiction to gadgets, you soon become a captive of the wonderful appeal of great music.

On the other hand, those, like myself, who derive their greatest satisfaction from the faithful reproduction of music and performances that they have revered for years, unwittingly find themselves engrossed in the intricacies of high-fidelity techniques. We even find a way of understanding the amazing jargon of the high-fidelity devotee.

Speaking of understanding, music has long played a part in promoting international understanding. In our time, through the readily available reproduction of music by radio and phonograph, the international message of music can be distributed easily and quickly to every human being.

The application of the science of electronics to the art of music has led to the greatest cultural revolution in modern times, and this has all taken place substantially in the last 30 years. Thus, a single network radio broadcast of Beethoven's Fifth Symphony can be listened to by more people than were able to hear this masterpiece during all of its performances throughout the 19th century.

Today, when it is our aim to have a better understanding with the people of nations separated from us by ideological barriers, music on records and on radio has served as the first ambassador of cultural interchange. Thus, when the Soviet violinist, Oistrakh, recently played in our concert halls, his art was already known to us through his recordings, which had been widely distributed and broadcast in the United States.

For our own part, the violinist, Isaac Stern, and the Boston Symphony Orchestra has performed for Russian audiences in recent years and the Philadelphia Orchestra will include a visit to the Soviet Union in its European tour this year. The people-to-people contacts made by musicians cannot help but pave the way for better understanding at other levels. Music and high fidelity thus frequently fill a functional role in international relations.

It is indeed a happy package that can hold so many desirable gifts. The inventors and manufacturers of high fidelity equipment live by our interest in the mysteries of these contrivances. The composers and musicians live by our love of their genius and their artistry.

I find that in 1957, the production of high fidelity instruments in the United States attained to some five million units, an increase of nearly 20 percent over 1956. It is noteworthy that the greatest increases were registered in the higher quality instruments and that the majority of the combination radio-phonographs included FM, the ideal medium for the broadcast of music.

What all this means to musicians and composers is not easily reduced to figures. What is really more important is that most artists and composers never get rich. On the contrary, they need us. They need to find us in their audiences at concerts and recitals, for live performances are necessarily the heart of the activity that inspires the imposing reproducing instruments to be seen and heard at hi-fi shows.

Here in Washington, that means that we should support our National Symphony Orchestra with our attendance at its concerts as well as by making the financial contribusions that are possible for us. And we should give equivalent attention if we can to all of the many fine musical organizations in the community. Who shall say that such support in their own communities by all our people throughout America does not add to our national strength and character?

Indeed, music has already greatly enriched our lives in America, and it is clear that it is constantly growing in scope and in influence. So, be it the living performance or the reproduction, listen with an open ear and you may be sure that you will always discover beauties and new spiritual qualities in this mysterious, yet pervading art that sooner or later affects all of us.

Michigan's Attractions Are Outstanding

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. CEDERBERG. Mr. Speaker, the editorial writer of the Bay City (Mich.) Times has struck at the very heart of the current Michigan Week observance when he says that in Michigan we seek to give our guests an indication of genuine hospitality that awaits them during their stay, be it brief or extended, among us.

The editorial follows:

MICHIGAN'S ATTRACTIONS ARE OUTSTANDING

Recreational, scenic, and historical attractions are uppermost in the minds of tourists when, with eager anticipation, they cross State lines into Michigan. And we have all three in the greatest abundance, to as great an extent, perhaps, as any other State in the Union.

The Wolverine State can offer thousands of beautiful lakes, silvery fishing streams, skyline drives, mountains, waterfalls, great sand dunes, and other natural wonders almost without limit. Its historical associations equal those of any eastern seaboard State. To the multitude of its other interests, including the cool greenery of a rolling countryside, it has added this year the magnificent Straits of Mackinac bridge, which all middle westerners will want to see and cross as soon as they can.

The breath-taking beauty of that lacework structure of steel and concrete is alone enough to mark it out as the year's top drawing card for vacationers. But even it is only a part of the wonderfully picturesque straits panorama with its incomparable setting, Mackinac Island.

These facts are well known to the hundreds of thousands or millions who will be thronging to the two peninsulas this year. They know they are more than welcome, but a considerate hostess does not rest satisfied with the mere assumption her visitors know how glad she is to see them. She makes sure of it by extending at the door all the little courtesies that set her friends at ease and make them feel at home.

In much the same spirit the State highway department has decided to give tourists at least a signboard welcome to Michigan when they arrive at the State lines. As a result of the new friendly policy of the department, "Welcome to Michigan" signs will be erected at the State borders along 20 major trunkline highways. The signs will carry a replica of the Mackinac Bridge to incite tourist in-

terest, and they will be reflectorized for nighttime visibility. They will be constructed in such a way as to make possible the publicizing of special events through the use of an interchangeable panel.

This is, of course, just good business, but it's also a great deal more than that. Our tourist and resort interests should be among the chief beneficiaries, but that was not the principal consideration in the minds of those who proposed and adopted the plan. They wanted to show, rather, that Michigan is a friendly State, one that seeks to give its guests at the borders an indication of the ginuine hospitality that awaits them during their stay, be it brief or extended, among us.

Near East Peace

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1958

Mr. MULTER. Mr. Speaker, on May 10, 1948, I inserted into the CONGRESSIONAL RECORD my views regarding a recovery plan for Palestine, stating that it was incumbent upon us as Americans to preserve peace in that area. Note, this was said before the new State of Israel was established.

Ten years later, almost to the day, Drew Pearson has written an article voicing the responsibility of the Christian and Moslem world to maintain peace in the Holy Land.

My article of May 10, 1948, and Drew Pearson's article which appeared in the Washington Post and Times Herald of May 7, 1958, follow:

A RECOVERY PLAN FOR PALESTINE

(Remarks of Hon. ABRAHAM J. MULTER, of New York, in the House of Representatives, Monday, May 10, 1948)

Mr. MULTER. Mr. Speaker, it was my happy privilege to participate in a conference in this city which started on May 7 and concluded last night, designated as an Emergency Conference To Propose a United States Policy for Palestine and the Middle East.

The conference was summoned by Senators Charles W. Tobey, Wayne Morse, and Dennis Chavez. Among its sponsors were many of our most outstanding citizens who came to Washington from all parts of the country for this purpose. Partisan politics had no part in its makeup or in its deliberations. The results of its activities will be released on Wednesday. At its concluding session I said to the conference:

"A REHABILITATION PROGRAM FOR THE MIDDLE EAST

"This conference has been called primarily to deal with an emergency which will be upon us with its full force in a matter of hours, if it is not actually upon us at this very moment.

"For many weeks I have been urging that the way to avert the grave consequences that can be seen by all except those who will not look, are some very simple expedients. They are:

"1. Announcement by our Government that as of May 16 it will recognize the Jewish state in Palestine and deal with it as a sovereign power; and

"2. Implement that recognition by treating with the new state as a sovereign, including lifting the embargo on arms as to it, and invoking economic sanctions against its aggressors.

"Without in any way lessening my position in that regard, permit me to take a few minutes to comment upon a rehabilitation program for the Middle East.

"In our efforts to propose specific actions to halt the bloodshed, warfare, and destruction in Palestine, we dare not ignore the underlying realities which caused this emergency and made possible this upheaval. We must go to the roots of the crisis if we are to achieve a stable and lasting peace in the whole troubled area of the Middle East.

"By underlying realities, I mean the economic conditions of the region—the level of economic development, the type of economy, the standard of living, the extent of industrialization, and related problems. A survey of the economic conditions of the Middle East brings sharply into focus a single basic fact: With the exception of the Jewish areas of Palestine, all the countries of the Middle East suffer from extremely low standards of living and operate on an extremely low economic level.

"Predominantly agricultural, these countries have for centuries made no advance toward more efficient use of such resources as they have. Their methods of cultivation are the same as in Biblical times. Outmoded systems of land tenure have long since destroyed initiative among the rural populations. Inadequate irrigation and inefficient marketing systems result in low yields and much waste. The usual physiological factor accompanying such conditions is an increase of the population of the area. In the Middle East it is at the rate of 600,000 persons a year. This increase only aggravates the problem of existence, because natural and man-made limitations render it impossible to provide for the minimum needs of the people.

"Accordingly we find that disease, ignorance, and poverty afflict the vast majority of the peoples.

"The impact of the industrial revolution has already caused the almost complete decay of handicraft skills. The modern skills have not begun to take their proper place in their economy.

"What are the dangers for us and for the world inherent in such conditions?

"Until adequate steps are taken to improve the substandard conditions of life in this area, there can be no hope of peaceful stability or social and political progress. What we have learned to be true of Europe in this respect is tenfold more true in the Middle East. If we hope to reduce the threat of communism in that strategic area, we will have to set about providing for its development toward a better balanced, more self-sufficient economy capable of offering the downtrodden populations a relatively decent standard of living. We can work no miracles in a short space of time; too many centuries of neglect and disintegration lie behind the present stagnation.

"We can make an important beginning. We can help the people of that region to help themselves—a principle to which our Government has committed itself and undertaken to implement in the case of Europe. How much more critical are the needs of the Middle East? Regardless of what brought the condition about, when we recognize it, we must agree to improve it.

"We must offer to support a program for the greater use of already existing resources and for the diversification of production, both agricultural and industrial. In return for our technical and financial assistance, we must expect the willing cooperation of the governments whose countries benefit.

"Palestine provides a striking example of how the economic potential of the area—meager, sparse, and difficult to exploit as it appears at first glance—can be effectively turned into economic abundance. In the past two decades the intensive application of western-type initiative, capital, and industry by the Jews has revitalized the Palestinian economy and pointed the way toward resurrection of the entire desert area between Egypt and India. The Jews have reclaimed the land and made gardens bloom where there were bleak wastelands. Between 1923 and 1942 the cultivable area of Palestine was almost doubled; capital investment has increased 21 fold and the number of industrial enterprises sevenfold.

"Any program for the economic development of the Middle East will have to take into account the experience of Palestine. Specific factors were at work there which made progress possible. The Jewish community has technical skills that are essential to expanding production. Its social institutions, educational system, and democratic political structure are unique in the Middle East. They need not remain so. They must not remain so. They must be made the universal pattern of progress there.

"The economic developments in Palestine will affect the development of its neighbors. Their economies can complement one another in the interest of material progress for the whole region.

"This conference will not have done a complete job unless it goes on record as recommending that the United States call upon the Middle Eastern countries to convene for the purpose of drafting a plan for the economic development of the Middle East—an ERP, or, in this case, an MERP, a Middle East rehabilitation plan.

"Certain conditions should be attached to any United States loans and grants provided to finance such a program.

"First. Peaceful relations must be established among all the countries, including, of course, Palestine. The only area where there are the technical skills and the industrial potential available to begin the regional development is Palestine.

"Second. An economic union providing for the coordination of material resources and waterpower (especially of the Jordan Valley) among the Middle East countries.

"Third. Political and social reforms to permit the elevation of depressed populations of the area so that they may participate as healthy, literate, and civilized human beings in the regeneration of their region.

"The reasons which led our country to adopt the European recovery program apply with far greater force to the establishment of a Middle East recovery program. Such a project must be an integral part of any long-term planning looking toward permanent elimination of the turbulence spreading through that region.

"I join with you in praying for peace in Jerusalem, peace in Palestine, peace in all the world."

NEAR EAST PEACE CHRISTIANS' DUTY

(By Drew Pearson)

The little State of Israel, now celebrating her 10th birthday, has accomplished miracles but faces grave problems ahead. These problems are not hers alone. They are the problems of the rest of the world from three points of view.

From a materialistic point of view, the problem of Arabian oil is vital to the West. Upon it depends the industry of France, England, and Western Europe.

From the point of view of peace, the Near East is the boiling pot most likely to erupt in war. It has erupted twice since VE-day.

From the humantarian point of view, we of the Christian world—even the Moslem world—have a moral obligation for the murder of 6 million Jews in Germany. Our minimum obligation is to ensure the Jews peace in the ancient land of their forefathers.

Most people have forgotten that it was during Hitler that anti-Jewish hatred was planted in the Arab world. Looking through the file of my old columns I find that on August 25, 1946, I published the secret testimony of Walter Schellenberg, chief of Hitler's SS foreign espionage, in which he told United States examiners how he had been ordered by Himmler in 1942 to pay the Grand Mufti of Jerusalem to stir up anti-Jewish prejudice. A flat $250,000 was paid by Hitler, $150,000 by Mussolini. Schellenberg further testified: "The mission carried along one-half hundredweight in gold coins, 20,000 in English pounds, and $10,000 in United States dollars."

OBLIGATION FOR PEACE

The public has also forgotten that Hitler's campaign of terror against the Jews started in 1933 and continued while we of the Christian world looked on, blasé and little concerned. We did nothing until other religions and other lands began to feel the imprint of his hate. And for at least a year after the war started, certain American diplomats tried to keep secret the gruesome reports which came into the State Department of Nazi concentration camps, the persecution, the starvation, the eventual transition to gas chambers and soap factories.

These are memories which we of the Christian world have forgotten. Jews can never forget. They constitute a reason why the rest of the world, including the Moslems (also descended from the Prophet Abraham), has a deep, unpaid obligation to the Jewish people.

The most complete way to make that restitution is to bring peace in the Near East. The Jews have already made great sacrifices to establish a homeland. What they need now is peace. Furthermore, we of the Christian world have an obligation to bring peace to that part of the world where He whose religious precepts we profess to follow first taught peace on earth, good will to men. We haven't followed it anywhere else in the world. We can begin at least where He taught.

From a monetary viewpoint, the Foreign Minister of Italy, Dr. Giuseppe Pella, suggested a constructive course toward peace when he conferred with John Foster Dulles in Washington last year. Pella recalled what most Americans have forgotten, that under the terms of the Marshall plan Western European nations soon must begin to pay off their Marshall plan loans. Pella proposed that this money be reinvested, jointly, to reconstruct and stabilize the Near East.

Mediterranean nations could join the United States in building irrigation projects and other public works to help both the Arab States and Israel to realize their interdependence, break down the barriers of prejudice, and bring peace.

THE TRUMAN PLAN

This is part of the idea Harry Truman was working on when he left the White House. Foreign Minister Pella would also extend cooperative French-Italian-American reconstruction aid to the Arabs of North Africa where French-Algerian bitterness has so disrupted the world.

Basically the two ideas are identical—the idea of outside nations cooperating with Near Eastern nations to get them in the habit of working together.

"Back in the days of the Greek and Roman Empires 60 million people lived in this area," Mr. Truman once told me. "Now there are about 25 million—all because of war, suspicion, and the destruction of the great irrigation works on the Tigris and the Euphrates."

NATO Trend at Copenhagen

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of an article entitled "NATO Trend at Copenhagen" by Constantine Brown which appeared in the May 6 edition of the Washington Evening Star.

NATO TREND AT COPENHAGEN

(By Constantine Brown)

Reports from Copenhagen where the NATO foreign ministers are meeting seem to indicate that the moral diplomatic victory obtained by the United States as a result of Russian's veto of our Arctic inspection proposal has been short-lived.

When the Russians cast their 83d veto, American and foreign diplomats in Washington were in an optimistic mood. This, they said, shows clearly to the rest of the world the ultimate aggressive objectives of the Soviet Union. It would prove henceforth clearly to our European allies that the Khrushchev proposals for a summit meeting are nothing more than a cheap propaganda gimmick.

The private talks held by Secretary of State Dulles with his British colleague, Selwyn Lloyd, and other foreign ministers have been disappointing, according to some reports. The desire to push us into a meeting with the Soviet dictator appears as strong as it was last winter in Paris when President Eisenhower was pressured into accepting the offer of "Stalin II."

At Paris we insisted on some safety clauses. These were preliminary talks at the ambassadors' level of the four powers directly concerned with the relaxation of tension, to be followed by a big four foreign ministers conference only after these meetings had shown concrete results and established a definite area of understanding were the heads of state to meet.

It appears the Russians want now to extend the big four meetings to include, at least at the foreign ministers conference, a number of satellites and so-called neutralists from Eastern Europe, the Middle East and, some believe, from the Far East. To our surprise, the British seem inclined to accept the Soviet thesis.

The British feel that since the present talks are intended to reduce tensions in so many parts of the globe there is no valid reason why other foreign ministers besides those of the big four should not participate at a powwow. As a matter of fact, the British Government—itself under Laborite pressure—would have favored the parity demanded by Foreign Minister Gromyko and agreed to participation of the Polish and Czechoslovak ambassadors at the meetings which are now going on in Moscow.

The NATO foreign ministers are reported to have assured Mr. Dulles of the full backing of their respective countries at the summit meeting. This encouraging declaration through former Belgian Prime Minister Paul-Henri Spaak (now secretary general of the organization) shows that the pressure for a meeting of the heads of state of the principal powers continues as in the past.

After the demonstration of bad faith and truculence by the Soviet Union, most observers, including Mr. Dulles, believed that a summit meeting would be indefinitely postponed—at least until Premier Krushchev provided some positive deeds in support of his demands for relaxation. Mr. Dulles expected to find that type of atmosphere in Copenhagen. But he is reported to have been surprised at the attitude of most of his colleagues who represent the political climate in their respective countries. They all assured him that the NATO ideological unity would be greater than in the past. But in the meantime, they said, their people still wanted a summit parley. This was not practicable this year, but maybe in 1959 it would offer a better chance.

Most of our West European allies are said to want their own foreign ministers to attend the second phase of the summit preliminaries. They want to be in a position to give an indirect mandate to American, British, and French heads of states when they meet Krushchev.

Few, if any, West European statesmen have any doubt that the Soviet proposal is anything but a phony diplomatic maneuver. But all of them are scared because of the alleged Soviet military power, particularly in nonconventional weapons. They see in the missile sites established in Poland, East Germany, Czechoslovakia, and Hungary a more direct threat to themselves than to the United States. Hence, their eagerness to accept even a phony relaxation by means of a summit meeting.

Public Reaction to Tax Cut Proposals

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 7, 1958

Mr. HUMPHREY. Mr. President, the Minneapolis Sunday Tribune of April 20, 1958, contained two articles on the public reaction to tax cut proposals. The first was a Minnesota poll and the second was a Gallup poll.

The Minnesota poll seemed to show a strong preference for public works projects over Federal tax cuts, although the framers of the question forced a choice between these suggestions while many people would combine them.

The Gallup poll showed national opinion almost equally divided between a tax cut and public works.

I believe the comparisons are interesting and instructive, and I ask unanimous consent that the text of these articles from the Minneapolis Tribune be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

DOES JOHN Q. PUBLIC WANT TAX CUT?—STATE VOTERS PREFER WORKS PLAN OVER OTHER BUSINESS BOOST AIDS

A Federal works program will do more to improve business in the United States during the next year than will a 10-percent Federal tax cut or an increase in military spending,

2 out of every 5 Minnesota men and women believe.

Public works also are rated ahead of high price supports for farm products and increased foreign trade, as a means of giving a lift to the national economy.

These are findings in a statewide survey by the Minneapolis Tribune's Minnesota poll, based on personal interviews with a cross section sample of voting-age men and women.

The survey also indicates that:

Sixty-seven percent of the people are in favor of calling a special session of the State legislature if there is widespread unemployment in the State later this spring.

Thirty-two percent think the Eisenhower administration is doing a good job of dealing with the business recession, 36 percent term it fair, and 24 percent call it poor.

One of the questions interviewers asked was this:

"A number of suggestions have been made in recent weeks on ways to improve business in the United States. Of the five ideas on this card, which one do you think would do the most good in the next year?"

Each respondent was handed a card listing the five proposals:

	Percent
Start Federal works projects to create jobs for the unemployed	40
Increase our trade with other countries	18
Cut Federal taxes 10 percent for everyone	16
Maintain high support prices on farm products	16
Increase our defense and military spending	5
Other answers	2
No opinion	3
Total	100

A few persons think there should be combinations of the choices, like high farm price supports and a tax cut. Several think we should cut down on foreign aid, or quit spending.

City and town people throughout the State make public works their No. 1 choice. Farm people put high price supports in first place.

Another question was:

"If a large number of Minnesota people are out of work later this spring, do you think it would be a good idea or a poor idea to have the State legislature called into special session to deal with the problem?"

The replies:

[In percent]

	Total	Men	Women
Good idea	67	64	71
Poor idea	19	23	15
Other answers	1	1	1
No opinion	13	12	13
Total	100	100	100

The idea of a special session, if there is substantial unemployment in the State later this spring, has the backing of large majorities in all major segments of the population.

For the most part, they say either that the legislature could "set up State public works projects," or that "something would have to be done."

People who consider a special legislative session a poor idea believe that the legislature would be unable to act promptly enough, or say "it's a problem for the Federal Government," or that it would lead to increased taxes. A few say, "The situation isn't that bad."

Before inquiring about public views on a legislative session, interviewers asked:

"In general, would you say the Eisenhower administration is doing a good, fair, or poor job of dealing with the slowdown in business?"

The answers:

[In percent]

	Total	Men	Women
Good job	32	29	36
Fair job	36	35	37
Poor job	24	28	19
Other answers	(1)	1	(1)
No opinion	8	7	8
Total	100	100	100

[1] Less than 1 percent.

Sixty percent of the Republican voters in the sample, and 50 percent of the college educated men and women, say they think the administration is doing a good job. But 42 percent of the Democratic-Farmer-Laborites call the administration's performance "poor", a view shared by 29 percent of the farm residents.

Persons labeling the administration's work "fair" or "poor" in dealing with the recession were asked:

"What do you think the administration should be doing?"

The replies fall chiefly in these categories:

1. Start public works; create jobs.
2. Cut taxes.
3. Help the farmer.
4. Act more promptly; "they're too slow."
5. Establish price controls; cut prices.
6. Cut down on foreign trade.

But 3 percent said they believe nothing much can be done, and another 6 percent had no suggestions.

GALLUP FINDS NATION FAVORS PUBLIC WORKS AS "SHOT IN ARM"

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J.—As politicians and economists argue the relative merits of tax cuts and increased Government spending, one question remains which only the consumers can answer—what would they do with a tax rebate if they got it?

The first of two special reports on the recession's impact shows these highlights:

1. If the Government returned part of the money paid in income tax this year, about 3 out of 4 tax dollars returned would find their way back into circulation—the hoped-for reaction by economists. The remainder would be saved or invested.

2. The public, however, is basically cool toward the idea of a tax cut. Although people feel strongly that the Government will have to take some action on the current business slump, they prefer public works to tax refunds as a Government "shot in the arm."

Americans do not feel that conditions will get better naturally with time. Views on this, however, vary by the kind of work one does, the region of the country he lives in and the amount of education he has.

As the business downturn continued to dominate Washington conversation, 162 experienced reporters from the institute's field staff were out talking to the people of America—asking housewives and workers, farmers and executives what they would do if Uncle Sam were to return some of the tax bite he took this year.

Their assignment was to ring doorbells, to get at the grassroots sentiment in all sections of the country. They asked the question:

"If the Government gave you back one-fifth of the money you pay in income tax, what would you do with the money?"

From a Montana Creek, Ala., miner who said he would buy whisky with it, to a Pulaski, Wis., farmer who would purchase a new manure spreader, the answers Gallop poll reporters got from voters fall into these general categories:

	Percent
Would buy something which otherwise would not buy	36
Would pay debts	22
Would save it	18
Would use it for normal living costs	11
Would invest it	7
Don't know	6

To get voter reaction to the Government's position in the recession, Gallop poll next asked these two questions of voters from coast to coast:

"Do you think conditions will get better naturally with time, or do you think the Government will have to take action?"

The views of all voters:

	Percent
It will get better with time	35
Government will have to take action	54
No opinion	11

"If the Government does take action to improve the business situation of the country, which of these two plans would you prefer—an income-tax reduction for all taxpayers and businesses, or Government spending for public works?"

The vote:

	Percent
Tax cut	41
Public works	46
No opinion	13

Analysis of the question of Government action reveals that although all groups feel the Government will have to step in, the greatest sympathy for letting time take its course is found in the Midwest, among college-trained people, and among business and professional people.

Michigan Is Vacation Land

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1958

Mr. CEDERBERG. Mr. Speaker, this is Michigan Week. For the fifth consecutive year we are engaged in this observance and Michigan is the only State in the Nation to celebrate such an event. During this week we endeavor to publicize to the Nation and to the world the human, natural, recreational, and economic resources of our State.

Today as one phase of this Michigan Week observance, I would like to call attention to our great recreational resources. The 10th Congressional District, which I represent, is in the very heart of the recreational area of our State. Within the 10th district are many miles of trout streams, hundreds of beautiful inland lakes thriving with fish, thousands of acres of hunting territory, and many miles of the crystal-clear waters of Lake Huron.

Michigan's tourist attractions are enumerated in the current issue of the magazine Inside Michigan in an article entitled "Michigan's Vacation Land."

I would like to call the attention of my colleagues to our Michigan water won-

derland and invite you to join us for your vacation this year. The article follows:

MICHIGAN IS VACATION LAND

Approximately 9 million persons will vacation in Michigan this year. That is the estimate of the Michigan Tourist Council and it means that the tourist industry is a very important segment of Michigan's economy. In fact tourist expenditures in Michigan every year are about $600 million.

Michigan is the fourth most popular State in the United States among vacationers. With its burgeoning winter sports business it is becoming a 12-month vacation State and it can be expected that the number of vacationers will increase steadily. Another factor that foretells future growth is the opening of the Mackinac Bridge providing easier access to many potential vacation areas in the upper peninsula.

A recent survey by the Michigan State University Bureau of Business and Economic Research gives a good idea of how people enjoy themselves in Michigan when they are on vacation. The data was tabulated from 10,000 questionnaires sent to persons selected at random from the 75,370 responses to tourist council vacation advertising in 1957.

What do people do when they come to Michigan? Fifty-seven percent said they come for sightseeing, scenery, and to visit historic and other interesting places. One out of five come for swimming and other water sports. Fishing is the major attraction for another 23 percent. Camping draws 7 percent, hunting 3 percent, and hiking 1 percent. Twenty-two percent of those answering admitted they vacationed in Michigan just for quiet relaxation.

Mr. Average Vacationer was found to be a family man who is likely to travel in a party of four. The average stay is 11.7 days and the average vacation expenditure is $217. The odds are that he and his family have vacationed in Michigan before, since 70 percent reported that 1957 was not the first they had vacationed in Michigan and 28 percent said they were new customers. Almost a third said they made more than one trip in the Wolverine State in 1957.

About a third of the vactioners said their home was in Michigan and 40 percent came from the surrounding States of Indiana, Ohio, Illinois and Wisconsin. Other States which have many residents visiting Michigan include New York, New Jersey, Pennsylvania, and the plains States of Minnesota, the Dakotas, Kansas, and Missouri. About half of the visitors remained on the move while in Michigan and the other half tended to stay in one place.

August is the most popular month for vacations with July, June, and September ranking behind in that order.

Let's take a closer look at what Michigan has to offer the vacationer. Water is, of course, the chief attraction because Michigan has so much of it. There are 40,000 square miles of lake surface and no point in Michigan is more than 85 miles from one of the Great Lakes. It has more than 3,000 miles of shoreline and 11,000 inland lakes. It has wide sandy beaches and even sand dunes. For those who just like to watch the boats pass by, the Detroit River and the locks at Sault Ste. Marie are the busiest waterways in the world.

Michigan has a romantic past and there are historic sites to visit in almost every county. An outstanding attraction, for example, is Dearborn's Greenfield Village which is one of the most popular tourist meccas in the country.

Tourists are welcome to visit the vast auto plants scattered throughout the State and the chemical centers are also interesting attractions.

There are 36,000 miles of fishable rivers, upland game country and resorts to suit every taste and purse. There are some 350 summer camps in the State. Fifty-seven State parks, thousands of roadside tables, and 90,000 miles of excellent highways bid welcome to all travelers.

Vacationers can visit the wonderful dunes country along Lake Michigan, the breathtaking beauty of the Grand Traverse and Leelanau Peninsula regions, the fruit-growing centers all along the west coast, the Thunder Bay country near Alpena, and the Lumbermen's Memorial along the Au Sable River.

Southwestern Michigan with its proximity to Chicago is among the most popular vacation areas. And well it might be with its miles of Lake Michigan beaches, interesting cities, and many historic landmarks. Southeastern Michigan, in addition to fabulous Detroit, has outstanding attractions in the academy at Cranbrook and the University of Michigan. The rich Saginaw Valley area, the many points of interest in Michigan's thumb, the center of the State with Michigan State University and the State Capitol and the Grand Rapids area with its industry and tourist attractions are all spots that might be on any tourist's itinerary with profit.

Hundreds of resorts, cottages, motels, and hotels are available for overnight or extended stays. Michigan has gone all out to make vacationing in Michigan an enjoyable experience. And few people can say they have seen it all after one visit. There is too much variety for that.

First Synagogue Has Dedication

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. MAY. Mr. Speaker, it was a great privilege to attend the dedication ceremonies of Temple Beth Tefilah in East Hartford, Conn., Sunday, May 4, 1958.

It was a most impressive ceremony, symbolic of the great and continued growth of religion in our country. I felt that this occasion deserved recognition by recording the event in the CONGRESSIONAL RECORD.

The development of the first synagogue in East Hartford, Conn., is very appropriately described in the following write-up in the Hartford Times.

FIRST SYNAGOGUE HAS DEDICATION

There have been people of the Jewish faith in East Hartford for nearly all of its entire 75-year history, but there has never been a formal synagogue in town until today.

Religious dignitaries of all faiths and civic leaders are attending the dedication of Temple Beth Tefilah this afternoon. Located at Rector and Bigelow Streets, the temple is the fulfillment of 4 years renovation, 10 years of searching and planning, and more than a century of yearning by those of the Jewish faith for a permanent home of worship.

Temple Beth Tefilah is the former Center Methodist Church. It was acquired 4 years ago by the East Hartford Jewish Community Center, composed of 65 persons, who now make up the congregation of the new temple.

Much of the form of the 85-year-old church has been preserved in the renovated structure, including the oak-stained pews and the varnished paneling. The seating arrangement, common to many New England churches and found also in many synagogues, remains unchanged.

Behind the altar, however, is the traditional ark, which contains the Torahs, the scrolls read at the Sabbath and holiday services. Two graceful menorahes, six-pronged candelabra, flank the altar. The exterior of the temple has received a recent coat of white paint and a new slanting roof. An ornate Star of David at the entrance signifies it is a temple.

The rough work of clearing and preparing interior and exterior of the temple was done mostly by the congregation, on weekends or nights. Once funds began to accumulate, professional craftsmen took over.

Besides the sanctuary, there are offices for a rabbi, yet to be named, and an entire downstairs vestry. The vestry has been in use for some time now, for social functions and for Sunday and Hebrew schools. A completely equipped kitchen was recently installed.

Attending the dedication this afternoon is Town Council President John Torpey, Representative Edwin H. May, Jr., the Reverend Roger S. Nicholson, representing the East Hartford Council of Churches, and many other notables.

Benjamin Goldfarb is president of the Jewish Community Center, which has been in existence for nearly 10 years.

Dedication committee follows: Chairmen Jack Kaplan and Mrs. Milton Faiman; program, Mr. Faiman and Everett Kaplan; invitations, Mrs. Murray Gottfried; publicity, Sidney Maiofes; refreshments, Mrs. Morris Blicht; head usher, David Schwartz; flowers, Mrs. William Nemirow; and building and maintenance, Louis Boxer.

Liberty—Whither Goest Thou?

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a well-prepared address, Liberty—Whither Goest Thou? delivered by Dwight B. MacCormack, of Boston, Mass., to the student body of Bethany College, in commemoration of Armistice Day, on November 14, 1957:

LIBERTY—WHITHER GOEST THOU?

(Address delivered to the student body of Bethany College, November 14, 1957, in commemoration of Armistice Day, by Dwight B. MacCormack, Esq., of Boston, Mass.)

Today Bethany College is extending to me a very great privilege—the privilege of imparting to you some thoughts pertaining to the meaning of liberty and freedom.

As the father of a son who was graduated recently from this fine, old institution of learning, I am very happy to be here. It has now been some years since I taught law, and, therefore, some time since I have been on the inside of an institution of higher learning looking out, instead of on the outside looking in.

Whatever I may say to you, and however I may say it, I hope you will understand that my thoughts as expressed today are not my final thoughts. There are few things in life that are final, and so little that is

infallible. I am reminded of some words once uttered by a Justice of the United States Supreme Court while referring to the work of the Court: "We are not final because we are infallible, but infallible because we are final." None of us is infallible. I know from history that the decisions of our Supreme Court are not always final and not always infallible.

I suppose—because of the habits I have amassed through the years as a lawyer—I may be pleading a cause as the true advocate, because I do believe very deeply in the freedom and liberty of each person as an individual human being. However, my purpose this morning, in speaking to you, is centered upon the hope that what I say may be of sufficient interest to awaken in your young and fertile minds an academic curiosity, so that you will search for the answers to these questions:

"What is freedom?" "Liberty—Whither goest thou?" If there are sufficient numbers of each generation who will seek the answers to these questions, the future of democracy in America wil be more secure than it at present appears to many that it will be.

On November 11, 1918, I marched through the streets of Amherst, Mass., in uniform, to celebrate the end of World War I and the first Armistice Day. It was a few weeks before that day that I had entered Amherst College as a freshman. In those days the war being fought "to make the world safe for democracy" was being waged with grotesque ferocity. The Government had taken over the colleges as training centers for the future officers of our citizen army. These training centers were called the Students Army Training Corps and popularly referred to as the SATC. Too young to be inducted into the military service, but because I had entered college in the ordinary course of events as a freshman, the military authorities regimented me, along with a number of others in my category, into a special company of our own. They had to do something with us. We were issued uniforms of a kind, armed with wooden guns, put under the pseudoauthority of army lieutenants and herded into barracks quite far removed from those who had been formally inducted into the service. Soon—by dint of youthful enterprise—our company earned the unique title of the "Yellow Belly Brigade of the Saturday Afternoon Tea Club."

I know that others like myself on that first Armistice Day, as we paraded through the town, really believed that the world had been made safe for democracy. The forces of democracy had prevailed, our liberty was preserved and we were free to continue our lives under a government established to secure our safety and happiness, to maintain our unalienable rights, and to secure the blessings of liberty for ourselves and our posterity.

It was nearly 36 years later that I awakened one July morning, and, for the first time in my life, asked myself seriously: "What is the real meaning of our liberty and freedom?" I had received in the morning's mail an invitation from a legal periodical of one of our law schools to write an article. At the time I was enjoying the comfort and luxury of life on a lake in Maine and my thoughts naturally gravitated toward those things which had made my comfort possible. For almost 36 years since the first Armistice Day, I had been going about my daily work, accepting life as it came to me, experiencing my joys and suffering my sorrows. I knew—because World War II and the Korean conflict had come and gone—that the world had in fact been made safe for democracy in 1918 only for the time being. I knew that our political, our economic and our social life had been constantly changing down through the years that have led us into the atomic age, but I did not realize fully that there had been taking place a constant, a persistent, a positive changing content in the meaning of individual freedom and the rights of man—for the safety and security of which our Founding Fathers had created our democratic form of government.

The great English teacher of history, Lord Acton, so it has been said, wanted to write a history of liberty, but found the task too great for one man. That is easy to understand, because the subject matter is inexhaustible.

It is not very important what my thoughts may be on the meaning of our liberty and freedom, but it is very important how the undergraduates in our colleges think and what they believe upon the subject.

In a book entitled "Changing Values in College," scheduled for publication last month, Prof. Philip E. Jacobs of the University of Pennsylvania has analyzed 200 studies of student beliefs. I understand yours is a conservative generation and that your trend toward conservatism maintains that Government should have a very minimal role in running the economic life of America, because the welfare state tends to destroy the initiative of the individual person. I hope that this is a true estimate of your attitude of mind because the welfare state by the very nature of its patterns does in fact destroy the freedom and dignity of individual man. Only by implanting in your minds and in the minds of others of your generation the true concepts of human freedom and individual dignity can we hope to preserve the American tradition. Do not wait 36 years before you are awakened and seek an appraisal of the meaning of our freedoms. The price of liberty is eternal struggle and eternal vigilance and the price must be paid by each succeeding generation.

"Liberty" and "freedom" are equivalent and correlative terms. Without one there is not the other. Search the great works of history and philosophy and you will not find a satisfactory definition of either. Liberty and freedom have meant different things to different peoples, in different places, in different ages—or to the same people in different times.

In 1864 Lincoln said:

"The world has never had a good definition of the word 'liberty', and the American people, just now, are much in want of one. We all declare for liberty, but in using the same word we do not all mean the same thing. With some the word 'liberty' may mean for each man to do as he pleases with himself, and the product of his labor; while with others the same word may mean for some men to do as they please with other men, and the product of other men's labor. Here are two, not only different, but incompatible things, called by the same name, liberty. And it follows that each of the things is, by the respective parties, called by two different and incompatible names—liberty and tyranny."

Under each and every government which is not democratic in form, it is the government which possesses the rights and it is the subjects who owe the duties. Under a democracy such as ours—on the other hand, it is the people who posses the rights and it is the government which owes the people the duties.

It was the writings of Locke which so strongly influenced the thinking of the Founding Fathers. It was his philosophy which found its way into the Declaration of Independence and the Constitution. According to Locke, before there was government, all men lived naturally and equally in a state of perfect freedom. Each man exercised his own separate and individual will and was in no manner dependent upon the will of any other man. He was subject only to the law of nature. The law of nature was reason, which teaches all men that they are born equal and independent. As Locke said: "No one ought to harm another in his life, health, liberty or possessions."

However, by the nature of things the enjoyment of such liberty was uncertain and insecure. Therefore, to make the enjoyment of liberty certain and secure, man created government, but the powers given to government were held in trust for the benefit of the donors. The government had only fiduciary duties, according to the compact it entered into with the men who created it.

Perfect freedom means absolute liberty. In Locke's state of nature, man did not have perfect freedom. He was unable to enjoy absolute liberty because of the transgressions of those who defied the law of nature. All governments are engaged in the practice of restraints. The more restraints government imposes, therefore, the fewer the freedoms. So, neither in Locke's original state of nature, nor under government, is there perfect liberty or absolute freedom. The liberty of man can exist only in something less than the absolute, and freedom will be something less than perfect. To put it another way—the extent of liberty man will enjoy under government will be greater or less in proportion to the amount of freedom he surrenders to government, or the amount of liberty government will deprive him of by its restraints upon his freedoms. Each restraint by government is one more deprivation of freedom and consequently one more step toward tyranny.

The great difficulty man has always had in his fight for his rights is to understand the difference between liberty and tyranny. The meaning of liberty may be abstract, but the enjoyment of freedom is a very realistic experience. Lord Acton has said: "Liberty is not a means to a higher political end. It is itself the highest political end." Liberty, therefore, is the ideal to which man in all his dignity aspires. He will aspire to realize perfect freedom and absolute liberty, knowing that to obtain the same is impossible in this world. In his aspirations he must be able to distinguish between the ideal that is false and the ideal that is true. To aspire to ideals that are false, provided there are enough of them, will lead not to liberty, but to tyranny. History is replete with the experiences of man to prove this. I will give but one example. The ideals of Marx are the foundation upon which communism has been built.

It is necessary that each individual participate in the functions of government. If all of us share in the duties of government, the greater will be the chance that our true ideals will give strength to our traditions and customs and lend strength to the generations to come. The trouble is, however, that there are too many of us today who find it more comfortable to let others do the work for us, because too many of us are indolent. Others are content to submit to the stronger wills of others, because that is the easy thing to do. This characteristic of man has been called deference. Men may fail to share their burdens because of their inclination to do as others do and feel as their neighbors feel. This is called sympathy. Men may fail to act because of the fear of asserting themselves against the strong or against a government gone wrong. Lastly, men may fail to act by reason by which they conclude that it is more practical to swim along with the tide of things and to submit to the popular trend. These five motives, indolence, deference, sympathy, fear, and reason, are the motives ascribed to man by which Bryce says governments are obeyed. If carried by sufficient numbers to excess, these characteristics also represent the five weaknesses of man which enable those with stronger wills to gain the power necessary to destroy our liberties, and to make government tyrannical.

In his volume entitled Liberty in the Modern State, Harold J. Laski began his treatise in words such as these:

"Liberty is essentially an absence of restraint."

This is a negative way of defining liberty. This tells us what must not be done in order that liberty may exist. Since Medieval times much of the liberty man has gained has been achieved through the removal of restraints. It is by such a process that the English constitution has grown.

Paine was of the opinion that in England there was no such thing as a constitution, because, beginning with William the Conqueror in 1066, the government was a tyranny founded on conquest, and what happened thereafter was: "The exertion of the nation at different periods to abate that tyranny and render it less intolerable."

Paine adds that Magna Carta was one of those acts of exertion by the people to compel government "to renounce part of its assumptions." Let us in America hope that the people will never again find it necessary to exert themselves in a way necessary to compel Government to renounce its assumptions except by the democratic process.

This negative concept that freedom is the absence of restraint is the fundamental basis of our American constitutionalism. The late Prof. Franz Neuman called this "juristic freedom" or "juridical liberty." Do not be critical of this negative aspect, because if you throw away this negative aspect of freedom and liberty there is nothing left but totalitarianism. By keeping this negative aspect of freedom in our form of government, we are able to maintain a balance between the constant struggle that is always waged in politics—the individual citizen versus the state. This is so, because politics by nature is the struggle for power. It is better that we maintain such a two-sided conflict than have no conflict at all, because where the state alone is paramount there is only tyranny. As long as government performs the functions for which it was created by "we the people" this contest of man versus the state is a healthy conflict.

Our daily life is not confined to its political aspects. There are freedoms other than "juridical freedoms" and rights other than political rights. There are, for example: (1) Personal rights, and (2) societal rights.

What are personal rights? They are those rights which belong to man as an individual. They are those rights which the individual possesses separate and apart from all other individuals and which are not dependent upon the individual's associations with others. Such, for example, is the privilege of the writ of habeas corpus under article I of the Constitution which guaranties, except in times of invasion or rebellion, that no person can be cast into prison and kept there without formal charges against him and without the benefit of a speedy trial. This human right was called by Professor Choffee the most important one in the Constitution. Other personal rights are such liberties as are set forth in the Bill of Rights by which we are secure in our persons, our homes, our papers and effects, and by which we are not subject to unreasonable searches and seizures in accordance with the fourth amendment; those rights by which we are entitled to a speedy and public trial, to have counsel and to be confronted by the witnesses against us in accordance with the sixth amendment; those rights which hold that in any criminal case no man shall be subjected to double jeopardy, nor compelled to be a witness against himself under the fifth amendment; those rights to a trial by jury under the seventh amendment and those rights which protect us from excessive bail and excessive fines under the eighth amendment. Such rights do not change with the ever-changing conditions of our social and economic life.

What are societal rights? They are those rights which man possesses as a member of society in his relations with other individuals. Such rights are the freedom of religion, the freedom of speech, freedom of the press and of peaceful assembly as set forth in the first amendment, and rights in property under the fifth amendment. These rights exist as long as they do not unreasonably interfere with the like rights of others.

Lord Bryce in his work on Modern Democracies has another way of describing our different rights. He states that there are four kinds of liberty: (1) Religious liberty; (2) political liberty; (3) civil liberty; and (4) individual liberty.

(1) Religious liberty is the "exemption from control of the expression of religious opinion and the practice of worship." This includes the manner of worship and the freedom of conscience.

(2) Political liberty is the "participation of the citizen in the government of the community."

(3) Civil liberty is the "exemption from control of the citizen in respect of his person and property." Civil liberty which is older than political liberty may exist without political liberty. Civil liberties are those liberties which were extracted from the King drop by drop.

(4) Individual liberty is the "exemption from control in matters which do not so plainly affect the welfare of the whole community as to render control necessary." Individual liberties are the most vague and most incapable of understanding. Every kind of individual liberty may be called a civil liberty.

As individual liberty consists in the exemption from legal control, so political liberty consists in the participation of control.

Man is both a private person and a public citizen at the same time. His interests as a private person in fact conflict with his interests as a public citizen. As a private person, he is an individual interested in his personal freedoms. As a public citizen, he participates with others in government and government deals in restraints. So, we have a conflict of man versus men. It is much easier for the collective wills of a group of men to overpower the will of one individual, or a group of individuals acting separately, than it is for one man to overcome the individual will of another individual. Thus, a majority, or a minority group well organized and acting in concert, is able to obtain from government legislation which will be favorable to the group as a group and oppressive to the minority, or unorganized majority.

The ability of a democracy such as ours to survive depends upon the treatment accorded the minority by the majority. A democracy cannot survive alone on the process, as Nietsche would say "of counting noses." The inability of our democracy to survive may be determined by the constant repetition of acts and attitudes of mind which favor only the interests of the majority, or which lay too much stress on the collective rights and security of mass groups. We have made errors in this direction. Some public officeholders, fearing disfavor, subject themselves to the influence of those who control large blocks of votes and of those who seek their own security to the absolute exclusion of others. As Lincoln might say, some would call such action "liberty," others would call it "tyranny."

In the Preamble of the Constitution we have a clause that pertains to man in the collective sense as a public citizen, namely, that the Constitution is established to "promote the general welfare". We have also the provision that applies to man as an individual person, namely that the Government is established to secure the blessings of liberty. The word "secure" means to safeguard, not to obtain, because we the people already possessed those blessings of liberty before our Government was established. These two provisions in the preamble are in some respects complimentary of each other, but in other respects they are mutually antagonistic, as time has proved to us they are. It is because of this natural antagonism between these two purposes of our Government that we are caught between the conflicting philosophies of those who believe primarily in States rights and the freedom of the individual on the one hand and those who believe in the socialism of the Welfare State on the other hand. By the provisions of article I, section 8, Congress has the power to lay and collect taxes to provide for the general welfare. That is a very great and specific power, which when exercised in the form of positive action has more appeal for law makers than engaging in the pursuit of the negative aspects of liberty. Congress has been exercising powers under this provision on a scale that defies the imagination, perception and understanding of any human being. As one wit has remarked: "It is a bit surprising that our ancestors worried so much about taxation without representation when we see the size of the taxation we get with representation."

We have said that the words "liberty" and "freedom" are equivalent and correlative terms. So, they are, but the Bill of Rights does not use them interchangeably. The first eight amendments say to the Central Government, "Thou shall not do these things", "You shall make no law for example, to deprive the people of the freedom of religion, the freedom of speech, the freedom of the press, the freedom of peaceable assembly, and the freedom of petition." But there are laws which regulate certain of these freedoms. The fifth amendment is the first provision of the Constitution in which the word "liberty" appears, except as that word is used in the preamble.

The Declaration of Independence declared:

"We hold these truths self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable Rights, that among these are Life, Liberty and the pursuit of Happiness."

But the fifth amendment is a positive contradiction that such rights are in fact "unalienable", for it states that no person shall "be deprived of life, liberty or property, without due process of law." By those words, and similar words in the 14th amendment, liberty is made the subject of restraint by government provided that the restraint is in accordance with due process of law. Anything that can be taken from us in any manner, whether it be by due process of law or by any other method cannot be unalienable.

Those who would call themselves realists would say that the words I have read from the Declaration of Independence only declare that such abstract rights of man exist and the mere declaration is not a guarantee of anything. Professor Beard in his provocative work The Republic has written:

"Rights are not established or imposed by proclamation. Proclamations and institutions merely help to define, enlarge and sustain them. Yet, if these rights are not deeply rooted in the theories, customs, sentiments and practices of the people, paper assertions are like chaff in the wind."

Let us add to this the words of Lord Acton that all freedom has been won on:

"The doctrine of national tradition and the doctrine of the higher law; * * * the principle that all political authorities must be tested and reformed according to a code which was not made by man."

Cicero believed there was a higher law and maintained that any manmade law which violated the higher law was not law, and therefore, void. Our Founding Fathers

believed in this higher law, but such a doctrine is no longer part of the public concern. Even the doctrine of national tradition has lost much of its former fortitude.

Possibly you have noticed that in speaking of liberty I have said nothing about equality. Never before in history has there been a land in which there has been so much equality, but it is from our misunderstandings of what equality means that we have made most of our errors under our democratic process. As we can never possess perfect liberty, so we can never enjoy perfect equality. As there are different kinds of liberty, so there are different kinds of equality, such as political equality, civil equality, social equality, and natural equality. But equality and liberty are not equivalent and correlative terms. When Hamilton was arguing on the floor of the Philadelphia Convention, he remarked:

"An inequality would exist as long as liberty existed, and that it would unavoidably result from that very liberty itself."

Political equality of our citizens is necessary. Civil equality is not the same thing as political equality. The matter of natural equality belongs to the Creator and He has made no two of us alike in mind, in character, in conscience, in ability, or in fortune. As Perry Como has been crooning of late:

"Some people are born to be doctors
Others are born to be lumberjacks
Some people are born just to take life easy
Others are born to break their backs."

As to the matter of social equality, it seems to me that that must come out of the consciences of the people, from the moral and ethical customs and practices of our Nation. We are reminded by the failure of the 18th amendment that one cannot legislate the morals or ethics of a people. The 18th amendment certainly was one proclamation that was life chaff in the wind. We called that the great experiment. We should not forget the lessons it taught us.

The ninth amendment has been called the forgotten amendment. It provides:

"The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people."

It seems clear enough, but what does it mean? No decision of the United States Supreme Court has told us. Such rights referred to as having been retained by the people refer to the personal rights of man—not to man's public rights, or his interests as a political person. This must be so, because, if it were not so, the ninth amendment would not have been put into the Bill of Rights. Being there, it should not be construed in any manner other than as a restraint upon the Federal Government against the attempted exercise of promoting the general welfare when such exercise of its powers will deny or disparage those rights retained by the people.

Let us hope that the ninth amendment will never be used in such a manner that it will give aid and comfort to those who would have us march towards absolue socialism, for beyond absolute socialism there is only totalitarianism and communism.

The fear of absolute socialism is not hysterical. Communism describes itself as democracy. Rousseau as an exponent of democracy advanced the theory of the general will. The English Utilitarians advocated the principle of "the greatest good for the greatest number." Communism is the exponent of the general will in which the minority has no rights. He who in his actions and even in his thoughts is not loyal to the government is not to be tolerated. The Communist theory of government—brazenly but erroneously referred to by Communists as a democracy is that of one party mass rule, mass civilization and a so-called mass democracy. The Communist theory of government is contrary to our traditions, to our beliefs in the purposes of government and the end of law, as well as being contrary to our Christian religion. The term "mass democracy" is a self-contradictory term. The words "mass" and "democracy" do not belong together in America.

Today in America we have moved toward the interests of the masses. It is ironical to think that the very masses for whose safety and happiness our Government was created may be the cause of the destruction of our individual liberties. Mass production has changed not only the quality of our products and our economy, but the quality of our thinking as well. Everything today is bigger and getting bigger. We have giant corporations, giant unions, giant Government, and giant taxes. It has become difficult for many to think in such small terms as "the rights of the individual person." We have been going through a metamorphosis from rugged individualism toward a state of existence which some have called by that hideous appellation, mass democracy.

The dangers to our blessings of liberty lie in the determination of how far we are destined to move away from the free individualism of our forefathers and how far we will move toward a mass democracy which concerns itself only with the general will—and nothing else.

I believe it is high time for us to determine anew the things that belong to Caesar and the things that belong to God.

This morning I have exercised what your Dr. Robinson [1] has described as a primordial natural right, namely, the right to be wise. Mind you, I am not saying that I am wise. I say only that I have exercised my right to be wise. Let me read something Dr. Robinson has set forth in his Crucial Issues in Philosophy, chapter 15:

"The right to be wise implies the right to do independent and critical thinking on any problem or question that may arise during one's conscious life span. Wisdom, then, may be said to begin with the exercise of one's capacity to do reflective or critical thinking."

I commend these words of wisdom to you. Exercise your right to be wise. Do not wait 36 years before you seek the answers to 1 of the great problems of our day.

"Liberty: Whither goest thou?"

[1] Daniel S. Robinson, Ph. D., Litt. D., LL. D., director, Emeritus, School of Philosophy of the University of California, distinguished service professor at Bethany College, Bethany, W. Va., on the John Hay Whitney Foundation.

Alcoholic Beverage Advertising

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. KILBURN. Mr. Speaker, at the request of some fine people, who are constituents of mine, I am extending in the RECORD a resolution which the Lewis County WCTU has passed. Believing that the RECORD in a way is a forum for opinions in this country, I am sure the Members will be glad to read it:

DEAR LAWMAKER: In view of the increasing difficulty experienced by parents in educating their children on the problems of alcohol because of the competition from the glamorous alcoholic beverage advertising appealing to young people and even to children, especially over the radio and television.

Resolved, That we call upon our representatives in both Houses of Congress to seriously consider whether it is for the good of the Nation to permit this competition which ignores the basic fact that alcohol is potentially dangerous both physically and socially, and ask them to aid the efforts of the home, the school, and the church by passing the Langer (S. 582) and Siler (H. R. 4835) bills now before them for consideration.

The Lewis County WCTU representing many citizens, respectfully ask your support of the above bills.

MRS. DULCIE HILL, *President.*
MRS. GLADYS DOBSON, *Secretary.*

Common Pleas Courts of Record

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Stroudsburg Daily Record, Stroudsburg, Pa., of May 3, 1958:

COMMON PLEAS COURTS OF RECORD
(By Hon. Chester H. Rhodes, President judge, Pennsylvania Superior Court)
(Last of four articles)

In Philadelphia County there are 7 courts of common pleas, each composed of 3 judges, while in Allegheny County there is 1 court of common pleas of 16 judges. In other counties the number of judges varies according to local requirements.

In Philadelphia there is also the municipal court, and in Allegheny County there is the county court. The purpose of these courts is to alleviate the burden of the courts of common pleas.

The courts of common pleas are designated courts of record as they maintain permanent records of their proceedings. In civil matters they exercise equity jurisdiction to provide a remedy where there is no other adequate remedy available. The judges hear criminal cases in the courts of oyer and terminer for serious crimes, and in the courts of quarter sessions for less serious crimes.

In counties where the population exceeds 150,000 there are separate courts called the orphans' courts, which have jurisdiction over matters involving decedent's estates, adoptions, trusts, guardianships, and related matters. In counties which do not qualify for a separate orphans' court, the common pleas judge performs those functions.

Monroe and Pike Counties constitute, at the present time, the 43d judicial district. They were originally a part of the 11th judicial district which was created in 1811 to include Luzerne, Wayne, Susquehanna, and Bradford Counties. Pike was added in 1814, and Monroe in 1836.

In 1844, Monroe County was transferred to the 21st judicial district, together with Schuylkill and Carbon Counties. In 1849 the 23d judicial district was created and Monroe and Pike Counties were transferred to that district which also included Wayne and Carbon Counties. In 1874 Monroe and Carbon Counties were taken from the 23d

district and made into the new 43d district. In 1901 Carbon County was made a separate district, the 56th and Pike County was transferred from the 22d district and added to Monroe in the 43d district.

Pike and Monroe Counties have remained as the 43d judicial district to the present time.

In the 83 years of its existence, the 43d judicial district has had only 7 president judges, 2 of whom served 1 year each.

The first president judge was Samuel S. Dreher, a native of Stroudsburg, who had previously been president judge of the 22d judicial district from 1870 to 1875. He became president judge of the 43d district on its creation and served until his death in 1893. The judge was born at Stroudsburg on April 10, 1824, the oldest of nine children. He was admitted to the bar in May of 1846. Dreher Township, Wayne County, has been named for him. In 1878 he presided at the trial of two men, in Carbon County, who were accused of participating in gang murders which were prevalent throughout the anthracite coal region. They were found guilty and sentenced to death to be hanged at 10:30 a. m. on January 14, 1879. A reprieve was granted by the Governor, but the executions took place before the reprieve was delivered.

John B. Storm was appointed to succeed Judge Dreher, and served until 1894 when Allen Craig was elected. Judge Craig served until his death in December 1902. Wilton A. Erdman was then appointed and served until January 1904. Charles B. Staples, who was elected president judge in 1903 and reelected in 1913, served until his death in 1917. He was recognized as one of the leading trial judges of his time.

Judge Staples was succeeded by Samuel E. Shull who served as president judge of the 43d judicial district until his death on June 4, 1945. Judge Shull was assigned by the supreme court to try many important cases throughout the Commonwealth.

The present president judge, Fred W. Davis, was appointed on June 12, 1945. He was elected in 1947 for a 10-year term and reelected in 1957. He is a worthy successor of those who have preceded him in that capacity.

In conclusion, I think a universal understanding of our system, if that were possible, would insure peace and progress and tend to preclude the collapse of civilization.

With the rule of law we have individual liberty and legal protection; without it life would be empty and often short. Whether it prevails depends to a great extent upon judges and lawyers—that is, on the proper functioning of our judicial system, the keystone of our constitutional structure. The preservation of the rule of law is not without effort and vigilance on the part of all of us.

The nationwide observance held on May 1, 1958, "was an important and significant demonstration to the world that the American people are united in their determination to preserve the way of life which our institutions of law and justice have made possible."

Hon. Emanuel Celler

SPEECH
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. TELLER. Mr. Speaker, I rise to join with my colleagues in extending my felicitations to Congressman MANNIE CELLER upon the occasion of his 70th birthday.

My colleagues have adverted to his distinction as a lawyer and as a devoted servant of the community. I have been made aware of these qualities, in a deeply impressive way, during my friendship with MANNIE CELLER. His sharpness of mind, his uncanny wit, and his unfailing sense of humor have been made well known to the Members of the House during the many years he has been a Member of Congress since he was first elected in 1922. He has had ample opportunity to influence the minds of the Congress and of the American people upon many significant public issues. The values to which MANNIE CELLER subscribes are those identified with the welfare of the people, and he has never walked away from a fight in the interest of the people.

All of this is well and nationally known, but I desire to speak of MANNIE CELLER as a personal friend and to acknowledge the deep influence which he has had upon me, as a friend and as a teacher. I well recall the sharp debate which took place in the last session over the civil-rights bill. As chairman of our Judiciary Committee, Congressman CELLER was in charge of the bill. Who will ever forget the unfailing graciousness, the patience, and the abiding sense of fairness which he demonstrated in that debate?

His statesmanlike and friendly participation in that debate knitted the membership of the House together, and when it was over, all of the Members of the House, both those who favored and those who opposed the bill, reaffirmed their friendship, admiration, and respect for this great man.

Long may he know peace and happiness, and continued membership in our House of Representatives.

A Tribute to Mr. Arvid Lundell

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, it is a great pleasure for me to say a word concerning a constituent of my district and my friend, Mr. Arvid Lundell. The purpose of my remarks is to make known his service to the Government. As president of the Colonial Broach and Machine Co., he brought his vast knowledge and business experience to his position as adviser to the Director of the Metalworking Equipment Division, Business and Defense Services Administration, United States Department of Commerce. His great knowledge of machine tooling from the smallest to elephant-size production was a valuable asset to the Government.

Mr. Arvid Lundell of 799 Lochmoor Road, Grosse Pointe Woods, Mich., president of the Colonial Broach and Machine Co., New Methods Steel Stamps, Detroit Tap and Tool, and director of the Peoples State Bank, of Hamtramck, Mich., has completed 6 months of Government service in the capacity as Adviser to the Director, Metalworking Equipment Division, Business and Defense Services Administration, United States Department of Commerce.

Mr. Lundell's vast and varied business experience made it possible for him to participate in the development of many vital mobilization programs of BDSA. Mr. Lundell spearheaded the M–Day Machine Tool Trigger Program—the first phase of which was completed during his tenure with the Metalworking Equipment Division. This program is considered by most mobilization officials as one of the foremost and progressive of the Nation's mobilization programs.

The primary objective of the M–Day Trigger Program is to buy essential time in producing the machine tools required for critical military end products. This is accomplished by placing with individual machine tool builders, a firm and definite contract that would permit the carrying out of the required production schedules on a practical and economic basis. This permits detailed planning of bills of materials, facilities, and production equipment requirements, subcontracting, and related production problems.

Approximately 91 machine tool builders have contracted to participate in the first phase of this program, covering approximately 15,298 general purpose machine tools having a value of about $233,882,000.

In the opinion of most mobilization officials, this program not only vastly enlarges the mobilization production potential of the Nation, but it also saves the Government millions of dollars through the comprehensive planning and programming that has been undertaken during a cold war period as contrasted to the problems and difficulties that would be encountered during similar programming under mobilization conditions.

Mr. Lundell also participated and was able to offer his industry experience in the development of the Critical Machine Tool and Elephant Machine Tool Programs. These programs will enable the Metalworking Equipment Division, Office of Defense Mobilization, Department of Defense, and other appropriate Government agencies program intelligently to meet critical machine tool production areas under mobilization conditions. Recently, Mr. Lundell activated a Government program that had for its objective the channelling of surplus machine tools into the junior high schools, high schools, technical schools, colleges, and universities, to better train the youth of the Nation, and to provide dispersal of machine tools which would be of vital importance in the event of an attack upon the country. This program has been widely acclaimed by congressional and educational leaders, and it is anticipated that it will strengthen the overall mobilization preparedness of the Nation through its aspects of expanding the opportunities of providing technical

and practical training of the Nation's youth.

Mr. Lundell has taken an active interest in the executive reserve program of the Metalworking Equipment and Business and Defense Services Administration, and during the past 6 months, has enlarged the Metalworking Equipment Division participation in this program so that as of the present, it covers 51 reservists from approximately 16 States and the District of Columbia. Mr. Lundell, on his return to Detroit, will continue his participation in this program, and he has been assigned to direct and supervise the metalworking equipment program in the area.

On May 6, Mr. H. B. McCoy, Administrator, Business and Defense Services Administration, presented to Mr. Lundell on behalf of the Secretary of Commerce, a certificate of merit in recognition of his outstanding Government services during the past 6 months. In addition, the Secretary of Commerce gave Mr. Lundell a personal letter of congratulations. Mr. H. B. McCoy presented to Mr. Lundell, a flag that was flown over the Capitol as a token in recognition of his services to the Nation, Business and Defense Services Administration, and the Department of Commerce. Mr. McCoy, in his own behalf presented a personal letter of congratulations.

Approximately 75 friends, business associates, and Government representatives attended Mr. Lundell's certificate of merit and flag presentation.

Again, Mr. Speaker, Michigan's leadership and know-how served the National Government.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy to include an excellent editorial commemorating the Polish Constitution Day on May 3, which appeared in the Lynn (Mass.) Item on May 3, 1958.

The editorial follows:

POLISH CONSTITUTION DAY

Few people realize that the first democratic constitution to be adopted by a European country was that promulgated as law by the Great Parliament of Poland on May 3, 1791, just 167 years ago today.

Greater Lynn residents of Polish birth or descent—one of the fine, solid segments of our population—are joining today in formal recognition of the anniversary, as suggested in a proclamation issued by Governor Furcolo.

The observance takes place in an atmosphere of hope that Poland soon will again take its rightful place among the free nations of the world, no longer under the atheistic domination of Communist Russia. It is noteworthy that when restrictions were eased slightly in Poland recently, its people immediately turned to the West to renew bonds of friendship and to appease their enforced intellectual hunger.

The original Polish Constitution was adopted only a few years after our own.

This document, incorporating many of the liberal social reforms initiated by the writings of Stanislas Staszic and educator Hugo Kollataj, guaranteed rights and priviliges unheard of in Europe. It proclaimed the rights of man. It declared that the state existed to serve the people. It enabled all Polish citizens to hold public office, and it abolished serfdom.

It was not coincidental that this work reflected the highest ideals of the Western World. From its early beginnings, about 965, the Polish state was linked closely with Western Europe. Its highly developed culture, in the early 16th century, was representative of the best of the European renaissance. This was the heritage which gave the world such notable figures as General Kosciusko, Count Pulaski, Henryk Sienkiewicz, Joseph Conrad, Chopin, Paderewski, and Mme. Marya Sklodovska Curie.

Unfairly Weighted Publicity Results From Exploitation of Wrongdoings of Few in Labor Movement

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. PRICE. Mr. Speaker, I am offering in the RECORD three articles by Stanley L. Johnson, the secretary-treasurer of the Illinois State Federation of Labor, that some of us would do well to ponder.

There is not a word of apology in these articles for any labor figure who has done wrong. But there is good strong common sense about the hypocrisy and the unfairly weighted publicity by which the sins of a few union leaders are condemned while the evils of individuals in other groups are treated lightly.

We in this House know that we are having to legislate to impose penalties on business firms that have collected tens of millions in social security and withholding taxes from workers and have failed to account for them to the Treasury. Does anyone rush to condemn business in general? Of course not; the vast majority of businessmen are honest and responsible, and no one would dream of laws to impose ethical codes on their associations or to break up and regulate their associations in a manner that would hamper legitimate activities.

But there is grave danger that the exposure of wrongdoing by a few labor figures will be exploited to impose hampering laws on unions. There is danger that we waste energy in writing unwise labor laws while we fail to work at the really urgent task of using the power and leadership of Government to check the recession and put our people back into jobs; that we do too little, rather than too much, to meet the problem of the man whose jobless compensation is exhausted, or was never eligible.

I hope that in the remaining months of this session we shall keep our sense of proportion, that we shall understand clearly what the needs of the hour are and where the dangers to our country lie.

Under unanimous consent, Mr. Speaker, I offer Mr. Johnson's articles for the RECORD:

CONDEMNATION AND HONEST REPORTING

(By Stanley L. Johnson, secretary-treasurer, from the Illinois State Federation of Labor Weekly News Letter)

Cheats, crooks, traitors, are all strong words. The most distasteful probably is traitor. We usually think of it as describing a person who betrays his country, which is about the most degraded, low act a person can commit. Trust can be betrayed by cheats, crooks, as well as traitors. Therefore, a good case can be made for lumping cheats and crooks with traitors.

We in labor use strong words, perhaps too much. We have said bluntly, both vocally and in print, that any labor official who has stolen funds of the union, misused them, or used his position of leadership for his own personal gain, is a traitor to labor. We have not joined the pack in constantly decrying the alleged and real misdeeds of a very few traitors who have been exposed in labor. We had publicized our views before the McClellan committee arrived on the scene. Even if only a portion of the revelations thus far exposed are true, it still is a mess than smells and needs cleansing.

Here is where we part from the characters who are damning the whole labor movement, vicious in their condemnation of labor officials, and in their hypocritical love for the rank and file member, but secretly want him reduced to a spineless beggar. What pains us is that some labor officials fall into this trap and are more mouthy than the characters who won't be happy until the labor movement is reduced to impotence. It is no wonder then that the average member can get confused. It is no wonder then that some rank and file members will unwittingly betray their union because of this confusion. Coupled with confusion is the deluge of antiunion, slanted news articles, antiunion editorials, and antiunion statements by self-seeking politicians of both parties battering all of us.

This weaseling, sniveling tirade of damnation, belching forth from editors and politicians alike against labor, is truly disgusting, because they do know the whole truth about all segments of our society. Why then this singling out only one part of our industrial, business, agricultural, and political economy as the only group bereft of virtue.

The truth is very brutal. Industrial, business, agricultural, and political segments have many more cheats, crooks, and traitors only because there are more of them, not because they happen to fall in the above categories. Human weaknesses are prevalent in every strata of our economy and society. The weakness and perfidy of man is recorded from centuries ago down to this date. So is the great strength and decency of man, which has always prevailed in the end against those greedy exploiters and betrayers of their fellowmen.

Have you seen headlines in the daily press such as these: "Employers Cheat Uncle Sam," "Millions in Withholding Taxes Stolen," "Retailers Cheat State," "Retailers Steal Taxes," "Millions Lost in Taxes." No, I haven't either. But you should see them, if the press wanted to sensationalize business malpractices. Why this timidity with employer groups? There is no qualm about headlining labor rascality. Either headline all alleged cheats, crooks, and traitors equally, or place them in the right perspective in a factual reporting job. Then editorialize with honesty. Let us get some of the honest objectivity which the press is always prattling about, but fails dismally and

we think purposely when the press discusses labor questions.

What are we talking about? We mean the misuse or improper accounting of money not belonging to the individual, to the company or business, which amounts to millions of dollars. Employer groups now stand accused of this cheating by both Federal and State Governments: Money which rightfully should be a sacred trust fund—money which was collected for our Federal and State Governments from workers and retail buyers by employers.

Our Federal Government is so disturbed over the delinquent employer that special legislation, providing penalties against these employer cheaters, is now necessary. H. R. 8865 passed the U. S. House of Representatives on August 16, 1957, and on January 23, 1958, was referred to the U. S. Senate Committee on Finance. The House Ways and Means Committee issued a report to accompany H. R. 8865, which points out the necessity of such legislation. Even with the penalties for the future, our interpretation is that H. R. 8865 deals gently with the tax cheaters or crooks to date.

According to the House Ways and Means Report for the years 1951 through 1956 inclusive, social-security taxes, and withholding taxes taken from employees, and not accounted for to the Federal Treasury, amounted to $279 million. Count it, $279 million collected from workers, and not credited to the workman's account. What does the press, the pious employer, the rabid political figure have to say about the employer and business morality and ethics? Those condemning organized labor so freely seem to be strangely silent. Yet, we are to assume that employers will safeguard health, welfare, and pension funds of their own, when so little respect is paid to Uncle Sam's money taken from the worker's pay check.

What about Illinois business? According to the Illinois State Department of Revenue, approximately 80,000 Illinois retail taxpayers owe the State of Illinois $24½ million in collected sales taxes. Twenty-four and one-half millions of dollars were collected from purchasers of goods at retail, and yet these retail groups and their spokesmen have the gall to point the finger of scorn against labor. According to the State Department of Revenue, $20 million cannot be collected from the retail employer. The $4½ million might be collectible. This is so, because business is treated gently by our State statutes when said businesses violate a law by cheating the State out of money taken from consumers, who in the main are wage earners. Many of them are union members.

Our union members ought to know that as rotten as a union official, who betrays them, may be, that a greater aggregate of betrayal comes from some employers. These employers have employer associations front for them. These associations overlook the peculations and unethical business practices of their own people and bravely take up the cudgel for the individual union member. These are the vociferous spokesmen who infer that all that a workingman need do is trust his future well-being to these spotless paragons of virtue. They wish to save our membership from those terrible, corrupt unions and the labor bosses. The record is there for all wage earners to check on the sincerity of employers in correcting injustices and inequities. Our members know better and if any doubt, please check the records and not our statements.

This is what bothers us: Using the labor movement, and particularly its entire leadership as a whipping boy, because of the speculations of a very few. According to the broadest allegations so far made, $10 million has been perverted in union dues money over a span of years, similar to the Illinois sales tax fraud span of years since 1933. We repeat—even if the $10 million of union funds should be proven to be stolen from union treasuries, the comparison is odious for the employer groups. We use the word "stolen" as a strong description purposely, even if the Senate committee making the allegations did not so infer. We gently remind our employer friends to suggest to their rabid spokesmen to read their Bibles. The greatest Teacher spoke thus on a certain occasion: "He that is without sin among you, let him first cast a stone."

Where does all this leave labor and employer alike? Obviously, it ill behooves employer associations and employer spokesmen to berate unions and their leadership, when their own house is in such disorder. Political figures could very well reexamine their consciences.

Apropos of this whole smelly mess is an article by a well-known psychologist wherein he points out that an honor system is only for crooks. This dealt with a group of students at Northwestern University in the department of education no less. Here was a group of students who presumably in the future might be teachers, and over 30 percent cheated in grading their papers. Proof again, that honesty or dishonesty cuts across all segments of our society. Therefore, this pointing the finger of scorn at labor only is sheer viciousness. It is perpetrated by those who feel that by weakening, and if possible castrating the labor movement, the workingman will come to heel, and be a patsy for exploitation.

We could go on for pages, but suffice to say that there is developing a hard core of good American trade unionists who will fight this un-American attack. By hard core we mean the men and women who pay the dues to keep their organizations going. We would much rather channel this spirit into sounder labor-management relations. But, if a small group of employer spokesmen are going to lead the great majority of fine employers up the alley which can only lead to jungle warfare, we wonder at the intelligence and vaunted know-how of management.

Labor has shown its responsibility through actions of the past few months. Let responsible management now demonstrate that demagogues and hate mongers do not control the destiny of management. Genuine differences we will continue to have, but let us both work in an atmosphere of cooperation. We believe in private enterprise. We want prosperous employers. We want to help create and continue such prosperity so we can share in it through better wages and conditions. Thus farmers and city dwellers alike will have well-being. All of us as Americans—we, the people—will then make our great governmental system operate equitably for the least of us.

Honest Reporting

(By Stanley L. Johnson, secretary-treasurer, from the Illinois State Federation of Labor Weekly News Letter)

Last week we had an article in the Weekly News Letter relating to Condemnation Versus Honest Reporting. We indicated that the record would substantiate our charge. Since then an outstanding editor, Ralph McGill of the Atlanta (Ga.) Constitution, made some comments which are to the point. The remarks were made at De Pauw University, Greencastle, Ind.

Mr. McGill stated that the citizen gets only a great hash of opinions, facts, claims, distortion, analyses, and interpretations, and half truths are made into truths. He was concerned about the job the American newspapers are doing in informing and forming national opinion. He further stated that while the press must move to meet, expose, and defeat all threats to a free press, the press must even more forthrightly see to it that the press deserves such freedom.

The sense of our statements, articles, and reports over the years has been for a free, responsible press. Print the news. Expose wrongdoing in any field. Be objective in reporting. Above all, be honest in editorializing.

As we have stated so many times, it is the dishonesty in editorializing which is the most disgusting. Besides the inference that all labor unions and their officials are corrupt, now we see still another attack on labor unions. For several months prior to the economic recession of the past 6 months, labor was blamed for all the inflation ills. Now, strangely enough, labor is being blamed by some of these editorial spokesmen as the cause of the deflation or recession.

Robert McLean of the Philadelphia Bulletin has served the Associated Press as president for 20 years. He was lauded this week at the AP's annual convention, attended by the top newspapermen of the country. In responding to the plaudits, he stated the compliments were to be regarded as pride in AP itself. He said, "I hold that pride to be justified, because the publication of news, the stark news, if you will, news without bias or prejudice, without intent to influence, without regard to whether the news be good or bad, favorable or unfavorable, is essential to the successful operation of a democracy."

If these editors will now go forth and live up to this philosophy, we say—amen. But we know that high principles are not always lived up to, even in the self-righteous atmosphere of the editorial room. Because we are practical men, knowing of the pressures put upon these quite human and likable individuals, we forgive them their weaknesses. However, we do not forgive these editors for using the labor movement as a whipping boy because of their frustrations—frustrations caused by their sense of guilt through failure to do an honest reporting job.

We ask our members to check the record. A delegation of Illinois businessmen, representing the chamber of commerce, is going to Congress again this week to oppose all measures which are of direct help to the unemployed. We think the Illinois Congressmen and the two Senators should have the gumption to ask these pseudoguardians of the lowly wage earner what positive measure of help they might suggest for a change. If the effrontery were not so tragic in attempting to act for the welfare of workers in their opposition to every measure which has sought to elevate the material welfare of wage earners over the years, we should consider it ludicrous.

These same employer spokesmen want picketing eliminated. They want State right-to-work laws. They should be happy about the present interpretations of the National Labor Relations Board on the Taft-Hartley Act. Every 1 of the 5 members of the National Board has been appointed by President Eisenhower and approved by the Senate. By administrative action, the Taft-Hartley Act is being even more used as an antiunion device. We have pointed out for years this ever-present danger of one-sided, biased rulings which would come as a result of the Taft-Hartley Act when the Board is dominated by employer thinking.

In conclusion, we ask: Where is the right to work for 5½ million Americans looking for a job? The sidestepping on this issue by the chamber of commerce and manufacturers' spokesmen would do credit to a Russian ballet dancer.

Questions on Policy

(By Stanley L. Johnson, secretary-treasurer, from the Illinois State Federation of Labor Weekly News Letter)

As an interested observer and as an official trying to gage the effects of national legislation on the wage earners of Illinois,

there is one phase of the AFL-CIO legislative policy that should be discussed.

We joined with AFL-CIO representatives from our State when we saw our Senators and Congressmen on March 11–12, urging them to institute a tax cut and increase public spending. This was done in good conscience to try and remedy an acute attack of unemployment. When several million Americans are out of work now, and the danger that the contagion may spread rapidly, it is time for drastic action.

Therefore, my usual caution in fiscal affairs is a victim of an emergency. It is difficult to be concerned with deficits and inflation when people need jobs. Likewise, this is true when billions for foreign aid and reciprocal trade agreements with other nations are stressed by political figures of both parties as essential to our Nation's welbeing. We are aware that approximately 85 percent of foreign-aid funds are spent in this country. We are aware that reciprocal trade agreements put some people out of jobs, too.

What is bothersome is that we still have inflation in the midst of declining jobs. The cost of living continues to go up and still labor is blamed for inflation. The hue and cry of a few months ago on the dangers of inflation seem to be forgotten. There should not be a casual dismissal either by our labor people, or others, of potential serious deflation of the dollar. It is one thing to take a calculated risk and another to ignore what might result.

I am for the calculated risk. The risk is a huge Federal deficit piled on top of the already overwhelming Federal debt. Couple this with a reduction in taxes and that deficit mushrooms again. The interest payments will so increase that either we will need a tremendous increase in taxes at a later date, or repudiation of the public debt could occur through various devices. This latter should never happen.

My personal feeling would be not to reduce taxes. Big business could be satisfied with a little less profit, through judicious price cutting. Increase unemployment-compensation benefits now with the same broad coverage as Social Security. This coupled with a comprehensive public-works program, schools, housing, hospitals, roads, dams, post offices, etc., now, would spread the money into every economic activity of the country. The increased tempo of business and people working, paying taxes, would help hold the deficit to reasonable bounds.

To ignore future possibilities of a day of reckoning, due to uncontrollable debt with wild inflation, could only lead to disaster for the very people we seek to represent and help—the wage earners of America. The least that we can do is to point out that in advocating needed emergency action by the Congress of huge spending, there are some future risks that must be taken.

General Practitioner of the Year

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of April 25, 1958, which comments on the designation by the Luzerne County Medical Society of Dr. A. W. Grover, Kingston surgeon and educator, as general practitioner of the year:

PRACTITIONER OF THE YEAR

Honors from his profession and community are not new to Dr. A. W. Grover, Kingston surgeon and educator, but the action of the Luzerne County Medical Society this week in designating him as general practitioner of the year is a tribute that should have special appeal since it not only constitutes recognition from colleagues, but it is an acknowledgment of his devotion to duty for more than a half century.

A native of Hobbie and a resident of Kingston for 60 years, Dr. Grover has been accorded such distinctions as a fellowship in the American College of Surgeons, the presidency of the Luzerne County Medical Society, a portrait in the staff room of Nesbitt Memorial Hospital in appreciation of his service as a trustee for 30 years and the presidency of the board of education in the West Side school district.

The respect Dr. Grover commands testifies to his professional skill and to his service beyond the call of duty. It is easy to concur in the decision of the profession to add to his laurels.

Hello, Congressmen

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in my hometown paper, the Cambridge Chronicle-Sun, having to do with the question of excise taxes, a subject pending before the Congress at this time.

I am in full accord with the thoughts expressed in the editorial, and I hope that my colleagues will join with me in endeavoring to secure early and favorable action.

The editorial follows:

[From the Cambridge Chronicle-Sun of May 1, 1958]

HELLO, CONGRESSMEN

At our house, a telephone is a necessity, not a luxury. Most Cambridge people feel the same way; over 80 percent of our city's families have phones. They find the telephone is a must for modern living.

That's why we wonder how long the Federal Government is going to continue its presumably temporary policy of taxing us 10 percent of the charges for both local and long-distance service.

The telephone company pays a lot of other taxes out of its own income, but this excise tax is different. The entire 10 percent is paid by telephone users. The company has the headache of collecting the tax from the public, but doesn't keep a penny of it. Every cent is turned over to Uncle Sam.

ADDS TO LIVING COST

This 10 percent tax adds to the high cost of living in every home that has a telephone. And people who gripe—as people will—about the size of their phone bills often fail to recognize that it is Congress and not the telephone company which has added 10 percent to the total tab.

There seem to be two main reasons why Congress imposed this kind of tax in the first place: To raise money for Government operation in periods of war or economic emergency, and to discourage use of telephone service during wartime.

During World War II, these taxes went up to 15 percent on local service and 25 percent on long distance, and these levels continued until 1954, when they were reduced to the present 10 percent rate.

This reduction was a boon to telephone users, but recently something new has been added to the picture. Recommendations have been made to turn certain Federal responsibilities over to the State governments, and to give the State access to 40 percent of the revenues from the 10 percent tax on local telephone service.

HERE FOREVER?

If this plan goes through, it's a safe bet that these so-called temporary taxes on telephone service will become permanent. In short, taxes which were established for emergency purposes will be here to stay, forever and a day.

That's why we think Congress should take a long, hard look at this whole telephone excise tax business. Congressmen should ask whether it is fair to tax one necessity in a way in which other necessities are not taxed. And above all they should ask themselves whether temporary really means temporary, or is just a polite way of saying permanent.

Latin America and the Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the extension of the trade-agreements program has been advocated by many sincere people as a means of aiding other countries to strengthen their economies in this critical period of world tension. It is not generally recognized that if the Congress refuses to extend the Trade Agreements Act no existing tariff rate will be increased. It is also apparent that many well-meaning citizens do not appreciate that so many of our imports are items on the free list. No duty whatsoever is paid on these imports and certainly no Member of the Congress would suggest that we impose a duty on them.

A booklet prepared by the State Department has contributed to this confusion. It included this statement:

In our (hypothetical) tradeless world there is (would be) no coffee on your breakfast table, nor cocoa, nor tea. You can't (could not) buy chocolate or tapioca, or brazil or cashew nuts. Spices like pepper, cloves, and mustard have (would have) just about vanished from your pantry shelves. Olives, olive oil, lobsters, tunafish, sugar, figs, bananas, and dates are (would be) more expensive now, and sometimes your grocer doesn't (would not) have them at all.

On January 15 our colleague, the gentleman from West Virginia [Mr. BAILEY], showed that almost all of the items described in this booklet are on the free list. He said:

Nearly all the important products of commerce found in the compilation are on our free list. The question then arises what

moved the State Department to list these products unless it could have made no impression and no case without doing so. The fact is that no further tariff reduction or liberalizing of trade in these items could possibly increase our imports since there is no duty to be taken off. Among them are coffee, newsprint, tin, copper ore, bauxite—aluminum ore, cocoa beans, tunafish—frozen, bananas, tapioca, lobsters, and pepper.

On March 25 I included as an extension of my remarks an address by Dr. Leland I. Doan, the president of the Dow Chemical Co., before the Economic Club of Detroit. Dr. Doan also touched on this problem with particular reference to our imports from Brazil. He said:

Our imports from Brazil are second only to those from Canada, principally coffee and cocoa, which are on our free list. Yet since 1948 our share of the Brazilian market has receded from a little over 50 percent to less than 25 percent. Our exports to Brazil have in the meantime been falling for she has used the dollars earned for purchasing in Europe.

Brazil has multiple exchange rates ranging from 18.36 cruzeiros to more than 308 cruzeiros to the dollar. Further, the Government levies a tax of 10 percent on all foreign exchange and an additional surcharge of 25 cruzeiros per dollar on exchange used for importing wheat, coal, and publications.

If a high level of United States imports from a friendly country should insure its prosperity, then the economic conditions in Brazil should be excellent. Unfortunately the Brazilian economy has been afflicted with many ills, which American imports have not cured.

In 1954 the Minerals, Materials, and Fuels Economic Subcommittee of the Senate Committee on Interior and Insular Affairs made an exhaustive review of many of these problems. The subcommittee's report includes this comment with respect to Brazil on page 304:

Imports from Brazil to the United States are under no restrictions, and their volume has been high, providing the Brazilian economy with an ample flow of dollars. Formerly these dollars were spent in Europe, which enabled Europe to settle its adverse dollar balance with the United States. Today Brazil, in spite of our purchases, has had great difficulty in settling its own commercial dollar transactions with the United States and it has been unable to furnish the market it formerly provided to Great Britain and the Continent of Europe.

It employs import controls and many restrictive devices at the present time. Foreign investment is discouraged as Brazil has reaffirmed its position that no foreign capital would be welcome in developing her potential petroleum resources.

Brazil's insistence on virtually nationalizing the development of her natural resources has resulted in the ridiculous situation where the rationing of oil supplies is receiving serious consideration, as railroads are being converted to diesel power and automobile imports are increasing.

More recently, Finance Minister Aranha has issued new regulations to subsidize agricultural exports and to allocate all foreign exchange for imports.

Receipts from exports are channeled directly to the Bank of Brazil. Exporters of coffee and other agricultural products are to receive bonus payments in dollars or other currencies. The bank retains enough of the balance, about one-third, to cover Brazil's foreign-debt service.

The remaining foreign exchange is auctioned to the importers who bid for exchange under five categories ranging from most essential (i. e., aviation gasoline) to least essential (perfume). The auction system for exchange certificates has aroused bitter complaints among Brazilian importers. Aranha has insisted that this procedure must be followed and exports must be stimulated so that Brazil can secure the funds for industrial expansion.

This diversion of dollars to industrial projects has also given rise to inflationary pressures at home, and to discontented workers who are unable to purchase consumer goods. Such policies by underdeveloped countries are not conducive to the development of world trade, and there is little that the United States can hope to accomplish by a unilateral reduction of its own tariffs in curing these conditions, except to jeopardize its security position through becoming dependent upon foreign countries for critical materials without which we could not conduct a war.

Mr. Speaker, these conditions reported during the 83d Congress still persist, as indicated by two recent articles on the Brazilian economy by Leslie Gould, the financial editor for the New York Journal-American. Under unanimous consent, I include them at this point:

[From the New York Journal-American of April 7, 1958]

BRAZIL GROWTH IMPEDED BY GOVERNMENT POLICIES

(By Leslie Gould)

(This is one of a series on South America by Financial Editor Leslie Gould who just completed a 4-week trip around that continent.)

The biggest country in South America is Brazil. In land area. In population. In potential wealth.

The possibilities there are limited only by Government policies.

These policies, most of them hangovers from past administrations, have brought on an inflation, which today is getting, if not already, out of hand. These policies also have encouraged nationalism and socialism and hampered or prevented, as in petroleum, private development of the rich natural resources.

Brazil, even with its rapid industrialization, is still a one commodity economy—coffee. Coffee accounts for more than 60 percent of the foreign exchange producing exports. Cotton and cocoa account for another 25 percent.

TWO-CLASS NATIONS

Brazil also is a two-class nation—the poor and the rich. There is no middle class to speak of. This situation is true in most South American countries. The Argentine is the exception.

The present population is around 60 million and the next 10 years is expected to see it pass the 80 million count.

With its tremendous potential for supplying industrial raw materials, Brazil's increasing population can be developed into an equally tremendous consumer market.

Brazil is short in food, electric power and transportation, and the terrific inflation has hampered the correction of these deficiencies as well as retarded the development of the country's vast natural resources.

CRUZEIRO PLUMMETS

The cruzeiro, which was 64 to the dollar last July, recently dropped to a rate of 111 to the United States dollar. In 2 weeks this year it weakened from 94 to the dollar to the 111 rate. This latest weakness follows a period last year that had given some promise of stability.

The Brazilian financial situation is critical. Dollar reserves in the United States dropped in a year from $153 million to $32 million and the loss continues. All holdings of gold and foreign are down 30 percent.

Brazil's two major economic headaches are an oversupply of coffee and a drop in coffee exports, and failure of the nationalized petroleum industry to develop enough oil to meet the country's needs.

About $300 million a year of foreign exchange must go for oil imports. The sad part about this is that Brazil has the oil in the ground, but Petrobras—the Government monopoly—hasn't been able to get it out. The need is for a change in policy that will permit outside interests to come in and develop the oil, the same as neighboring Venezuela, which has one of the world's strongest and most stable currencies.

TOO MUCH COFFEE

Coffee is proving to be another drain. It does account for better than 60 percent of Brazil's foreign-exchange income, but because of overproduction the Government this year may be forced to buy in 8 million bags on top of 7 to 8 million bags now in Government warehouses.

Last year Brazil exported 14.3 million bags of coffee, off 2½ million bags from 1956. So far this year shipments have totaled 2,330,627 bags, off 1,699,990 bags from a year ago. In March, shipments were off 170,000 bags. This means a considerable drop in needed foreign exchange—mostly dollars.

While exports are down, Brazil's imports are up. Last year exports were down $60 million but imports rose 60 percent. The country still had a favorable trade balance, but the gap is narrowing.

BRAZILIAN CRUZEIRO

Cruzeiros per United States dollar (free rate): 1946, 20.90; 1947, 22; 1948, 27; 1949, 30.50; 1950, 33.35; 1951, 31.05; 1952, 33.75; 1953, 44; 1954, 58.50; 1955, 79.25; 1956, 86.50; 1957, 72.50; 1958, 107.

[From the New York Journal-American of April 9, 1958]

UNITED STATES GOLD POLICY HELPS REDS COMPETE IN SOUTH AMERICA

(By Leslie Gould)

(This is one of a series on South America by Financial Editor Leslie Gould, based on a just completed 4-week air trip around that continent.)

Brazil is where the Russians, under their new look, will contest the United States in the economic phase of the East-West cold war. The Argentine is the other big battleground, with Chile and Uruguay smaller targets.

Russia is dangling long-term credits, including needed dollars, and barter deals of oil equipment and other machinery.

The irony of these proposals is that these credits are made possible by the United States Treasury's $35-an-ounce fixed price for gold. This puts a firm floor under the world gold markets, no matter how heavy the offerings of metal.

OFFERING EASY CREDIT

Russia is a heavy seller of gold. These sales are the source of much of the money being used to carry on the economic phase of the Communists' cold war, as well as to finance subversive activities of its other agents.

The United States is at a disadvantage in meeting this kind of competition, for the Soviets are playing up to the Brazilian factions devoted to nationalism, as in oil development, and socialism. They also aren't missing the point that the United States will drop billions in aid to Europe and elsewhere around the globe, but will channel only a trickle of such funds to the countries south of our border.

The Russians also are offering credit on terms that cannot be matched on any business basis.

The real future for Brazil and the rest of the South American countries lies in development of their almost unlimited natu-

ral resources—certainly in Brazil—through private enterprise.

A great many top drawer American companies are in South America. The American private stake in all Latin America is around $9 billion. This gives the United States a big advantage over the Russians.

FAVORS TRADE WITH UNITED STATES

While the Communist, socialistic and nationalistic forces are strong in Brazil, the country basically favors doing business with the United States and putting greater emphasis on private enterprise.

Brazil, though, is facing a serious financial crisis, as evidenced by the flight from the cruzeiro and its fall in value. The inflation of the currency in the last 9 months has been almost 100 percent.

The country in the next couple of years has very heavy dollar financial obligations to meet, about $1 billion. Total dollar obligations are close to $2¼ billion.

INFLATION NO. 1 PROBLEM

This picture is complicated by the drop in coffee shipments and the price for the country's No. 1 export commodity, the recession in the United States as well as at home and the Government's red ink.

The biggest headache is the inflation, which up to last year was about 20 percent a year. In the latter half of 1957, this was temporarily arrested, but it is out of hand again.

Once this is solved, nothing can stop Brazil.

Mr. Speaker, we are fortunate in this case that imports from Brazil are complimentary to our economy and that they have not caused any harm to our producers. Certainly the Brazilians should have no concern with what Congress does with the Trade Agreements Program, as we will not impose a tariff on coffee. Yet, it is quite clear that the solution to the inflationary pressures which prevail in Brazil lies with the Brazilians themselves who must make it possible for private capital to develop their vast mineral resources.

The Senate report in 1954 and Mr. Gould's articles in 1958 both stress that foreign exchange presently used for oil imports could be saved by encouraging American oil companies with the technical know-how to come in and develop the oil which Brazil is fortunate to have but which its government monopoly has been unable to produce.

The solution to many of these problems requires a more hospitable climate for private enterprise and investment. The American taxpayer cannot solve all the world's problems by massive contributions of American aid nor can we sacrifice our own industries by a continuation of the present trade agreements program which has reduced American tariffs without securing any real compensating advantage for American producers selling abroad.

A Dulles Triumph

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal Star of May 5, 1958.

A DULLES TRIUMPH

Secretary Dulles has pulled off a real diplomatic triumph. It is a rare pleasure when our State Department puts the Soviet Union on the defensive. Give John Foster Dulles credit for a skillful job.

His offer of an Arctic open skies inspection plan was so logical that the Russians had no reasonable way of refusing it. They were forced to use their veto privilege in the U. N. Security Council, which is the equivalent of shooting a peace dove with a double-barreled shotgun.

People of Europe who have been swallowing the Soviet peace propaganda were suddenly disillusioned by the Soviet veto. It took the mask off the Communist peace talk. It made Soviet demands for a summit conference look ridiculous. It undid the work of months of clever Russian propaganda.

Much of the pressure for a summit conference is now off our allies. That relieves our Government of pressure to take part in a Soviet-planned meeting which probably would have been a propaganda disaster for us.

Domestic pressure, too, has been taken off President Eisenhower by the Dulles triumph. Democrats who were shouting for a summit conference now see what Eisenhower and Dulles saw all the time; namely, that the summit talk was only Soviet deceit.

We have been taking a series of propaganda beatings from the Kremlin since last November. Mr. Dulles' present triumph wipes much of that off the record.

It will help restore world respect for the United States. And it should greatly increase confidence in Mr. Dulles among us Americans.

High School Principal Runs a Strict School

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. DORN of South Carolina. Mr. Speaker, something is wrong with education in America today. Men like Cyrus L. Oyer, principal of Babylon, N. Y., High School, have the answer. Mr. Oyer is practical. He is a realist. He gets the job done.

I am happy to recommend to you, Mr. Speaker, and the Congress, this splendid article:

[From Parade magazine of May 4, 1958]

I RUN A STRICT SCHOOL

(By Cyrus L. Oyer)

BABYLON, N. Y.—In New York City not long ago, a high-school student stood before Judge Samuel S. Leibowitz. The judge was staggered to learn that the boy was unable to spell some of the simple words on his junior-high diploma.

And in a midwestern college, the director of admissions shook his head in perplexity. A number of freshmen, he had discovered, thought Theodore Roosevelt was president before the Civil War.

You probably have heard similar stories about poorly educated youngsters. But you won't find any of this among the students at my school. That's because this institution is run with a firm belief in the old-fashioned virtues, including hard work and discipline.

When my boys and girls receive their diplomas, they have a hard core of knowledge in the arts, the sciences, and the humanities. They have learned how to study. They have learned how to think. And they can spell the words on their diplomas.

Otherwise, I can tell you, they don't graduate.

Now why am I sounding off like this? You are hearing much talk these postsputnik days about "soft" American high schools, about the teaching of so-called trivia, about the lack of emphasis on science and mathematics.

Some of this unquestionably is true. I've heard that a few schools actually offer credit for corridor duty and library assistance. At one school, time is devoted to discussing clothes—how to pick them and how to wear them. Secretary of Labor James P. Mitchell said recently that half our high schools offer no modern foreign language, 33 percent no intermediate algebra, 43 percent no physics, and 20 percent no plane geometry.

Clearly, many schools can stand tightening and overhauling.

MY SCHOOL IS TYPICAL

But the impression has gotten around that all high schools are shameful wastes of time. The feeling is growing that secondary education is just one wow of a social experience and precious little else.

This is not only false but dangerous.

I ought to know. I have been a school principal 22 years and I know many schools which believe in high, rigid, exacting standards. My school, Babylon High, is just one. It's typical of a good many others.

Our school is in a village 35 miles east of New York City—not wealthy, not poor, just average. You'll find no imported marble or expensive paneling in our corridors. We believe in spending money on libraries and laboratories. We want the best. And we want the best from our students. We believe the way to get it is to be strict in 4 main areas:

1. Homework: We believe in it. We don't accept the notion that a youngster should do all his studying at school and be left free the rest of the day to follow his own inclinations. I've heard claims that this produces a more rounded individual. If it does, it also is certain to create a pretty thinly educated one.

For every 40 minutes of class work, a student at Babylon High is assigned 40 minutes of homework. On the average, a youngster must do between 3 and 4 hours of preparation a night.

An unprepared student stays late to make up. If his unpreparedness occurs often, he goes to our guidance department. If it persists, we have a conference with his parents. The student continually is checked to keep him on the ball.

2. Tests: We believe in tests, lots of them and stiff ones. Frequently teachers spring tests without warning. Unfair? We don't think so. What's unfair about expecting a pupil to keep abreast of his work?

We require each boy and girl to pass a 3-hour examination in each course every year. This is in addition to Regents tests given by the State.

I've heard of schools which do not tell pupils how they made out on tests for fear of giving them a sense of inferiority. Our students are told promptly. We take the attitude that a youngster's psyche doesn't bruise quite so easily.

3. Discipline: We don't tolerate misbehavior of any sort. Our standards of conduct are strictly old-school, namely: Rules are rules and must be obeyed. We don't take the stand that "Oh, well, kids are kids and have to let off steam." That's for the football stadium.

If misbehavior occurs, we handle things quietly and efficiently. If the offense is serious, the offender is taken home by an attendance officer after the principal has telephoned his parents to expect him. That day, a letter going out explaining that the

youngster will not be re-entered until a parent comes to school. Almost invariably, parents come in next day.

BETTER GROOMING, BETTER WORK

Three years ago we banned sloppy clothes at our school. We did this because we felt that attitudes toward dress can affect conduct and lead to slovenly schoolwork and careless thinking. The students have cooperated beautifully. They look well and, more important, they act well.

4. Courses of study: We don't believe in letting a student choose from a supermarket-type display of a large variety of courses, among which he hopes to find a good sprinkling of snaps. Babylon has no snaps. We don't feel that students go to high school for a social experience. We take the view that they come to feed their minds.

Thus for graduation we require passage of stiff courses in English, science, mathematics, history and health. A student must take a major sequence, consisting of 3 years in a chosen field—but this field is restricted to the major areas of study.

And if a youngster does not complete all his credits, neither pleas nor tears can squeeze him through. Last year nearly 5 percent of our seniors failed to graduate by a half point. They had to go to summer school to win their diplomas.

I'll tell you something which may astonish you. It's not unusual for a student who has scored 85 on a test to receive a stern lecture for doing poorly, while one who gets 75 is not called on the carpet. Why? Because if a student who has consistently scored 95 suddenly dives 10 points, we want to know the reason. We consider a 95 student who gets a few 85's more deficient than a 75 student who keeps getting 75.

And a student who can complete a 40-minute assignment in 15 minutes is not just considered lucky. He is given longer and harder jobs to do. If you think this makes youngsters resentful, you're wrong. They're grateful because they want to do more, learn more.

Basically we believe that every youngster should study up to the limits of his mental capacity. If an A science student has room in his schedule for an elective, he has to have a pretty good reason for choosing a course other than more science.

WHAT IS A FRILL?

While I am on the subject of courses of study, I would like to inject a word about frills. United States schools are being compared to Russian schools and all instruction which doesn't seem to be strictly business is labeled with that derisive term.

Yet a physics course actually can be a frill—and a cooking class important. Suppose a physics teacher tells his students, "Those who wish can bring radios next month and we'll try to fix them up." If the students who do not bring radios are permitted to loaf, that course is the frilliest of frills. On the other hand, a cooking course that requires tests, homework, and reports can be valuable.

With all this, do we believe school should be pleasant, even fun? We do. We do not believe that relaxation should be reserved for afterschool hours or off-school areas.

Thus, when our students finish lunch, they can stroll into the gym and dance to records. If some jazz enthusiasts want to bring their instruments, that's all right, too. Others can go to our audio-visual room and watch movies.

STAYING IN STEP

There are shady walks and athletic facilities. Sometimes teachers even act as lonely hearts advisers to youngsters with romantic problems. I've functioned in that capacity myself.

Finally, no school is worth much without a dedicated faculty. This we have, plus a school superintendent with vision—Gerald W. Anderson.

That's our school. We're proud of it, and we're backing the American system of education. There is some softness in it, some need to step up programs. But it always has adapted to change.

Not long ago Charles F. Kettering, former General Motors research director, said: "There's nothing wrong with the science program in the United States. People should quit talking about it as though there was. I think the science program should be stepped up but that's not because of the launching of the sputniks. Normal advancements bring certain changes. School curriculums should be brought up to date with this in mind."

They are being brought up to date. It's time Americans realized that.

Yes, I run a strict school—but so do principals in many communities. We know the challenge of our enormous responsibilities toward your children. Toward our children—my own daughter is a senior at Babylon High.

We accept the challenge. We are meeting it headon.

Five Churches in Wyoming Valley and Wyoming Seminary Preparatory School Hold Major Events

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Record of April 28, 1958, which describes the recent major events held by five churches in Wyoming Valley, Luzerne County, Pa., as well as that held by Wyoming Seminary, leading preparatory school:

FIVE CHURCHES AND SEMINARY HOLD MAJOR EVENTS—BISHOP FRED CORSON OFFICIATES AT SIX FUNCTIONS IN AREA

Five local and area Methodist churches and Wyoming Seminary, yesterday held major events which included two cornerstone layings, two ground breakings, one consecration service and a sesquicentennial celebration.

In the first event of the day, Bishop Fred Pierce Corson, resident bishop of Philadelphia area of Methodist Church, spoke at services of First Methodist Church of Kingston in Wyoming Seminary chapel. Following services, the clergy and congregation moved to Market Street and South Sprague Avenue, site of the proposed new church, for the laying of the cornerstone.

More than 300 persons were present for the cornerstone laying. Among them were Isaac S. VanScoy and Frank M. Garney, both of whom were members of the church when the first cornerstone was laid in 1872. In addition to Bishop Corson, VanScoy and Garney, others who were present on the speakers' platform were: Rev. Harold C. Buckingham, district superintendent; Dr. Ralph W. Decker, president of Wyoming Seminary; Rev. Alfred L. Crayton, pastor; Rev. Milton F. McKenney, associate pastor; Arthur L. Strayer, chairman of the building committee; Dr. Wilbur H. Fleck, chairman of trustees; W. Charles Maxwell, Jr., chairman of official board; Charles M. Talley, architect, and George R. Taylor, contractor.

Cornerstone for Wyoming Seminary gymnasium was laid at 12:30 p. m. yesterday. The ceremony followed church services at Nelson Memorial Chapel on the school's campus. Bishop Corson delivered the sermon.

More than 250 persons attended the cornerstone laying for the $800,000 gymnasium. The cornerstone was a piece of native bluestone taken from in front of Forty Fort Meeting House, where it had served as a doorstep since the erection of the building 150 years ago. The stone is inscribed: "This cornerstone was a doorstep in the Old Meeting House in Forty Fort, erected in 1807, where in October, 1839, Dr. George Peck started the movement that resulted in the establishment of the Wyoming Seminary."

Construction of the gymnasium was authorized by trustees last October and the contract was awarded to Tabone and Barbera, Pittston. Designed by Thomas H. Atherton, the building will house the main winter sports program of the school. Faced in red brick with white trim to harmonize with the other school buildings, the structure also will house a swimming pool in a separate wing. Gifts to cover the cost of construction were pledged by a small group of alumni and friends of the school.

CONTENTS OF BOX

Among the items placed in a lead box sealed within the cornerstone are a copy of the Bible, a history of Wyoming Seminary, a photograph of Rev. George Peck, interior and exterior photographs of Forty Fort Meeting House, a letter from Walter S. Carpenter, Jr., concerning the gift which made erection of the building possible, clippings from Wilkes-Barre Record and Wilkes-Barre Times-Leader Evening News, and a set of the most recent issue of United States coins.

Participating in the ceremony yesterday were Dr. Ralph W. Decker, president of Wyoming Seminary; Z. Platt Bennett, president of trustees; Walter S. Carpenter, Jr., trustee; Dr. Wilbur H. Fleck, president emeritus and trustee; Bishop Corson, trustee; Dr. Alfred L. Crayton, secretary of trustees and pastor of First Methodist Church, Kingston; Col. Thomas H. Atherton, trustee, representing the architects; Dean James A. Adams, John Charlton, president of the senior class; Dr. Harold C. Buckingham, trustee and district superintendent, and Santo Tabone, representing the contractor.

ONE HUNDRED AND FIFTY AT RUGGLES

More than 150 persons, a capacity attendance, filled Ruggles Methodist Church yesterday afternoon at 3:30 for a consecration service. Taking part in the consecration of the remodeled church were Bishop Corson, District Superintendent Reverend Buckingham, Rev. John Gordon, pastor; Rev. Ruth Underwood, Rev. David R. Morgan, and a combined choir from Noxen, Alderson, and Ruggles churches under the direction of Mrs. Fred Swanson.

In the service it was pointed out Rev. James Hilbert was pastor during the first years of the church and later Reverend Miss Underwood and Reverend Mr. Gordon. A total of $20,000 has been invested in the remodeling to date, it was explained, with future plans calling for finishing and furnishing a basement, landscaping the lawn, and a new exterior finish for the building.

A tea followed the consecration service in the basement with Mrs. John Gordon and Mrs. Clarence Oberst pouring.

GROUND-BREAKING AT DALLAS

Next event on yesterday's Methodist calendar was ground-breaking ceremonies for a Sunday school building held at 4:30 p. m. at Dallas Methodist Church. Rev. Russell Lawry was in charge. Brief remarks were made by Bishop Corson. Reverend Buck-

ingham led the prayer. Despite the rain, about 125 persons attended the ceremonies.

Others who participated in the Dallas program were church lay leader Lawrence Updyke, church lay member Clark Hildebrandt, and Niles White, president of trustees.

It was announced yesterday final plans for the building have been approved and bids for construction will be placed within a few days.

SHAVERTOWN CEREMONIES

Later in the afternoon, at 5:15, Shavertown Methodist Church was the scene of ground-breaking ceremonies for a new educational building expected to cost about $101,000. Rev. Robert Yost was in charge of ceremonies and approximately 100 persons attended.

Reverend Mr. Yost was assisted by Bishop Corson, who encouraged those attending to carry on with the project. Others who took part in the program were Thomas Graham, building committee chairman; church lay leader John Henninger, Donald F. Davis, Sunday school superintendent; and Mrs. Carl Hontz, WSCS president.

Other members of the building committee are Stephen Johnson, Wesley Davies, Ross Williams, Stephen Davis, Harry Carson, George Jacobs, Norman Patton, William Powell, John Coon, Donald Tretheway, J. Houston Day, Thomas H. Morgan, Clarence Laidler, John S. Wilson, Herbert Tippett, Walter Cook, and James Edwards.

ONE HUNDRED AND TWENTY-FIFTH YEAR AT ORANGE

Climaxing the Methodist events yesterday was the final meeting in connection with the 125th anniversary celebration of Orange Methodist Church at 7:30 p. m. Rev. William W. Reid, Jr., pastor of Carverton Charge, which includes Mt. Zion and Carverton Churches in addition to Orange Methodist, officiated. Bishop Corson preached the sermon. Music was furnished by the combined choirs of the three churches in Carverton Charge.

A social hour followed the service with Methodist youth fellowship members as hosts. Earlier Sunday, a morning service featured a sermon entitled "Rear View Mirrors and Windshields," delivered by the pastor. Other speakers were Herman DeWolfe, Caverton, and Nelson Lewis, Mt. Zion. Homecoming Day was observed Saturday with a special dinner at 6 p. m. Other events which highlighted a 4-day celebration included a pageant, an open house, and a past pastors' night.

Union Methodist Society of Orange was organized in 1833.

Resolution of the Detroit Metropolitan Conference of Mayors and Village Presidents

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert in the RECORD a resolution which was adopted on May 2, 1958, by the Detroit Metropolitan Conference of Mayors and Village Presidents:

RESOLUTION

Whereas the President's 1959 budget recommended to Congress that the sum of $18 million be allocated for fiscal 1959 for work on the Great Lakes connecting channel project; and

Whereas at this rate of appropriation the completion of this project would not be possible until 1965 or later; and

Whereas through the efforts of the Michigan Members of Congress the President requested an additional $5,500,000 for this project in a supplemental public works budget, making a total of $23,500,000 available for fiscal 1959; and

Whereas the Army engineers in charge of this project state that $30 million can be used in the prosecution of this project for fiscal 1959; and

Whereas the original schedule called for completion of this project in 1962; and

Whereas the completion of this project is so vital to the economy and progress of the State of Michigan and particularly the metropolitan area of Detroit: Now, therefore, be it

Resolved, That the Detroit Metropolitan Conference of Mayors and Village Presidents, representing 91 units of government, go on record requesting the United States Congress to appropriate for fiscal 1959 an amount of money sufficient to assure the completion of the Great Lakes connecting channel project by 1962; and be it further

Resolved, That copies of this resolution be sent to the Michigan delegation in Congress.

Unanimously adopted, May 2, 1958.

How a Trade Agreement Is Made

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very timely commentary by O. R. Strackbein, chairman, the Nationwide Committee on Import-Export Policy, which corresponds with the consideration by the Congress of the trade agreements extension bill of 1958.

HOW A TRADE AGREEMENT IS MADE

(Commentary by O. R. Strackbein, chairman, the Nationwide Committee on Import-Export Policy, April 30, 1958)

The Department of State has issued a brochure under the title "How a Trade Agreement Is Made." It bears the date of February 1958 and has recently been distributed far and wide. This dissemination corresponds with the consideration by the Congress of the trade agreements extension bill of 1958.

The publication presents in detail the interdepartmental organization that initiates trade agreements, sets forth the several steps involved in preparing lists of items on which it is proposed to reduce the tariff on the one hand, and on which concessions are to be asked from other countries, on the other; traces the public hearings process, the setting up of negotiating teams to deal with foreign representatives, the actual process and considerations that guide the bargaining operations and the final promulgation of the results by the President.

The Department is to be congratulated on the thoroughness of its job.

However, in making this exposition the Department was probably unaware of the thorough manner in which it also confirmed the many bitter complaints lodged against this very system by numerous domestic producers who have experienced the results of the organizational features described in the brochure and the airtight procedures pursued in making a trade agreement.

Intentional or not, the system almost completely shuts out all influences other than those of the executive power, which is enthroned atop of numerous interlocking and same-thinking subsidiary committees, which in their turn are also drawn, with minor exceptions, from the swollen and teeming executive departments: State, Treasury, Defense, Interior, Agriculture, Commerce, and Labor.

As well try to penetrate the inner precincts of a medieval palace through the concentric rings of guards as to undertake to produce the least effect upon the deliberations of these executive representatives. Their precautions against influence from outside the executive branch would all be appropriate with respect to subjects that fall exclusively under the functions of the executive; but are out of place with respect to a subject on which no settled policy can be forespoken.

It becomes obvious that such devices as hearings before the Committee for Reciprocity Information (which is made up almost completely of executive departmental personnel) in preparation for trade agreements are nothing more than hollow concessions made to outward appearances. The executive personnel of the Committee for Reciprocity Information (a hearings agency) is the same as that of the Interdepartmental Committee on Trade Agreements (an operating group). Not only is this odd but reflects once more the prevalent attitude that domestic producers whose vital interests are involved should be told and not asked. Theirs is not to reason on the hows and whys.

If the document on How a Trade Agreement Is Made is read against the constitutional enumeration of the powers of Congress, where the responsibility for the regulation of foreign commerce and tariff making is placed unequivocally upon Congress, it becomes obvious that once the portals to the executive maze that leads to a trade agreement are entered Congress is soon lost to sight; and no one has yet been able to find or fight his way back. The dungeonkeepers of the Middle Ages would find the atmosphere familiar; and the marauders of the Arabian Nights would recognize a kindred world.

To men of the open day and sunlight the system is and should be abhorrent.

The men who sit on these inner committees are as bound in thought and conclusion as the members of a Russian soviet; and this is alien to the American system.

How can this be?

The fact arises from a basic error of administrative concept:

What has happened is that the administration of a law governing an ever-controversial issue (tariffs and trade) has been treated since 1934 as if it had been moved into a settled arena, to be guided henceforth by an inflexible and undebatable formula: in this case, progressive and relentless tariff reduction under executive rule with but a shadow of recourse by those who are injured.

The procedure established could only be based on the assumption that the electorate, once having spoken, had relinquished its interest in the tariff and trade subject and left it to the President (meaning in effect the State Department) to do with as he saw fit. Judging by the executive procedures established to govern the trade-agreements program, the 73d Congress sitting in 1934 was apparently regarded as having spoken for all future Congresses as well. This is, of course, wholly out of keeping with the Constitution which contemplates changes in sentiment among the

people and the expression of such changes through their elected representatives.

Procedures for making trade agreements under the legislation were characteristically set forth in Executive Order 9832. This was in effect an act of waving goodbye to representative government in this particular field.

Why?

It is because executive personnel of the departments who became almost the exclusive administrators are appointed by the Executive, owe their tenure, the future of their careers, their advancement, and all else that makes for loyalty, to the Executive. Their function is to carry out settled policy. Theirs is not a legislative or parliamentary field nor one in which the voice of the voters is registered.

Therefore, it is unrealistic to look to public hearings conducted by executive personnel and expect results significantly at odds with the ruling executive policy. Such personnel is not responsive to Congress; and the voice of Congress is lost in the intervening chasm.

It would be different if the administering bodies were creatures of Congress and responsible to Congress, as are some of the independent agencies. That is the distinction between the Tariff Commission, which is an agency set up by Congress to do the detailed and technical work of Congress, and the Interdepartmental Committee on Trade Agreements and its alter ego the Committee for Reciprocity Information, which are not creatures of the Congress but arms of the Executive. The Tariff Commission under the present setup, is but an edentate body constantly frustrated by the President.

The nonresponsive effect produced by this system could still be overcome but for two practices that effectively lock the door to the reentry of congressional influence.

1. Tariff Commission recommendations under the escape clause are sent exclusively to the President to do with as he likes. The escape clause represents the principal recourse against injury from trade agreements available to domestic producers. In rejecting such recommendations the President has but to sign a letter directed to the chairmen respectively of the Senate Finance Committee and the House Committee on Ways and Means. From this there is no appeal, and the President has since 1951, when the escape clause was first enacted, rejected about two recommendations for every one he has signed.

(These rejections appear to be completely at odds with the successive presidential assurances that no domestic industry would be hurt by the trade-agreements program. This reassuring face is the one the Executive has turned to the public while in the meantime the trade agreements machinery has continued to grind out its results quite oblivious of these assurances.)

2. In negotiating the General Agreement on Tariffs and Trade the State Department agreed to far-reaching trade rules that go beyond mere tariff reductions. These trade rules, one example of which is renunciation of the use of import quotas (with some transitory exceptions), have the effect of interposing between Congress and its freedom to legislate certain international taboos that cannot be violated without breaking solemn international commitments.

The practical effect of the operation of the trade agreements system, including the organizational and procedural aspects of making agreements, has thus been to make a house of futility out of Congress so far as the regulation of foreign commerce is concerned.

At the same time and by the same process the electorate has perforce been effectively disfranchised in this field so far as its control over the Government is concerned as contemplated under the concept of popular sovereignty. The Constitution has been amended de facto in complete disregard of the prescribed procedures.

"How a Trade Agreement Is Made" might just as appropriately be titled "How the State Department Through the Trade Agreements Legislation Drove Congress From the Hill."

The obvious remedy lies in legislation that would restore congressional control, at the very minimum to the point of controlling the escape clause remedy. This could be accomplished by requiring that the Tariff Commission recommendations be sent to Congress for possible disapproval by joint resolution. In other words, the veto power over such recommendations should be shifted from the executive to the Congress.

The need for an escape clause action arises from errors committed in tariff negotiations by the executive under the system set up by the executive for making trade agreements.

Since the original power in the regulation of foreign commerce resides in Congress and the President exercises only delegated power, the Congress rather than the President should be the judge of whether the delegated power has been properly carried out. This would be accomplished in substantial part by giving to Congress the final word on escape clause recommendations.

If the President has reasons beyond the question of injury to a domestic industry for wishing to block a Tariff Commission recommendation he could present his reasons to Congress; and if these were compelling Congress would no doubt give heed to his plea.

Not Anti-American

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the letters to the editor column of the Wilkes-Barre Record of April 25, 1958, on the situation in Lebanon:

NOT ANTI-AMERICAN

EDITOR OF THE RECORD:

I read with interest your article Maronite Patriarch Asks Neutral Lebanon. May I be permitted to state the following: In your article it states that his beatitude, the maronite patriarch, Msgr. Paul Meouchi, called on the Lebanese to oust the pro-American Government of Lebanon. It would sound as if the patriarch is anti-American which he is definitely not as he is an American citizen and holds very dear to his ties with America, with much honor and pride.

What has happened in Lebanon today, politically, is that the constitution of the Lebanese Republic limits the president to one term in office of 6 years, and he cannot succeed himself. The government, being pro-Western and concerned about the fate of Lebanon, feels that the present Presiednt, Camille Chamoun, is strong politically to guide Lebanon through the present crisis in the Middle East without being absorbed by other ambitious nations. The patriarch insisted that President Camille Chamount is having the constitution changed to permit him to be reelected for another term of 6 years. It is required to have two-thirds majority in Parliament to make amendments to the constitution, and the President does not have the required majority, and the patriarch insists that it is not the will of the majority of the Lebanese people who feel there are other able and capable men who can qualify to succeed to the presidency and continue to serve ably the needs and aim of Lebanon, which is very pro-Western and pro-Arab.

The ironic twist to this whole matter is the way it is being skillfully used by the anti-Western forces in Lebanon who are in a complete minority and are able to foment trouble for the Government of Lebanon by quoting that the maronite patriarch, who is a powerful figure in Lebanon, is against the Government of President Chamoun, who is pro-Western; therefore the patriarch is anti-Western, especially anti-American which is completely untrue.

I hope this will erase the misjudgment of the few who interpreted this article incorrectly.

A. G. ALBERT.

WILKES-BARRE, PA.

Why the Independent Business Schools Should Be Included in Federal Aid to Education Programs

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. LANE. Mr. Speaker, I am pleased to include a very interesting statement on the role of the independent business school in American education, which was prepared by the National Association and Council of Business Schools and submitted to me by Miss Agnes B. McClellon, executive vice president of the Malden Business School in Malden, Mass.:

MALDEN BUSINESS SCHOOL,
Malden, Mass., May 5, 1958.

The Honorable THOMAS J. LANE,
The House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN LANE: This is a report, prepared by our National Association and Council of Business Schools, which gives the salient points which we feel justify our inclusion in the Federal aid to education bills.

We repeat that we are not interested in any financial aid that might come to us from students attending our schools. However, we maintain their right to choose us, if they wish. Our interest is that we not be excluded from the definition of "an institution of higher education" for which we qualify except for the nonprofit and tax-supported or tax-exempt requirement.

Anything you can do to help us will be greatly appreciated by us and by the thousands of successful graduates and future graduates of independent business schools throughout our country.

Sincerely,

AGNES B. MCCLELLON,
Member of Legislative Committee,
Massachusetts Association of Business Schools.

WHY THE INDEPENDENT BUSINESS SCHOOLS SHOULD BE INCLUDED IN FEDERAL AID TO EDUCATION PROGRAMS

THE ROLE OF THE INDEPENDENT BUSINESS SCHOOL IN AMERICAN EDUCATION

1. There are approximately 1,500 independent business schools throughout the

country training over 500,000 students annually.

2. Many firsts in education were developed through private school initiative and enterprise. Among these firsts in education are many important contributions made by independent business schools to improve educational methods, text materials, start of frequent enrollment opportunities, individual progress according to ability, adult education. Many other neglected gaps in our educational program have been filled to meet the changes brought about in the last 50 years by the independent business schools.

3. The independent business school makes a distinct contribution to serving the youth of America, and providing trained personnel for private industry, government, and national defense.

4. The independent business school is prepared to join with other educational institutions to meet the growing crisis in education. The independent business school, by its continuing expansion plan, can double its present student enrollments, without any additional cost to the taxpayers.

5. It is possible that many people have lost sight of the fact that the first business schools were private business schools. They came into being because there was a definite need for the kind of training they were able to give best. There will always be a definite place in our educational system for the independent business school, giving truly functional training to the many thousands who do not have the time or money to spend on a college education, and who should receive the same benefits as those in more favorable circumstances.

6. Our schools are community colleges which cater to the needs of people in their areas. Specifically the courses and curriculums offered meet the needs of employers in each area, and students are able to secure positions at the highest salaries. Because of the history of the independent business school and the role it plays in the community, it is our firm opinion that care should be exercised that the bona fide interests of independent business schools should be considered and supported. Business-school training has a definite goal. It provides specialized training for business that is a definite aspect of our culture. Business education is an economical education—economical both in time and money. Business education develops the specialized skills in which we train students so that they can earn their own way and render useful service to society.

7. The quality of instruction and the methods of teaching are of the highest caliber in the independent business schools.

8. Because of the proprietary nature of most business schools, they are more flexible and can rapidly change their curriculums to meet the ever-changing needs of our dynamic society.

9. The independent business schools have an accrediting commission called the Accrediting Commission for Business Schools, which is a nationally recognized accrediting agency, so recognized by the Office of Education of the United States.

WHAT DO THE INDEPENDENT BUSINESS SCHOOLS WANT IN FEDERAL AID TO EDUCATION BILLS?

1. The independent business schools are not interested in any grants to business schools, nor are they interested in any particular parts of the bills which would, in effect, give any sums of money directly to institutions of higher learning.

2. The independent business schools do not want or desire any type of grant or subsidy from either Federal Government or any of the State governments.

3. The independent business schools do not want any other aid such as laboratory equipment, library facilities, or research funds.

4. The independent business schools do want inclusion only in specific parts of the bills dealing with scholarship assistant which goes to the student and not to the school. In other words, the only interest independent business schools have in Federal aid to education is the right of a student under the scholarship provisions to select the type of educational institution which he desires, including the independent business school.

5. In allowing scholarships, a student should have a freedom of choice to pick any type of educational institution, including an independent business school. This means that if a student wants to attend Harvard, MIT, or a State university, or a junior college, he should certainly be allowed to do so. But if he prefers to go to an approved business school or technical institute, he also should be entitled to do so.

WHY SHOULD THE INDEPENDENT BUSINESS SCHOOLS BE INCLUDED UNDER THE SCHOLARSHIP PROVISIONS OF FEDERAL AID TO EDUCATION BILLS?

1. The independent business schools have formulated new courses to meet the current crisis in education. Such courses as technical, engineering, scientific training for secretaries, and engineering aide courses are now being offered by independent business schools. A constant complaint of many engineers is the fact that they are tied down by office tedium to a point where they spend too much of their time on matters which can be handled by a competently trained secretary or aid. Our schools have developed and are offering a 2-year course of intensive training, consisting of the specialized terminology of the technical, scientific and engineering professions; laboratory work in general science (especially physics and chemistry), engineering mathematics, drafting, all in addition to a full curriculum of standard secretarial instruction.

The purposes of these courses is to cut months off a new secretary's usually lengthy adjustment to complex engineering terminology and to free engineers from some of those only marginally professional duties such as routine calculations and graph plotting.

In a recent report published by Professor Hamlin, chairman of agricultural education at the University of Illinois, in the Nation's Schools for March 1958, he states: "We don't want to waste those who are professionally trained in jobs others could do. We hear of a shortage of engineers, but we hear also that a high percentage of engineers are doing work of less-than-engineering grade. Vocational schools provide the helpers they need. Similar situations prevail with respect to all of the other professions."

2. Since many private business schools are junior colleges and 4-year institutions of higher learning, a failure to include these schools will result in discriminations, since a student could take the same courses, taught in the same manner, using the same textbooks in another institution down the street. One would be approved under the law as it now stands, but an independent business school would not be so approved.

3. It is not the intent of the Congress of the United States to arbitrarily discriminate against any type of educational institution. Failure to include the independent business schools under the scholarship provisions would go against numerous precedents such as the World War II GI bill and Korean GI bill, Public Law 550.

4. Our whole economy is based on the free enterprise system and schools which are organized without tax support should be honored and respected for what they are doing in serving the young people.

5. It is the stated purpose of the Health, Education, and Welfare Department that all educational institutions be utilized to their fullest extent. This is also the recommendation of the President's Committee on Education Beyond the High School. It must be recognized that the colleges and universities will not be able to handle the tremendous influx of students which are expected in the very near future. The independent business schools will be able to take care of the overflow and provide the necessary education for a large segment of the public.

6. It must be remembered that many students do not want a college education and prefer practical training in the independent business schools. In addition, there are other students who cannot afford to go to colleges and universities, even with a scholarship, but need to provide for a family as soon as possible. They would prefer a 2-year course in an independent business school. There are many others who are not of college caliber. Their needs and wishes cannot be ignored by the Congress of the United States.

7. The independent business schools can play a substantial part in absorbing many college freshmen in the years ahead. After completing their 2 years of training in an independent business school, they could then be absorbed into the colleges and universities to replace the students who drop out after the freshman year. This would result in saving the taxpayers hundreds of millions of dollars.

SUMMARY

Suppose there had never been a business college in the United States? There would be no shorthand writers because the shorthand systems in use today were developed by business college educators. Typists would be scarce because only within the last years have high schools and public colleges seen fit to teach typing skills. There would be very few bookkeepers because prior to the beginning of the business college, people learned to keep books through the apprentice system.

If all business college-trained people vanished from the earth, government and business would be in a turmoil today.

It is important to the broad educational future of our country that independent business colleges be included in the benefits of any education bill which is passed. Business schools do not need and do not want subsidies for the payment of teachers, dormitories, buildings, etc., but independent business schools do feel that people who are unable to attend a 4-year college should receive assistance and consideration in some measure comparable to that of the student who is able to go to a 4-year college. We hope that any bill which is passed by Congress this year will have a provision whereby aid can be given to students who attend business schools as well as those who attend other types of colleges.

Business schools have certain advantages for a large group of people that the 4-year college does not have. We are all aware that there are some people who are not capable of assimilating a 4-year college training program. Newspaper articles on this subject have stated that more than 40 percent of those people who enter 4-year college training fail in their subjects and are dropped by the wayside. Surely this is a great waste of the taxpayer's money and the time of the student.

Many of these finally find their way to the independent business school and make good as bookkeepers, clerical workers, stenographers and business machine operators.

In addition to the fact that certain people cannot profit from a four-year college course but could benefit from a business course, there are other advantages. They are: (1)

the relative cost of business education is approximately one-fourth that of other type colleges; (2) business schools train people for a specialized job and do not require the student to take unrelated subjects thereby saving a great deal of time for the student; (3) business-school graduates have been able and will continue to be able to compete on the same grounds for secretarial and accounting jobs as four-year college graduates in commercial studies; (4) business schools are taxpayers—both Federal and State. Business schools do not consume taxes, they pay them.

The independent business school should be included in the proposed legislation because of the work it is now doing in the field of science and technology. The private business school is instituting new crash programs and courses such as engineering secretarial courses and engineering aide courses, which have been designed with the aid of industry as an answer to its problems.

To show the urgent need for such training, read the following statement from prominent men in the engineering field: Mr. William Cavanaugh of the Engineers Joint Council states: "Development of Supporting personnel such as secretaries and technicians is one of the most productive avenues to increase engineers' output."

Mr. E. Paul Lange, secretary of the Joint Council, explains the shortage of engineering-wise office aides this way, "before World War II, few companies went in heavily for research and development projects." "Now that's all changed and about 150,000, or approximately 25 percent of the country's engineers, are working on some kind of civilian or military research and development project." "These are the engineers that baffle secretaries with complicated technical jargon; they lose idea time when they have to go back over letters and reports to iron out errors."

U. S. News & World Report, January 10, 1958, states: "Lack of Technical help is found to load down engineers with all kinds of chores. One electronics firm found that engineers in one of its divisions spent 19 percent of their time on jobs that could be done by technicians and clerical, or administrative employees."

Mr. Miles McConkey, supervisor of the Westinghouse Electric Research Center, states: "Proofreading of research reports bothers us a lot. Most secretaries don't know enough about engineering terminology to avoid mistakes when they're typing reports, so our engineers have to take time out to go over the finished paper."

Naturally these courses require the careful selection of proper students. It is clear, however, that the private business schools will be advancing science by its work in these fields.

We Have Nothing To Gain at Summit Conferences

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. DORN of South Carolina. Mr. Speaker, gangsters, crooks, and dope peddlers have everything to gain and nothing to lose by open conferences with decent people. Many of our people out over this great country feel the same way about summit conferences with Russia. We have everything to lose and nothing to gain by lending standing and dignity to the Communist leaders at international conferences. The following letter is a good example of how some of our thinking people feel:

GREENVILLE, S. C., *April 16, 1958.*
The Honorable W. J. B. DORN,
House of Representatives,
Washington, D. C.

DEAR MR. DORN: It is urgent that you do do all in your power to prevent another summit conference. The record shows:

1. Agreements with any advantage for the United States have almost never been reached in these conferences.

2. Russia has never yet kept one such agreement.

3. We occasionally get a slight propaganda benefit from such a meeting, but Russia almost always gets the short-range propaganda gain and always gets the long-range propaganda gain.

4. The honest man has nothing to gain by conferring with gangsters, the gangsters everything. Why continue to build respectability for the Russian gangsters in the eyes of the world?

The time to stop this destructive process permanently is now.

Sincerely yours,

STERLING L. SMITH.

Space Program

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. FULTON. Mr. Speaker, an excellent editorial on the policies to be considered in the research, development, and exploration of outer space as a national policy is contained in the New York Times for Sunday, May 4, 1958. I submit this editorial for the RECORD:

SPACE PROGRAM

Dr. R. E. Robertson, a chief scientist of North American Aviation, is the latest person to speak out for a reasoned space program. He joins Dr. L. A. DuBridge, president of the California Institute of Technology, and Dr. Hugh L. Dryden, Director of the National Advisory Committee for Aeronautics, in urging careful concentration of the Nation's resources on first things first. Other respected authorities have joined them in condemning space-cadet stunts and ill-advised projects which could at best have marginal military utility and might disperse the country's resources.

The tug-of-war between the military and the scientists—though muted—is obvious. But the best of both military and scientific worlds appear to agree that the President's concept of a National Aeronautics and Space Agency—to absorb the National Advisory Committee for Aeronautics, and to be independent of the military—is sound.

But several major amendments to the projected legislation are certainly desirable. The status and authority of the Agency should be clearly defined. Its 17-man board, to meet only 4 times annually, appears to be cumbersome, and might well be replaced by a commission form of authority, similar to that of the Atomic Energy Commission. Its director, in any case, should have authority to make quick decisions. There should be a military applications division; military personnel should participate in the Agency's work, and liaison with the military should be close and intimate.

Responsiveness to military needs—and vice versa—is essential to space progress, as well as to this Nation's future security.

The Outlook in the Field of Immigration and Nationality Legislation in the 85th Congress

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following speech I delivered before the Association of Immigration and Nationality Lawyers in Brooklyn, N. Y., Friday, May 2, 1958:

THE OUTLOOK IN THE FIELD OF IMMIGRATION AND NATIONALITY LEGISLATION IN THE 85TH CONGRESS

There are many who believe that any change at all in the Immigration Act of 1952 is so much pie in the sky. I do not count myself among those. Within the last year, through the enactment of Public Law 85–316 (act of September 11, 1957), together with favorable committee action on H. R. 11033, a bill to provide for creation of record of admission for permanent residence of certain Hungarian refugees, and H. R. 11874, a bill to record the lawful admission of certain aliens, who entered the United States prior to June 28, 1940, we see that change, little by little, a step at a time, is taking place.

I would like to discuss with this knowing audience these 3 pieces of legislation, 1 already existing law, the other 2 certain to become law, as I see it now, before the end of the session.

In discussing Public Law 85–316, I would like to list briefly both its advantages and its shortcomings:

1. The status of the stepchild is clarified by including him in the definition of "child born out of wedlock."

2. Illegitimate and legitimate children are now in the same status. However, it is to be noted that it does not help the illegitimate child in the event the father, in recognition of his responsibility, wishes to bring the child to the United States. It is the mother-child relationship that is paramount here.

3. A child adopted under the age of 14 years by intending immigrants or by United States citizens is considered to be a natural-born child for immigration purposes. However, such child must have been in the legal custody of the adoptive parents for at least 2 years.

4. Nonquota status is granted to first-preference skilled specialists for whom petitions were filed before July 1, 1957. However, because of this cutoff date, the first preference portion for immigration quotas has again become oversubscribed early this year, namely, quotas for Japan, the Philippines, Iran, and the subquota for Jamaica. I make the point that all skilled specialists whose services are urgently needed in the United States should be placed on nonquota visas. It is illogical for the law to state on one hand that a foreign skilled specialist can enter if his services are urgently needed, and then make him wait until a quota number is available. He is either urgently needed, or he is not.

5. The nonquota status granted to adopted children under the age of 14 is valid only through June 30, 1959. There should be, I believe, no time limitation since by adoption the child becomes a legitimate member of the family unit and there should be no restrictions on keeping the child with his adopted parents.

6. Waivers were granted to immigrants excludable on the ground of commission of crime or immoral conduct or affliction with tuberculosis, provided they come to the United States to join their nearest relatives. Similar waivers were granted to immigrants who in the past misrepresented certain facts while endeavoring to enter the United States.

7. Fingerprinting was waived in the case of nonimmigrant aliens, which has had a very salutary effect, as you know, on foreign relations.

8. The mortgages imposed on 16 immigration quotas under the Displaced Persons Act of 1948 and 1950, as well as under two special sheepherders acts, were removed, resulting in the full use of all immigration quotas.

9. The naturalization of minor adopted children of United States citizens stationed abroad was expedited.

10. The pending petitions for second and third preference quota visas were transferred to nonquota status. This provision alone, it is estimated, will bring to the United States by the close of this year over 27,000 people who are parents of United States citizens, spouses, or children who were previously admitted for permanent residence. However, the fourth preference (brothers and sisters of United States citizens, children of United States citizens over 21 years of age or married) remains heavily oversubscribed, notably in such countries as Italy, Greece, Poland, Turkey, and others. The action taken for the first three preferences should be applied to the fourth preference as well.

11. The provision permitting the issuance of 18,656 nonimmigrant visas not used under the Refugee Relief Act of 1953, as amended, represents a welcome recognition by the Congress that the refugee problem still exists, but the number allocated is, of course, pitifully small to meet the need. There is no provision made for sudden emergencies which inevitably will arise in this conflict-torn world.

There are other provisions not as dramatic as these upon which I do not touch, but taken altogether, there is in this act an unarticulated acknowledgment of some of the inadequacies that existed in the 1952 legislation. But it is a good step forward and establishes a healthy precedent for further amendment.

In addition thereto, the Committee on the Judiciary has acted favorably on H. R. 11033, which provides for the retroactive adjustment of the immigration status of Hungarian refugees who were paroled into the United States subsequent to October 1956. This bill is on the Consent Calendar of the House, and I believe it will be acted upon favorably by the House at the next call of the Calendar.

The third bill to which I made reference, H. R. 11874, permits persons illegally in this country prior to 1940, either through illegal entry or through overstay of legal entry, to adjust their status to that of permanent residence. Existing law, as you know, permitted adjustments of these categories up to the year 1924. A 16-year period of grace will be added. How many will be favorably affected when this bill is enacted, no one knows, since we cannot know who is illegally here until he is caught; but we do know that in the year 1938, some 21,000 persons' status was adjusted. This rate has declined steadily until we find that in the year 1957, some 4,200 were thus recorded for permanent residence. It is estimated that perhaps with the enactment of this bill, some additional 10,000 to 15,000 will be recorded as permanent residents in the next fiscal year.

Perhaps I have been unduly long in dwelling on Public Law 85-316. But I view its enactment as a prelude to what can—not necessarily shall—but can follow. Hearings on my bill, H. R. 3364, are tentatively scheduled for the month of June. It is admittedly not the most propitious time for the holding of hearings. I shall come back to this point in a few moments. But I would like to make clear that the subject of an immigration policy for the United States is one that has been drowned by a deluge of words. There is none of us who has been intimately concerned with the liberalization of our immigration policy who has not, at one time or another, felt that whatever observations we can make have long since become trite and platitudinous. Emma Lazarus' inscription on the Statue of Liberty has been quoted so often that even the most ardent supporters of good immigration legislation must cringe at its sound.

Let us make no mistake; this is a danger. Too many of us get weary of the old subjects, tired of the old tune, not realizing, of course, that we must go on talking, must go on agitating, must go on sponsoring, because the remedy—the just and right remedy—has not as yet been supplied. This is precisely what has happened in the whole area of refugee relief. People grew weary of the refrain. Then we enter into a new phase of the battle: to battle the apathy that follows the weariness.

This is always the danger point: the flagging of enthusiasm that ends inevitably in retreat. And yet the fact of the refugee is an inescapable fact of contemporary history. Geographical partition produces refugees. Political divisions produce refugees. Supernationalist movements produce refugees. And, tired as we may be of the story, the refugee exists, and to turn aside in weariness will not erase the fact of his existence.

We ask ourselves the question now, how much further will the Congress go?

I am not clairvoyant and do not presume to know. But I do know what is unfavorable and what is favorable in the climate which could or could not produce changes in the immigration law. I know that approximately two-thirds of the Congress are against change; particularly, they are opposed to any change in the national origins system.

I know, too, that there will be a different argument used this time to uphold the national origins system. Spokesmen against change will move away from its heaviest emphasis on possible subversives, and even away from the argument of inability of southern Europeans to assimilate easily into our culture. The argument will shift to the facts of the economic decline. Emphasis will be placed upon problems of population. It will be pointed out that we already have a population of some 170 million; that in about 20 years the population of the United States will increase by some 60 million; that the pattern of large families will continue; that our schools are overcrowded, to put it mildly; that our hospitals are already inadequate for our growing population; that automation is and will continue at accelerating pace to displace American workers; that increased population—either through natural increase or through immigration—will increase demands which, in turn, will increase inflation because productivity will not catch up with such demands.

It will be argued that immigrants almost invariably settle in cities already populated beyond the point of comfort, adding to congestion and, hence, contributing to delinquency. It will be argued that immigrants do not settle on farms where population is decreasing.

These, I believe, will be the main burden of the refrain. These arguments will have to be answered and I maintain that all these assertions can be rationally met.

I would like to make one modification. I have seen growing evidence of the adoption of these arguments by former proponents of liberal immigration. I have been told that some groups would be willing to settle for the change from a 1920 census base to a 1950 census base, a redistribution of unused quotas, and a modification of some of the deportation provisions. They have based their conclusions on the arguments I have just given you. I have been advised that they will stop pressing for the departure from the national origins system.

What I cannot understand is the perfectly obvious flaw in this kind of reasoning. Assuming for a moment—and I, for one, do not make such assumption—that increased immigration is at this time against the best national interests, what in the name of sanity has that to do with discrimination in public law? If the United States admits, 2, 5, 25, or 250,000, must they not be admitted on an equality of selection? Must they not be admitted on criteria that apply to all peoples, regardless of race, color, or creed? We must be prepared to meet these arguments not with heat, but with light.

Much will depend upon the nature of the testimony given at the hearings. If the testimony in favor of change is of the same pattern of exhortation and generalization, as well as denunciation, then we will not succeed in effecting any change whatsoever, especially in light of the economic picture. The opponents of change will seize upon this opportunity to emphasize and reemphasize the dangers of added numbers to our census. The argument must be based on America's imperative need to be, above all, just to all people. The argument must be based on America's absorptive capacity. The argument must be lodged in facts and figures on America's new industry, on our decreasing pool of skilled and unskilled workers. The American image has been badly damaged upon our insistence on the retention of the national origins system.

I believe that what we have to seek to establish at this point is not so much an unrealistic increase in numbers permitted to enter the United States, but the reassertion in our immigration law of the American principle of equality of opportunity for all, regardless of race, color, or creed. I believe it can be shown that the rigid quota system applied to Europe, Asia, and Africa, yet not applied from the Western Hemisphere, has resulted in weaking the argument that some persons assimilate easily and others not at all.

Some 49,000 Mexicans enter the United States each year, as against approximately 210,000 from Europe, Asia, and Africa all together. I have seen no injury to America from the Mexican influx, nor has it been a subject for comment by any of our immigration restrictionists. I merely point this out to show the fallacy in the restrictionists' thinking when it is based on a pretended homogeneity of the American people.

You will agree that limits must be set; not all will agree as to what those limits should be. For my part, I seek to have established a total annual quota of 250,000. I have based this on the average number of immigrants actually admitted into the United States within the last decade. My new bill, in most aspects, is similar to the legislation introduced in the 84th Congress and known as the Celler-Lehman bill, but I have extensively revised the earlier bill in its two most significant areas.

In retaining the basic features of the Celler-Lehman bill, I am, of course, proposing the elimination of the discriminatory features of the present law. Under my proposal, there will be no discrimination based on national origin or race, and there will be no classification of United States citizens into two categories, native-born and naturalized. There will be no additional grounds for loss of United States citizenship by naturalized citizens except those that apply to native-born citizens.

All provisions of the present law which permit its retroactive application in deportation proceedings have been eliminated in my bill. Similarly, all of the unduly harsh pro-

visions applicable now in exclusion proceedings have been humanized in my proposal. I have provided for a full and unlimited judicial review of administrative decisions made in all immigration and naturalization processes, including deportation and entry, and I have retained all the humanitarian provisions of the Celler-Lehman bill designed to prevent the separation of families. I have made the provisions applicable to suspension of deportation more human by eliminating the stiff restrictions of the present law in removing the requirement that suspension of deportation could be granted only if it would cause what the present law refers to as "exceptionally and extremely unusual hardship."

The revised features of my new bill pertain to what I believe is the heart of our immigration policy, namely (1) our quota system, and (2) jurisdiction over immigration.

The bill I am offering contains a new formula for the distribution of quota immigrant visas. This is a new formula devised for the first time since 1921, not based on national origins and not depending on any nose count of the United States population.

Wives, husbands, and minor children of United States citizens will continue to be admitted as nonquota immigrants, but I have added to the nonquota class parents of United States citizens and professors of academic schools.

In an attempt to make the new quota flexible in order to permit the United States to adjust its intake of immigrants in enlightened self-interest to the fast changing political, economic, and social situation of the world, under my new proposal our annual quota will be distributed among 5 classes of immigrants without regard to national origin, race, or any results of the United States census, as follows: (1) family unification class, (2) occupational class, (3) refugee asylum class, (4) national interest class, and (5) resettlement class.

Within each of the 5 classes, no more than 15 percent of the annual allocation could be issued to inhabitants of any single country. Here is how the annual distribution of the overall immigration quota will be established: Each year the President of the United States, after consulting with the Secretaries of State, Commerce, and Labor, and with the Attorney General, would submit to the Congress, prior to March 1, the proposed allocation for each of the 5 classes, and Congress will have 60 days following the submission of the President's proposal to disapprove it by passing a concurrent resolution. If the proposal is not disapproved by the Congress, it would take effect on the first day of the fiscal year immediately following. If the Congress disagrees with the President, the allocation effective in the preceding fiscal year would automatically become effective.

In order to get the joint executive-legislative responsibility for the annual distribution of the total immigration quota started, I propose that the first presidential allocation plan shall reach the Congress within 6 months immediately following the enactment of my bill, and if agreement is not reached on this first presidential proposal, the total annual quota of 250,000 would be simply cut across the board so as to give each of the 5 classes 20 percent of the total. This interim allocation would, of course, be valid for the first fiscal year of operations, pending the submission of the next presidential proposal which, again, will be subject to congressional disapproval.

My main purpose in proposing this flexible distribution of a permanently fixed annual quota is to permit the President to decide—on a year-to-year basis—with congressional concurrence, whether it is desirable in any particular year to grant more immigrant visas to relatives of United States citizens or to, say, refugees, or to, perhaps, immigrants possessing special skills needed in the United States at that particular time, or to any of the other classes.

The 15-percent permanent limitation affecting the participation of any single country in the distribution of the fivefold allocation is, in my opinion, a sufficient guarantee that no unfair distribution of visas for the benefit of inhabitants of one particular country would be practicable.

The second revised feature of my bill affects the administration of the law. Under the present law, we have a two-headed system where officials of the Department of State issue visas to both immigrants and nonimmigrants abroad, while officers of the Department of Justice determine at ports of entry whether the holders of visas are admissible to the United States. This is an antiquated, cumbersome, and expensive system. It creataes anxiety and uncertainty in the minds of the immigrants and nonimmigrants alike, and it causes friction between two governmental agencies operating independently in the same field and stepping on each other's toes.

Under my proposal, the entire administration of our immigration and nationality laws will be placed in the hands of a Director of Bureau of Immigration and Citizenship, who will be an Assistant Attorney General, subject to confirmation by the Senate. His officers, acting as immigration attachés, will be stationed at our consulates abroad and will issue immigrant and nonimmigrant visas after a finding is made that the recipient of a visa is found to be eligible actually to enter the United States.

In addition to simplification of procedures and elimination of dual standards, as well as uncertainty in the minds of immigrants or foreign visitors, my proposal will automatically open visa issuance to administrative review in the Department of Justice by the well-qualified and trusted Board of Immigration Appeals. The issuance of diplomatic visas will, of course, remain a function of diplomatic officers in the Department of State.

I believe that the administrative system which I propose will not only provide for a more efficient and more equitable issuance of visas abroad, but that it will also bring a great saving to the American taxpayer.

I have every reason to believe that the hearings on immigration will be both intensive and extensive. Twenty-eight Members of Congress have followed me in the introduction of this bill, which is in itself a most heartening fact. However, be it noted that the greatest majority of those who introduced identical legislation come from the heavily populated States. While it is reasonable to expect that these States, having benefited from immigration, would be most liberal in immigration matters, it is an indication of the educational work that must be done in the Midwest, Western, and Southern States.

If the proponents of liberalized immigration law do their homework, defer to reason and not passion, drop the name-calling which only serves to antagonize and strengthen the opposition, we can, through the forthcoming hearings, if nothing more, at least start the ball rolling toward an immigration law that will do honor to us and proclaim an effective and working democracy to those abroad.

Editor's Report by William Randolph Hearst, Jr.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting report by William Randolph Hearst, Jr., following his interview with Walter Ulbricht, top Communist stooge of the satellite state, East Germany.

The report follows:

RED LIKENS SELF TO LINCOLN

(By William Randolph Hearst, Jr.)

The old wheeze about a newspaperman "meeting so many interesting people" was pretty well justified, at least as far as I was concerned, the past 10 days.

Last week in Germany we lunched and talked with a half dozen German industrialists, including Alfred Krupp, the chief of that famous industrial firm. Then, on the political side, we spent an hour with Franz Joseph Strauss, young West German Defense Minister, and topped it all off with an interview with Chancellor Konrad Adenauer, which hit quite a few front pages all around the world.

Friday evening Bob Considine, Frank Conniff, and I flew up to Berlin and Saturday, too late for inclusion in last week's piece, we interviewed, by appointment, Walter Ulbricht, the top Communist stooge of the satellite state—East Germany. He had with him three members of his cabinet, including Gerhart Eisler, who, you might recall, jumped bail after being convicted of an immigration offense here in 1949, on the Polish ship *Batory*.

They had insisted that we submit our questions to them a week ahead and, when we met them at the central Communist Party headquarters, presented us with a 24-page propaganda-laden set of replies.

I must say it was an interesting session because, despite the fact that they knew that we knew we were getting a lot of double-talk, we were at least able to break it up on a light note.

That occurred when, speaking in German, the humorless, goateed Ulbricht tried to compare himself with Abraham Lincoln, and I made the remark, addressed to nobody in particular, "I thought Abraham Lincoln was on our side." With that the three cabinet members, all understanding English, burst into laughter. Realizing he was making no progress with his illogical line of reasoning the meeting broke up in some disorder.

I am informed that the reaction—unanimous, naturally—of the East German press to the interview is to accuse me of being adamantly pro-West. It is a censure that has not caused me one sleepless night.

The next morning, Sunday, we flew into New York, and Monday lunched with Dag Hammarskjold, Secretary General of the United Nations.

We have been on a mutual admiration "Dag and Bill" basis since our first Russian trip.

He is outspoken in his belief that these trips and interviews with the leaders of the countries that we have visited in our travels the past few years have been all for the good in helping promote better understanding

between peoples, and I have become a convert to the value of the work the United Nations does (or tries to do) under his able and dedicated leadership. As you know he is a Swede, and Sweden, at least in this century and despite two World Wars, has played a peaceful, neutral role.

His country's history and his own intellectual background eminently qualify him for his position, further attested to by the fact that both the East and the West voted for his continuing in his high office for a second term of 5 years.

Dag did not surprise me, therefore, when the other day he just could not restrain himself from speaking out in the Security Council on behalf of President Eisenhower's obviously sincere suggestion to set up an international Arctic inspection area, which Russian or American bombers would presumably traverse if launching an attack.

The President's plan proposed that nations whose interests include the Arctic—such as the United States, Russia, Canada, Norway, Sweden, Denmark and Finland—undertake technical studies for an effective inspection system against surprise attack. As Ambassador Henry Cabot Lodge carefully and reasonably spelled it out, such a system should include prior notification of flights and other significant military movement in the Arctic, and radar and ground inspection posts.

Of all 11 nations in the Security Council only Russia sarcastically and scornfully rejected it, and it was at this point that Dag, though not supposed to take sides in a partisan argument, felt obliged, as a man of peace, to speak up.

Occasionally we read of someone appearing in a legal dispute in this country as a friend of the court. Dag played somewhat the same role. He appeared before the Security Council as a friend of humanity.

He explained afterwards that he felt compelled to speak because the President's plan offered the hope of making a dent in the disarmament deadlock. This same attitude was expressed by Secretary Dulles Thursday when he said: "I can hardly overstate my view that if something of this sort got started, it might mark a real turning point in this whole cold-war situation."

Mr. Dulles, I thought, was superb. His earnestness and his flexibility made the Russian charges that this was just a gimmick and a diversionary maneuver look shabby and ill-tempered. And this, coupled with President Eisenhower's equally earnest request to Soviet leaders the day before to reconsider their rejection, gave the United States proposal a tremendous moral and humanitarian impact. Proof of this were reports in the U. N. that even the Soviet satellites, Poland and Czechoslovakia, were pressing the Russians to give ground.

So along came Friday—the showdown day in the Security Council—and Soviet delegate Sobolev led off the proceedings with another snarling "No." He took a cut at Mr. Hammarskjold, saying his intervention in behalf of the plan "did not strengthen his authority * * * rather to the contrary," which I would say is rather to the contrary of the truth. He belligerently warned Cabot Lodge that in another war the territory of this country would be involved.

Cabot's reply was calmly irrefutable. If the Russians were as concerned as they professed to be about the accidental outbreak of war, he remarked, why did they object to a plan that would obviously reduce that danger?

The only answer the Soviet delegate had was to cast the sole vote against the President's plan.

In so doing, as Cabot Lodge observed, the Soviet Union may have deliberately knocked a summit meeting on its head.

By refusing to consider one single, specific proposal to relieve world tension—put forward in good faith and supported by men and nations of good faith—the Russians have made a mockery of expectations of any real accomplishment at the summit.

As you know, I have been in favor of a summit meeting since the return of the Hearst Task Force from Russia some 5 months ago.

Now, after this affront to the hopes of humanity for peace, I am inclined to agree with Cabot that in vetoing the President's plan, the Russians also have vetoed the summit.

What Can Foreign Investment Do for the Philippine Economy?

EXTENSION OF REMARKS
OF
HON. JOSEPH L. CARRIGG
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. CARRIGG. Mr. Speaker, under leave to extend my remarks in the RECORD and to include a statement by Mr. Gerald Wilkinson, president of Theo. H. Davies & Co., Far East, Ltd., may I say that the President of the Philippines, the Honorable Carlos P. Garcia, is soon to embark upon a visit to the United States where he will be greeted by our President and engage in discussions with our Secretary of State and others of our distinguished representatives. President Garcia's administration is most friendly to the United States and seeks to encourage foreign investments in the Philippines.

Mr. Gerald Wilkinson, president of Theo. H. Davies & Co., Far East Ltd., the author of the attached address entitled "What Can Foreign Investment Do for the Philippine Economy?" made to the Management Association of the Philippines, Manila, March 24, 1958, is a distinguished soldier, author, economist, and businessman. Mr. Wilkinson, as a representative of both domestic and foreign capital, has been engaged in various businesses in the Philippines for the past 30 years and during the last war had a distinguished war service record as liaison officer between the British and American armies, having departed from the Philippines with General MacArthur.

WHAT CAN FOREIGN INVESTMENT DO FOR THE PHILIPPINE ECONOMY?

Mr. President, members of the Management Association of the Philippines: In view of the important announcements made during recent weeks by His Excellency, the President, and by the speaker of the lower house, encouraging foreign investment in the Philippines, I am honored by your invitation to speak to you today, as a representative of both domestic and foreign capital, on the subject, "What Can Foreign Investment Do for the Philippine Economy?"

What foreign investment could do for the Philippine economy is clear. It could fill the gap which is more serious now than ever in Philippine history. I refer, of course, to the foreign exchange gap, the lack of foreign exchange; in other words, the gap between Philippine need of foreign exchange and the Philippine reserves of foreign exchange.

Why is that need more serious than before? Because, as we all know, the growth of Philippine population is outstripping the cost of imports and industrialization.

The disparity between the official rate of exchange and the black market rate of exchange has put a premium on barter which in turn reduces the foreign exchange available from exports, thereby further impairing the national reserves of foreign exchange. At the same time, in the Philippines, as elsewhere in Asia (except Japan), the terms of world trade have, particularly in recent years, worked against the Philippines. A significant statement on this point was made at the recent ECAFE meeting in Malaya, from which I will quote: "There is a disturbing trend where nonindustrial countries seem to be getting a decreasing share of world trade while industrial countries continue to advance." The reason for this, of course, is that the cost of agricultural products, and gold and recently base metals, from all of which the Philippines derives much of her export income, have not enjoyed the increases in price which capital goods and imported raw materials have enjoyed, so that the value per unit of our imports has become more costly than the value per unit of our exports.

Those who criticize the Philippine monetary authorities and regard them as alone responsible for the serious decline in Philippine foreign exchange reserves, would do well to remember that for years the Philippines has been swimming against an adverse economic tide in the terms of trade. The critics would also do well to remember that Philippine reserves of foreign exchange have not been wholly squandered on nonessentials. I know of no other country in southeast Asia that has achieved the same percentage of growth in industrialization, using 1949 as the base, that the Philippines has achieved, and most of this has required a heavy outgo of foreign exchange for capital expenditures and materials, although the percentage of local raw materials used in Philippine factories will undoubtedly grow in years to come.

There is another factor which presses on the balance of payments, and that is the growth of Philippine population, and the growth of the desire per capita to have more things. These forces exercise a mounting pressure for more imports and for more production by local industry. They do not necessarily act as a force for larger exports unless the incentives to develop exports are built in.

So, in measuring what investment, domestic or foreign, can do for the Philippine economy, we have this rising tide, the tide of more people needing more things, needing more production, needing more goods competing for the market, needing an economy of abundance and not an economy of scarcity, needing in fact more things to be made available so that prices may be controlled by the only thing that ultimately ever controls prices: abundance of supply. In many of the countries outside of North America, it seems to me that we have lived so long in atmospheres of State-controlled scarcities, that many of us businessmen are getting hardening of the arteries; not the arteries of the body but the arteries of the mind and the imagination.

Now, how is all of this going to be improved not only for the Philippines but for those other countries of southeast Asia whose populations are also increasing, whose standards of living deserve to rise, and who are also suffering from adverse terms of trade, that is, adverse values of exports compared with the cost of machinery and imported materials? How is abundance of supply and production to be achieved for this great section of the world's population?

The voice of Russia has been clearly heard; her advice in occasions of this sort is to encourage economic nationalism within small countries and to urge them to solve it your-

self. It reminds me of the wolf, disguised as grandma, beguiling little Red Riding Hood. However, let us look at this advice. Can we solve the economic needs of the Philippines by going it alone without foreign investment? If we could, what a relief, how simple.

I remember a time in the Philippines when it was commonly thought by many Filipinos and foreigners that Philippine capital would never venture beyond real estate and precious stones, into industrialization on any major scale. How wrong those judgments have proved. In companies associated with us alone, I have seen Filipino capital come out of real estate and savings into new industry on a scale that any patriot would be proud of, and I know that our experience is a minor one compared with what is happening elsewhere in Philippine finance. Colonel Soriano's companies alone have done wonders in domestic capital development. We need a few dozen more like him; but they don't grow on every bush. What is remarkable, I think, is that domestic capital has moved into industrial development, trade and commerce, to the extent that it has in recent years, when any movement of Philippine capital, for example out of inherited real estate into new ventures or out of any old business into a new one, is punished by a capital gains tax which highly industrialized countries, such as Britain and Candada, do not impose upon their economies, and which even the United States, in all its wealth and power, regards as undesirable above a 25 percent rate. I believe that the deterrent effect of the capital-gains tax upon the movement of Phillippine domestic capital into greater productivity, is a very serious matter, and that its silently restrictive effect upon Filipino capital movement is far greater than the small sums earned by the tax.

However, even if the capital gains tax were abolished, would Philippine domestic capital be able to provide the increased national production required to fill not only the empty shelves of today but the shelves of 5 and 10 years' time? If the population was static and if its standard of living was already high, I think that with the aid of some very large long-term foreign loans (if obtainable) to fill foreign exchange gaps, domestic capital might be able to do the job. But is the population going to be static and is the standard of human consumption already high enough? We know that it isn't, and we know that in 5 and 10 years' time the situation is going to be far more serious than now.

Did you notice the statistics quoted by Leo Virata the other day that in the 1956 census 71 percent of the Philippine population was under 29 years of age, and 44 percent of it under 20 years old? How old will those large percentages of the population be in 5 and 10 years from now? Will their per capita desires be less or more than now? Will they and their growing families be content with an economy of controlled scarcity, or will they demand more things more cheaply for more people? The answer is all too clear. They will want more things more cheaply for more people. What is going to solve than want? Communists of course would like to do it their way; the sharing of everything by everybody, which can be quite popular when nobody has much to share. The best antidate to that, I would think, is to have an economy in which more things are available for more people more cheaply. Communism must lose much of its charm when it requires a lot of people to give up a lot of things, and I have not noticed it achieve much success in a country where most people have a lot of things. Have you?

Then how are we going to provide a lot of things during these next 5 or 10 years? Only, I would think, by a major increase of domestic and foreign investment and by a concentrated drive not on development alone but on the acceleration of development. This is going to require heavy expenditures in foreign exchange. Why not encourage foreign investers to bring it in voluntary, not shotgun, partnerships with domestic capital? (I mention the shotgun because if foreign investors are told that their participation is to be regimented and that their partnership plans are to be compulsory, not voluntary, they may not turn up for the wedding.)

In this connection, I notice that the wording of our subject today is "What Can Foreign Investment Do" and not "What Will Foreign Investment Do." This distinction seems to me a wise one. What foreign investment can do and what it will do can be very different things. For the ability of foreign investment to do anything is subject to the actions of the Philippine Government, the legislature, and the monetary authorities. If the attitude and actions of the Philippine authorities toward foreign capital are welcoming, nondiscriminatory, considerate and consistent, I am sure that the Philippines could attract the entry of helpful foreign capital on a scale that has not been seen before and surpassing the probable entry of foreign capital into any areas between Suez and Japan inclusive. Why? Because the people of the Philippines are known to be progressive, friendly, Christian, and anti-Communist. And because this country is known to possess a combination of agricultural, mineral and power resources that could provide great prosperity for all her people.

If, on the other hand, the actions of the Philippine authorities toward foreign capital are divided in the nature of their welcome; if, for example, the administration is welcoming and the legislature passes helpful bills to encourage foreign investment, but at the same time, other bills aim at discouraging foreign investment and their staffs and technicians, then new capital, which is in demand all over the world, will obviously go elsewhere, as it has been doing to a large extent. This matter of consistency is of the greatest importance if we are to attract foreign capital here. A foreign investor, like a domestic investor, wants to be sure of consistency in the regulations. He wants to know if the dividend and profit remittance formulas are going to be changed. Most changes of regulations make investors nervous, and give investors the feeling that they are swimming in a sea of unpredictable waves, which may upset the worthiest calculations and the most efficient operation. Any uncertainty as to adequate raw materials supply is of course fatal, and it would be better for Philippine prestige and fairer to all investors, domestic and foreign, I think, if permission to establish a new industry were denied rather than to grant the industry permission to start and then deny it the raw materials upon which the industry, its employees, and its investors, depend.

His Excellency, Tunku Abdul Rahman, Prime Minister of the Malayan Federation made, I thought, a most constructive suggestion the other day, when he suggested that Asian countries might attract private capital from abroad if they drew up an international charter, a charter that would regulate the treatment of foreign private capital, that would assure investors that their rights would be protected, and would remove fears that such investment would interfere with the sovereigney of receiving countries. He expressed the hope that Malaya's neighbors might take a lead in this.

I would have thought that the Philippines is admirably qualified by her political sophistication, her recognition that the world is moving towards internationalism, her strategic position, and her need to develop her natural resources, to take a lead in this suggestion from Malaya.

From the Philippine point of view, I can well understand the former fear that overinvestment by foreign capital might prejudice national freedom. A hundred years ago such a fear might have been well founded. But today, the diversity of Philippine agriculture, mining and industry, and the large proportions of ownership that are firmly in Filipino hands, can give little grounds for fears. This is no desert in which an oil strike might prove politically indigestible. If the capital gains tax is abolished and so liberates Philippine capital to enter into new ventures in voluntary partnerships with foreign investment, the growth prospects for Philippine investors would, in my view, be far greater than today, and far greater than in any country trying to go it alone.

Well, gentlemen, time marches on. I have spoken enough and if anything I have said is mistaken or misinformed, I hope you will correct me. There is so much to learn. But it is not only in this room that time marches on. The growth of population, the rise of human needs, and the scarcity of foreign exchange, are urgent matters.

As a long established resident of the Philippines, I recommend that a Philippine charter to welcome foreign capital be earnestly considered, and I believe that such a charter will benefit the Philippine public and domestic investors immensely, now and much more so in years to come.

A Moral and Legal Obligation for Congress

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 31, 1958

Mr. KEATING. Mr. Speaker, Congress has a moral and legal obligation to reverse the recent Supreme Court decision of Commissioner against Sullivan. In this case the Court held that operators of gambling enterprises may deduct as ordinary and necessary business expenses amounts expended to lease premises and hire employees, even though their business is illegal.

As it now stands, this decision opens the door for gamblers to deduct just about any item they consider ordinary to their particular business. This could well include the cost of buying police and local protection, of hiring thugs to scare off competitors, and other illegal payoff deals which are essential to the operations of the bigtime gambler.

To put an end to this nonsense, I introduced on March 27, H. R. 11691, which would prohibit the deduction of any expense incurred in furtherance of a gambling enterprise which is illegal under State law. We should enact this bill immediately, so that no law-abiding citizen will be forced to pay more taxes to the Federal Government because illegal organizations are allowed to reduce their tax burdens by the amount of illegal expenditures he has made. When it comes to paying taxes, the bigtime gambler should be treated for what he is—not a law-abiding businessman, but an out and out crook.

Chairman MILLS of the House Ways and Means Committee has assured me the bill will receive early consideration by the committee as soon as the depart-

mental reports are received. Public interest is high in this measure, and I am hopeful Congress will act on it before adjournment.

Three editorials from different parts of the country have endorsed the principle of H. R. 11691. They are from the Christian Science Monitor, the Nashville Banner, and the Rochester Democrat and Chronicle. Under leave previously granted, I insert them at this point in the RECORD.

[From the Christian Science Monitor of March 22, 1958]

THE TANGLED WEB

"Oh, what a tangled web we weave,
When first we practice to deceive!"

To which lines of wisdom by Sir Walter Scott, Congress in 1951 and a decision of the Supreme Court this past week have supplied a word of special emphasis: "ourselves."

The Court has just ruled that professional gamblers—although their operations likely violate State law—when reporting income for Federal tax purposes may deduct "ordinary and necessary expenses," such as wages, and rents, incurred conducting their illegal businesses.

United States Solicitor General J. Lee Rankin, in presenting the Government's argument for a contrary decision, made a succinct commentary on this extraordinary ruling:

"We do not believe it is 'necessary' to break the law or, in particular, that it is 'necessary' to hire persons to commit crimes."

Fantastic? The Court's majority opinion gives the clue to why this is simple fantasy compounded:

"This [referring to the tax code] seems to us to be recognition of a gambling enterprise as a business for Federal tax purposes."

Back in 1951, searching for sources of revenue and hopeful of exposing professional gamblers, Congress enacted a law requiring such gamblers to register and buy $50 tax stamps. If the gamblers avoid this they break Federal law; if they comply they furnish about all the information needed for prosecution under State law. And gambling is illegal in almost every State.

Congress has never given the Internal Revenue Service a fraction of the men necessary to enforce such a law. The tax has brought in but 2 percent of the annual $400 million predicted. And it has so tangled the legal and moral factors that a Court decision such as this one might be termed logical in the context.

But it is basically wrong. And the law is basically wrong. When the people or their representatives permit their Government to be led into any sort of partnership with elements against which it is expected to protect society, then they indeed deceive themselves.

[From the Nashville Banner of April 10, 1958]

TO RECTIFY "LAW OF THE LAND"

As to what is legal and what is illegal—what is the "law of the land"? That Congress has the right to say, and in some very definitive language by written statute, is the theme of a bill introduced last week by Representative KENNETH KEATING, of New York, moving to reverse (by law) a March 17 decision of the United States Supreme Court.

In that decision, the high tribunal held that it is right and legal for the Federal Internal Revenue Service to grant an income-tax deduction on expenses incurred by persons who are engaged in operating businesses that violate State laws.

The case originated in Illinois, which forbids by law the operation of gambling enterprises. The Supreme Court ruled that persons engaged in illegal gambling there had a right to deduct rent and wages of their employees before paying Federal taxes on their profits. Supposedly that became the "law of the land."

Truly the Court moves in mysterious ways its wonders to perform.

Among the laws that Congress writes are the revenue laws. It leaves to the States (and properly) the writing of laws determinative of what is legal or illegal within their respective boundaries.

Representative KEATING is right in his proposal to put some sense and principle into the defense of law as written. This is not the first time, nor the only field, in which the Supreme Court has sought to preempt authority and dispossess a State law.

[From the Rochester Democrat and Chronicle]

CRACK AT CROOKS

Representative KENNETH B. KEATING's bill to prohibit the deduction of business expenses incurred in an illegal gambling operation is a response to virtually a challenge from the Supreme Court.

In ruling that such expenses could be deducted, the tribunal in effect said that Congress had never disapproved of such deductions. Therefore it becomes a corrective legislative function; the Court only interprets—it does not make the law.

In the case appealed to the Court, a gambling operator's request to deduct money spent to lease premises and hire help in an illegal operation was confirmed. Furthermore, it is understood that gamblers, in reporting income, may reduce their winnings by the amount of their losses—"business losses," you know.

The High Court's interpretation leaves the door open to some interesting "business expenses." They might include the cost of police protection, of hiring thugs to frighten competitors, or of paying strong-arm boys for collecting from welshers.

Under provisions of the Internal Revenue Code, not only is a breed of lawbreakers officially recognized; but the Government compounds an evil (an illegal mess) by feeding upon it.

No law-abiding citizen ought to pay more taxes because an admitted lawbreaker is allowed to pay less. If the Government cannot stamp out illegal gambling, at least the operators should pay heavily for it.

Hon. Emanuel Celler

SPEECH
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. BUCKLEY. Mr. Speaker, I am pleased to join with my colleagues in extending to the Honorable EMANUEL CELLER, heartiest congratulations on his 70th birthday.

I have been associated with him in the House of Representatives for many years and I know of the great contributions he has made to our Nation. I value his friendship. We have always found him cooperative, willing to aid all those who call upon him for assistance.

His talents and capabilities are outstanding. He is an able and astute legislator; as chairman of the important Committee on the Judiciary, his vast knowledge of the law and his fair and impartial treatment of all who appear before him, make him one of the great committee chairmen in the history of the House of Representatives. His active participation in philanthropic programs, community affairs, his interest in the welfare of mankind, all contribute to his great stature as a leader among men.

I wish for my dear friend EMANUEL CELLER many more happy birthday anniversaries.

Let's Not Overadjust Our Readjustment

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. BOSCH. Mr. Speaker, we cannot pick up a newspaper today, or listen to a news report without hearing about the recession. Of course, we should at all times be alert to the changes in our economy, but we should not go headlong into a spending spree which could take us into a financial or economic depression.

Under leave to extend my remarks, I include a very sensible article from the May 1958 issue of Nation's Business. The article follows:

LET'S NOT OVERADJUST OUR READJUSTMENT

However much the present business adjustment may differ in severity from its immediate predecessors, it surpasses them in at least one respect:

It claims far wider attention.

The recessions of 1949 and 1954 came and went largely unremarked except by those immediately affected and by economists.

The casual acceptance of mild adversity in those years contrasts sharply with the alarums and tocsins that are sounding today. Press wires out of Washington are frantic with rumors of impending actions, legislative proposals, spending schemes, boasts, excuses, and assurances that the unemployed have not been forgotten.

One who can think in all this din is likely to ask himself: Why this effort to pump life into a business adjustment which, though sharp in places, is far from universal?

He arrives at a pretty shabby answer:

Nineteen-fifty-eight is an election year.

If this harsh judgment seems to imply a belief that expediency colors the politician's view of the national economy, one needs only to turn to the proposed emergency spending schemes for proof.

Few of these schemes are new.

Some have actually failed on their own merits only to be offered again—after sputnik—to help us catch up with the Russians; now, once more, to get us out of recession.

Some were tried in the decade 1930 to 1940 when, in spite of an orgy of Government spending, we had the longest depression in our history.

Most would put Government money initially into construction which is already projected at a record level and where inflation cost has been running five percent a year compounded for more than a decade. Such spending would not only run the Government deeper into debt; it would take effect slowly and would be unstoppable once

begun—even Government cannot leave a dam half-built.

Carrying over into months or years after the present adjustment ends, it would bid against private builders for material and labor, thus increasing the pressure for inflation—which only a few months ago was a major concern of Government.

It will be again unless statesmanship replaces the chase for selfish political advantage. If it will return to realities, Government can help lay a firm foundation for a sound and enduring recovery.

Some automatic governmental stabilizers are already at work.

Some actions already taken can be helpful.

Latest figures show that, of the present 5.2 million unemployed, some 3 million are unemployable, changing jobs, or seasonably out of work—a normal condition. Some 700,000 are new additions to the working force seeking their first job. This leaves some 1.5 million who have lost their jobs because of the business readjustment.

Since it costs about $16,000 today to employ a man in industry, a government effort to provide a job for these people would cost $23 billion.

Even the most lavish government spenders would pause at this.

Private industry can meet this cost with advantage to everybody if Federal tax reform provides the incentive to develop new things, and put people to work making them.

Editors Strike Hard at Secrecy in Government

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks I wish to inclde an editorial which appeared in the Illinois State Register on May 5, 1958. The editorial follows:

EDITORS STRIKE HARD AT SECRECY IN GOVERNMENT

The editor of the State Register had occasion, when in Washington at sessions of the American Society of Newspaper Editors in mid-April, to personally congratulate Congressman JOHN E. MOSS, Democrat, of California, on his review of his gallant fight against Government secrecy. We are pleased to add that legislation which Moss is sponsoring to let the people know about the people's business, has been, and is, stanchly supported by Congressman PETER F. MACK, Jr., of this district, a close friend of MOSS.

The current issue of Editor and Publisher presents the problem succinctly when commending House passage of an antisecrecy amendment to the Federal housekeeping statute. The Editor and Publisher sums up the situation as to the future. It says, and we are in complete agreement:

"The victory in the House would not have been possible without the stalwart efforts of Representative JOHN MOSS and his committee members. But at the same time, their success would not have been possible without the support and backing of newspaper editors. If it had not been for Dr. Harold Cross, ASNE counsel, who first uncovered the statute (5 U. S. C. 22) as the source of much governmental secrecy, the move to amend might never have occurred.

"The fight to reduce secrecy in government must not end here. Dr. Cross cites as the target for tomorrow, title 5, United States Code, section 1002, enacted in 1946 as a part of the Administrative Procedure Act. It has five built-in provisions susceptible of use to justify secrecy, according to Dr. Cross. Among them are provisions permitting secrecy for 'any function of the United States requiring secrecy in the public interest,' or for 'any matter relating solely to the internal management of an agency.'

"Bills to amend this section have been introduced in the Senate and House. They deserve the same support that editors have given and must continue to give to the Moss-Hennings bills."

In an interview with Congressman MACK in Washington, the Springfield district representative said: "JOHN MOSS is a close personal friend, and I support his views on freedom of information. I am a vigorous supporter of his bill (H. R. 2767) as Government agencies admittedly overclassify information and use this classification as an excuse for withholding information from the public. The people have a right to know that this legislation is in their interest."

The editor of the State Register is pleased to report that all newspaper conferences he has attended this year—the Copley Press, American Society of Newspaper Editors, the Associated Press, and the American Newspaper Publishers Association—have gone on record as insisting, to the point of demand, that the people must be kept informed of the people's business in government, local, State, and national. Secrecy in government is un-American.

Virginia's I. T. Quinn Points to Legislative Conflicts in Resources Policy

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the searching editorial, The Prodigality of Man, written by I. T. Quinn, executive director of the Commonwealth of Virginia's Commission of Game and Inland Fisheries in a recent issue of Virginia Wildlife:

THE PRODIGALITY OF MAN

(By I. T. Quinn)

Contrary to common belief, nature was not prodigal at the time of creation. After heaven and earth were brought into existence, the waters were separated from the earth, and lights for both day and night were established. Then came into being the beasts of the field, fowls of the air and fishes of the waters. Last, but by no means the least, the human race was brought into existence and was given dominion and made the overseer of every living thing.

How well man has discharged the responsibilities assigned him, you may judge, dear reader. If I were to be the judge, I am afraid the sentence passed on him would be a rather harsh one. During the nearly 35 years that I have been an administrator of man-made laws and regulations governing the conservation, protection and development of the wildlife of fields, woods and waters, I have observed the selfish rapaciousness of man exemplified throughout the length and breadth of the United States and some of the foreign countries.

Drive along the modern highways of today and you will see grim monuments to man's stupidity. The red devil of fire has taken its toll of some of the best that has been left by the saw and ax. Too many of our once beautiful streams remain burdened with human and industrial wastes. Eroded soils fill their beds and produce costly floods. Go to our fields and woodlands, and in too many instances will you find little or no game where once there was an abundance.

True, man has begun in a feeble way to restore the forests, the virgin waters and the soil he so ruthlessly mined; but he's just scratching the surface. Human population is far outstripping man's effort and his ability to reproduce natural renewable resources.

Manmade laws too often destroy the natural laws which, if given opportunity, through the process of reproduction and growth would guarantee to the teeming millions of earth a reasonable supply of all those natural renewable resources placed here for man's pleasure and economic benefit.

Many of our natural resources are dissipated upon the altar of political expediency. Witness the conflicting legislation which has been enacted in recent years. Some of the outstanding examples of man's innate desire to do something spectacular without regard to consequences may be cited as follows:

(a) Laws enacted and large sums of money appropriated to authoriez and pay for ditching and draining millions of acres of potholes and wetlands, where ducks and other migratory waterfowl are struggling to perpetuate their kinds, for the purpose of increasing the number of acres which may be devoted to raising agricultural crops.

(b) Revenues appropriated and other revenues required from the sale of duck stamps to construct potholes and to take lands out of agriculture and convert them into wetlands for the purpose of raising ducks and other migratory wildfowl.

(c) Millions upon top of millions appropriated to pay farmers to take cropland out of cultivation.

(d) Millions appropriated to reestablish agricultural lands by methods of irrigation.

(e) Millions appropriated to pay farmers for taking land out of cultivation under the Soil Bank plan, so they will not produce so large a surplus.

(f) Millions appropriated to teach farmers how to produce more agricultural crops per acre.

(g) Millions appropriated on top of millions to feed and thereby obtain the good will of the peoples of other nations.

(h) Large sums appropriated from which a million-dollars-a-day storage rent is paid for caves, warehouses, and ships to store grain and other surplus food products. Why could not this food be sent to the hungry peoples of the world instead of sending them money with which to buy food from other countries?

How does all this conflicting legislation come about? Well, one set of legislators has constituents who own large acreages of wet land and pot-hole country; another set has a large number of semi-arid country landowners. Still another group has a constituency that wants to get in on the soil-bank plan, and so on. Each fraction trades back and forth on the taxpayers' money. One says to the other: "I'll vote for an appropriation to ditch and drain your pot holes and wetlands if you'll vote for an appropriation to construct pot holes and build dikes for the purpose of creating wetlands for my constituency." A third group says to the first two: "I'll vote for both of your bills if you will help me get the millions it's going to take to get all of this crop land out of production." The irrigation group votes for all of the other three groups if they vote for his irrigation projects. By the time all the trades are in, a multiplicity of conflicting laws have been written into the statutes. At least, that's the way it looks from where I sit.

It may be that the lawmakers do not trade with each other, but, whatever they do, they come up with the aforesaid legislation.

Slovaks in Russia Before 1917 Bolshevik Revolution

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. RODINO. Mr. Speaker, on May 4, 1958, the Slovaks of the world in general and the United States of America in particular, paid tribute to Gen. Milan R. Stefanik, scientist, soldier, patriot, and cofounder of the first Czechoslovak Republic in observance of the 39th anniversary of his tragic death.

I am proud to point out that General Stefanik visited the Newark area of my disrtict on two occasions. Once in 1907 while on his way to Tahiti as a member of the French Academy of Scientists, and then again during World War I. General Stefanik's late brother as well as another well-known fighter for Slovak freedom, Gustave Kosik, at one time claimed Newark as their residence.

The following article by John C. Sciranka, editor of the American Friends of Slovak Freedom, of Passaic, N. J., is timely in recalling the role General Stefanik and the Slovaks played in fighting communism.

SLOVAKS IN RUSSIA BEFORE 1917 BOLSHEVIK REVOLUTION

(By John C. Sciranka)

On November 7, 1957, the 40th anniversary of Bolshevik revolution was celebrated in Soviet Russia and in all the countries where she has her diplomatic representatives including the United States.

This brings the subject of Slovaks in Russia before this revolution in 1917. They have lived there for several centuries. Especially the Slovak wireworkers, drotari, established their shops in principal cities of Russia. Many apprentices after finishing their 4 years of craftsmanship in Slovakia, moved to Russia. One of the larger Slovak wire manufacturers was Bellis, whose namesake operates a wire factory in Bronx, N. Y. Bellis employed several hundred workers in various cities, including the province of Georgia, where Stalin was born. He transported his wires by freight, horses, wagons, and on camels.

But not all Slovaks in Russia before the revolution of 1917 were wireworkers. Many were diplomats, army officers, and professors. For instance, Michael Baludjansky was born in Zemplin County in 1769 and died in St. Petersburg in 1847, after completing his studies in Kosice, eastern metropolis of Slovakia, went to St. Petersburg as professor. Later he became a senator and chairman of the czar's cabinet chancery. Baludjansky also was first president of the University of St. Petersburg. Later Dr. Dusan Makovicky became personal physician of the famous Count Leo Tolstoy, author of War and Peace, Anna Karenina, and many other popular works. Makovicky lived with Tolstoy in the Yasnaja Polyana. Another Slovak, Albert Skarvan, was the first non-Russian writer to translate and publicize Tolstoy's famous works.

When in 1916 American Slovaks sent two delegates to Russia to seek czar's aid in establishing a free Bohemia and Slovkia, the late Dr. Gustave Kosik of Passaic, N. J., and Dr. Stefan Osusky of Cudahy, Wis., later Czechoslovakian ambassador in Paris for 20 years, were chosen as representatives of the Slovak League of America. Osusky is presently in Washington, D. C., heading the Czechoslovakian liberation movement. Osusky never reached Russia but stayed in Paris, assisting Dr. Eduard Benes. Kosik arrived in London, where he was briefed for his trip for several months by Dr. T. G. Masaryk, later first president of Czechoslovakia. Before Kosik's arrival in Russia in 1916 with Gen. Milan R. Stefanik, 1 of the 3 principal cofounders of Czechoslovakia, the Czechs and Slovaks there were talking seriously about kingdom of Czechoslovakia. At that time it was apparent that Russia will win the war and one of the Russian dukes would occupy the historical throne of Bohemia. Kings and emperors were still popular. Of course, Masaryk, Benes, Stefanik, Col. Hurban, later Ambassador in Washington, Kosik, as well their associates in United States of America, England, France, and other countries outside of Russia were preaching democratic form of government on the pattern of our United States. Kosik was well known in Newark, N. J., as president of the Slovak Catholic Sokol.

Although the Czechs and Slovaks lived in Russia for several centuries it was only after the outbreak of World War I, that they called the First Czechoslovak Congress in Russia, which was held on August 28, 1914, in St. Petersburg. Poland, especially the city of Warsaw was then under the czar's rule. There the Slovaks had a very large colony. Jozef Orsagh was their leader. They had their society called the Warsawska Beseda (Warsaw Forum). When the Czech and Slovak leaders met in St. Petersburg, they proclaimed the unity of two nations. However, at that time, the mentioned Jozef Orsagh insisted on the Slovakian homerule, which was adopted unanimously. On September 17, 1914 Czar Nicholas the last, received the first delegation of Czechs and Slovaks at the Carske Selo. Delegate Klecanda represented the St. Petersburg group; Konicek the Moscow group; Cerveny the group from Kiev and Orsagh was the Slovak representative.

This delegation asked the czar for the freedom of Czechs and Slovaks of the Austro-Hungarian Empire and the establishment of the independent Kingdom of Czechoslovakia. The czar was impressed and since Orsagh was the only Slovak representative, czar directed a question at him, whether the Slovaks demand a unity with the Czechs, to which Orsagh responded in the affirmative.

The czar gave his sanction for the establishment of the Czechoslovak freedom movement. What followed was the step to unite the existing Czech and Slovak societies in all czarist Russia. Such unity meeting of both nations was held at a conference in Moscow from February 22 to 26 in 1915. It was a mere coincidence that President George Washington's birthday was selected for the first day of this historical conference. Later Washington, D. C., and the United States played a very important role in the establishment of Czechoslovakia, which was considered its child and President Woodrow Wilson its uncle or godfather. Bohumil Cermak, namesake of famous Chicago mayor, Anton Cermak, was elected chairman of the conference.

The only known Slovak intellectual who opposed this unity was Dr. Kvacala, professor at Jurjevska University. Kvacala's relative was a Lutheran minister in Braddock, Pa., who again worked for the creation of Czechoslovakia.

Dr. Massaryk soon learned about the misunderstanding in Russia, so he sent there Mr. Durich; former Czech member of Vienna Parliament. But Durich proved to be too weak to master the Czech and Slovak group. On May 31, 1915 B. Cermak, as chairman; J. Moravec as vice chairman; Jiri Klecanda as secretary, and Frantisek Reif and A. Wols, as members of the committee issued a proclamation, recalling the glorious past of Great Moravian Kingdom and the unity of Czech and Slovak nations. Professor Kvacala continued to oppose this unity. However, the presence of General Stefanik and Gustave Kosik as spokesmen for the American Slovaks helped to cement that unity, which Kosik later opposed. At that time there were many Czech and Slovak war prisoners in Russia. They were either captured or gave themselves up, refusing to fight as soldiers of Austro-Hungary against their Slavic brothers—the Russians. Many were shot for treason. Later many of these prisoners were terrorized. Some 20,000 of them, mostly Slovaks, died building the Murmansk road, others died of hunger and typhoid fever.

Russia at that time was already in the German hands. Czar was but a figurehead. And German diplomats and officers plotted to overthrow the czar whom Kosik visited and presented the memorandum of American Slovaks. Czar's minister Sturmer, a German, promised to take care of Czech and Slovak war prisoners and help them to join the Czecho-Slovak legion. But it was just an empty promise. Sturmer worked against the Czecho-Slovak liberation movement and was in the hands of German agents, who helped Lenin to enter into Russia in a sealed train. Minister Sturmer had for his adviser a certain official named Priklonsky, who although was czar's consul general in Budapest for 15 years yet he did not know anything about the Slovak problem and their desires. Kosik later informed Priklonsky but it was too late. Hunger and disunity were already forcing czar's abdication. Later murder of mad monk Rasputin and the assassination of czar and his family followed. Kosik was still in Russia when Kerensky came into power. He was on the streets of Moscow when many fightings took place. However, very few Russians took the Bolshevik leaders seriously. Mrs. Eleanor Roosevelt is right that the world in general did not know true Russia and this applies even now.

I heard very often my old friend Valentine Nemec, well-known Slovak printer in New York City, now retired, who knew Leon Trotsky personally. Nemec often remarks that who would have ever thought that a weakling like Trotsky with a few whiskers on his beard, would become such a giant during the "10 days that shook the world," as described by John Reed, an American, who became arch-Bolshevist and is buried in Kremlin.

General Stefanik after his return from Russia warned the Allies that bolshevism is a menace to the free world unless it is stopped. General Stefanik's Czecho-Slovak legion and its historical march of the 70,000 under the leadership of Gen. Rudolph Gajda checked its spread as described by the late Col. Stephen Bonsal, interpreter of President Wilson in his Suitors and Suppliants and The Unfinished Business, a Pulitzer prize winner. Bonsal knew General Stefanik and quotes his prophetic warning but many then, just like now in the era of sputnik, minimized the Soviet power, ambition, and expansion. Let the past be a lesson and a warning for the present and the future.

Victory Without War—Is It Possible?

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. FULTON. Mr. Speaker, an excellent new book published a few days ago has come to my attention. The title is

Victory Without War. This is a challenging subject in which all of us are deeply interested.

This perceptive volume is written by a distinguished soldier-analyst, George Fielding Eliot. Mr. Eliot tells a sharply challenging story of the amazing build-up in the missile and space exploration field now credited to Soviet Russia. He recommends certain "must" courses to make war impossible. These are courses to be taken by the United States and the free world if they are to equal the Soviet Union's remarkable advance.

To know current, vital problems in this most interesting area, I recommend this volume as an efficient and telling work which will make every intelligent American, regardless of party, stop, look, and listen.

I am particularly struck with the keen analysis embodied in these forward-looking views and want them to be considered by the careful and thinking Members of the Congress and the American people in broadening the basis for their judgment.

Poland's Contribution to America

SPEECH
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. QUIE. Mr. Speaker, this month marks the 167th anniversary of the enactment of a document which has profound significance for all of us who appreciate the priceless heritage of freedom under a government of law.

One hundred and sixty-seven years ago, the Polish Diet met at Warsaw and enacted, by unanimous vote, a constitution for the Polish people which became at once a charter of their liberties and a document of vital importance for all peoples.

Drawn at a time when Poland was being threatened by imperialistic countries, this constitution carried principles which survived while Poland was struggling for independence and which were embodied in the constitutional laws of the Polish State which emerged after World War I.

Today it can be said that while Poland's government is Communist its people are not. The tenets of the original constitution are cherished in the hearts of Polish citizens within the borders of this unfortunate nation, and are remembered by everyone who is deeply concerned with the freedom and rights of man.

Reports from Poland indicate that communism has made no gains over deep-rooted Polish love of liberty and patriotism, due, in large measure, to the clear memory of the precepts carried in the original constitution of Poland.

Now is the time, I believe, to take notice of the enactment of this great document and to reaffirm our friendship for the people of Poland.

Surely, people who produced such an inspiring document as this can never be subjected in spirit by a force as detrimental as communism.

Try as they might to eradicate the tenets of constitutional government, the Communists cannot rub out the bright light of liberty which was kindled in Poland in 1791.

That light will burn long after the torch of communism has been extinguished.

This is a fitting opportunity to note the tremendous contribution our Polish Americans have made to our country.

There is scarcely an area of our national life where Polish Americans are not prominent. They have brought to these areas qualities of self-reliance, indomitable courage, patriotism, and a love of work—indispensable attributes for our ever-growing, ever-expanding population.

These qualities, long regarded as synonomous with the Polish spirit, are now a very real part of our American fiber.

These qualities were at work in our earliest settlement at Jamestown. Poles were very much in evidence there. Poles helped to clear the forests, to build up the industries in their adopted country, exhibiting their great willingness to dedicate their minds and muscles to building up the mightiest country on earth.

Poles not only worked to further our liberty. They fought and, in many cases, died to preserve it. The story of the American Revolution is not complete without chapters devoted to the bravery and vision of Pulaski and Kosciuszko who fought at the side of General Washington. There are many hundreds of other Polish names on the muster rolls, too, names of men who fought for American liberty at Saratoga, Brandywine, and Charleston, to mention just a few of the engagements.

After the Revolution, Poles discarded their weapons for other tools. They participated in all levels of activity in peacetime, from the grueling hard work of early factories to the splendid contributions to our spiritual and cultural heritage from pulpits and teachers' rostrums.

These dedicated, dependable Americans participated in every struggle for liberty in which our country engaged. It has been pointed out—and should be cited again—that more than 40,000 Polish Americans volunteered in World War I and that a total of 300,000 served in all the armed forces during that conflict.

More than 550,000 served in World War II—and thousands more participated in the Korean conflict.

No reference to Polish American contributions can be complete without telling how they bettered our American culture. A list of Polish-American musicians, authors, painters, sculptors, and architects could fill these pages. We might well consider the artistry of Artur Rubinstein and the eminence of Leopold Stokowski, to mention only two leaders. America would be far poorer without these men and the men Polish citizens whose contributions have enriched our lives.

It is well for us to remember the names of leading Polish-Americans. But it also is essential that we pay tribute to the many thousands of people of Polish extraction who are not famous in the sense of the world—but who are serving their communities, States, and Nation. These people are part of the real flesh and bone that is America.

If there is one word that typifies their contribution to America, it is "dependability." It is a great word. Polish-Americans can be depended on to render great service to America. They can be depended on to produce the many hours of work that is needed by modern America. They can be depended on to furnish the leadership for our cultural and scientific advances. They can be depended on to work and fight for continuance of our American Republic.

I cite Polish-Americans today for their enviable record of dependable service to the Republic.

Mr. Speaker, I congratulate them on this anniversary of the enactment of the constitution of their native land—and I join with them in the prayer that soon Poland will again be a free neighbor in the association of nations.

Syria Souring on Egypt's Curbs

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following news story written from Beirut, Lebanon, by Foster Hailey as it appeared in the New York Times of May 1, 1958:

SYRIANS SOURING ON EGYPT'S CURBS—BUSINESSMEN, FARMERS, AND OTHERS PROTEST AGAINST LOSS OF FREEDOM

(By Foster Hailey)

BEIRUT, Lebanon, April 28.—The fruits of economic union with Egypt are developing a bitter taste in Syria.

Damascus newspapers reaching Beirut record a growing protest by industrialists, business men, farmers and labor union leaders against the attempted imposition on the former free economy in Syria of the strict controls imposed by the revolutionary council in Egypt since 1954.

The latest was against the imposition of stricter controls on imports of so-called luxury goods. These make the importation of any thing worth more than $300 impossible except for a favored few large operators, Syrian importers say.

That is only the latest of a series of measures taken by the new United Arab Republic to integrate the economies of Egypt and Syria, the two regions of the new union. Syrians say privately it is an attempt by Cairo to drag Syria down to the same low standards as Egypt.

There is now in Cairo a delegation of Syrian farmers to protest the announced intention of extending to Syria the benefits of the protection of the farmer law. Its most controversial clause limits landholding by any one family to 250 acres. That may be needed in land-hungry Egypt, the Syrian

farmers say, but not in Syria, which is much less densely populated.

When leaders of the 1,800-strong Workers Union of the Iraq Petroleum Co. refused recently to bow to the Government takeover of their bargaining and union control, they were sumarily dismissed.

PAPER LISTS COMPLAINTS

Little or none of this discontent appears in the Egyptian newspapers, or at least not in the issues that reach Beirut.

The Damascus press has not been completely indoctrinated, it would seem, although six newspapers have had to go out of business because of the withdrawal of subsidies. Syrian papers dutifully denounce the protesters as enemies of the state. But they print the protests so that all literate Syrians can read—and literacy is much higher in Syria than in Egypt—the complaints made by these enemies against restrictive state controls they had not known before.

Al Sham, for instance, had a long editorial listing the complaints of various special groups and concluded:

"If we suffer a drought, they say it is the fault of union with Egypt. If development figures in the budget rise, they start moaning about the possibility of an increase in the tax rate.

"Should a baker be lax in performing his duties [all flour recently was put under government allocation and bread prices pegged], they start beating their breasts."

Before the union, Syria had one of the soundest international trade positions in the Middle East. She exported tobacco to the United States, hard wheat to Italy, and cotton to all the world. With those exports she earned hard currency. The Syrian pound was stable and on a strict parity with the Lebanese pound, at 3.15 to $1.

Now more outspoken Syrians say the Egyptians are buying Syrian wheat and cotton and paying for it in Egyptian pounds, which then have to be sold at a 35-percent discount in Beirut.

Egyptians are reported to have moved in on Damascus to take over banking and other commercial activities. Every Syrian Army unit from the company level up has an Egyptian cadre attached to it.

Progress Report: Merrimack River Flood Control 22 Years Later

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my statement on May 6, 1958, before the Subcommittee on Public Works of the House Committee on Appropriations, recommending an appropriation of $2,300,000 in the fiscal year 1959, for the Hopkinton-Everett flood-control project in the State of New Hampshire:

PROGRESS REPORT: MERRIMACK RIVER FLOOD CONTROL 22 YEARS LATER

(Statement of Hon. THOMAS J. LANE, of Massachusetts before Subcommittee on Public Works of the House Committee on Appropriations recommending an appropriation of $2,300,000 in the fiscal year 1959 for the Hopkinton-Everett flood-control project, May 6, 1958)

Mr. Chairman, the Merrimack River, originating in mountain brooks, gathers volume and strength as it runs through southern New Hampshire and northeastern Massachusetts.

From mountain to ocean, it is 116 miles long, and drains an area of 5,015 square miles.

The population of the basin is more than 1 million concentrated in the industrial cities and towns that spread from the banks of the river.

Major floods in the Merrimack River Basin are caused by heavy rainfall covering large areas, in combination with rapidly melting snow cover.

The most destructive flood in the history of this river took place in March 1936, when the daily discharge at Lawrence, Mass., was 160,000 cubic feet per second, or 80 percent larger than the record flood of 1852.

The bill for damages came to $36 million.

Subsequent hurricanes, drenching the area with heavy rains that the river could not handle, brought additional floods. The industries and the people of this area suffered further losses, running into millions of dollars. The cost so far has been heavy.

Each spring we anxiously watch the swollen waters of the Merrimack, wondering if they will spill over their banks to flood homes and stories and factories, and asking ourselves: "When are we going to get protection and relief from this annual threat?"

Let's look at the progress report to see what has been accomplished in the 22 years since the disastrous flood of 1936, not to mention the lesser but still damaging floods that occurred during the intervening years.

The United States Army Engineer Division, New England, has had no illusions about the problem.

It was after a 1938 survey that: "The district engineer finds that a serious flood situation exists in the Merrimack Basin. The district engineer concludes that the only feasible method of obtaining comprehensive flood protection in this basin is by means of reservoir control. There are several combinations of reservoirs within the limits of economic justification which will eliminate nearly three-fourths of the annual flood damages."

And the Congress, theoretically, through the Flood Control Act which was approved on June 22, 1936, authorized the construction of a system of flood-control reservoirs in the Merrimack River Basin for the reduction of flood heights in the Merrimack Valley.

Efforts to build this intent into fulfillment were frustrated by the priority needs of World War II, general apathy, and technical delays.

Finally, in 1946, one dam was completed.

Nothing else in the way of actual construction has been accomplished during those 22 years, even though in the October 1956 issue of Industry, which is published monthly by the Associated Industries of Massachusetts, the Merrimack was described as potentially the most dangerous flood site in Massachusetts today.

As far as preliminary technicalities are concerned, they have been resolved.

New Hampshire, where the reservoirs will be built, had to be compensated for the tax money it would lose from the farms and homes that would be taken for the reservoir area, and for the highways that would have to be relocated.

Last year the Merrimack River flood-control compact was passed by the legislatures of the two States, providing for compensation by Massachusetts to New Hampshire, of 70 percent of the loss that will result through this construction.

The compact was approved by Congress and signed by the President.

The 1959 budget originally called for an appropriation of $1,200,000 to continue land acquisition, to initiate work on relocation, and to continue the engineering and design on this project.

The United States Army Engineer Division, New England, has made arrangements with the Governor of New Hampshire for his department of public works to handle the relocation of the four State highways affected by the construction of the dam and the reservoir. The State agency will also assist in the disposition of local roads. These highway studies and preliminary designs are well underway. Governor Dwinell has also appointed an advisory committee to coordinate and advise the Army engineers in several problems affecting 2 or more State agencies and the 4 towns in the area.

The first property in the area has been purchased with funds made available for the acquisition of hardship cases.

The budget originally recommended for the year beginning July 1 the sum of $1,200,000. On March 13 the White House, with the endorsement of the Budget Bureau and the Corps of Engineers, recommended an increase of $200,000, bringing the revised estimate up to $1,400,000.

Under date of April 23, 1958, I was advised that the Merrimack River Flood Control Commission, "after conferring with the New England Division, Corps of Engineers, United States Army, and the New Hampshire Department of Public Works and Highways, and also taking into consideration the hardship cases in the Hopkinton-Everett area, recommend that the Congress appropriate the sum of $2,300,000 for fiscal year 1959, for the Hopkinton-Everett flood control project."

The New Hampshire Department of Public Works and Highways needs an additional $500,000 for highway relocations. An additional $400,000 is required to take care of land acquisition and to compensate for the hardship cases that result from these "ejectments." These needs justify a total appropriation of $2,300,000.

After 22 years, we are at last committed to definite and substantial action leading to construction of the Merrimack River flood-control project.

When the President and the Bureau of the Budget revise their estimates upward, this is evidence in itself that an accelerated rate of progress toward construction of this vital project is considered urgent.

The appeal of the Merrimack River Valley Flood Control Commission, whose members are in direct contact with the problem, reinforces that conclusion.

From my own knowledge and experience over the years in the long struggle to win Federal recognition and assistance for our flood-control needs, I believe that this project, now cleared for action, should go forward with all possible speed.

After 22 years of waiting, the people and the industries of this valley reasonably expect that the Congress will vote an appropriation of $2,300,000 to make certain that the Merrimack River flood-control project is at last on its way toward actual construction.

Representative May Hears From the Grassroots

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Bridgeport (Conn.) Post which commends my Connecticut colleague, the Honorable EDWIN H. MAY, JR., for polling

some 200,000 of his constituents for their opinions of important questions facing the Congress.

Representative MAY has, in a short period of time in his first term, earned the respect of both his colleagues and his constituents for his conscientious devotion to duty, his vigorous defense of principle, and his untiring efforts on behalf of his constituency.

Congressman MAY demonstrated that he considers himself the elected Representative of all of his constituents, not just the members of the party under whose banner he was elected, by including Democrats and independents as well as Republicans in his poll.

The people of Hartford County have in ED MAY a devoted servant and an able legislator who is dedicated to carrying out the will of his constituency to the best of his ability.

WHAT THE "GRASSROOTS" THINK

When Members of Congress visit their home districts during recesses and vacations they are generally described as keeping their ears to the ground, listening to what is being said in the "grassroots" areas. This is how they are reputed to be getting advice on what their people want and how they should vote in Congress.

We have no idea how many actually do this. Representative EDWIN H. MAY, JR., Republican, of Wethersfield, used another method which proved to be highly successful in finding out what the voters in the Hartford area are thinking about on several important subjects.

Early this year the Congressman sent out a questionnaire to 200,000 voters in the First District. He received 12,000 replies, which he considered well above the average return of questionnaires of this type. It required 4 months, he said, to prepare and mail the forms and to tabulate the answers. Mr. MAY called it an extremely worthwhile experiment and is now making public the replies he received from Republicans, Democrats and independents. Six of the 12 questions have been tabulated. The others will follow.

The first question asked for an opinion on the appropriation of more money for missiles and rockets, even if this eliminated the possibility of a tax cut or a reduction in the Federal debt. The percentage voting yes, was 84.9 percent; voting no, 11.6 and undecided 3.5 percent.

To the question of approval of the Eisenhower foreign policy, 68.9 percent voted yes; 24.9 percent no, and 7.1 percent were undecided.

On the continuation of foreign aid he received 65.9 percent yes votes; 26.1 no, and 8 percent undecided.

On the revision of the McCarran-Walter immigration law to allow more immigrants to enter the United States through revision of the quota system, 31.1 percent voted yes; 61.9, no, and 7 percent undecided.

Regarding approval of Federal aid for school construction, 67.2 percent voted yes; 29.1 no, with 3.7 percent undecided.

In regard to approval of legislation providing safeguards against misuse of labor union and corporate welfare funds, 95.1 percent said, yes; 3.3 percent voted no, with 1.6 percent undecided.

That is a pretty clear indication of what the voters in Hartford County want, and expect their Representative to act accordingly. This may not be a hundred-percent-accurate report, but it probably comes as close to "grassroots" opinion as can be obtained.

Congressman MAY's method of polling his district could well be emulated by all Members, who are interested in learning what people back home are thinking about.

The Maladministration of the Reciprocal Trade Program

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1958

Mr. DORN of South Carolina. Mr. Speaker, one of the greatest industrialists of our times is Mr. Leon Lowenstein. Mr. Lowenstein has always promoted the very best working conditions for his employees. He is now very much alarmed over this tendency to sacrifice American labor and American industry. This House will be interested in the following comments by Mr. Lowenstein concerning the present maladministration of the reciprocal trade program:

Tariffs may have originally been for purposes of revenue; later to protect infant industries; but now they are control points for determining whether products made with cheap foreign labor should be allowed to displace United States merchandise. I think it is as simple as that. Looking at the problem from the point of view of equity, I say it is unfair practice to require American labor and industry to compete with products made in many countries abroad. Is it fair to have a person who earns $1.50 an hour compete with one making 15 cents per hour? That is so in textiles except it is 13 cents in Japan, not 15 cents.

We must face certain facts. If the equal product of country X can sell for less than the American product, it will displace the American product. We all know that one of the most important ingredients of any product is labor. Style, skill, and tools play important parts. But granted a standard product and thus eliminate the style—recognize that country X has the tools and the skill but a much lower labor cost, and the inevitable consequence of a free trade policy is the elimination of the American producer from the market.

That is so with respect to textiles. Japan buys the raw cotton from the United States at 15 percent lower than American manufacturers can buy it here. They have machinery as modern as ours (built since the war with our dollars), they have skills, the product is a standard one involving no style element which might otherwise be a factor, and their labor rate is less than one-tenth of ours.

But it isn't of textiles alone that I write. You have mentioned stainless steel, cutlery and watches. The automobile industry has felt itself immune to foreign competition—now they are beginning to ask themselves some questions as more and more foreign cars find themselves in this market. Do we for one moment believe that our cattle industry would not suffer if we lowered the bars on foreign cattle and beef? We recognize the farmers' needs in our quotas on foreign cotton and sugar. We have over the years recognized the need to equalize other domestic costs in our various tariff rates.

Now there are certain areas where we have yielded the entire market to foreign manufacturers. I refer to embroidery and cheap toys as illustrations. Embroidery requires a skill which is present in many countries with low living standards. There is now no domestic embroidery industry as such.

In toys American ingenuity may devise novel items which have a certain market, but in terms of dollars and items foreign competition has left only the unique or the crumbs to the American toy industry. In both instances cheap labor, lack of a specific style element, no machinery problem, all are present—result, the United States market is preempted by foreign countries.

The illustrations could be multiplied countless times. It would be a wonderful world if each nation could produce in the world market and the one that was the most efficient or ingenious would make the product for which it was thus preeminent. We would then have the situation of each one concentrating on that activity in which he excelled. But that can only be successful if all have equal standards of living.

Now, some may say, Why not let the most efficient have the market? Are we prepared to say that if foreign nations can deliver a product here to undersell the American market, they should be free to do so? At first blush the consumer might think this is a good idea. Joe Doakes, who drives a truck, might like the idea of this saving on his purchases. But soon Joe would have nothing to carry in his truck and he would have no wages with which to shop for these bargains.

Are we prepared to say that American industries, of which the textile industry is one, should fold up and turn over its markets to foreign companies? The theory of free trade is an attractive one—in theory—but in the light of reality it spells suicide. In one sense I am selfish. I don't wish to preside over the liquidation of an industry with a capital investment of billions and employing millions of persons. And from the view of our Nation's security, I wonder if sufficient thought has been given to the place of textiles in our country's defense.

I need not comment on those individuals who have suggested that industries and individuals who are displaced by this foreign competition be given assistance. We want no dole.

There has been much mention of the great numbers of persons who are engaged in this country in export-import trade. In fact, the number so engaged falls largely in the export area, not the import. Relatively, few owe their employment directly to imports as such. These are shippers and distributors.

With respect to the importance of imports in order for us to maintain our exports it should be recognized that we are an exporting Nation. Our foreign customers do not buy from the United States just because they like us (which we hope they do) but because they need our product and cannot buy it cheaper elsewhere in the world market.

In this connection, is there any other country which allows the importation of products when the same product is available from domestic manufacturers? I think not. If, perchance, it does, I believe its tariff rates will be such as to put the foreign product at a disadvantage in competing with the domestic variety.

Yet we in the United States allow Japanese textiles to undersell American goods of the identical type in our own market.

I may be accused of selfishness, and I admit I have a bias—a bias to preserve our industry and my company. I think proponents of free trade too have a bias. Examine each voice and see where the personal interest lies. Thus it becomes a task for men like yourself to determine the matter on the basis of fairness and principle. What is in the best interests of the people of the United States—the elimination of certain basic industries or the building up of certain countries which presently are our allies?

The most important requisite of the day is, I think, to keep all of us out of world war III. However, sometimes one can be too liberal. Instead of keeping us out of war we can get right into it, and we can get into it without the partners that we might think we have. If we get into war we wouldn't even have unity in our own country.

Without proper tariffs we are bound to get more and more unemployment, and I am concerned about this unemployment. We

will get it. We have a recession right now, and if we have real unemployment people are going to have empty bellies. Please don't think for one minute that with empty bellies you are not going to get a lot of Communist sentiment. That would come. Take unemployment today. I imagine that if it was figured properly we would have upward of 6 million unemployed.

I am not so much worried about the number of unemployed as a lot of other things. I am worried about the percentage of unemployed to employed. Now, the employed support the unemployed. As an example, something occurred in our own company this very week—we had one mill in South Carolina that was running full on a certain style. We were getting 27½ cents per yard for this particular number. Japan came out with this very same piece of goods, just as good as ours, which is as good as can be made in this country or any other country, at 2½ cents a yard under our price and they sold the goods. Do you know what this means to this mill? First, the mill immediately threw off its Saturday operation which pays them time and a half to the employee, and then it went off 1 day out of the 5 remaining days. The result is the mill is running only 4 days and before you know it, we have that many more unemployed because instead of running 3 shifts they will only be running 2 shifts, and perhaps only 1 shift. Now, this is an example of how we are going to cause unemployment in this country and it is going to occur more and more.

Now, if Japan is doing this to our company and other companies like ours in the textile industry, they are going to affect other industries because we cannot cope with their labor rates. We cannot with the standards of living that we now have.

I certainly want to keep out of war and I want us to continue to have the partners that we now have and, if posible, we should have more partners; in other words, take them away from Russia. Sometimes when one gives away too much, one gives badly; instead of making a friend or partner one makes an enemy. I am asking you a question—did you ever lend a friend any money? How long was he your friend after that?

Let's look at the textile industry. Why should any one industry stand the brunt of imports made with slave labor rates? We are a country where everyone should bear his share of the cost of the national problem. Now, how are we going to do this? You talk about lower taxes, building roads, etc. Do you know how long it will take us to catch up with ourselves? How can we stop the recession we are now in? And there is no question about it—we are in a recession.

In the Roosevelt administration we had our problems—and, by the way, I voted for Mr. Roosevelt, if my memory serves me right, twice, and I voted for Mr. Eisenhower two times because I believed in him. I believed in what he stood for and some of his doctrines, but I am going to make a confession—I question right now whether I believe in today's administration as much as I believed in it a year ago. When I vote, I vote for whom I consider the best man for the country.

Now, in the Roosevelt administration they had a WPA. The Government sought bids on yard goods and then they had other bids for garments made out of yard goods. Then they gave the garments away in areas that really needed it. How can you get employment back faster all the way from the base right to the end product? More and more people would be employed in this way, and giving it away will not be too expensive to the Government.

Now, let's go further. There are a lot of foreign countries whose people do not have enough clothing. It might be a good idea to give garments to these foreign countries. Our Government can do all its buying through sealed bids so that nobody gets an advantage.

If my memory serves me right, during the Second World War, how did we go into Africa? I was in on this situation. Our Government sent a boat loaded with textiles that the north African people needed and wanted badly. We made friends out of them. It helped us to win the war.

I am not for reducing the standard of living in America. America was made by proper standards of living. People are happy here and we want to keep them happy, but you can only do this if you have employment. Unemployment will make very unhappy people, and who is going to get blamed for it? This administration, of course—there is no question about that.

It might be a smart thing to give away money but with this money they buy merchandise or machinery or whatever they want from America. I understand that Japan, which is the best copyist in the world, has not only copied our machinery but has improved it and is now shipping it elsewhere so they can further compete with the United States. How long will it be before we have the kind of competition we cannot take also from India?

You and I both know that every country today is doing everything possible to nationalize itself. In this country we talk about higher education—more scientists, more engineers—and maybe it would be quite an idea if we aided the education of people in other countries. There is no question about it—our way of thinking is the right way of thinking, and it would only be a question of time before the people of the other countries became our friends as they would become educated and thus reason for themselves.

Free Enterprise and Commonsense—The Answer to the Recession

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. McDONOUGH. Mr. Speaker, the United States of America was not created, developed, and expanded by timid men and women. It was created by people with fortitude and courage, a people unafraid to fight for the ideals of freedom and independence in which they believed.

It was developed by people who could face apparent insurmountable obstacles with steadfast courage and faith that a problem recognized and appraised was a problem which could be solved.

It was expanded by men and women who could face the future with optimism and act boldly and confidently in times of emergency and economic crisis.

Today we face an economic problem in business, and we hear talk of depression and recession on every side. And the cry for a quick remedy, any remedy, sometimes borders on panic at a time when what is needed is a calm and resolute appraisal of the economic facts contributing to the present business slump.

And as Americans we must remember that our Nation is dedicated to the principle of free enterprise, and Government of the people, by the people and for the people—rather than Government control of the people.

If we evaluate the present economic problem correctly, we shall find a sensible solution, and in solving the problem business, labor, and Government must cooperate.

The following "Letter from Eddie," a letter written by Edward Schwarz of Los Gatos, Calif., gives a citizen's straightforward views on the present economic situation with one man's suggestions for solution. I believe this letter should receive the consideration of all Members of Congress:

LETTER FROM EDDIE

So far as we're concerned a depression is to business slumps what the Grand Canyon is to valleys.

And we don't think our mental picture of a depression differs much from that of anyone else old enough to have had his tail feathers singed in the depression of the thirties.

In a depression prices plunge, credit crashes, banks bust, businessmen bankrupt, stock prices collapse, faith flees, the bottom falls out of the country's personal income, almost 25 percent of the labor force is out of a job, and businesses stop making commitments for new plants and equipment.

Now prices are up, credit's healthy, banks are solid, the business failure rate is about normal, stocks are holding up with many going up, general business activity is good, people have enough faith to take on long-term credit obligations, and the country's personal income figure is only a whisker away from where it was at this time last year despite fewer jobs, and unemployment is running at 8.4 percent of the labor force. Employment is right at 62 million, only 4 percent lower than this time a year ago. The Securities and Exchange Commission and the United States Department of Commerce say first quarter expenditures for new plants and equipment will be a mere 3.6 percent below a year ago.

If this is a depression then a mouse is a fire-snorting, man-eating monster.

What's going on is this: Sales of manufacturers have been wavering around twenty-seven or twenty-eight billion dollars per month ever since July 1955. Inventories increased from $44.1 billion in July 1955 to $54.2 billion by September 1957. Then the order book closed just the way it must when one of your departments is overbought.

When you have a $10 billion excessive inventory to work off in a $27 billion a month business, production has to be curtailed. The fact that you are comparing production with figures that were adding to inventory last year makes the picture look worse.

Since $7.4 billion of the excessive inventory is in durable goods, that's where the cutback hurts most—and it will keep on hurting until sales catch up to inventories or vice versa.

The Government isn't spending less—it's spending more.

Up to now everybody who's been able to get the floor has O. K.'d every possible kind of handout to save us from this depression that doesn't exist. Willing saviors of our supposed quaking nation are popping up in all the places you'd expect.

But up to now we haven't heard a peep out of anybody about the proven American method of letting business solve in its own problems by taking the beating it has coming to it for overextending inventories and then getting back to work selling goods.

The automotive industry is the worst off. Here free gratis for nothing are four distasteful but effective ideas that will help solve their problems.

First. Hold a heavily promoted industry-wide, nationwide one price for all week based on Blue Book trade-ins, nonfinagled extra costs and the lowest price each dealer has sold a similar car for so far this year.

This will bring out those buyers who've discovered they've been rooked by some smart guy auto dealer with the business morals of a Syrian rug peddler. These millions are afraid to buy the car they need for fear of being even bigger patsies on a fast shuffle.

It's going to be pretty tough to get the bamboozled public to believe this one-price-for-all deal is on the level, but a propaganda machine that can sell an inventory adjustment as a catastrophe calling for even bigger big Government should be able to handle it.

Second. Face it. Nineteen hundred and fifty-eight car styling is not what enough customers want. Sales are poor because enough people don't want the gaudy, gimmicked monsters with their grotesque, exaggerated fannies and pinball lighting. Look around—most of the people of this country have as good taste in cars as they do in women. You've noticed they seldom take those bizarre jobs with size 42 bazooms hung on a size 10 frame home to mother.

Even with power steering these monsters are too tough for the little lady to park.

Start over—make cars smaller, sleeker, more functional, easier to handle. Take the markdown the way we do in store business—decisively, painfully, and quickly.

Third. Get prices down; $4,000 is too much to spend for a car that stands in a factory parking lot all day or that is being used to haul kids and groceries.

If you don't know how to make a car for $2,000—with radio, heater, and white sidewalls—find out how.

But don't expect your entrenched, thought-conditioned, design and engineering groups to come through with ideas out of the groove. Just get a couple of old tin benders, engine and transmission men together with a smart young engineer who can work a slipstick and keep them locked up 'til they find the answer.

Your industry is full of over-organization, unchallenged concepts, red tape, yessing, playing follow the mob, and too little 'round-the-clock brain squeezing for bold new concepts.

Two thousand dollars, delivered complete—that's the goal.

Fouth. Get aggressively competitive. Cut competitors' throats—no quarter. Fight to win. But fight with ideas, not price claims.

Who'll be first wtih disc brakes and fuel injection on a $2,000 car?

Who'll be first with a 40-mile-per-gallon standard car?

Who'll first go to 100 percent leasing?

And who'll have the guts to first make dealers go one price to all.

The auto industry can tnd must sell its way out—and that goes for any other industry in trouble.

We don't need tax cuts. We don't need monster public works programs. And we don't need any other kind of economic sugar-tit.

What we need is less election year grandstanding to the gallery with promises of a worry-less, low tax, beef and bourbon Utopia and to get back to letting men fight it out for themselves, with no help from enslaving big brother government.

Personally I'm fed up with Government-by-crisis and the trend toward wholly un-American socialism and inflation policies.

An if you are you had better let your boys in Washington know it via a petition with enough names on it to scare the hell out of them and get them back in line.

Urban Renewal in Chicago

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. O'HARA of Illinois. Mr. Speaker, what is going on in urban renewal in the district in Chicago that I have the honor to represent is attracting national interest. As a pilot project, closely watched by the Nation, it naturally is attended with many problems and is still a subject of spirited controversy.

My colleagues will remember one phase that Senator DOUGLAS in the other body and I in this body brought to the attention of the 84th Congress. That was in connection with the plight of the small-business tenants who were dislocated from the sites of long-established businesses. We were successful in getting an allowance for moving expenses up to $2,000, which in the 1st session of the 85th Congress was increased to $2,500. This will prove of benefit to other communities when urban renewal plans place tenant small businesses in position comparable to that of the dislocated Hyde Park merchants. It illustrates how important it is that the experiences we are going through in this pilot urban renewal project should be reflected in permanent legislation governing nationwide.

There is another phase graphically presented to the senior Senator from Illinois and the Congressman of the Second District at a meeting of Hyde Park business and professional men during the Easer-vacation period. The consensus of opinion at that meeting was that priority should be given by the redeveloper to the dislocated businesses in the rental of properties in the new business district. This was advanced on the equitable principle that businesses that had earned the good will of the community by years of serving it should be given first opportunity, under equal conditions, to relocate themselves in the new business district where they could continue thir old relationship with their customers. Proposed legislation along this line is now being drafted.

Walter Allman, 1360 Madison Park Avenue, Chicago, in a recent letter to me, said:

I am a businessman in Hyde Park, being located on the east side of Lake Park Avenue. Needless to say, the redevelopment plans are of great concern to me, as well as numerous other small-business men. I am in complete accord with the idea that neighborhoods must be rehabilitated. Naturally, there are many reasons for this deterioration. At this time that is not important, but what is important is the fact that seemingly land-clearance plans, as noble as they seem, are basically inhuman because they take away from business people their entire business with a pittance as remuneration. As I understand the land-clearance laws, property owners are paid the fair market values, but the owners of businesses who make the property valuable get nothing. Not only do they get nothing, but their income is completely stopped. In most cases it is impossible for a small-business man to move into a new project because the rents that the private redevelopers charge are far beyond his reach, and as I understand it, the land is sold to these redevelopers at a very low price.

There are, in my opinion, two important things that should be incorporated in the laws before the Hyde Park plan is finally accepted and approved: (1) Businessmen should be given fair market value for their businesses. (2) Businessmen who are being disenfranchised should be allowed to purchase parcels of land in redevelopment areas if they so desire. They should not be at the mercy of the private redevelopers who have no interest in them or their plight.

Because this is the major urban renewal plan in the country, and as a pilot its progress is being followed so widely in other cities, I am extending my remarks to include the full text of a page article appearing in the Chicago Daily News of May 3, 1958. The article follows:

MUST COMPETE WITH SUBURBS

(By Paul Gapp)

Sometime in the next few months a giant bulldozer will roar into life near the corner of 55th Street and Lake Park Avenue.

The driver will plunge its big steel brow into the earth and thereby begin a new cycle in the life of our city.

It will be the first new construction on the gigantic Hyde Park-Kenwood renewal plan, a project that will prove whether we have at last found the secret for saving our city's future.

Private enterprise and public planning are teamed up in this effort to stop the deterioration of 900 acres of housing and industry bounded by 47th Street, 59th Street, Cottage Grove Avenue, and Lake Michigan.

The goal: A new kind of city that will be such a good place to live in that people will move back in from the suburbs.

Whole blocks of aging buildings will be ripped away—some already have been—to make way for modern homes, schools, parks, playgrounds, churches, and shopping centers.

Uncle Sam is pumping $26 million into the area. Local governments will swell this by another $13 million.

And behind this will come a much bigger pile of private capital, the total of which cannot even be estimated accurately.

NEW YORK FIRM PUTS UP $15 MILLION

The first chunk of private money—$15 million—will come from the New York firm of Webb & Knapp for Hyde Park Projects A and B. This is where construction will start this summer.

Projects A and B cover 47 acres of blighted land bought by the Chicago Land Clearance Commission, razed, and resold at "fair used value" to Webb & Knapp.

More than 1,200 families moved out of this area.

Work will soon begin on the first of two 8-story buildings to house 528 families.

Soon thereafter will be built a shopping center and single homes, another 267 families.

Thus the new projects will house some 900 families, one-third less than now occupy its steaming, crowded apartments.

This is the shape of tomorrow's city, where city dwellers will have more elbow room. But it is only the nucleus of the great conservation program now before the city.

The overall plan, a subject of heated controversy in the area today, calls for modernizing an additional 1.3 square miles.

It would raze 638 buildings scattered through the area. These buildings now contain 6,239 living units, or 19,000 persons.

In their place would be built 2,350 modern living units. The exact number of persons these will accommodate has not yet been determined.

PLAN TO REDUCE UNITS BY 10 PERCENT

But the new plan will reduce the total number of living units in the 1.3 square-mile area by about 10 percent—from 29,321 to 25,432.

The modernized community, in addition to giving residents more living room, is to add more than $1 million a year to local tax revenues.

Six private institutions such as churches and private schools will buy 504,252 square feet of the cleared property.

Fifteen acres have been earmarked for parks and 9.4 acres for schools. New police and fire facilities, offstreet parking and modernized street lighting are also planned.

Cottage Grove, Lake Park, and 47th Street will become the three big traffic carriers under a plan to route through traffic around the community.

Buildings in need of rehabilitation will be brought up to minimum code standards under a continuous enforcement program.

Property owners who need loans to make improvements will be eligible for mortgage insurance under the liberal section 220 of the National Housing Act.

Backers of the renewal plan hope private interests will sink up to $100 million in the neighborhood once the basic rejuvenation is completed.

UNIVERSITY OF CHICAGO TO CONTINUE AS STRENGTH FACTOR

Hyde Park's two big anchors—its location and the University of Chicago—will continue to be major factors of strength in the future.

It is expected that the lure of comfortable housing only 15 minutes from the Loop will draw many new professional and middle class workers into the area.

Jeremiah P. Holland, head of the community conservation board, hopes to submit the plan to the council in June.

What happens in Hyde Park will help form the pattern of action in six other Chicago neighborhoods designated as conservation areas by the CCB.

Municipal officials all other the Nation will be watching Chicago's South Side, too.

EXPERTS ANSWER CRITICISM—WHY SOME OBJECT TO PLAN

Whenever the city has undertaken a major improvement project involving the relocation of a considerable number of people, violent objection to the plan has been raised.

This is no exception in Hyde Park-Kenwood, where opponents of the program have cited a number of criticisms to the plan now before city officials.

Most articulate of these opponents are the Hyde Park-Kenwood Tenants and Home Owners, the United Woodlawn Conference, the North Kenwood-Oakland Community Conference, the 5400 Dorchester Block, the 5400 Blackstone Block, and District 1, United Packinghouse Workers Union.

Here is a list of the major objections raised by these groups and the sense of official replies presented by Jeremiah P. Holand, head of the community conservation board, Julian Levi, executive director, South East Chicago Commission, and James V. Cunningham, Jr., executive director of Hyde Park-Kenwood Community Conference.

Objection: It will displace most of the Negroes now in the area. It will discriminate against them. They will not be able to afford the rentals charged in new or improved buildings.

Reply: Only about one-quarter of the Negroes will be displaced by land clearance. The plan contains a tough antidiscrimination covenant.

Negro rents are increasing now, without benefit of rehabilitation. Many Negro families in the area enjoy incomes higher than those of neighboring whites.

"One of the most important goals of this whole plan is to establish a stable, interracial neighborhood," said Cunningham.

Objection: The plan calls for razing too many apartment buildings that could be rehabilitated.

Reply: Every effort is made to avoid this. "But you can't carry out a program like this without taking down some sound structures," said Levi.

Allowing one solid but shoddy building to stand on a site cleared for a new school, for example, would defeat the basic purpose of the program.

Objection: The new housing is going to be too expensive for the little man.

Reply: At current prices, it's impossible to build anything that will rent at less than $37 a room. The plan makes provisions for co-op and Chicago Dwellings Association housing, too. This will help.

Objection: Why isn't any public housing included in the plan?

Reply: The Chicago Housing Authority will build an 8-story apartment building at 50th Street and Cottage Grove this summer.

Objection: The people displaced by clearance in Hyde Park are going to invade already crowded areas like Woodlawn.

Reply: When earlier clearance was carried out in Hyde Park, 81 percent of the 651 families moved were relocated in neighborhoods generally considered to be uncrowded. We hope to do better this time.

Objection: If a property owner rehabilitates his building, what assurance will he have that the city won't come along and tear it down?

Reply: "The plan requires no more than compliance with the city code," said Levi. "If you comply, your building is safe."

If a property owner can't get an improvement loan, or if he refuses to meet the code, his building may be marked for clearance.

Objection: The University of Chicago has dominated Hyde Park planning and arranged rehabilitation and clearance policies for its own benefit.

Reply: While the university planning unit devised the plan, policy matters were handled by the CCB and the Conservation Community Council.

THE CASE FOR CITY RENEWAL

(By Lawrence A. Kimpton, chancellor, University of Chicago)

There is much more at stake in the Hyde Park-Kenwood urban renewal plan than the elimination of that area's blight, the preservation of its productive tax base, or even the continuation of its many important institutions.

The real question is whether the city of Chicago will act to save itself as a place to live, or, by refusing to face up to the increasing deterioration, will encourage the flight to the suburbs of the citizens who are essential to it.

If the city is to be saved, a start must be made somewhere. Because of its vigorous efforts over the past 6 years, and the support of the city administration, Hyde Park-Kenwood is ready to start.

By developing a plan that saves 80 percent of its present area, Hyde Park-Kenwood offers the most hopeful pattern yet devised for saving all the middle-aged neighborhoods of Chicago.

Double Disaster

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Norman Cousins which appeared in the Saturday Review for April 19, 1958:

DOUBLE DISASTER

(By Norman Cousins)

The Soviet decision to halt its nuclear tests has resulted in two serious defeats for the United States.

The first defeat is the result of the fact that we allowed the Soviet Union to be the first to respond to the fast-mounting demand of the world's peoples for an end to the growing contamination of air and food produced by radioactive fallout.

The second defeat—and possibly a larger one—is the result of the initial negative response of the United States to one of the gravest challenges in our history. It seemed puny, petulant, unimaginative.

For what is involved here is not just a routine maneuver in the cold war that can be handled with the usual diplomatic counterthrust.

What is involved here is the need of the United States to demonstrate before the world its ability to come up with a dramatic forward thrust of its own on one of the major questions in human history.

For next to peace itself, the runaway nuclear arms race and the threat of radioactive fallout are the most serious problems confronting man on earth.

The approach to this problem involves a supreme sensitivity to human values. It requires the fullest possible exercise of the moral imagination. For our security depends less on bomb stockpiles than it does on our ability to reach people everywhere and earn and keep their good will and support.

The world's people today are worried—as they have every right to be.

They are worried about the obscene competition in creating weapons that can incinerate millions at a time.

And they are worried about the fact that just in the act of testing these weapons there is a real threat of contamination to air and food.

Radioactive fallout, it is now admitted by the United States Atomic Energy Commission, can no longer be dismissed as a negligible danger.

Inevitably, the world's peoples have been increasingly insistent that their basic rights be respected. The principle here is a simple one: No nation has the right to contaminate or jeopardize the air or water or food that belong to other people.

This is the central issue whose implications have yet to be fully understood.

There is nothing unnatural about this indignant demand by other peoples. If we as a Nation were not involved in nuclear testing, we would split the sky with our fury over the crass violation of our sovereignty by the testing powers. American parents would demand immediate action by our Government to protect their children from being exposed to the danger of the diseases of blood and bone that can be produced by radioactive strontium.

Are we so morally calloused that we cannot understand that this is exactly how others feel—as they have every right to feel?

That is why it is not enough for us as a nation to regard the issue of testing only in the context of propaganda advantage or disadvantage.

It is not enough for us to point out, which is perfectly true, that the Soviet Union conveniently waited until it completed its most intensive series of nuclear tests before announcing its decision to stop the tests.

It is not enough to say this, because there was no reason why the United States should not have announced it was calling a halt to nuclear testing after the completion of its own recent tests. A halt must be made somewhere.

We were the first to start testing and stockpiling nuclear weapons. There was no reason why we shouldn't have been the first to stop and then do everything in our power to mobilize world opinion behind a universal ban.

It is not enough to protest that the Soviet is making a cheap bid for world support.

It is not enough, because the world's people are not stupid. They are aware of the spurious aspects of the Soviet bid. They have not forgotten the monstrous outrage of the Soviet violence in Hungary. But they are also aware that the United States has not come to life on this issue. They are not blind to the fact that we have shown neither imagination nor sensitivity in our own approach to this question.

There is no point in fooling ourselves. The State Department has been willing to talk about arms control for propaganda purposes. But its basic position, well known to close observers in Washington, is that it does not believe that arms control is desirable—even if a foolproof system of enforcement could be achieved.

In part, this is the result of the insistence by the British and French that they be allowed to develop their own family of nuclear weapons before any ban is put into effect.

If, therefore, we insist on proceeding with our tests, the result may be a moral disaster for the United States in the world.

Yet it may be claimed that the tests are essential to the Nation's security.

But there is no security in polluting our air and fouling our food.

There is no security in cutting ourselves off from the good will of the overwhelming majority of peoples in the world.

There is no security in an insane race for weapons of obliteration that no longer have any military justification, for when these weapons are used the result will not be victory but mutual suicide.

There is no security in distributing nuclear weapons around the world to various nations when the careless use of such weapons could easily start a chain reaction leading to world nuclear war.

That is why our response to the Soviet requires something more substantial and meaningful than a routine reply in the context of the cold war.

If we are to hold our own in the world, if we are to move towards a meaningful peace, then we must come up with a daring program of our own. We must put into action specific points of that program at once.

We can accept the challenge of the Soviet on the matter of nuclear testing but say that we do not propose to stop there. We want to set up machinery to insure such a ban.

We can say we are prepared immediately to act on the question of control over existing stockpiles.

We can say we are prepared immediately to act on the question of reducing those stockpiles under United Nations auspices, with a plan for inspection and control, and challenge the Soviet to do the same.

We can put an end to the nightmare of the proposed distribution of nuclear weapons and materials to our allies in the world. A French colonel in an American plane bombed an Algerian village. The bombing was said to be unauthorized. It will be no consolation to the survivor of a nuclear war to be told that the explosion that started that war was unauthorized.

We can say that control over arms is but a start on the larger problem of the peace and that we are prepared to act immediately to give the United Nations the kind of responsible powers that can deal with basic causes of war.

We can challenge the Soviet Union to a competition in the mobilization of our respective energies and resources in an attack on the basic problems of mankind.

This is where sanity begins—if we are interested in sanity.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Senate passed and cleared for President bill authorizing prototype for nuclear destroyer and took up urgent deficiency appropriations.

Senate

Chamber Action

Routine Proceedings, pages 7324–7349

Bills Introduced: 10 bills and 1 resolution were introduced, as follows: S. 3763–3772; and S. Res. 301.

Pages 7328–7329

Bills Reported: Reports were made as follows: H. R. 1342, 2763, 4445, 6176, 6528, 6731, 7203, 7718, 8039, 8433, 8448, 9012, 9109, 9395, 9490, 9514, 9991, 9992, 5424, and 7733, private bills (S. Repts. 1525–1544, respectively).

Page 7328

Bills Referred: 27 House-passed bills were referred to appropriate committees. Pages 7323–7324

Louisiana Bayous: Report dated March 25, 1958, from Chief of Engineers, Department of Army, together with accompanying papers and illustrations, on review of reports on Bayous Petit Anse, Tigre, and Carlin, La., was referred to Committee on Public Works, and ordered to be printed as S. Doc. 70. Page 7332

Miami Harbor, Fla.: Report dated April 16, 1958, from Chief of Engineers, Department of Army, together with accompanying papers and illustrations, on review of report on Miami Harbor, Fla., was referred to Committee on Public Works, and ordered to be printed as S. Doc. 71. Pages 7332–7333

Nuclear Destroyer: Senate passed without amendment and cleared for President H. R. 12009, increasing by $35 million authorization for appropriations for AEC for a land-based prototype powerplant for a nuclear destroyer or frigate.

S. 3632, an identical bill, was indefinitely postponed.

Pages 7349–7350

Klamath Indians: Senate passed with committee amendments S. 3051, to amend the Klamath Termination Act by providing in the alternative for Federal or private acquisition of the part of the tribal forest that must be sold. Pages 7352–7363

D. C. Heliport: Senate passed, without amendment, S. J. Res. 167, directing the D. C. Commissioners to make a study of factors involved in the construction of a heliport in the D. C. Pages 7364–7365

D. C.—Liquor: Senate passed with amendments H. R. 7300, providing certain changes in zoning provisions under the D. C. Alcoholic Beverage Control Act.

Page 7365

D. C. Firemen: Senate passed without amendment and cleared for President H. R. 7568, providing that service in the grades of inspector and private in the D. C. Fire Department shall be deemed to be service in such grades for longevity purposes. Pages 7365–7366

Minnesota: S. Res. 301, providing for printing as a Senate document a manuscript entitled "A Sketch of Minnesota," prepared by Russell W. Fridley, director of the Minnesota State Historical Society, was adopted.

Pages 7328–7329

Canal Zone Sabotage: Senate passed without amendment and cleared for President H. R. 3604, providing penalties for interference with communications facilities in the Panama Canal Zone. Pages 7366, 7382

Urgent Deficiency Appropriations: Senate made its unfinished business H. R. 12326, urgent deficiency appropriations for fiscal year 1958. Page 7382

Nominations: Nomination of Arthur S. Fleming, of Ohio, to be Secretary of Health, Education, and Welfare, was received, along with 1,072 Air Force nominations. Pages 7384–7388

Program for Thursday: Senate adjourned at 3:50 p. m. until noon Thursday, May 8, when it will continue on H. R. 12326, urgent deficiency appropriations.

Pages 7382, 7384

Committee Meetings

(*Committees not listed did not meet*)

APPROPRIATIONS—PUBLIC WORKS

Committee on Appropriations: Subcommittee continued its hearings on fiscal 1959 budget estimates for public works, with testimony from the following witnesses: Senator Dirksen and local witnesses, on funds for navigation and flood control in Illinois; Senator Bible, on flood-control survey funds for Nevada; and Senator Yarborough, on funds for river and harbor and flood-control work in Texas.

Hearings continue tomorrow.

Appendix

No Time for Timid Souls

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, May 8, 1958

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "No Time for Timid Souls," which I delivered before the State Federation of Republican Women's Convention, in Prescott, Ariz., last Saturday night, May 3.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NO TIME FOR TIMID SOULS

One hundred and seventy-one years ago this month, at Independence Hall in Philadelphia, the City of Brotherly Love, there assembled 55 delegates representing the American colonies.

You know the purpose of that meeting. You and I honor, love, and respect the documents they forged. We believe they created a framework of freedom in which has flowered the magnificent productivity of America.

The Constitution they wrote has endured to meet the challenge of the industrial revolution, the conquering of time and space, the magnificent technological advances and change.

The Constitution of the United States of America has burned like a flaming torch of freedom before all the world.

But now we are being told that that beacon light upon which the eyes of the less fortunate have so long been focused is losing its brilliance, is somehow tarnished, has lost its power to enlist and retain the allegiance of men.

You and I do not share this belief. We find the promise of political and spiritual and economic freedom more challenging and desirable today than in all the 6,000 years of man's recorded history. And yet we are told that America is losing prestige abroad, our social progress is deprecated, and our failure to solve all man's problems is magnified into total failure.

We have been subjected for more than 25 years to a philosophy of fear. The great horrible depression of the late twenties has been exploited by those who seek personal power to undermine our confidence in ourselves and our country. Men have become mesmerized with an unrealistic, utopian situation described as security. And we are told that physical and economic security must become the goal of all men everywhere.

Such is our world in the middle 1950's. We see reflections of these beliefs in our national magazines, our great newspapers, on the television, and hear it on the radio. It is no longer a thing of wonder that earnest men, sincere men, find themselves questioning the validity of freedom, wavering between the challenge of individual responsibility and the promise of collective security.

We are immersed in an absorption with material things and material objectives. We are and we must be constantly preoccupied with the necessity of earning a living, of securing everyday comforts for our families. And in these rightful, proper, everyday tasks we perform, there lurks the dreadful possibility that we may become totally absorbed and completely indifferent to problems of such great magnitude they appear to be insoluble.

May I confess that I am not an authority on all the ills of the world. I have no ready or pat answer to the problems I have so briefly outlined. Yet I know the uncertainty and the agony and the injustice in our world must be solved and I am confident that men of good will with courage and determination can and must find those answers.

And may I suggest the answer will not spring fully perfected and documented in detail from the national House or the national Senate or the national administration. The solutions to all problems must come from you, from the small towns of America, from the men and women who look up from the toil of their day to day labors toward a better world, toward a nearer approach to that spiritual society of loving men and women God intended his creation to become.

When you and I approach the Grand Canyon of the Colorado, the vast immensity of that magnificent natural wonder is completely overpowering. We cannot even contemplate more than a small section of that gorge at one time. And even though we know how it was created we cannot comprehend the expanse of time required for its accomplishment.

May I suggest that if we are to find an answer to the front page headlines which give us such great concern, it is first necessary to accomplish an understanding of the various factors at work in our world which have created situations which now appear to be overpowering and insoluble.

When the delegates to the Constitutional Convention assembled in Independence Hall those 171 years ago, they too were burdened with what appeared to be an insoluble problem.

There was great jealousy between the States. There was conflict of economic interest and geographical concern. Each State was jealous of its own power, its own authority. Yet these men were able to conquer their selfish self-interests, determined to create a government which would protect the rights of the individual. They pushed aside vanity and conceit and hammered out the Constitution.

In our world today, you and I are caught like a shuttlecock in a badminton game between the power plays of ambitious men.

This is easily recognizable on an international level. We are familiar with the long history of the balance of power between England and the continental powers. We recognize the emergence of the United States of America as a world leader produced perhaps more jealousy than respect, certainly more envy than love.

The conflict between the basic governmental philosophy of a free people and the dictatorial slavery of world communism is quite apparent. And these aspects being beyond our immediate control and influence cause us to feel remote and unimportant and helpless.

The exercise of greed for power must first be recognized and challenged in our own lives and our own experiences.

In America, we still cherish the idea that man is free, free to worship God in his own fashion, free to seek a job at labor of his own choosing, free to start a business if he so desires, free to move when the wanderlust attracts him, free to be thrifty and prudent, or wasteful, free to keep himself healthy or free to allow his body to deteriorate.

You and I must recognize in the constant struggle for the concentration of power in this Nation these very freedoms I have enumerated are being challenged and limited.

If this were only a contest between two antagonists we might someday accommodate ourselves to the dizzy pressures from, first, this side, and then the other. But today we are threatened by the concentration of power in three antagonists on a national level and hundreds of other opposing forces in our own communities and our own lives.

The rapid development of industrial America has produced a growing concentration of power in the business community. Mergers have increased productive capacity and lowered unit costs. And when size no longer contributed to a better product or a lower price, size became desirable solely for the establishment of power alone.

The tax structure of the last 25 years has contributed tremendously to the number of mergers and the concentration of power in the business communities. We have witnessed the ridiculous situation of poorly managed companies with tremendous tax losses being desirable as a merger partner because of the advantage of those tax losses which were representative of poor business management.

In some areas of our economy merger has been the only solution when an enterprise was faced with either a giant competitor or a giant labor union.

The union movement in this country, by and large, hase been a helpful one. The idea of old trade unions, the theory that wage earners should unite in order to bargain on equal terms with the owner of an individual plant or business operation strengthens the concept of the freedom and the dignity of the individual.

But when labor unions adopt compulsion, when then enlarge and expand and merge until they can virtually dictate prices in our economy, the basic benefits of unionism are lost. And they become a threat to freedom rather than a prop for freedom.

Beginning in the 1930's with then needed assistance and support of the Federal Government, the size of labor unions has doubled and dedoubled until today there is virtually a monopoly and the destiny of millions of wage earners is controlled by a handful of union leaders many of whom were not democratically elected, who submit themselves to little democratic control or suggestion and who operate with all the ruthless selfishness of political dictatorship.

The third giant concentration of power is in the activities of the Federal governmental establishment.

Under the impetus of the depression in the early 1930's, the Government perhaps with good intentions moved into many fields which had heretofore been reserved for private endeavor. Somehow, men, lacking confidence in their own ability to solve the Nation's economic ills, subscribed to that ancient fallacy that a powerful central government could do more for man than man could do for himself. And to create this power, the gradual assignment of individual

freedom, the collective control of big government, appeared to be desirable.

Power is an intoxicant. It gives its possessor a feeling of omnipotence, it shouts down criticism, it dismisses failure contemptuously, it refuses to admit mistakes, it denies the dignity and importance of the individual.

The heartland and strength and growth of America has always been on the main streets of our small towns. We've been a Nation of small shopkeepers, of small manufacturers, of independent operators. The freedom of opportunity has been available to any man who would work for the accomplishment of his own goals.

Today, after 25 years of meddling and tinkering with the basic concepts of the Constitution with our ancient understanding of the position of a free man in a free society, and with our constant increasing dependence upon a central authority, in business and in labor and in government, the face of America's main street has been changed.

And this struggle for power continues and intensifies as the degree of power obtainable increases and intensifies.

If we are to reestablish a free America as the beacon light for all the world, if we are to triumph in this material struggle with the disciples of Marxian communism, if we are to provide for our children the land of opportunity our fathers gave to us, we must recognize, define and limit the continued concentration of power in our economic, political, and social society.

This is not time for timid souls, this is not the hour when men can back away from their responsibility, this is not the moment when we can concentrate on our own personal ventures and personal fortunes. This is a time for bravery, determination and understanding.

The strength of America is in the character of its individual people. And character strengthens in the face of adversity and problems. Character does not shrink back from the difficult, unpleasant duty.

If the Walker Party had preferred the sheltered safety of the established eastern cities, there would have been no gold dug from Lynx Creek and Prescott would probably not be where it is today.

If Charles Poston had preferred the luxuries of London or New York, Arizona never would have become a territory. If those brave men who followed Teddy Roosevelt up San Juan Hill had preferred the security of life at home to the responsibilities of free men, the lamp of freedom would have long ago been extinguished.

If the doughboy of World War I had made security the total goal of his life, the course of history would have been altered.

And if our own sons and fathers and brothers had preferred the safety of this protected continent to facing the evil challenge of the Nazi dictatorship, our world today would be a different world.

Are you and I less dedicated to the cause of freedom than those men and women who lived and loved, labored and died, that it might be preserved and perpetuated?

At this moment of peril the contest is not on a foreign battlefield. It is no further removed than our own neighborhoods * * * our home States. And the day of decision is marked for November 4, 1958.

The delegates to the Constitutional Convention ratified their labors and submitted it to their respective States on the 17th of September, 171 years ago.

The elections of 1958 will either ratify or reject their dedicated devotion to the dignity of the individual.

And while the struggle for power goes on all around us, in arenas which appear to be remote and untouchable by the individual citizen, the struggle and contest is not removed. For this is a contest for the allegiance of the minds of men.

Shall the exercise of the Federal Government be further corrupted and expanded into a completely paternalistic and collective administrative dictatorship?

Shall the power of the labor unions be expanded to where they will hold within their grasp the ability to dispense or deny the right to a livelihood to the wage earners of America?

Shall we encourage by apathy and indifference and the continuation of ridiculous tax laws a further concentration of power in big business?

If we follow the trend of the past 25 years, the independent businessman will disappear to be replaced by a managerial class operating the properties of gigantic corporate structures.

The independent craftsman will disappear to become a number in a union organization.

The gigantic Federal Government will expand its activities to administer paternalistic benefits with tax funds extracted from the impersonal corporations and the individual wage earners increasing its own power and importance by matching these two antagonists with each other.

The power for which these giants struggle does not belong to them and is not in their possession, for the power in this Republic reposes in the individual citizen and in his expression at the ballot box.

Let us unite, and let us enlist the active, concerned, informed ability of every man and woman who believes in freedom.

Let us express our decision in November. Let us deny the wisdom of those who offer us the pie-in-the-sky of collectivist paternalism in return for a surrender of our individual freedoms and responsibilities.

Let us reassert the dignity of the wage earner and his right to voice his opinions and express his wisdom through a democratically elected union leadership.

Let us remove every aspect of big government which inspires further consolidation of our economic system. And then let us reestablish that principle of limited central authority under which the States and the people of America created the greatest land of opportunity and freedom and spiritual independence ever known in the history of civilization.

Let us once more proclaim that ancient truth, that man as a child of God is not to have his labors or his wisdom or his substance tampered with, or controlled by any combination of governmental, economic, or social powers or authority.

Let us be hardheaded in our wisdom and our judgment. Let us become participants in the exercise of political government and thereby protectors of political freedom.

How can we do all these things? We can do them as individual citizens, both Republicans and Democrats. We can demand that candidates seeking public office be men of integrity and devotion rather than men of ambition.

We can demand that every aspirant for public office be a first-rate candidate worthy of our trust and confidence rather than the political hack who has curried favor with a few men who control in some cases the destiny of segments of the political parties.

We can denounce and refuse to accept that ancient enticing philosophy of something for nothing.

In our business world, we can examine and study and then carefully adopt a set of principles which satisfy the nature and condition of the independent individual. Certainly this is true: if the people of America who by their purchases support the American commercial establishment, express their disapproval of the concentration of power in big business, the businessman, sensitive to the necessity for the good will and favor of his patrons, will terminate that concentration of power.

The wage earners, in their union activities, with the help and understanding of their fellow citizens, certainly possesses the power to limit the expansion and concentration of arbitrary authority in the hands of a few central labor leaders.

All these things can be done. You and I can do them—do them as individuals. For nothing will be started and nothing will be accomplished until we as individuals commit ourselves, our labors and our support to that concept of the dignity of the individual man and the perpetuation of freedom so beautifully pronounced and so ably outlined in that document those gentlemen of Philadelphia presented to us 171 years ago in the City of Brotherly Love.

Address by Postmaster General Arthur E. Summerfield

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Thursday, May 8, 1958

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding address delivered by the distinguished Postmaster General, Arthur E. Summerfield, before the Brown County Republican organization at Aberdeen, S. Dak. I commend the address to all my colleagues. It is one of the most outstanding I have heard.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY POSTMASTER GENERAL ARTHUR E. SUMMERFIELD BEFORE THE BROWN COUNTY REPUBLICAN ORGANIZATION, ABERDEEN, S. DAK.

My fellow Republicans, I am both grateful and happy to be here tonight in South Dakota, in the midst of this great agriculture belt—this heartland of America—and to bring you greetings of the President of the United States, Dwight D. Eisenhower.

I have the wonderful coming home feeling here in this land so rich in opportunity, so steeped in the true-blue kind of Americanism that has made our country the most favored Nation on earth.

My political outlook, indeed, most of my life, has been formed in a middle-western setting much like this.

I was born not far from here, over in Michigan.

My father and his father were just as devoted as I have been to our Grand Old Party which, for more than a hundred years, has served America so faithfully and so well.

It is a very real pleasure to be here in the home State of two of the ablest of our United States Senators, your own KARL E. MUNDT, of Madison, and FRANCIS CASE, of Custer.

Both these outstanding Americans are rendering invaluable service not only to the people of South Dakota, but to all of our citizens.

I am pleased and honored to be on the same platform here tonight with the great patriot, your very able Governor, Joe FOSS.

You will, I know, send him to Congress where his sound judgment, aggressive leadership and great courage will make him an

extremely useful Congressman, particularly in these trying times when character and experienced military counsel are so urgently needed in the solving of our defense problems.

I feel certain, too, that you will reelect your able Congressman, E. Y. BERRY, of McLaughlin, to represent your Second District for the fifth time.

Congress BERRY is urgently needed back in Washington where his intimate knowledge of Indian affairs and mineral conservation is so essential to the economic well-being not only of South Dakota, but the Nation as well.

South Dakota is unique among these United States because you folks have kept faith with the traditional Republican virtues of thrift and fiscal integrity.

The people of your great State are not burdened with a State income tax—not burdened with one red cent of bonded indebtedness.

The fine leadership in good government in South Dakota will be continued whether you elect that experienced administrator, Lt. Gov. Roy Houck, or your able Attorney General Phil Saunders in the gubernatorial elections this fall.

My fellow Republicans of South Dakota, I sincerely salute you for your great accomplishments.

I can well understand also why you have been called the opportunity State and why your strong economic position makes South Dakota an inviting area for industry and investment capital to flourish and prosper.

The State and the Nation owe all of you a vote of thanks.

It is especially pleasing to come into this agricultural area during an era of peace when agriculture is successfully working its way out the maze of problems which confronted it after American participation in two wars in one generation.

There are still troublesome problems besetting agriculture today, but the picture is encouraging.

It is especially encouraging to you who are working with our great President Eisenhower and the Republican administration in trying to formulate policies and bring about programs which will help farm operators obtain the full parity of income to which they are entitled and which the President and all of us want for the farmers of America.

My friends, I have, like most of you, made my own way.

I have fought my way up through political and economic affairs in the community, in the locality, in the State, and in the Nation.

Over these years, I have been inspired not so much by the plentiful opportunities I have found along the way as by the tough and sturdy qualities of our people—the strength that flows from the grit, the eager competitive spirit, the proud self-reliance, the instinctive confidence of the great majority of Americans.

And this, too, I have noted, as you doubtless have: these strengths of our people are founded in a deep religious faith, a faith which is accountable for our political system and for the concepts immortalized by our Founding Fathers.

These truths—that faith, this strength of character—these always have been especially notable in this part of our country.

Perhaps that is because of the nearness, relatively speaking, of this region to the frontier.

Perhaps it is also because of the proximity of people here to the soil, to the eternal verities of nature, to the evidences of divine purpose so plainly revealed in your great plains, your glorious sunsets, the bounty of your land, and the eagerness of everyone in these parts to achieve for himself and to build a better future for his family and his fellow man.

At all events, such thoughts and feelings always recur when I come into this area.

And today, of course, I am deeply aware in addition that this is a political meeting of politically informed people—gathered for a political purpose.

And aware, too, that I speak to you as the former chairman of the Republican Party, and at the moment your Postmaster General.

Having such thoughts, my urge is to talk here of the truly basic considerations affecting our country—of the principles and concepts which in my recollection are the most meaningful to you folks who are the kind I have grown up with and over the years have known the best.

I enter upon this kind of discussion in this meeting for this reason alone:

With, I am sure, many of you, I look to our country's future with a confidence that simply will not be downed.

Yet I harbor a deep apprehension.

I am gravely concerned lest collectivistic socializing influences for years at large in our country may, in due course, recapture the reins of our Government, give them another mighty pull to the left, and thus divert for all future time our Nation and our people from the time-honored ways, convictions, and attitudes which have ever been the pillars of American liberty and opportunity.

You dedicated Republicans surely see, as I do, the clear portents of the times in which we live.

In many ways this is, in our history, our supreme test—a period every bit as grave and as fraught with significance as our revolutionary crisis two centuries ago.

We clearly see the gravity of the events of which I speak.

Across the seas a mighty nation has arisen.

Its foundation is repudiation of divine purpose.

It is materialistic, treacherous, wholly devoted to worldly goals.

Of human life and human worth it is utterly contemptuous.

Its leadership is tyrannical and cruel.

Its ambitions are insatiable.

Daily it feeds and grows like a vampire, subsisting on the misery of its own people.

It has objectives which to us are vastly evil—the extinction of western civilization—the destruction of every humanitarian ideal and impulse—the enslavement of mankind—the obliteration of man's acknowledgment of even the existence of God.

This menacing mass of humanity, numbering over 800 millions of enslaved people, has become in these times armed with weapons and a technology indescribably destructive.

Not only does it threaten western nations with death and ruin on a scale unmatched in history; today it also threatens the annihilation of humanity itself.

By force of arms, by threats of force, by economic bondage, cajolery and pressure, by open subversion and covert penetration, by cynical blandishment and deliberate distortion, by a Niagara of falsehoods cascading from radio and press and in newspapers, books and pamphlets—by whatever means, fair or foul, this evil force relentlessly pursues its goal of global domination.

With that conquest, it hopes finally to blot out for all time the human values so hard won by thousands of millions of men and women of all nations and all the ages.

Ballistic missiles, nuclear explosives, supersonic aircraft, massive ground forces, the largest submarine fleet in history, a rapidly growing industrial machine, an outpouring of skilled scientists and engineers, all this is the devilish tool of a godless tyranny that values as nothing human life and liberty and strives only for world mastery.

That, my friends, is the shape of things across the seas.

That menace, we must never forget for an instant, pervades the times in which we live.

To each of us, whether we live here in America's heartland or on the shores to the east or the west, this towering threat of Soviet imperialism has a meaning that is immediate and personal and long-lasting in its impact.

Wherever we live, we cannot escape the heavy burdens imposed by this greatest of all threats to human dignity and freedom.

You feel those burdens here, as your fellow South Dakotans feel them in Maine, Florida, and California, in the whiplash of taxes, in the continuing induction of young men into the Armed Forces, in the growth of huge military, naval, and Air Force installations, in the maintenance of large Reserve and National Guard units in our towns and cities and on the campuses of our colleges and universities.

We see them in the white streamers far above us in the skies as huge jet bombers conduct their awesome aerial patrols so fateful to any would-be aggressor.

We sense them as we know, perhaps not realizing the figure, that each minute we spent $50,000 for our defenses—while I have been speaking, spending a half-million dollars—almost every cent of which is wrung from the ingenuity and effort of private citizens who must make their own way in America's system of free enterprise.

As we ponder these things, we think too of the great accomplishments left undone due to the looming menace beyond our shores.

We think of the $200 billion spent only for military purposes in just these past 5 years, a sum so huge as to defy understanding.

We know from our great President the vast good it could have done in a more peaceful world.

We know it could have built all the Nation-spanning highways America needs, all the hospitals needed for 10 years to come, all the schools needed for another decade, all the hydroelectric dams America could usefully build, and yet could have left us some $50 billion more to cut taxes or reduce the national debt.

Knowing these things, we know that somehow, in such a time, there must surely be basic concepts of Government that must be applied consistently and firmly if we are to save our system and pass it on unimpaired to our children and those to follow them.

And then, as we look to our Nation's domestic affairs, what do we see?

We see the bounty for which America is justly famed, a richness unmatched anywhere at any time, an individual well-being, a comfort, a satisfaction of basic needs that have never been approached in all human history.

Yet, in the shifting winds of American life we see puffs of dark clouds which we recognize as harbingers of rough weather sure to come unless we act in time.

We see an enormous concentration of economic power in the hands of organized labor, power used not only to bludgeon management, but also to dominate and intimidate elected officials of Government, the leadership of a great political party, and even the selection of candidates for the highest offices in the land.

Additionally, we see millions of dollars being taken from laboring men and women, put into political pressure groups employing full-time political organizers, creating political organisms of crushing power in behalf of candidates selected not by the workers who paid the dues, but by labor's privileged few.

And, in the process, we see our elective system becoming more and more the catspaw of the lowest common denominators of human character, catering more and more to the greed and self-centeredness of classes and segments and sections of the populace in order to serve equally selfish, equally self-centered ambitions of demogogic leaders

who, by cynical raids on the Federal Treasury, seek to advance their power at the expense of the public.

Again, then, as we look upon these characteristics of the times in which we live, we ponder the future.

And again we wonder, is there, in these times, something truly fundamental, something firm and stable, something to which we can confidently cling as we make our way through such troublous events to a brighter, more promising future?

What, in short, can we do, each of us, all of us together?

What can we do to ensure that, as we confront this terrible Soviet menace seeking to master the world, as we take measure of the growing danger of high-pressure political power seeking to dominate our country, as we struggle to carry the heavy and growing burdens of our own defense, just what can we do to make certain that tomorrow, next year, and on into the future there will surely be liberty preserved for ourselves and our children?

What can we do to see that our free institutions survive, that our free enterprise is not overwhelmed, that America will continue to symbolize human achievement and happiness and freedom to all the world?

Is there—can there be—anything that you can do and I can do?

In answer to these questions, which so long have perplexed many of our people, I say that there are, indeed, solid anchors to which we can hold with assurance amid the swirling events of the middle 20th century.

I say that, most certainly, there are specific and identifiable things you and I and our neighbors can do to help preserve liberty and opportunity in America.

Further I say, that we must—imperatively we must—hold to these anchors not alone for our present well-being, not only for our children, but also for free men everywhere and, in truth, for the very salvation of humanity.

These thoughts bring me unavoidably to the roots of our political processes—and back once again to the great significance of the Republican Party to each of us and to our country.

Clear it is that the greatest trouble of our times is a willingness of too many among us to drift with changing political seasons, to be willing to stand politically for little or nothing, to accept compromise with principle as if expediency were itself a precept of government.

Clear it is that far too many among us fail to discern the enoromously significant differences between the two great political parties which daily contest with each other for the control of our governmental policies and programs.

Clear it is that many, too many, Americans have become prone in the past quarter century to look to Uncle Sam, as if he were some distant rich relative whose wealth can be bestowed upon you and me and our cities and States without any expense to ourselves.

Clear it is that unless we Americans come to understand far better than we do today that it matters tremendously to America's future which party holds the reins of the Government—we are certain to float aimlessly with the tide of events and to witness the gradual destruction of the basic principles which over the years have preserved our freedom and our system of private enterprise.

It may seem farfeteched when I say that your degree of Republicanism bears directly on the success of our efforts for world peace.

Maybe you would consider it at first as sheer exaggeration for me to say that your willingness to work and sacrifice in behalf of Republicanism has much to do with whether or not America will be adequately defended in this time of intercontinental missiles and hydrogen bombs.

And maybe you think it nonsense when I say that your freedom of decision here in South Dakota, your ability to make a living, the protection of your property values, the security of your jobs, the growth of your communities, and the standard of values of your children are all intimately related to whether or not Republicanism is successful in America's political life.

Yet, every one of these things is true.

Let me explain.

I have said that our two great political parties are entirely different.

I say this despite the current tendency of far too many of us to say that the present administration and some of the New Deal and Fair Deal varieties of government are much the same.

The truth is that this administration is totally different from any Democrat administration you can conceive of in charge of national affairs.

There are two basic reasons for this.

They go to the very heart of Republican political philosophy.

The first reason is simply this:

Republicans, as a party, believe in liberty not as an abstract thing, but as a very personal matter for the individual citizen.

Republicans, as a group, believe that each individual in America must be left as free as he possibly can to work out his own destiny in his own way toward goals of his own choosing.

And secondly, we Republicans believe, as a group, that each individual citizen is a singularly uncommon sort of person.

We believe that the individual in America is able and responsible, that he is entirely capable of making his own decisions, that he is quite able to get along without being nursed and fondled and fed political pabulum by a benevolent bureaucracy back in Washington, D. C.

We believe, as a party, that wisdom resides more in individual citizens back home than in some elected or appointed governmental employee.

We believe that America will be stronger and her liberties better protected as Central Government is restrained, as local government is strengthened, and as all government is kept to the very minimum consistent with public need.

Believing, then, as we do, that the key to our system is the liberty and capability of the individual citizen to act and do for himself, we begin to understand why our party stands as it does for various public policies and programs.

Let me give an example or two.

Consistent with our faith in the individual, we fight against legislation designed to favor classes in America and we support legislation to encourage individuals to venture and risk and do for themselves.

Consistent with that faith, we work constantly to get the Federal Government out of competition with private enterprise.

Holding to our basic philosophy, we struggle persistently to return to States and local governments responsibilities and revenues preempted by Uncle Sam and taken to Washington, D. C., during the past quarter century of New Dealism and Fair Dealism.

Reflecting our faith in the good sense of the individual citizen, we Republicans, as a group, have consistently worked over the years to keep the cost of government to the minimum—to keep its size as small as possible—to make the tax burdens as low as possible.

And indeed, to cut taxes whenever and wherever this could be done consistent with national obligations.

Our basic philosophy demands this of us, for we believe, as a party, that the individual citizen can more wisely invest and use his money than can some bureaucrat far away in Washington, D. C.

We completely reject the idea that career government employees know better what is good for you here in South Dakota than you do for yourselves.

Having faith in the commonsense soundness of these fundamental political beliefs, I am certain, my friends, that you see what I meant when I said that your ardency in the cause of Republicanism relates directly to our efforts for world peace—to the soundness of our defenses—to the preservation of American liberty.

If we are weak internally, American efforts to keep world peace are weak.

If we are financially on the skids, our confidence gone, private enterprise discouraged, our will-to-do weakened, our defenses will surely go to pot.

If our liberties are progressively restricted, our self-reliance eroded away and our decisions made for us by some bureaucrat far away in Washington, D. C., we can hardly belligerently wage the battle for freedom elsewhere in the world.

This means, I believe, very specific things to you and to me.

Earlier I mentioned anchors.

I said we must hold fiercely to them in the interest of America's future.

Those anchors are the principles of our Republican Party.

It is not enough to sit there and shake your head up and down in agreement.

Yes, we believe in individual freedom.

Yes, we believe in the good sense of the individual.

Yes, we therefore stand for small government, for free enterprise, for letting the little fellow work out his own destiny with minimum interference from Washington.

But, my friends, shaking your head up and down won't get us anywhere.

Merely agreeing won't keep your freedom and your livelihood.

You and I and folks like us all over America have got to get the petty irritations out of our system.

We have got to stop picking and hacking at each other.

We have got to start looking at the big picture instead of nitpicking.

We have got to make certain that leftwing, collectivist, bureaucratic planners don't take over our Government all over again 2 years from now.

And in the meantime, we have got to make sure that President Eisenhower is given once again a Republican Congress to work with—so this Republican program of ours can be as effective as it should be in the interests of all Americans.

Most solemnly I say this to you:

If in President Eisenhower's last 2 years of his term he is confronted by a Democrat Congress, then if America doesn't face a crisis abroad during that period, it will hardly matter—for the crisis, I assure you, will be genuine here at home.

And so, we are talking about your welfare.

We are talking about your children's future.

We are talking about the cause of peace and freedom in the world.

We are talking about America's safety in the nuclear and missile age.

All that is in your hands.

Is it worth your effort?

Is it worth doing more than shaking your heads up and down?

Certainly it is.

My friends, it is up to you, and no one else, to decide America's future.

I call on you to join me in making sure it is a bright one.

Meeting of the Wisconsin Academy of Sciences, Arts, and Letters

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 8, 1958

Mr. WILEY. Mr. President, it seems clear that this 85th Congress will be recorded in history as a science Congress.

Probably few, if any, Congresses in American history will have devoted so much attention and, I believe, so fruitfully, to the various sciences than this, the 85th Congress.

I particularly commend the important work which has been done, and is being done, by my colleagues on the Senate Committee on Government Operations in their review of the Science and Technology Act of 1958, and related issues.

Our associate, the distinguished junior Senator from Minnesota [Mr. HUMPHREY] has devoted a great deal of time and energy to this important subject of advancing American science and technology.

In our technical race with the Soviet Union, we cannot afford to be second-best; either in our pure research, the so-called basic research, or in our applied research.

I particularly commend the very excellent background material which was prepared by the staff of the Government Operations Committee in the form of Senate Document No. 90.

In addition to all of the many other phases of that document I found of particular interest its section devoted to scientific programs abroad. This section was prepared by no less a personage than Dr. Wallace R. Brode, the distinguished president of the American Association for the Advancement of Science, who, with Dr. James Killian, is now working so industriously to advance American science.

It is my hope that the United States will get the maximum benefit from scientific research abroad. And, pursuant to President Eisenhower's science for peace program, as stated in his sixth State of the Union Message, it is my further hope that we will contribute generously and abundantly to scientific advances of other nations for peaceful purposes.

Naturally, the legislation which this, the 85th Congress, writes can be no better than the application of that legislation at the grassroots of America.

I am certain, for example, that the University of Wisconsin will continue to be in the forefront of scientific advances, as I have previously pointed out.

Coincidentally enough, at the very time the Senate Committee on Government Operations was hearing testimony from scientific leaders of our land, there was meeting at Whitewater, in my State, the Wisconsin Academy of Sciences, Arts, and Letters.

At this session there were announced the scholarship winners in the 10th annual talent search conducted by the academy in conjunction with the science clubs of America.

It has been my pleasure, previously, to commend the work of the science clubs of America and, in particular, the work of Mr. Watson Davis in that connection. I can think of few better illustrations of stimulating the constructive energies of American youth in wholesome, fruitful ways than what has been accomplished by the science clubs throughout this land.

The Wisconsin Junior Academy of Sciences, Arts, and Letters will, I know, continue to play a most active role in this regard.

I ask unanimous consent to have printed in the Appendix of the RECORD the text of an article from the May 5 issue of the Janesville, Wis., Daily Gazette describing the comprehensive program of the senior and junior academies, including a list of the fiine folks—adults and teen-agers—engaged in this work, specifically. It is upon their shoulders, and similar shoulders throughout the land, that America's future scientific position depends.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AWARDS MADE, UNIVERSITY OF WISCONSIN MAN ELECTED NEW PRESIDENT AT ACADEMY OF SCIENCE CONVENTION HELD IN WHITEWATER

(By Bonnie Moody)

WHITEWATER.—A highly successful 2-day session of the Wisconsin Academy of Sciences, Arts, and Letters, the first ever held in Whitewater, was concluded Sunday afternoon with a 6-hour trip to parts of the Kettle Moraine. Prof. Henry Meyer, Whitewater, who served as chairman of local arrangements, estimated that more than 300 persons attended this year's meeting, coming from all parts of the State.

New officers were elected Saturday afternoon at a short business meeting. Robert J. Dicke, of the University of Wisconsin, Madison, was named president. A member of this year's program committee, he will succeed Rev. Raymond H. Reis, S. J., Marquette University, Milwaukee.

Other new officers chosen were Professor Meyer, president-elect to understudy the president; Roy J. Christoph, Carroll College, vice president (sciences); Cyril C. O'Brien, Marquette University, vice president (arts); Haskell M. Block, University of Wisconsin, Madison, vice president (letters); Walter E. Scott, Madison, Wisconsin conservation department, reelected librarian; Roger E. Schwenn, Madison, of the University of Wisconsin Library, secretary-treasurer; and John W. Thomson, University of Wisconsin, Madison, chairman of Junior Academy of Science.

Stephen F. Darling, Lawrence College, Appleton, was chosen to serve as representative on the AAAS Council.

Elected to serve on the membership committee were Harold A. Goder, Wisconsin State College, Platteville, chairman; Bernice Cooper, Wisconsin State College, Superior; Otto L. Kowalke, University of Wisconsin, Madison; Fred Kaufmann, University of Wisconsin, Milwaukee; John F. Vozza, University of Wisconsin Extension Center, Racine; and Frederick W. Hainer, Clever-Brooks Co., Milwaukee.

JUNIOR CONTESTS HELD

Special praise was heaped upon the high-school seniors who participated in sessions of the Junior Academy of Science, also held here Saturday, by the adults who attended their meetings.

For the students attending, the high spot was announcement of this year's winners in the 10th annual Wisconsin science talent search conducted by the academy in conjunction with the science clubs of America. There were 89 entrants this year and 12 winners, 8 boys and 4 girls.

Jane Karau, of Columbus High School, Marshfield, was top winner and nominated by the committee of judges for a 4-year tuition scholarship to Marquette University, Milwaukee. Her subject was "Natural Dyes for Home Use." In preparing it, she did research on how past generations, as far back as the Indians, used to extract the colors from walnuts, birch, and clover to dye fabrics.

Miss Karau and Daniel Gollnick, of La Cross Central High School, were named recipients of $100 cash scholarship awards made available through the Junior Academy committee of the State Academy. Since Miss Karau could not accept both the Marquette scholarship and the cash award, Priscilla Pestka, of the Mary D. Bradford High School, Kenosha, was named alternate winner to replace her.

Gollnick's paper was entitled "Effect of Natural Phenomena on Cosmic Ray Intensity," which he demonstrated with the most delicate of instruments.

Called Plant Rooting Media, Miss Pestka's subject dealt with a study of the marvels of nature's rooting plants.

The other winners and their subjects were:

Elliot R. Dreger, Kenosha, "Halogen Anion Analysis"; David E. Kullman, Kenosha, "Corrosion Inhibitors"; Caryl Ann Milkowski, Kenosha, "Prejudice Determination by the Use of Jokes"; Clarence R. Netwal, La Cross, "Unusual Uses of Light"; Peter C. Owzarski, Jr., Rothschild, "Experience with Rocket Fuels"; Samuel F. Pellicori, Kenosha, "Growth of Crystalline Solids in a Magnetic Field"; Ronald S. Saunders, Madison, "Anti-bubbles and Thickness of Air Films"; Henry E. Thompson, Racine, "Dial the Answer"; and Jacqueline J. Werner, Sheboygan, "Fractional Derivatives."

Judges for the Science Talent Search were Jesse M. Caskey, Northland College; Ralph C. Huffer, Beloit College; J. B. Greene, Marquette University; Daniel Q. Thompson, Ripon College; Robert M. Rosenberg, Lawrence College; Frances W. Jones, Milwaukee-Downer; L. A. Fraser, University of Wisconsin; and Roy J. Christoph, Carroll College.

Memberships in the American Association for the Advancement of Science were won by Edward Carberry, Nicolet High School, Glendale, and June Horock, Lincoln High School, Wisconsin Rapids.

Margaret W. Hicks, Nicolet High School, Glendale, and Tim Hulich, Aquinas High School, La Crosse, were elected co-chairmen of next year's meeting.

ONE HUNDRED TWENTY-THREE AT BANQUET

An outstanding part of the 2 days was the Academy banquet Saturday night at the Country Club. One hundred and twenty-three members heard Father Reis, Academy president and main speaker, give an excellent talk entitled, "A Study in Human Genetics."

Three busloads and several privately owned cars carrying about 115 members of the 2 academies departed at 9 a. m. Sunday for what proved to be the most popular portion of the 2 days for many, the tour of the Kettle Moraine. Prof. Warren C. Fischer, chairman of the department of geography at the local college, was tour leader and gave a running commentary from the starting point at Eagle until its end at Holy Hill.

Emil P. Kruschke, associate curator of botany, Milwaukee Public Museum, was botany leader. It was his opinion that the oaks and hawthorns are the most significant vegetation of the Kettle Moraine area and

that within the next 2 weeks, its beauty should be tops.

Clyde Smith, superintendent of the Kettle Moraine Park, also made the tour, explaining its future development and pointing out the locations for the various improvements planned.

Speaking at a symposium Saturday, Raymond T. Zillmer, a Milwaukee attorney, strongly recommended that the academy exert efforts to have the Federal Government acquire the entire Kettle Moraine for a national park.

In other business, the academy voted an honorary life membership to Dr. Hugo W. Rhode, Oconomowoc, a member for 60 years who has distinguished himself in the field of chemistry.

Next year's meetings, of both the academy and junior academy, will be held in Platteville.

Talmadge Farm Plan

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 8, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article which I wrote for the May 7, 1958, issue of the Georgia Farmers Market Bulletin explaining my suggested new farm plan, and the column written by Georgia Commissioner of Agriculture Phil Campbell endorsing it, published in the same issue.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TALMADGE TWO-PRICE PLAN

(By Senator HERMAN E. TALMADGE)

Many farmers have urged me to offer a bold new national farm program to rescue this Nation's agricultural economy and, after much study, I have formulated what I consider to be such a program.

It is my conclusion that our farm problems cannot be solved until the Federal Government is removed from the business of buying, storing, and selling agricultural commodities and the responsibility for marketing farm produce is returned to the farmer and private enterprise where it belongs. It is in that light that I propose to let the farmer plant what he wants to plant and sell his crops for the best prices he can get with the Federal Government paying him the difference between the prices he receives for commodities sold for domestic consumption and 100 percent of parity.

My proposed farm program has five points which are as follows:

1. Eliminate all acreage controls and Government loans.

2. Assign each farmer growing basic commodities a domestic production quota to be expressed in terms of unit measurements (pounds, bushels, bales, etc.) which would be the same percentage of the national consumption of basic commodities that the farmer's historic acreage base bears to the total national acreage base.

3. Guarantee and pay to each farmer a sales price support of the difference between the price he receives for his domestic production quota and 100 percent of parity.

4. Require each farmer to submit a bill of sale with his application for sale price support payments.

5. Impose a maximum of $25,000 on the amount of sales price support payments which any individual farmer could receive.

Such a program would eliminate redtape, end the accumulation of surpluses, cost the taxpayers less and once more let the farmer be the master of his own destiny. It would give consumers a price break and would serve to put both raw and manufactured farm products back on the world market at competitive prices. Because it is geared to domestic production, it would amount to no more than giving the farmer the same protection which labor gets with the minimum wage and industry with the tariff.

Although it is generally agreed that any new farm plan to be successful must be one which lets the farmer farm and guarantees him his proportionate share of the national income, there is no such consensus as to how those objectives should be achieved. Therefore, in announcing my ideas about what a new farm program ought to embrace, I am asking Georgia farmers to write me what they think about them.

I want to hear from every farmer in Georgia and hope each will drop me a line at the Senate Office Building in Washington. A tabulation of the replies I receive will determine whether I offer legislation to write the Talmadge farm plan into law.

TWO-PRICE SYSTEM IS ILLUSTRATED

(By Phil Campbell)

In the accompanying article, Senator HERMAN E. TALMADGE has presented his proposal for a new national farm program based on the two-price support system.

I am in wholehearted agreement with this program advocated by Senator TALMADGE, which last year was introduced by Senator RICHARD RUSSELL and Congressman JAMIE WHITTEN of Mississippi as strictly a cotton support measure.

I will use cotton as an example to describe the workings of this two-price program. A farmer who presently has 25 acres for his cotton allotment would receive approximately 16 bales for his share of the domestic allotment to be consumed in the United States. He would receive 90 percent or 100 percent parity for these 16 bales on today's market.

One hundred percent parity would be well over 40 cents. In addition to this 16 bales supported by the Federal Government a farmer would be allowed to produce as much additional cotton as he desired at a world market price which on today's market would be 20 to 25 cents per pound.

I strongly support this two-price system as I feel it is the only plan basic and sound enough to be permanent without revision from session to session of Congress, with the consequent uncertainty on the part of the farmer in making his farm plans.

Senator Bridges Honored by Jewish League Against Communism

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, May 8, 1958

Mr. COTTON. Mr. President, earlier this week, my colleague, the senior Senator from New Hampshire [Mr. BRIDGES], was honored by the American Jewish League Against Communism for his leadership and public service. The plaque presented to my colleague at the award luncheon in New York is engraved with these words:

Presented to Senator BRIDGES for courageous leadership and outstanding public service to his country by the American Jewish League Against Communism, 1958.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Herald Tribune for May 6, 1958, which comments on the award luncheon, and contains the thoughtful remarks which the senior Senator from New Hampshire made.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR BRIDGES WARNS OF REDS' LULL; CALLS PRESENT INACTIVITY IN UNITED STATES ONLY TEMPORARY

(By Paul Tobenkin)

Senator STYLES BRIDGES, Republican, New Hampshire, said yesterday that the apparent lull in Communist activity in the United States is merely temporary and that the Communists will resume fullscale operations as soon as conditions make it possible for them to do so.

Senator BRIDGES spoke to 450 persons at the the annual award luncheon of the American Jewish League Against Communism at the Waldorf-Astoria. He and Fulton Lewis, Jr., radio commentator and columnist, received the league's 1958 public service awards for their fight against communism.

Asserting that the Communists fish best in troubled waters, Senator BRIDGES said:

"Let us make no mistake about the need to continue this fight. The awakening of our people to the dangers of communism within our borders has caused some to believe there is a lull in subversive designs upon us. But this is temporary. The Communists have merely transferred their efforts to other parts of the world until conditions give them another chance in the United States."

Discussing the unchanging character of Russia's determination to control the world, Senator BRIDGES said:

"The Soviet Union has not changed in either its aims or conduct. Its goal is still world conquest. Its methods are just as brutal and despicable to all that is upright and decent in the history of mankind. And because the Soviet Union has at its disposal the awesome power of modern science and technology, it is today more dangerous than ever."

Senator BRIDGES said that the fate of western civilization depends in considerable measure on the leadership and strength of the United States and that the first step necessary for the preservation of freedom is to keep the United States militarily strong.

"It was the weakness of the nations of Eastern Europe at the close of the war that permitted the Soviet Union to overrun and subjugate them," he said, adding:

"And so it has been all over the world. Wherever force to resist was lacking, either the Soviet Union, or its puppets, moved in for the kill.

"From this we learned our second important lesson; that wherever we oppose force to conquest, the aggressor will generally desist.

"We saw this happen in Iran, Greece, Turkey, the Berlin airlift, Formosa, Korea and the Middle East.

"Out of necessity and much against our will, we of the free world have had to learn the language of force in order to travel safely through the dark alleys of Communist world politics.

"We must be prepared to meet aggression in any form—economic, political, military. We must meet it with determination."

President Eisenhower and Secretary of State John Foster Dulles are correct in their opposition to another summit meeting without prior preparations.

The United States must stop permitting Russia to assume that we will never act until she strikes the first blow.

The bronze plaque given to Senator BRIDGES was for courageous leadership and outstanding public service to his country.

Other speakers included Mr. Lewis, George E. Sokolsky, writer and president of the league, and Roy M. Cohn, vice president and treasurer of the league and former chief counsel to the late Senator Joseph R. McCarthy's Permanent Investigations Subcommittee.

Mr. Cohn recounted the 10-year history of the league in exposing Communists and urged a program of positive Americanism.

Mr. Lewis said that since the death of Senator McCarthy there has not been a single open investigation of communism by a committee of Congress.

The Retirement of Senator Flanders of Vermont

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Boston Sunday Globe of May 4 concerning the impending retirement of our distinguished and beloved colleague from Vermont, RALPH FLANDERS. Mr. Bob Healy of the Globe has done such a fine job of reviewing some of the qualities of RALPH FLANDERS that have so endeared him to his colleagues that I felt such an article would be of interest to the entire Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FLANDERS LEAVING SENATE TO ENJOY VERMONT LIFE

(By Robert Healy)

WASHINGTON.—Just before 9 on these balmy spring mornings a green Ford Thunderbird, with the top down, rolls up to the side door of the Senate Office Building.

From out of the bucket-like seats steps RALPH E. FLANDERS, the 77-year-old Senator from Vermont.

Several pieces of yellow note paper labeled "Things to Remember," bulge the handkerchief pocket of his suitcoat. So they won't be forgotten, they are snatched by a secretary as he steps into his third floor office.

It's not that age has made him absent minded. He has been that way since he was 30 years old and these little coat pocket notes are his liaison between home and office.

At night, he leaves with more notes for his wife.

IN SENATE SINCE 1946

This methodical, deep-thinking Yankee, at times a very controversial figure, was sent to the United States Senate in 1946. Now after 12 years, he wants to hang up his campaign spikes and become a full-time Vermonter.

Senate life has become confining for him and there are many things that he and his wife, the former Helen E. Harkness, of Springfield, Vt., want to see and do in the years to come.

He hopes to keep his connections with public life to promote international disarmament and to study secondary education in Vermont and elsewhere in the Nation.

HIGH SCHOOLS CALLED CLUBS

On high schools he has this to say: "They have lost their interest in scholarship. Under the extreme modern educationists (not educators) they have become nothing more than teen-age clubs."

He makes his declaration on disarmament today before the University of New Hampshire.

When he announced this week that he would retire from the Senate at the end of the term, press association stories noted that it was he who initiated the fight in 1954 to censure the late Senator Joseph R. McCarthy, of Wisconsin.

On this subject he will add nothing that is not in the record, except that he felt it was a job that had to be done.

WROTE SPEECHES IN VERMONT

Three speeches that he made on the Senate floor—each tougher than the preceding one—he wrote in his study at his white colonial home in Springfield, Vt. He received hundreds of letters both pro and con on the subject and even today there are persons who want to discuss the matter with him.

He once suggested that it might be a good idea, when he dies, if all the letters that he received on the McCarthy issue be turned over to either a university or foundation for academic study.

DRESSES IN TRADITION

The junior Senator for the Green Mountain State is a real individualist about dress and tradition.

He wears those felt hats turned up in the front and wild tartan vests. "Those preposterous vests he wears even to the best affairs," said one of his close Senate colleagues.

When he first came to the Senate Chamber he scoffed at senatorial courtesy and burlesqued it mildly.

"This excess of courtesy used by the Senators is an amusing thing, after all, if you listen to it and are not accustomed to it," he said.

"Alben Barkley, then floor leader, sat down next to me one day and told me although I found senatorial courtesy amusing I would find uses for it. He suggested that I study it before I made any more fun of it."

BARKLEY WAS RIGHT

FLANDERS did just that and found he could get across a keen political dig under the guise of senatorial courtesy. "It is really much more sophisticated than the fist shaking that goes on at the House side about once a year," he said, "and much more ingenious."

"Barkley was right."

He hasn't exactly lived by the senatorial courtesy book since then however.

In one of his weekly radio broadcasts to the folks back in Vermont, the Senator, describing the powerful Democratic Senate floor leader, LYNDON JOHNSON of Texas, in action said:

"He looked like an orchestra leader except that he didn't stand in one place. He was up and down the aisles, in and out of the seats, shushing up one Democrat, encouraging another, fixing the necktie and brushing off the shoulders of a third while he whispered in his ear and he even went through the motions of winding up a mechanical toy as he endeavored to get the President pro tempore into high gear.

"So far as we could judge, he got away with it all. No one else could."

FRANKNESS WON FRIENDS

Frankness has won him friends, however, on both sides of the aisle.

Senator JOHN SPARKMAN (Democrat, Alabama), told the story of how he had arranged for a paired vote on a farm issue with FLANDERS when he, SPARKMAN, was on a trip to Europe.

"A single vote would have changed the outcome. Every pressure was used to make him change events from the White House. But he stuck with it," SPARKMAN said.

SPARKMAN also confirmed a story that for years he and FLANDERS conversed at sessions of the Joint Economic Committee in Latin.

"We did jabber some," said the Alabama Senator.

FLANDERS has a working knowledge of Greek, French, and some German and is an avid reader of the definitive books.

Throughout his life he has been an inventor and an engineer. Friends say that even on trips, which he has made with his wife all over the world, he carries his slide rule.

He holds patents on a number of machine tools and has written books and many papers on the subject. His latest venture is the book entitled, "Letter to a Generation," which is dedicated to his even dozen grandchildren, "their future wives and husbands, whoever and wherever they may be; and the goodly generation of which they are a part."

It is a philosophical work with the avoidance of World War II without surrender as the subject. The book is a discussion of morals and ethics, economics and politics, disarmament and peace. It is the fruit of his 77 years for the young generation and is an excellent mirror of the Senator's mind.

ORIGINALLY MACHINIST

RALPH FLANDERS became machinist, draftsman, designer, editor, engineer, industrial executive, president of the Federal Reserve Bank in Boston and Senator.

He was born in Barnet, Vt., where his father was a woodworker and farmer. The family moved to Lincoln, R. I., where Ralph entered ungraded school at 8 and finished high school when he was 15. "A high school graduate in those days knew as much as a college graduate today," he said.

"There was French, Greek, and Latin, and we learned reading, writing and arithmetic. Above all we learned how to spell," a subject on which the Senator has strong feelings.

STARTED AS APPRENTICE AT 15

He entered a machine shop as an apprentice at 15 and 3 years later won his journeyman papers. His interest in obtaining theoretical knowledge of machine design and mechanical engineers' work won him promotion.

He wrote several papers which attracted attention and was offered in New York the editor's job on Machinery, a technical journal.

As an editor he had leisure time and spent it acquiring a foundation for mathematics and theoretical mechanics and in later years became an authority in the theory of gearing.

SUCCEEDED WARREN AUSTIN

He returned to Springfield after the editor's post and eventually became president and chairman of Jones & Lamson Machinery Co.

He succeeded Warren Austin, who was named ambassador to the United Nations, in the Senate. He had made one unsuccessful run against the present Senator GEORGE O. AIKEN, in 1940.

America Still Needs Pioneers

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, May 8, 1958

Mr. GOLDWATER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD, an address entitled "America Still Needs Pioneers," delivered by Cecil B. DeMille at the Broadcast Pioneers dinner in Los Angeles, Calif., on April 29, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA STILL NEEDS PIONEERS

(An address by Cecil B. DeMille, at Broadcast Pioneers dinner, Los Angeles, Calif., April 29, 1958)

Thank you, Mr. Patt, for that most generous introduction and for this citation from the Broadcast Pioneers.

You have made me feel a little less like Banquo's ghost at a broadcaster's banquet—but Plutarch says there is a skeleton at every feast, so I hope you will forgive me if I rattle it a bit.

I am not sure that I would qualify as a pioneer in broadcasting.

True, it is 22 years since I first said, "Greetings from Hollywood, ladies and gentlemen" on the Lux Radio Theater of the Air—but that association with broadcasting came to an end 13 years ago.

I am deeply moved by your remembering it here tonight.

That radio program meant a very great deal to me.

It is an honor when anyone asks you into his home as a frequent and familiar guest.

Week after week, for those 9 years, many millions of Americans opened their homes—and I think I may say their hearts—to those fine players who took part in those fine plays, and perhaps some opened their hearts to me.

Before going on that program, I had known something of what it means to reach millions of people through the theater and the motion picture screen—but the radio, as you gentlemen well know, gives an intimacy, a closeness, almost a membership in family circles all over this country.

It meant very much on those Monday nights to think that throughout the country, mothers and fathers were gathering their children around the radio in city dwellings and farm homes, that shut-ins and hospital patients, the blind, the crippled, and the very old and the very young looked forward every week to that hour when the magic of the theater came to them wherever they were, and that I had a hand in bringing it to them—and in return received their welcome and their confidence and their loyalty week after week for all those years.

But all that came to an end.

It was one of the most satisfying experiences of my life—and then it stopped.

Perhaps some of you may remember why.

I refused to pay a $1 political assessment levied by my union.

I was suspended by the union.

Under the union shop that meant that I could not work in radio any more.

There was no commercial television then, but since then the ban upon my right to work has been extended to television also, though there was no television union when I was denied the use of the air.

But I am not here to rehearse what is to some of you an old story.

I mention it only to help you understand how profoundly moved I am by your recognition of the work which was so very dear to me.

It is good to be remembered by you broadcast pioneers—just as it is gratifying when, even after 13 years, people still write to me or come up to me on trains or at airports or in stores or in the lobbies of hotels or on city streets and say, "I remember you on the Lux program."

And then those people usually add something which is very much more important than the personal compliment they are kind enough to pay me.

They usually say, "You were right not to pay that dollar."

They see that, as the Omaha World-Herald said at the time, "The issue cuts far deeper than the immediate controversy—it is far more important than Mr. DeMille or his union or his radio program or all of them together. To a considerable extent its symbolizes and dramatizes the most significant conflict of our age—the conflict between the individual and the organization."

In that editorial, the Omaha World-Herald puts its finger on the basic issue, which many leaders in the broadcasting industry and other industries apparently did not see in 1945—but millions of the American people saw it, and their awareness of it has been growing stronger through the years.

Does a man have the right to work—to earn bread for his wife and children?

Does that right belong to him—or to some organization which he is forced to join and which he is not free to leave if he is to go on working?

Should any organization have the power to cut off a man's livelihood and banish him for life from his chosen trade or profession?

Should a union have the right to assess its members for a political purpose?

This issue is not an old, dead issue.

If you think times have changed, ask the sign painters here in Los Angeles whose union has assessed them each $2 to fight the right to work—the same issue that I fought 13 years ago, the same tactics, the only difference is that the assessment is doubled now, or in some cases trebled.

Samuel Gompers, the father of our modern labor movement, said that loss of union membership in an organized trade was equivalent to capital punishment.

The Taft-Hartley Act was passed to free workers from that awful threat—but some unions have found a way to stay within that law and still keep the power of economic life or death.

They do not expel the union member who incurs the displeasure of his union bosses.

They merely suspend him and that is equivalent to his economic death.

He cannot resign and he cannot work.

That is something like telling a man he has been sentenced to death.

He is not going to hang—he is merely going to be suspended by the neck at the end of the hangman's rope.

Some people say, "DeMille can afford to talk. The loss of his job in radio did not mean the loss of food from his table or a coat from his back or a roof over his head."

And because that is true I have been able to speak for those who cannot speak—for the men and women who sent dollars and dimes to the DeMille Foundation, saying, "Use this money for our freedom, but don't mention my name because I have a family to support."

These are the same union members and their wives who, in State after State, in the sacred privacy of the voting booth, have cast their ballots as free Americans for laws protecting their right to work.

Thirteen years ago when the DeMille Foundation and other groups began their campaign for the right to work only 2 or 3 States had right-to-work laws, mostly inadequate.

Now 18 States, North and South, industrial and agricultural, have these laws—and the Supreme Court of the United States has upheld them on three separate occasions.

On the Federal level, the recommendations we made to the Senate and House Labor Committees in 1947 have been incorporated in the Taft-Hartley Act and applied in several cases by the National Labor Relations Board.

But this is not a historical question.

It is a very live issue.

In this State and some others it is the most prominent issue before the public—and it is not a partisan issue anywhere.

Workmen who are Democrats and workmen who are Republicans both need protection from bosses who follow neither Jefferson nor Lincoln but only their own greed for power.

At the very bottom of this issue is the struggle between the people of this Nation and the union bosses for the control of the country.

Public-opinion polls indicate that a majority of the people favor the right to work—the more people learn about this issue, the stronger public opinion for the right to work becomes.

Most people know now that the right-to-work movement is not antilabor.

The people are seeing through the propaganda gimmick of calling the right to work the right to wreck unions.

In the States having right-to-work laws, union membership has increased at a greater rate than in the States that do not have this protection.

The right to work does not hurt unions or union members.

It helps unions to serve their members.

It hurts only the power of union bosses to rule their members.

Some of the conclusions of the McClellan committee will interest those who are interested in union integrity.

I quote from the committee's report of March 24, 1958:

"There has been a significant lack of democratic procedures in the unions studied. Constitutions have been perverted or ignored. One-man dictatorships have thrived. Through fear, intimidation, and violence, the rank-and-file member has been shorn of a voice in his own union affairs, notably in financial matters. Use of the secret ballot has been denied in many cases."

And to all this abuse the individual member must submit in silence for he is required to maintain union membership as the price of keeping his job.

But if his right to work, regardless of union membership, is protected by law, he can demand fair play from his union officers, he can thwart their dictatorship, or he can leave a corrupt union and join a clean union or none at all, as he chooses.

The McClellan committee condemns certain managements for their illegal and immoral collusion with certain union leaders.

Where the worker does not have the right to work, he is a helpless pawn tossed on the bargaining table between corrupt union leadership and cynical management.

The McClellan committee refers to the "widespread misuse of union funds in the unions studied"—a total of "$10 million in union-dues money" lost, strayed, or stolen.

And note that the unions studied by the McClellan committee have only 2 million members out of the total union membership of 17 million.

I wonder how many times that $10 million would be multiplied if all the facts were known about all the unions in which these loose and corrupt financial practices prevail.

Whose money is this?

It is the hard-earned money of the individual workingman, who pays it to the union to represent him and look out for his rights.

And what can he do when he sees his money mishandled and stolen by those to whom he has entrusted it?

There is not one thing he can do, as long as his job and his family's food depend upon his keeping in the good graces of those who betray his trust.

But give back to that workingman his right to work—and he can stand on his own two feet as a free American and drive the money-changers from the temple of labor.

I do not say that a right-to-work law is the single answer to every problem in labor relations—but I do say that you can go through last month's report of the McClellan committee and find not 1 of the 11 glaring abuses listed in that report that could not be modified, if not wholly cured, if union membership were put on a completely voluntary basis.

Samuel Gompers also said, "No lasting gain has ever come from compulsion."

If he were alive today, he would see that the bitter fruit of compulsion is enslavement.

It is not unionism we oppose—but compulsory unionism.

The American people have accepted unionism as a necessary and important part of our national life, but they want it to be voluntary unionism.

They want every American to be free to join a union of his own choice—but free also to refrain from joining a union or to leave it if it fails to serve him.

This is the fundamental right which the citizens of 18 of our States now enjoy—and on which the citizens of several other States will soon be called upon to vote.

I have no doubt how they will vote if the case for the right-to-work is put before them with half the energy the union bosses are expending to deny the right to work to their members.

They are saying, or getting others to say for them, that right-to-work laws really don't accomplish anything—that working for the right to work is a waste of time—and that these laws are unenforced and unenforceable.

If right-to-work legislation is so unimportant and insignificant—if it is not a real threat to the corrupt power of the misleaders of labor—why are they fighting it so hard—why are they spending vast sums of money to oppose it?

How do those who say that right-to-work laws are unenforced and unenforceable explain the cases—in various State courts as well as the United States Supreme Court—in which right-to-work laws have been upheld and enforced?

They do not explain them.

They want to forget them.

The McClellan committee says that "the weapon of organizational picketing has been abused by some of the unions studied."

In Arizona and Arkansas, the supreme courts have curbed illegal picketing by applying the right-to-work laws of those States.

In Nevada and Tennessee, the supreme courts have protected the right of nonunion labor to work.

I cite these cases almost at random—I have not studied every case in which right-to-work laws have been tested in the courts—but these are sufficient to answer those who tell us that these laws are unenforced and unforceable.

I do not doubt that the right-to-work laws are violated in some places.

So are many other laws.

So are the Ten Commandments—all of them every day.

But that is no reason for repealing them.

The strength of the right to work is perhaps best demonstrated by the weakness of the arguments put up against it.

Sweep aside the deceptive fog of those weak arguments and the basic issue stands out crystal-clear: should a man be forced to join a union in order to get or hold a job?

That is the simple question which Americans are called upon to answer—it's a simple question, yes—but one which has its roots deep in the soil of the American philosophy of life.

Americans believe deeply that man is endowed by his Creator with certain unalienable rights, and the right to work is one of them.

Americans believe deeply that governments are instituted among men to secure these rights and that no government, and certainly no private group, may usurp these rights, and the right to work is one of them.

Americans believe deeply in individual responsibility—that every man should be free to exercise his God-given rights—and the right to work is one of them.

At the beginning of this campaign for the right to work, 13 years ago, when I was a younger man than I am now, I used to feel it necessary to say that there was no benefit in this campaign for me personally.

At the age of 76, one need not labor that point.

But I will go on speaking for the right to work—not my right, but the right of every American to work when he pleases, where he pleases, for himself or for whoever wants to hire him—as long as I have breath.

I am grateful to you for asking me to speak of it here, in this gathering of men whose eminence in your profession puts you in the front rank of leaders and molders of American thought.

I cannot close these remarks without referring to one whom you all knew, one who was in so many ways entitled to be called a broadcast pioneer, G. A. Richards—"Dick" Richards—one of the very few in the broadcasting industry who rallied to the cause of the right to work 13 years ago—one of those true pioneers of the kind that seemingly must be crucified in order to gain for others the rights denied to themselves.

Dick Richards' voice is silent now—but you have now the editorial freedom for which he was pilloried.

Use it for the freedom he cherished—the rights he defended—and the right to work was one of them.

You have given me more than a citation and a wonderful reception tonight.

You have given me a hope—not for myself, but for America—a hope that makes up, if anything could, for all that I loved and lost the last time I was permitted to say, "This is Cecil B. DeMille saying good night to you from Hollywood."

Resistance to the Recession in the Upper Midwest

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1958

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD more good news from the upper Midwest. It is a pleasure to be able to report that business continues to be good, and that industry and economic enterprises are continuing to expand. The flag is flying in the breeze, and people in the Midwest are moving forward.

I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Area Tops United States in Resistance to Recession," written by Randall Hobart, Minneapolis Star Business Editor, and published in a recent edition of that newspaper.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AREA TOPS UNITED STATES IN RESISTANCE TO RECESSION

(By Randall Hobart)

Economic indicators for the first quarter of 1958 show the upper Midwest is continuing to put up more resistance to the recession than the Nation as a whole, the Federal Reserve Bank of Minneapolis reported today.

The bank's economists said business activity in some sections of the ninth Federal Reserve district are not as buoyant as might be desired, but they pointed to these plus factors:

March bank debits, a measure of checkbook spending, were above a year ago.

Cumulative department store sales were running ahead of 1957.

Agricultural prices are higher and the new crop season is off to an early start in most farming areas.

On the other hand the seasonal pickup in nonagricultural employment is less than in recent years.

"This reflects, principally, reductions in iron-ore mining and processing operations as well as the slowdown in overall construction," the economists noted in the bank's monthly review.

Nevertheless, employment in district nonagricultural establishments in March totaled 1,313,700, only 22,000 below that of March of 1957.

To support its assertion that the recession has not been so pronounced in the ninth district as in the rest of the country, the bank pointed to these percentage comparisons with a year ago for the first quarter:

Nonagricultural employment. Down 0.9 percent in the district; down 2.6 percent in the Nation.

Manufacturing employment. Down 5.7 percent in the district; down 7.8 percent in the Nation.

Average weekly earnings of manufacturing workers. Up 0.6 percent in the district; down 1.8 percent in the Nation.

Department store sales. Up 0.7 percent in the district; down 3 percent in the Nation.

Loans and discounts at banks. Up 4.4 percent in the district; up 2.7 percent in the Nation.

Demand deposits. Up 1.7 percent in the district; down 0.4 percent in the Nation.

Time deposits. Up 13 percent in the district; up 11.6 percent in the Nation.

Bank debits. Up 2.6 percent in the district; down 0.4 percent in the Nation.

The ninth district includes Minnesota, North Dakota, South Dakota, Montana, upper Michigan, and northwestern Wisconsin.

Bank analysts described crop prospects for most of the region as excellent. Top moisture reserves are adequate to abundant; and in most areas the subsoil moisture is also plentiful.

"The winter wheat crop wintered well and is in good condition," they pointed out.

"The expectations are for a record crop; Montana producers currently expect a harvest of over 58 million bushels, 25 percent more than a year ago."

That the recession has deepened at the national level, is evidenced by a decline in gross national product from an annual rate of $433 billion in the fourth quarter of 1957 to $424 billion in the first quarter of 1958, the bank said.

Personal spending, which makes up about two-thirds of the gross national product, dipped about $1½ billion and business spending was down near $8 billion in the first quarter. Industrial production was down 12 percent from the peak reached last summer.

In recognition of these general trends, the Minneapolis Federal Reserve Bank reduced the discount rate again in mid-April by one-half of 1 percent, the fourth downward adjustment since last November.

The new rate of 1¾ percent is the lowest since August 1955. Reserve requirements at central Reserve city banks were also cut a full percentage point and by a half point at Reserve city banks, it was pointed out.

United States-Canadian Trade

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 28, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the May 6 New Orleans States in the RECORD:

UNITED STATES-CANADIAN TRADE

There have been warnings posted from time to time about the shortsightedness of the United States trade policies as they affect neighbor Canada. The gist of these counselings is that the United States better be more considerate or it will lose a market it has had sewed up.

Figures coming from Ottawa now prove that those who issued the warnings were prophets. Canada has historically run a trade deficit with the United States, importing far more than she exported.

In the January-March period, Canada's deficit with the United States was down to $208,500,000—a 43 percent drop from the same quarter a year ago. This was primarily attributable to the sag in United States exports to Canada.

Yet, British exports to our northern neighbor managed to show a small gain—almost 3 percent.

Few have rushed into print to say so, but there must be a direct relationship between this growth of trade with Britain and last year's statement of Prime Minister John Diefenbaker of Canada that Canadian-British trade was to be cultivated.

A few days ago a Canadian trade commission made a report that generated much cheer in London newspapers. Trade-conscious Britain relishes the outlook for increased Anglo-Canadian commerce, noting that the average Canadian has twice the buying power of the average Briton.

The United States didn't have to irritate Canada and disrupt the trade pattern in which it sold the next-door nation 60 percent of her imports. But subsidized, surplus-laden United States agriculture dumped much produce abroad, undercutting markets on which Canada depends. And United States protectionists have made menacing gestures about some of the Canadian exports sold in the United States.

One doesn't have to strain his eyes to find in this situation good arguments against high tariffs and a farm policy which alienates some of our best allies.

Muskegon Fights the Recession

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. GRIFFIN. Mr. Speaker, I would like to point to Muskegon in my Ninth Congressional District of Michigan as an outstanding example of a city, hard hit by the recession, that is rolling up its sleeves and fighting back.

Greater Muskegon, population 108,018, is an area of serious labor surplus, with about 12.5 percent of the working force unemployed. Military contracts, public-works projects and other activities show promise of lessening the pressure later in the year, but in the meantime merchants and civic leaders are locking horns with the psychology of recession by staging a huge buy-now-sales-mean-more-jobs campaign.

Since the campaign will continue until May 10, its success cannot yet be measured, but reports to date have been good. Other cities throughout the United States have succeeded with similar promotions.

Muskegon's campaign, marked by raised banners and lowered price tags, is extended to the entire range of buying, and is not limited to autos as in some other cities. The spirit behind the Muskegon promotion is well expressed in this excerpt from an editorial which appeared in the April 30 edition of the Muskegon Chronicle:

Anybody knows that a buy-now campaign isn't the whole solution. There also has to be Government action to remedy the unemployment situation. Certainly our buy-now idea is not intended to cover up unemployment or in anyway ignore it.

But it makes no sense for business firms or any of the rest of us to sit back waiting for the Government to do something. There is much we can do for ourselves through vigorous, courteous salesmanship and by an understanding of how buying creates jobs here and everywhere else.

The Western Michigan News, a weekly newspaper published in Muskegon by the AFL–CIO, in addition to supporting the buy-now campaign, is carrying on a continuing promotion to induce its readers to buy now in Muskegon.

Radio stations, too, are carrying their full share of the citywide campaign to boost Muskegon by its own bootstraps.

A nationwide effort, following the outstanding example set by Muskegon, through its energetic chamber of commerce, would be a great shot in the arm for our entire economy.

A move already is underway to spark this effort. The United States Advertising Council, a nonprofit public service organization, supported by contributions from American business, will sponsor, during this month, a nationwide campaign to promote confidence in a growing America. I am told by council officials that public spirited owners of newspapers, radio and television stations are expected to contribute between $10 million and $15 million in free space and time for a promotional campaign appealing to the consumer to help cure the recession by buying now. Other cities, following Muskegon's lead, will be able to take advantage of this national advertising.

Michigan, for many reasons, is one of the States hardest hit by the recession. One of the chief reasons, of course, is that the auto industry, for which Michigan is famous, is hard hit. Most of the decline nationally has taken place in the automobile, steel and other industries that make hard goods. Yet in Michigan, as elsewhere, personal savings are at an all-time high. Too many people, feeling that this is not the time to buy, are sitting tight.

Increased sales promotions, accompanied by lower prices, can encourage these people who are sitting tight to buy now the things they want and need. These sales will mean more jobs.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. HARRY G. HASKELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. HASKELL. Mr. Speaker, it is a privilege for me to say a few words today about the celebration of a great event in the history of Poland. On Saturday, May 3, the Polish people throughout the world celebrated the 167th birthday of the Polish Constitution. To the people of this great country the significance of the constitution in 1791 lies in the fact that it was an end and a beginning in the historic progress of their country.

For the people of Poland, the significance of May 3 is a significance of the spirit, for on this day they draw renewed inspiration of the promise of freedom and justice which was inscribed in the constitution more than 160 years ago.

Most Americans have been deeply troubled by what has taken place in Poland since the war. We in this country had hoped that out fo the smoldering ruins of the conflict, a new Poland would arise—strong, prosperous, and independent. Instead, we have seen an unscrupulous Soviet imperialism make a mockery of this hope. We have seen the rights of human beings trampled upon with utter cynicism. We have seen solemn international agreements treated as scraps of paper. The Communists have cut off the Polish nation and its traditional ties with the West. They have held up to ridicule and scorn pa-

triots who were fighting the Nazi hordes, and in many instances, have gone so far as to deprive these patriots of their liberty and even their lives. They have sought to undermine the work of the church, which has long fought for the rights of the people.

We in America are proud of the millions of Americans of Polish background who have put their strength, skills, and independence into American industrial expansion. That we, as a Nation, have reached such great heights of material power is due in no small measure to their unstinting efforts.

Americans of Polish descent helped to explore, to settle, and to build this Nation, and in the same manner, have also helped to defend it. From Kosciusko and Pulaski of Revolutionary War fame, through the Korean conflict, thousands of citizens of Polish extraction have written pages of an unbroken record of devoted services in the defense of this Nation.

I cannot believe that Poland, who shares the religious, social, and political heritage of the West, is now forever lost to the West. I can only hope, as I am sure you do, that Poland will surely emerge from the shadows of totalitarianism and resume her rightful place among the leading states of the Western World, that she will move forward with us and other peaceful nations toward common goals of national independence, international security, and continuing human progress.

Air Traffic Control

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent that a statement by the National Aviation Trades Association be printed in the Appendix of the RECORD.

Public and Government concern is properly focused on the vital issue of air traffic control. I am pleased to see the Aviation Trades Association taking a civic-minded position as indicated in this statement. It is important for all of us to give careful thought to this complex problem which is of vital concern—the safety of our air traffic.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Grave concern over public interpretation of airspace use, which has been highlighted by the tragic collision of April 21, as well as fear that Government planners will lose sight of basic measures whereby collision hazards can be reduced, has caused the National Aviation Trades Association to issue a request and warning on these matters to the Civil Aeronautics Board.

This stemmed from CAB's announced intention, immediately following the accident, of giving a complete report of all actions and proposals now in process regarding airspace matters to the Congress.

The following is the NATA position as stated to CAB:

"DEAR MR. DURFEE: We commend your action with respect to providing pertinent data to the Congress following the tragic air accident of April 21, as stated in your telegram submitted to the Interstate and Foreign Commerce Committees of both House and Senate. However, we would like to make the following observations.

"Irrespective of all the highly complicated proposals for control of the airspace, the very simple and basic fact remains: Had the aircraft involved been equipped with some type of warning device or proximity indicator, here again is another accident, in an already long line, that doubtless would have been avoided. It is imperative that you bring out this basic point in any statement in order that the nature of the air-space problem will not be further distorted in the mind of the Congress or the general public.

"We are requesting of the Airway Modernization Board that they give the development of a practicable anticollision device a top priority in their technical developments program. Such a device will greatly assist in the safe utilization of the airspace by all concerned.

"We recognize the technical difficulties involved, but with the vast resources available to the AMB, we believe that such a device can and must be developed which, in size, weight and cost, will eventually, if not initially, be usable by thousands of smaller aircraft as well. Initial application of such equipment abroad larger aircraft should not be delayed because of ultimate refinements desired, since warning in itself should be of immense value.

"The entire near-miss problem, which CAB has publicized considerably and which action we have earlier severely criticized, would in great measure be reduced to a relatively minor problem with the utilization of the equipment outlined.

"It is our position that utilization of a suitable electronic warning device, improved aircraft markings with particular reference to new florescent paints and continued efforts toward improved cockpit visibility, combined with the still utterly basic function of looking out the window, that the airspace can accommodate a vastly increased flow of air traffic of all types with a high degree of safety.

"We urge that our position, as herein stated, be given every consideration by you in your forthcoming special report to the Congress.

"Respectively yours,
"CHARLES A. PARKER,
"Executive Director".

A Lesson in Socialism

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1958

Mr. MUNDT. Mr. President, all those of us who have taught, and all those of us who have observed young Americans who have been taught by others, recognize the importance of impressing upon young Americans the advantage of living in this great United States of ours, founded on the concept of free American enterprise and free American labor.

Because of the unique way in which Thomas J. Shelly, for 35 years a teacher of economics and history in the Yonkers High School, has been impressing upon the students in his classes the perils, evils, and futilities of socialism, I ask unanimous consent to have printed in the Appendix of the RECORD a little item entitled "A Lesson in Socialism," written by Mr. Shelly.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A LESSON IN SOCIALISM

Thomas J. Shelly, 35 years a teacher of economics and history, attempted to explain the meaning of socialism to his Yonkers High School class as follows:

"John, you made a grade of 95, and yours, Dick, was 55. I shall now take 20 points from you, John, and give them to Dick. Thus, each of you has 75, adequate for passing.

"Here I have applied the Socialist-Communist principle as set forth by Karl Marx: 'From each according to his ability, to each according to his need.'

"Now, let us examine this in practice. You, John, won't work because you have had your incentive removed. And, you, Dick, won't work because you are getting something for nothing.

"We can't exist unless we work and produce. Thus, in order to get the work done, we'll need someone with a whip or a gun. Socialism must lead to authoritarian control."

Our Real Trade Crisis

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 28, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the May 12 issue of Life magazine:

OUR REAL TRADE CRISIS

The House Ways and Means Committee is about to report a bill extending the Reciprocal Trade Agreements Act. It will whittle down the President's proposals, probably making this renewal more niggardly than the last, as happens almost every time. If the United States is to keep any seat at all in the world's trade councils, some kind of reciprocal trade agreements extension must be passed. Yet even the President's undiluted version would be a mere holding action. This is one of those situations "where little will be gained by success and a great deal will be lost by failure."

The phrase is that of Raymond Vernon in a forceful pamphlet called "Trade Policy in Crisis," which every Congressman ought to read (International Finance Section, Economics Department, Princeton University; single-copies free). The crisis Vernon means is not the quarrel over the reciprocal trade agreements extension, which is conducted with largely obsolete arguments. Let us hope the old-fashioned liberals (Cordell Hull type) wrest one more victory from the "Strackpots" (followers of O. R. Strackbein, the high-tariff lobbyist). But let us also be aware of our real trade crisis, and what we must soon do to meet it.

Two great changes have taken place in world trade. One of these was analyzed by Central Intelligence Director Allen Dulles before the United States Chamber of Commerce last week. The U. S. S. R., which Herbert Hoover in the 1920's could rightly

call "a gigantic economic vacuum," is now a major industrial power and a rapidly growing exporter and importer. What with its growth and our recession, the Sino-Soviet bloc for the first time produced more steel in the first quarter of 1958 than did the United States. And as Soviet production increases, so does its power to use trade as a weapon of Communist imperialism. The Soviet policy of investment in disorder is currently illustrated in Yemen, where $80 million in ruble credits, plus 65 Communist military advisers, are already creating new trouble in the Middle East. This Soviet weapon has also probed South America, as Vice President Nixon is learning on his current trip. It has penetrated parts of Europe, southeast Asia and Japan, not to mention Egypt and Syria. Mikoyan, the master of this new weapon, may be a major shaper of world history's next 10 years.

The second great change in world trade has also taken place beyond the grasp and without the participation of the United States. This is the economic resurgence of Europe. After a virtual stagnation of some 35 years, Europe has recently been shaping its own economic destiny toward unity, prosperity, and commonsense. The common-market treaties signed last winter required far more statesmanship and willingness to take risks than anything Americans have shown in that line since the early days of the Marshall plan. Led by Germany, the nations of Europe have rediscovered hard money, hard salesmanship, and free trade. Some of them have even discovered that old open secret of American capitalism's health: antitrust laws. The antitrust idea has made headway in the laws of Germany, the United Kingdom, the Netherlands, Norway, and the Coal and Steel Community—ironically at a time when the United States, as Vernon points out, was "withdrawing its support for an international agreement on the subject" of restrictive business practices.

In short, United States economic supremacy in the world, which we have so long taken for granted, is now being contested by Soviet might and guile on the one hand, and by bolder practitioners of free enterprise and economic horsesense on the other.

What do these vast changes mean for United States trade policy? They do not immediately threaten our position as the richest nation. Even if we withdraw into deeper protectionism, we might on on somehow thriving for a generation, though with increasing costs and dwindling alliances. But this would mean abdicating any claim to economic leadership against Soviet imperialism, as well as a short sale of our own greater destiny.

Americans have repeatedly proved to themselves that free enterprise, sound money and the profit motive are the most nearly magical key to prosperity ever devised, as well as the most favorable environment for other kinds of freedom. Now that Europe has rediscovered the same facts, Americans should rejoice at their fresh opportunity to make the system worldwide. But to seize it requires a much larger vision of economic policy than Washington has so far shown.

Life has already proposed (October 31) one means toward this great end: A United States policy of complete free trade with all like-minded nations. Vernon's proposal is similar: "The economic fusion of the free world's nations." A preliminary step, as urged in the current Fortune, would call for unilateral United States tariff reduction, liquidation of the Tariff Commission, and elimination of the escape clause (which at present makes the reciprocal-trade agreement's freer trade pretensions so hypocritical).

If the United States moves boldly in this direction, Europe's common market and capitalist revival would merge naturally into an expanding free-trade area of the whole non-Communist world. Result: Faster real economic progress everywhere, and a greater resistance everywhere to Soviet blandishments. If the United States does not so move, or merely stays put, the European community is likely to become autarkic and belligerent, the free world economically Balkanized, and the Soviet trade offensive provided with soft spots and round-heeled barter victims on every side.

Such is the real crisis of United States trade policy. Let's first pass this obsolete but indispensable reciprocal-trade agreements bill, and then get on with the creation of a real world trading system.

Surrogate Joseph A. Cox Makes Significant Contribution to Law Day, U. S. A.: The Supremacy of Justice According to Law

---

EXTENSION OF REMARKS

OF

HON. LUDWIG TELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1958

Mr. TELLER. Mr. Speaker, I bring to the Nation's attention a significant contribution to a better understanding of our common law as a guardian of civil liberties, concisely set forth in an address by Surrogate Joseph A. Cox of New York County, given at New York Law School on "Law Day, U. S. A.," May 1, 1958.

Surrogate Cox, who is now a judge in one of our country's most important courts, was formerly a justice of the New York Supreme Court, and also served as a member of its appellate division. A profound student of the law, Judge Cox served for many years as a professor of law at New York Law School, and was recently elected president of its distinguished board of trustees.

In recognition of his scholarship and public service, he was awarded an honorary doctorate of law by Manhattan College.

Law Day, U. S. A. was observed on May 1, 1958, throughout the country by Presidential proclamation, as a tribute to the rule of law, as a day for reaffirming our belief in the system of human freedom under law which has helped to make our Nation great.

The common law, as Judge Cox shows, has played a large part in the development of our faith in a free society adaptable to the welfare of the people.

The address by Surrogate Cox follows:

LAW DAY, U. S. A.: THE SUPREMACY OF JUSTICE ACCORDING TO LAW

(By Surrogate Joseph A. Cox, president, New York Law School)

In this swiftly moving age, with its revolutionary advances in so many diverse fields of scientific and cultural activities, it is well to pause and reflect upon the role of law in American life. Unfortunately, in our preoccupation with daily chores, we miss the trees for the forest, for to a large extent the lawyers' time is taken up with private interests which, while important to the individual, too often ignore the vital issues affecting the community. Yet no lawyer can have any real pride in his profession unless he has the capacity for interpreting to himself and to his fellow Americans the full majesty and meaning of the law.

I can think of no better way of participating in the national observance of Law Day, U. S. A., than by discussing with you the origin, development, and growth of our legal system and its adaptability to modern living.

Without becoming unduly involved in philosophic concepts of law and justice which have been the subject of comment and debate for many centuries, it is enough here to note that without law man would be plunged back into the chaos from which we emerged at the dawn of civilization. It is the law that brings an orderly society, where men may follow their pursuits, secure in the knowledge that their rights will be protected and their obligations enforced. It is the law which protects the individual against the tyranny of his sovereign.

For a proper understanding of our present legal institutions we must look back over the past centuries to the origin and growth of the common law of England, for it was that system of law which shaped the thinking of our Founding Fathers. The origin of the common law may be traced to the customs of the Germanic tribes who stood before the Roman legions when Britain was still a Roman province. It was influenced by the teachings of the Christian church, after the conversion of the Roman Empire. Among the Germanic traditions which took deep root were those of freedom and individual self-respect, concepts which have characterized the common law ever since, and which largely account for our present-day liberties.

Primitive modes of proof and trial: As a result of the Germanic influence, early justice in England was formal and rigid, a characteristic of most primitive societies and essential, in critical periods of society, to prevent a relapse into anarchy and barbarism. Only by making hard and fast rules, evidenced by concrete expression, could it be demonstrated to the primitive mind that the law was the same for all men. In order, therefore, for a man to bring himself within the protection of the law, a suitor was required to follow the exact words prescribed by the legal ritual, which controlled the primitive modes of proof and trial which then prevailed. Thus, it is not surprising to find that up until the 12th century, there was no human method for resolving issues of credibility, this being left to the supernatural. Formalism was, therefore, at its peak in these archaic methods of proof and trial, the most prominent of which were, trial by ordeal, by oath or wager of law, and trial by battle.

The primitive trial involved two stages: In the first stage, the court rendered a medial or preliminary judgment, which merely involved the selection of the method of proof, to which the defendant was to be put and the time and place of trial; at the second stage, the judges acted somewhat as umpires to see that the method of proof prescribed by the preliminary judgment was strictly adhered to in the specific form of trial selected.

Perhaps the earliest form of the older modes of trial was the ordeal, dating from before the introduction of Christianity. As its practice was so widespread among primitive people, and as it was based on the belief that God intervened by some sign or miracle to determine an issue pending between two adversaries, the church felt obligated to soften its harsh features by surrounding it with formal ceremonies, which added to its moral and psychological effectiveness as a

test in the ascertainment of truth. According to Forsyth, an accused was subjected to trial by ordeal:

1. Where he was unable to secure a sufficient number of compurgators.

2. Where he had been previously found guilty of perjury.

3. Where he was not a freeman, unless his lord swore to his innocence, or purchased his freedom by paying the required weregild or fine.

Once a person was required to submit to ordeal, he might be subjected to either 1 of 3 forms of trial—the ordeal of the hot iron, the ordeal of hot water, or the accursed morsel. Without going into details, this primitive method of proof was open to corruption and perjury, produced few convictions and hence fell into decay, and in 1215 was condemned by the lateran council, after which it was prohibited by a writ which Henry III (1216–72) sent to his itinerant justices in 1219.

Trial by oath was unknown to Roman procedure; it was, however, known among the barbaric tribes which overran England. Consequently, this system of trial was found in operation early in the Anglo-Saxon period of English history. In trial by oath, the plaintiff made a formal affirmation or charge, which was met by an equally formal denial, controverting every point of plaintiff's assertion, word for word. The adversary could stop the oath and challenge the swearer as incredible. But this could only be done at the proper time, for an oath once begun could not be interrupted. To stop the oath the hand must be seized before it is lifted up to swear or before it touched the relic upon which the oath was to be made. Another method of stopping the oath was for the aggrieved party to bar the way into the church by stretching his arm or his sword across the door. In either event, the oathtaker, in the same fashion, must play his part exactly as the ritual required.

Where a crime was charged one could not always escape with an oath. Most likely he would be sent to the ordeal, which, as we have seen, was conceived as the judgment of God. The truth was revealed by immersion in water or fire. The water in the pit was adjured to receive the innocent and reject the guilty. He who sunk was safe. He who floated was lost. The red-hot iron, 1 pound in weight, must be lifted and carried 3 paces. The hand that held it was then sealed up in a cloth. Three days afterwards the seal was broken, and if there was a blister as large as half a walnut, it was fatal.

And now we come to trial by battle, which prevailed among the barbaric tribes of Europe, but was unknown among the Anglo-Saxons until introduced by the Norman conquest, after which it was extensively applied in the settlement of a wide variety of disputes, including both civil and criminal cases. Thayer observes that this mode of trial was viewed with suspicion, that the ordeal was preferred over it, hence when trial by ordeal was prohibited by Henry III (1216–72) in 1219, a wide gap was opened up to be filled by the now rapidly developing jury.

In this form of trial, the accuser undertook, during the course of the day, to prove, by his body, the truth of the charge; if he failed to do this before twilight fell, he failed in his proof and in effect became a perjurer. The object was not to kill or maim his adversary, but to make him pronounce the loathsome word "craven." Although the use of champions to fight the battles of the litigants was authorized by the Statute of Westminster I (1275), this form of trial was distrusted. In 1215 Pope Innocent III condemned it at the lateran council for the same reasons which proved fatal to trial by wager of law. Although obsolete, it persisted until the early part of the 19th century. In the year 1819 this mode of trial was finally abolished by statute.

Trial by jury: After the Norman Conquest and during the 12th and 13th centuries, William the Conqueror and his successors took the decentralized Anglo-Saxon system of courts, and superimposed thereon the 3 royal courts of King's bench, common pleas, and exchequer, with appellate jurisdiction vested in the court of exchequer chamber and the House of Lords. The development of these courts gave England a centralized court system.

As an incident of this development the archaic methods of proof, as represented by the ordeal, wager of law, and battle, gradually fell into decay, while trial by jury, initially conceived as a method of eliciting the facts in controversy from 12 neighbors, developed into the modern jury of today, the function of which is no longer to act as witnesses, but as triers of facts.

Shortly after William the Conqueror took over, he issued what was known as the ordinance of 1077, separating the common-law and ecclesiastical courts, with the common-law courts retaining jurisdiction over land, and hence of devises of land, while the ecclesiastical courts retained jurisdiction over testaments of personalty—a division which was destined to have a profound effect upon the law of real and personal property, as well as the administration of estates and the probate of wills.

The evolutionary development of the three superior common-law courts did not exhaust the judicial powers of the King's council. A residuary power remained in the council under which the King could have administered justice if all the other established courts had ceased operation. This great residiary power was now invoked by the King for the alleged purpose of relieving the rigidity of the common law, which, for various reasons—social, economic, political, and religious—refused to take jurisdiction of certain causes. In consequence, suitors were left with no alternative but a direct petition to the King. In such cases the King by his chancellor investigated and decided the controversy. Out of this practice there gradually developed a new tribunal known as the court of equity, which could afford remedies not available in the common-law courts. In this fashion the chancellor, as the keeper of the King's conscience, brought much needed liberalization to the administration of justice and provided the flexibility needed to deal with the great changes that were taking place. The common law courts and the courts of equity, after a period of conflict, as we shall see, worded side by side, one influencing and complementing the other.

As a result of this development of the common-law, ecclesiastical, and equity systems of courts, it was inevitable that the early history of English law should be marked by a continuing struggle for jurisdiction. And it was during this critical period that the common-law judges and lawyers stood firm, resisting the trend in favor of adopting the Roman law, which at that time, the 16th century, was sweeping over Europe.

Coke and the Magna Carta: In the 17th century the common-law became involved in a battle against the Stuart kings. When James I (1603–25) first came over from Scotland he found Coke in the midst of a battle with the ecclesiastical courts, which were resisting his use of the writ of prohibition to limit their jurisdiction. The King was aggravated by reason of the fact that in this struggle Coke insisted that the King was not above the law. At that time, however, James I was not yet sufficiently entrenched politically to challenge Coke. In consequence, the common-law courts took over a large portion of the ecclesiastical jurisdiction.

In the same century, battle was again joined, this time between the common law and equity courts, the latter supported by the crown, with Coke reviving his earlier view that the law, as opposed to the King, was supreme.

The issue arose when the court of common pleas granted a writ of prohibition against temporal action taken by an administrative tribunal established for the regulation of the church. The Archbishop of Canterbury complained to King James I (1603–25), before whom all of the judges of England were summoned, with Sir Edward Coke as their spokesman. The archbishop talked of the royal prerogative, that is, the right of the King to do himself what he had delegated to his judges. Coke replied that under the laws of England the King could not adjudge any cause, that all cases were to be determined in a court of justice according to the law and custom of the realm. The King took offense and regarded as treasonable the suggestion that he should be under the law. Coke's famous answer was that the King ought not to be under any man, but under God and the law.

In this contest, Coke was resting his case on Magna Carta, which had been wrung from King John 400 years earlier at Runnymede and Marston Moor, in order to compel his recognition and respect for certain basic rights, which are cherished by all men.

Coke's influence upon American constitutional doctrine: The role of the Magna Carta in the history of American constitutional theory is due in large measure to the revival and restatement of its principles by Lord Coke. The significance of the charter lay in the fact that it was drawn in terms that did not confine its application to the immediate issues at hand or to the interests therein involved. Its language was couched in terms of universal application. For the history of American constitutional law and theory, the most important part of the Magna Carta, was chapter 29, which has been translated as follows:

"No freeman shall be taken or imprisoned or deprived of his freehold or of his liberties or free customs, or outlawed, or exiled, or in any manner destroyed, nor shall we go upon him, nor shall we send upon him, except by a legal judgment of his peers or by the law of the land."

It is said that our concept of due process of law, upon which so many of our liberties have turned, stems directly from this provision.

Because of the generality and scope of the language, Magna Carta, from its inception, contained elements of growth. In 1297 Edward I (1272–1307) ordered all "justices, sheriffs, mayors, and other ministers, which under us and by us have the laws of our land to guide," to treat the great charter as common law in all pleas before them. Furthermore, any judgment contrary to the great charter was "to be holden for naught"; and all archbishops and bishops were to pronounce "the sentence of great excommunication against all those that by deed, aid or counsel," proceeded contrary to the charter or in any way transgressed it. By the 17th century Coke could cite 32 royal confirmations of the charter. With the passage of time, the principles enunciated by Magna Carta, became absorbed in the general stream of the common law and Englishmen transferred to the common law the worship they had so long reserved especially for the charter. Of this period it has been written:

"The common law is pictured invested with a halo of dignity peculiar to the embodiment of the deepest principles and to the highest expression of human reason and of the law of nature implanted by God

in the heart of man. As yet, men are not clear that an act of Parliament can do no more than declare the common law. It is the common law which men set up as an object of worship. They regard it as the symbol of ordered life and disciplined activities, which are to replace the license and violence of the evil times now passed away. * * * Common law is the perfect ideal of law; for it is natural reason developed and expounded by a collective wisdom of many generations. * * * Based on long usage and almost supernatural wisdom, its authority is above rather than below the act of Parliament or royal ordinances which owe their fleeting existence to the caprice of the king or to the pleasure of councilors, which have a merely material sanction and may be repealed at any moment."

This attitude is reflected in the writings of Sir John Fortescue, Henry VI's chief justice, who followed his king into exile, and also in the later writings of Coke and Blackstone.

It was, however, in the name of the supremacy of the common law that Parliament challenged the doctrine of the divine right of kings. Coke's dictum in the Bonham Case, decided by the court of common pleas in 1610, has had a tremendous impact upon Anglo-American constitutional law. It reads as follows:

"And it appears in our books, that in many cases, the common law will control acts of Parliament, and sometimes adjudge them to be utterly void; for when an act of Parliament is against common right and reason, or repugnant, or impossible to be performed, the common law will control it and adjudge such act to be void."

This dictum pointed the way to judicial review of legislative acts and postulated the test of reasonableness. In consequence it found its way into the legal literature of the time, and was used as a weapon against Parliament's claim to sovereignty. Coke was not expounding a rule of statutory construction, but was expressing a rule of higher law, binding on Parliament and the ordinary courts alike. In other words, Coke regarded common right and reason as something fundamental and permanent, a higher law. This concept is also to be found in the maxims with which his writings abound: "A statute should have prospective, not retrospective operation." "No one should twice be punished for the same offense." "Every man's house is his own castle." These and many other declarations by Lord Coke are now familiar parts of our jurisprudence.

In restoring the great charter to its proper place Coke wrote that it was called Magna Carta, not for the length or largeness of it but in respect of the great weightiness and the weighty greatness of the matter contained in it; in a few words being the foundation of all of the fundamental laws of the realm. He pointed out that the benefits of Magna Carta extend to all. He meant the benefits of the historical procedures of the common law, the known processes of the ordinary courts, such as indictment by grand jury, trial by the "law of the land," habeas corpus, security against monopoly, taxation only by the consent of Parliament.

From Coke's version of the Magna Carta, through the English declaration and bill of rights of 1688 and 1689, to the Bill of Rights of our Constitution, the line is direct. Coke's great contribution to our legal system was later supplemented by John Locke, whose Second Treatise on Civil Government first appeared in 1690. Locke emphasized the natural rights of the individual resting upon a social compact. The primary sources of his studies were the wirtings of Fortescue and Coke and his own conceptions of natural law. He shifted the emphasis from the individual to the people in mass. He noted the limitation on legislative power and its supremacy within the law and not a power above the law or a license for arbitrary acts. He also noted that the law must be general in application, the same for rich and poor, and that it must dispense justice and decide the rights of the subject by promulgated standing laws, and known authorized judges. In saying these things, Locke was anticipating some of the fundamental propositions of American constitutional law: Law must afford equal protection to all; it must not operate retroactively; it must be enforced through the courts; legislative power does not include judicial power.

The higher law doctrine: The influence of the higher law doctrine, associated with the names of Coke and Locke, was at its height in England when the American colonies were being settled. Their greatest contribution to the American colonists was that legislative power emanates from a sovereign people. Our Constitution gained acceptance because it was based on the concept of a higher law, superior to the will of the sovereign. This outstanding characteristic of the English higher law was described by John Adams, while still a young man, as follows:

"It has been my amusement for many years past, as far as I have had leisure, to examine the systems of all the legislators, ancient and modern, fantastical and real * * * and the result * * * is a settled opinion that the liberty, the unalienable, indefeasible rights of men, the honor and dignity of human nature, the grandeur and glory of the public, and the universal happiness of individuals, were never so skillfully and successfully consulted as in that most excellent monument of human art, the common law of England."

To John Adams and the other Founding Fathers, the common law represented an embodiment of the supremacy of the law which was to influence their thinking when they wrote the Constitution. These men must have been impressed by this tough, tenacious, and yet flexible system of law. As men of wide learning, they were aware of the hard-won struggles of the common law and of the protective shield it had set up against sovereign tyranny. They knew that the servants of the common law had spoken out boldly and truthfully before kings to enforce the concept of equal public justice. Their unquenchable zeal for justice was expressed in the maxim: "Let justice be done though the heavens fall." This is the priceless heritage upon which our institutions were founded.

I have touched upon the origin and development of the common law, and its contribution to our legal system, because we, as lawyers, must be familiar with the past in order to understand the present and to plan for the future.

The adoption of our Constitution was another great landmark in the evolution of government by law as opposed to government by men. The authors of that great document succeeded in binding together those common law customs and traditions which had attained the exalted status of higher law, together with the concept of the separation of powers. The Constitution was made for an undefined and uncertain future. Conceived for the Government of a new Nation but recently carved out of the wilderness, it has proved to be an effective instrument for the orderly administration of a society, whose complexities could not have been imagined by the Founding Fathers.

The Bill of Rights and the subsequent amendments to the Constitution have provided a happy blend of authority and freedom. The system of checks and balances adopted therein has preserved the supremacy of the law with its guaranty of equal justice to all. The Constitution, designed for a government of freemen, permits us to live in an ordered society without fear of tyrants. It extends protection to the humblest citizen while exerting restraints against government itself. It remains a living, pulsating, document because it serves freemen in a free society. This is the priceless heritage of liberty, justice, and equality. Under the law which our forefathers bequeathed to us, we must guard it with continuous vigilance.

We respect the law because it is our servant, not our master. As Charles Evans Hughes once aptly said:

"We of the common law respect authority, but it is the authority of the legal order. We respect those who in station, high or humble, execute the law—because it is our law. We esteem them, but only as they esteem and keep within the law."

It is this characteristic of our law which distinguishes it from the decrees of totalitarian governments which rule by force and which exist only so long as its citizens are held in subjection.

Another significant characteristic of our law is its capacity for growth and adaptation. I need only mention in passing some of the tools employed to meet changing needs: The antitrust laws, the Interstate Commerce Commission, the Federal Reserve System, minimum hour and wage legislation, the Social Security Act, the Norris-LaGuardia Act, the Wagner Act, the Securities and Exchange Commission, the Federal Trade Commission, the Federal Communications Commission, and other regulatory bodies, many of which have counterparts in our State governments. In the field of civil rights we are slowly but surely also measuring up to our responsibility.

I do not suggest that those charged with the administration of our law have never faltered. Human fallability being what it is, trial and error is to be expected. But we have managed in the long run to provide our own corrections because of our system of free expression and independent courts. We have not permitted our Constitution to be subverted into a restraint upon governmental action required for the common good. On the contrary, it has been utilized as an instrument for healthy growth.

Today our law faces its greatest challenge. It must be developed and adjusted to meet the requirements of an age which has seen the secrets of nature unlocked by phenomenol advances in science and technology. We are living in an age of atomic fissure, missles, and man-made satellites. We are witnessing industrial development on an unprecedented scale. We are confronted with economic and sociological problems of vast complexity. Our security is being threatened on the international scene at a time when the weapons of desruction are capable of laying the world desolate. To permit our law to lag behind the times would be to court disaster. We must dedicate ourselves to the task of carrying forward the precious heritage of our law to the new horizons shaping up before us. We must teach our fellow Americans that respect for principled authority upon which the growth and development of the law feeds. We must make them understand that only in this way will they survive as free men in a free society.

Despite the remarkable advances in science which we are witnessing today, the character of man remains substantially unchanged. He still needs stability and justice in his social relations. He still needs protection against the arbitrary action of his government. To fulfill these needs will always be among the loftiest concern of mankind. Each of us, therefore, is under a stern obligation to respond to the law's command to secure justice between man and man and between the citizen and his government. We must pursue this goal with

unflagging determination and undeviating purpose.

Oppressed people throughout the world look to us for moral leadership. In the competition with dictatorships for the minds of men, more potent than any lethal weapon, would be an effective demonstration that our system of law assures more equal protection under the law, more security in person and property, and greater personal freedom, than any other system yet devised. We can and should, with the greatest moral pride, point to our system of law as the surest guarantee of individual and collective liberty and freedom in a peaceful and orderly life. We should proclaim that a deep respect by our people, for the rule of law, will ultimately lead to a lawful and peaceful existence for the world community.

And as lawyers, we must assume leadership in selling the rule of law and reason, to the peoples of the whole world as mankind's best hope for survival.

The Boom in United States Agriculture

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mrs. ST. GEORGE. Mr. Speaker, the prophets of despair are again abroad in our land. They hopefully point to signs of recession and roll unfavorable statistics on their tongues with gusto.

I have always believed, Mr. Speaker, that agriculture is basically the most important of all industries and that without a healthy agriculture there could not be a completely sound economy.

It is, therefore, with great pleasure that I call the following article, appearing in Time magazine, to your attention.

Except for the false prophets, we can all rejoice at this good news for our farmers, the very cornerstone of our prosperity:

BOOM TIMES

The best economic news in the United States last week, bar none, was the boom in United States agriculture. From all over the country reports trickled into Washington showing that the farmer, after being the lowest man on the economic totem pole since 1955, is making an astonishing comeback. Agriculture Department experts scarcely dared believe some of their own figures. As of mid-April, the prices that farmers get are up 9.8 percent over the same time last year. The prices they pay are up, too—some 3 percent. But the net improvement is pushing their annual income to $13 billion versus $11.5 billion last year.

Moreover, the picture in individual farm commodities is even brighter. Items:

Thanks to a brisk competition between steak-hungry consumers and farmers trying to rebuild their drought-depleted cattle herds by holding back or buying up heifers, beef prices were running 30 percent above last year, spreading joy from Texas to the feed lots of Kansas City.

Hogs were up 20 percent above last year and holding long after most farm economists expected a seasonal price break; many counties in the corn belt reported the most favorable corn-hog ratio in history—up to 25-1. (Usual make-money point for hog raisers is when 1 cwt. of live hog sells for 12 bu. of corn.)

Even the egg—a big thing from California to Delaware—was selling for 25 percent above last year, so high that many poultrymen feared consumers might rebel.

Partly because of the Florida freeze, but also because of continued high food demand from city folks, fresh vegetables were selling 40 percent higher than last year.

And the once heavily subsidized potato was selling, unaided, more than 150 percent higher, carrying the new farm prosperity all the way up to Maine's Aroostook County.

MAIN STREET EVIDENCE

But as far as the general United States economy was concerned, the best evidence of farm recovery was on the main streets of farm towns. In Oskaloosa, Iowa, a typical Midwestern farm market town (population 11,000), where farmers long were sullen and resentful over drought and low farm prices, Time Correspondent Jonathan Rinehart found cash registers jingle-jangling more merrily than in years. Manager Ernest Dilley of the Thriftway Supermarket reported that farm wives, in a delicate shift in buying habits, suddenly had taken to buying cake mixes, scorning the economies of blending their own. Manager John Lilley of the local J. C. Penney store gloated: "We had the best April we've ever had." Predicted Mrs. Gilbert Howarth of Howarth Sales & Service: "Last year we sold 15 air conditioners. This year we expect to sell 20. And that's not bad when you consider there are eight other stores in town where you can buy them."

Chevrolet Dealer Robert Knoepfler sold 15 new cars and trucks in April, cleared out 25 used ones. At first he figured that he had simply cut into his competitors' business. Then Clay Carriker, manager of Greene's Ford, said that his new-car sales for the past 60 days were 20 percent ahead of 1957, used cars 30 percent; high-priced new trucks were slow, but lower-priced used trucks were hot. Another major beneficiary of the farmer's new-found prosperity was the farm-machinery business. Owner Don Berkemeir of the Lytle Implement Co. reported that he sold 25 new tractors so far this year, drew groups of up to 25 farmers at a time to his showroom to view the latest in mechanical hay balers. "Business," said Berkemeir, "is within a few dollars of double last year." Used tractors taken back as trade-ins scarcely stay in the shop long enough to be oiled and repainted. Fresh from selling off 160 head of feeder cattle, Farmer Bill Hynick, 45, dropped by recently, plunked down $1,950 for a 2-year-old model. "I've been thinking of buying for a couple of years," said Hynick. "Until now, I couldn't do it."

Not only has returning farm prosperity benefited virtually every Oskaloosa business (Lumber Dealer Jim Mathew figures his sales are up 50 percent, due largely to farmers fixing up the old home place or repairing the barn), but it has brought a flock of new civic improvements in progress, e. g., three new schools, a $200,000 bowling alley and amusement center. Two years ago Oskaloosa, hungry for an industry payroll to offset the setbacks to farming, almost landed an American Chain & Cable Co. plant, but at the last minute lost out. Putting its finger on the reason, the Iowa Development Commission said: "Poor community attitude." Last week a commission pulse-feeler passed through, asked a workman in overalls what he now thought of Oskaloosa. "Best damned town in Iowa," the workman roared.

BACK ON HIS FEET

Oskaloosa's good fortune was not unique. The Central Iowa Farm Business Association completed its annual report of 153 representative farms, reported net income in 1957 averaged $11,200, or 32 percent over 1956's $8,467 and more than 2½ times 1955's low of $4,235. For a national view, the Farm Journal polled its regional correspondents, found business noticeably better in every section except the Southeast, where row-crop farmers have been hit by weather and acreage cuts, but livestock and poultry farmers are prospering.

Having recently been through the mill, most farmers were being prudent with their new prosperity. In Fresno, Calif., heart of the San Joaquin Valley machine-farming area, Julius Neilsen, Bank of America farm-loan representative, said: "I never saw so many farmers come in ahead of time and pay off their loans." The Iowa Life Insurance Co., reported its sales to farmers through April were up 78 percent over last year. And, said Red Oak Agent Stanley Fagerland: "When the farmer gets around to buying life insurance, you know he is getting back on his feet."

Scenic Wonderland

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. PORTER. Mr. Speaker, the State of Oregon will celebrate its 100th birthday in 1959. Many special events are being planned and we invite everyone to share in our celebration.

However, an outstanding Oregon attribute, available at any time, is its scenery. Throughout the State it is ever-present.

Under the leave to extend my remarks in the RECORD, I include the following story which appeared in the May 5, 1958, edition of the Christian Science Monitor. The Bend writer, unidentified, has vividly described highway 126 between Bend and Eugene, a highway which winds through an outstanding scenic area I hope all you may see one day:

SCENIC GEMS PARALLEL MCKENZIE RIVER—TINY TOWNS, HIGH PEAKS, FOLLOW RIVER IN OREGON

BEND, OREG.—Across west central Oregon via Highway 126 between here and Eugene is some of the Green State's most appealing scenery.

Highway 126 runs through the McKenzie River Canyon, and there is much for the tourist to see there.

The summer climate is warm, with pleasant days and cool nights. Most of all, the McKenzie is a gray-blue, fast-moving stream of considerable size. One doesn't have to be a trout fisherman to enjoy this setting, but if he is he probably won't be disappointed.

All along the course of the McKenzie as it parallels the highway are little resort towns—McKenzie Bridge, Blue River, Nimrod, Vida—with excellent food and lodging accommodations. The cities at either end of the trip—Bend on the east and Eugene on the west—are excellent tourist headquarters.

The tourist will like the homey cabin accommodations along the edge of the river. If he is a fisherman, he can cast off the porch for his evening meal.

The journey from Bend westerly is an interesting one, scenically. A few miles out of town is the town of Sisters, named after the Three Sisters—a trio of high Cascade peaks, easily visible to the southwest.

The McKenzie Pass crosses through a vast lava bed upheaved by ancient volcanoes. A stone tower at the summit gives an excellent view of what might be said to be magnificent devastation.

Dropping down the west side one descends into cool green forest country. In late spring, sometimes as late as June, one may see vast displays of wild azalea in bloom.

In the McKenzie Canyon, at the resort town of Belknap Springs, the highway joins up with the dashing McKenzie River. From now on one is side by side with the river. The greenery of Oregon, the freshness and pleasantness of forest country, is in abundance. Side trips into lumber country are popular.

One of the most interesting items in the entire McKenzie River scene is the white covered bridge near Vida. Oregon in recent years had some 120 various-sized covered bridges, but some have been replaced with the improvement of highway facilities.

These covered structures were not put up for utility so much as for their atmospheric value. The Goodpasture Bridge near Vida is said to be Oregon's best example of modern covered bridge design.

It spans the McKenzie River below a wide spot and a turn. Large gravel bars lie below it, and with a background of lofty green trees behind it, and mountains rising into the sky, this is an awe-inspiring scene.

Prize-Winning Mollenhoff Stories Spurred Probes

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include an article which appeared in the Des Moines Register, May 6, 1958, concerning one of the very efficient reporters for the Des Moines Register and Tribune, Des Moines, Iowa, Mr. Clark Mollenhoff, who was recently awarded a Pulitzer prize for his news stories:

PRIZE-WINNING MOLLENHOFF STORIES SPURRED PROBES

NEW YORK, N. Y.—Clark Mollenhoff, of the Des Moines Register's Washington bureau, Monday was awarded a Pulitzer prize for news stories resulting from 5 years of investigating corruption in labor unions.

His disclosures contributed substantially toward the McClellan committee's hearings on labor racketeering in the Senate, as well as toward other remedial actions.

The Pulitzer award for national affairs reporting cited Mollenhoff "for his persistent inquiry into labor racketeering, which included investigatory reporting of wide significance."

He was cited for news coverage which included investigations in Iowa, Minnesota, New York, and New Jersey.

The announcement said Mollenhoff's "investigations and reporting are credited with having assisted congressional investigations exposing James R. Hoffa, Dave Beck, Frank Brewster, and other teamster union figures."

Mollenhoff, 37, has been a member of the Register's Washington bureau since 1950. Before that he had been a reporter for the Register in Des Moines since 1941.

The Pulitzer award, announced here by the trustees of Columbia University, was the second award based on Mollenhoff's news coverage of labor racketeering.

Last month, the Register was awarded the 1957 public service prize of Sigma Delta Chi, professional journalism fraternity, for his work in the same field.

Mollenhoff previously won two other Sigma Delta Chi prizes, the Raymond Clapper Memorial Award for distinguished Washington reporting and the Heywood Broun Memorial Award of the American Newspaper

HIGHEST AWARD

The work which won for Mollenhoff the Pultizer prize, most coveted award in American journalism, began 5 years ago.

The series of investigations which he undertook in many States, and the stories he wrote from then through 1957, resulted in a series of congressional investigations of racketeering, misuse of funds, and mishandling of welfare and pension funds in labor unions.

Chairman JOHN L. MCCLELLAN, Democrat, of Arkansas, of the Senate Select Committee on Improper Activities in Labor and Management—a group which has conducted explosive hearings since its establishment a little over a year ago—has credited Mollenhoff with providing the impetus for the broad probe.

MCCLELLAN, in a letter to Mollenhoff, once said: "Your ideas, advice, and guidance have been invaluable."

BECK AND HOFFA

Beck's retirement as teamster president, and a tangle of legal problems in which Hoffa is now enmeshed, were results of the McClellan hearings.

The Senate recently passed a bill to reform the handling of union pension and health and welfare funds. Mollenhoff's detailed stories on abuses in various unions had focused attention on this area.

Mollenhoff, a native of Fort Dodge, Iowa, was graduated from Drake University Law School in Des Moines in 1944. He served 2 years as a naval officer in World War II. In 1949 he won a Niemann fellowship and spent a year studying at Harvard University.

IN IOWA FOR WEBSTER CITY TALKS

Mollenhoff heard the news of his Pulitzer award while in Des Moines Monday en route to Webster City, his former hometown.

Mollenhoff will speak tonight to the Webster City High School Quill and Scroll journalism society at Elm Park School, and Wednesday night to the Webster City Teachers Association at Washington Central School gymnasium.

Mollenhoff plans to visit Drake University, his alma mater, Thursday.

His wife, Georgia, formerly of Webster City, heard the award news at their home in Washington, D. C., The Mollenhoffs have three children, Gjori, 17; Sue, 14, and Raymond, 8.

Mollenhoff's mother, Mrs. R. E. Mollenhoff, lives at Waverly, Iowa.

UNDERWORLD TIES

Mollenhoff predicted here Monday night that labor news involving the underworld and the hold it has on the Teamsters union and some others will be of great national interest this summer.

"This underworld picture will be further dramatized in the summer months to give impetus to labor legislation in the United States Senate," Mollenhoff said.

"The Senate will try to enact legislation on the labor front, and may even jar the House into action."

Mollenhoff said responsible labor leaders such as George Meany, president of the AFL–CIO, have tried to clean up unhealthy situations.

"Meany and others like him are faced with the problem of practical politics within their operation, and would be powerless to act if the Senate Labor Racket Committee were not continually putting fire on the subject," Mollenhoff said.

George Czech Receives Highest Award

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. MARSHALL. Mr. Speaker, a young school patrolman from my district, Mr. George Czech, of Little Falls, Minn., is being honored in Washington this weekend with our highest civilian award for valor—the gold lifesaving medal. We congratulate him on this occasion and know that the best wishes of the people of our district are with him.

We are proud that national recognition is being accorded his brave act. At risk to his own life, he saved eight children from the path of an onrushing car as they were leaving their school bus to cross a highway. His quick thinking and courageous action in pushing them from the highway with his patrol flag is credited with saving them from harm.

He has been rightly honored by the State of Minnesota and by the Minnesota State Automobile Association for his heroism. Tomorrow he will receive the lifesaving medal from Gen. Nathan F. Twining, Chairman of the Joint Chiefs of Staff, in ceremonies at the Pentagon. On Saturday, he will review the parade of 30,000 school patrolmen down Constitution Avenue.

I am sure, Mr. Speaker, that his brave act will be an inspiration to the thousands of school patrolmen across the Nation who play such an important part in protecting the safety of our children. Theirs is an invaluable contribution toward teaching law and order to their fellow students on our streets and highways.

Our congratulations, too, to Mrs. Czech, who has accompanied her son here and who has every right to be proud of the honors being paid him. We hope they will both enjoy Washington and New York.

Under unanimous consent, Mr. Speaker, I include an article on the award which was printed in the Little Falls Transcript on May 1, 1958, in the Appendix:

GOLD LIFESAVING MEDAL TO BE PRESENTED IN WASHINGTON—GEORGE CZECH TO RECEIVE HIGHEST AWARD

George Czech, 15, Little Falls school-bus patrolman, has been named 1 of 5 in the United States to receive the highest civilian award—a gold lifesaving medal—for valor.

The patrolman, who last year pushed eight pupils from the path of a car that was breaking through a patrol line, will be given the award May 9 in ceremonies at the Pentagon in Washington, D. C., by Gen. Nathan F. Twining, Chairman of the Joint Chiefs of Staff.

He is the second boy in Minnesota ever to receive the honor, according to C. L. Bowar, Minneapolis, director of traffic and safety with the Minnesota State Automobile Association. The first to receive the award was Ralph Fuerst, Minneapolis, who rescued a girl, Carol Rosenthal, from the path of an approaching train. Fuerst is presently in the Armed Forces.

Czech and the four other youths also will lead a parade of 30,000 school patrol boys down the Capital's Constitution Avenue as part of the ceremonies. The following Sunday evening, Czech and the four other young heroes will be guests at the Ed Sullivan television show in New York City where they will be given further national recognition.

The awards and trips for the youths, and their chaperones, are sponsored by the American Automobile Association. The recommendation for the award was made by the Minnesota State Automobile Association.

Czech was honored February 18, 1957, by Gov. Orville Freeman for his bravery.

The incident, for which he is being honored, occurred February 12, 1957, in front of what is known as the brickyard school. He was a patrolman on the bus, operated by Richard LeMieur, that had stopped to discharge pupils at the school. While the bus' stop signals were blinking, and the stop arm of the bus was extended, a rapidly approaching car apparently was not going to stop. School children were already starting to cross the highway when Czech saw the impending danger. He took his patrol flag pole and herded the children back toward the bus, saving them while exposing himself to the danger.

LeMieur noted the license number of the car and reported the incident to authorities. The driver was later apprehended.

Czech will be accompanied on the trip by his mother, Mrs. George Czech, route 2, Little Falls. They will leave here next Wednesday morning for Minneapolis, where they will board a train for Washington, D. C. While in Washington, they will be guests of the AAA and will stay at the Mayflower Hotel. They will be feted to sight-seeing tours of the Nation's Capital, and also will meet Members of Congress.

Several special dinners are also being arranged for them during their tour, said Bowar.

While in New York City, they will be given tours of the metropolis, and again will be guests at another special dinner. In New York they will stay at the Manhattan Hotel.

They will return May 13, Bowar said.

For Boating Safety

EXTENSION OF REMARKS

OF

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1958

Mr. KLUCZYNSKI. Mr. Speaker, after 2 years of careful study by the Committee on Merchant Marine and Fisheries, a bill has been reported, and is presently pending before the Rules Committee, which will be a major step in the modernization of our boating laws. The tremendous boom in recreational boating in recent years provides ample proof of the need for new legislation to cope with problems which are being created. Many State and local governments have either recently enacted legislation or ordinances to regulate boating, or are presently giving study to the subject. The great danger is that in the absence of coordinated effort among the various jurisdictions, a hodgepodge of boating laws are likely to come into being, which could set the industry and the sport back for many years.

The bill H. R. 11078 as reported by the Merchant Marine Committee is a sound step in the direction of coordination of effort toward the goal of reasonable uniformity between the States and the Federal Government.

The need for this type of action is well brought out in an editorial in the May 1 issue of the Christian Science Monitor.

Under leave heretofore granted, I insert the following editorial:

WARNING FLAG HOISTED OVER BOATING BOOM

(By W. Clifford Harvey)

One of the oldest of American industries—pleasure boating—is only in its infancy today with booming sales and families thinking in terms of taking to the water under sail, in cabin cruisers, dinghys, or on yachts.

This amazingly sudden spurt of customers trying to get into new boats and sparking their modern self-starters has just as suddenly thrust a completely new set of problems and regulatory formulas upon the lawmakers and boat owners. The problem is to develop a safety code before the waterways become as crowded as the highways.

The fast-ballooning pleasure boat business is now concerned over the possibility that local, State, and Federal governments might create a hodgepodge of boating laws that could set the industry back more than a decade.

BOATING ACT PROPOSED

Checks against this prospect are being referred to local boating organizations and legislatures with the idea of forestalling private groups said to be pressing their own favorite plans.

Representative HERBERT C. BONNER, Democrat of North Carolina, an ardent proponent of some model State boating law, has warned against building a "Tower of Babel in boating laws." He is fighting for the updating of Federal laws through passage of a boating act which he has introduced into the current Congress.

Safety is something that can be installed in a boat—or an automobile—only to a limited extent. Complete safety is dependent largely upon the operator. But protection against the carelessness or frailties of the human element can be solidified, according to Mr. BONNER, through carefully thought out, uniform laws.

One boatmaker is advertising that the amount of pleasure you realize from your boat investment is in direct proportion to how safe you make your boat. There are all kinds of devices available, he says, to make boating safer. And he goes on to list a few—automatic pilots, direction finders, radio telephones, depth recorders, radar, electric starting, and electric lighting.

EARLY ACTION DUE

The proposed Federal Boating Act goes further. It is the result of a 2-year effort by the Merchant Marine and Fisheries Committee. It aims at a workable framework of uniform legislation to regulate, but not to restrict, boating. It has the endorsement of the United States Coast Guard, Council of State Governments, the Outboard Boating Club of America, the United States Power Squadrons, American Power Boat Association, and the National Boating Association.

Early action by Congress is forthcoming, due to the mounting problems of handling the vastly increasing flotillas of pleasure boats. Pleasure craft, formerly numbering in the thousands, have increased to millions.

National recognition of the boat problems was given by the Commandant of the United States Coast Guard, when he told a congressional hearing that the boating situation has mushroomed to the point where it is almost out of hand.

Several States have organized motorboat committees or advisory commissions to help in formulating sensible laws that will control and not hamper the operation of pleasure boats.

A Letter From General Counsel Robert Dechert of the Department of Defense

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1958

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include a letter from the General Counsel of the Department of Defense, Robert Dechert, regarding a TV debate:

GENERAL COUNSEL OF THE
DEPARTMENT OF DEFENSE,
Washington, D. C., May 6, 1958.

Hon. PAUL CUNNINGHAM,
House of Representatives.

DEAR MR. CUNNINGHAM: I write this letter to supplement our conversation this morning at the meeting of the House Armed Services Committee about the statement introduced into the CONGRESSIONAL RECORD for yesterday, May 5, 1958, by Congressman F. EDWARD HÉBERT, relating to the TV debate between him and me day before yesterday (Sunday, May 4, 1958). Unfortunately Congressman HÉBERT has returned to his constituency for a period, as he told me Sunday he planned to do, and I am therefore unable to see him. I am, however, sending to his office a copy of this letter.

Mr. HÉBERT's statement (on p. A4065) is headed "The Full Story." I suggest that whoever was responsible for this heading did Mr. HÉBERT an injustice.

Mr. HÉBERT said on page A4065 that Mr. Dechert stated that he was "a former marine himself." This is an error on his part. What I said was that as a Regular Army lieutenant I had served with the 5th Marine Regiment in the Battle of Belleau Wood in June 1918, and had in fact been in charge, for the 10 days which made up the second (and lesser) half of that battle, of the entire communications of the Marine Brigade of the Second Division in the Belleau Wood. This and many other contacts have given me an undying admiration for the United States Marine Corps.

Mr. HÉBERT in his CONGRESSIONAL RECORD statement then said, as to the Marine Corps, that I "set about chastising them and using language which was most inappropriate and shocking."

Lest these adjectives mislead anyone who did not hear our TV debate, it seems to me that the CONGRESSIONAL RECORD should contain the following exact transcript (taken from a tape recording) of my answer in the TV debate to Congressman HÉBERT, in which he finds "language which was most inappropriate and shocking." I hope that his view will not be shared by anyone else who heard the debate or who reads this, for no one regards both the Marine Corps and the Navy more highly than I, and what I was trying to say was that my regard for them was so widely shared that neither of those great organizations need fear that the public would allow them to be unfairly treated.

Here then is the stenographic transcript of the part of the TV debate to which Mr. HÉBERT referred in such strong language:

Mr. DECHERT. "As a newspaperman you know that the newspaper can never report a whole speech. Since you've asked this, you've got to give me a minute or two to read this. This is what I said, in pointing

out that reorganizations always bring growing pains, and that those growing pains need to be dealt with wisely and that you cannot always deal with them by legislation. I said:

" 'Let's take a specific example—the United States Marine Corps. I stand second to no one in my admiration for the fighting United States Marine Corps. I served as the signal officer under the 5th Marines—the 6th Marines—in the Belleau Woods for the last 10 days in the battle of the Belleau Woods. I was a Regular Army officer.' "

Mr. HÉBERT. "Are you reading? Did you say this last night?"

Mr. DECHERT. "I said it last night. * * * 'I was a Regular Army officer and I know the value of the Marine Corps, but you can't effectively preserve the status quo by legislation, nor is it desirable to try to do so. Note however that this bill, recognizing the admiration of the country and certain understandable concerns of the Marine Corps, contains three things:

" '1. The preamble provision;

" '2. Section 202 (c) (3), which says that "Within the policy enunciated" by section 2—the preamble—certain things will be done; and finally it retains

" '3. Title 10, United States Code 5013 (a), which says that the Marine Corps "* * * shall be so organized as to include not less than 3 combat divisions and 3 air wings, and such other land combat, aviation and other services as may be organic therein'."

"I then went on and said that 'no set of words could ever guarantee absolutely the status quo. The continued high status of the United States Marine Corps must be guaranteed, in the future as in the past, by three things:

" '1. Their deeds;

" '2. Their public acceptance;

" '3. The devotion of their members and past members.

" 'I suggest that it would be against the best interests of the United States Marine Corps to seek more specific guarantees by statute.'

"And I believe that."

The points which I was trying most to emphasize in my Saturday speech and in the TV debate were these:

1. In the face of changing methods of warfare (and surely the missile and space implications of today are omens of change), no legislation is effective to continue the methods of yesterday. I pointed out that no law could have preserved wooden battleships, once the *Monitor* and *Merrimac* fought their famous battle off Newport News, and that armored tanks spelled the end of cavalry after World War I, regardless of legislation.

2. Those who try to preserve the exact status quo by legislation in fact do a disservice to the military services. Those services have shown a great adaptability to change. They cannot be safely put into legislative straitjackets.

Very sincerely,

ROBERT DECHERT.

J. Edgar Hoover and Communism

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which summarizes J. Edgar Hoover's new book entitled "Masters of Deceit" devoted to the study of and combat against communism. This article appeared in the Elks magazine, issued for May 1958:

J. EDGAR HOOVER AND COMMUNISM

The Order of Elks was the first national American organization to condemn communism.

That action was taken at the grand lodge session of 1919.

That same year a young man named J. Edgar Hoover, a special assistant to the Attorney General of the United States, was assigned to prepare a legal brief on the newly formed Communist Party.

Since his acceptance of the responsibilities of the Directorship of the Federal Bureau of Investigation, Mr. Hoover has, naturally, devoted himself earnestly to the study of and combat against communism in this country.

From time to time, articles by him pertaining to this subject have been contributed by him to the Elks magazine and have been read with appreciation and benefit by the members of the order.

In the foreword of a book just issued, entitled "Masters of Deceit," Mr. Hoover tells of the depth and breadth of his studies of communism and states that he concluded his 1919 report on the subject as follows:

"These doctrines threaten the happiness of the community, the safety of every individual and the continuance of every home and fireside.

"They would destroy the peace of the country and thrust it into a condition of anarchy and lawlessness and immorality that passes imagination."

His conclusions, he says, remain the same today and he adds that communism is the major menace of our time and threatens the very existence of our Western civilization.

When one concludes the reading of Masters of Deceit one cannot fail to be thoroughly convinced Mr. Hoover has proven his case.

We have read several reviews of the Masters of Deceit, but none which we feel does justice to the book.

We shall not attempt a review. An effort to give full justice to the book would require another 300-page publication and then fall short.

In brief, let us say that Mr. Hoover is the only man who could have written this book.

He covers the history of communism from Marx and Engels through Lenin and Stalin to Khrushchev and substantiates all charges of deceit, oppression, and murder by special instances.

He treats communism in the United States in the same manner, giving names, dates and instances.

He shows the great deceit and danger not only of definite Communist groups, but also of fronts and fellow travelers.

In short, it is a book that ought to be read by every American citizen interested in the preservation of the freedom we now enjoy. It should be in every library in our country and made a textbook in our schools.

All loyal American citizens of our country owe a debt of gratitude to J. Edgar Hoover, the author of Masters of Deceit.

Inflation and Automation: Cause of Unemployment

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Little Businessman by Mr. William Castleman. As executive secretary of the Illinois Institute of Social Welfare, Mr. Castleman is particularly qualified to view the impact that the current economic picture has had on older people, and on those with fixed incomes:

CAUSE OF UNEMPLOYMENT: INFLATION AND AUTOMATION

(By William Castleman, editor)

The President in a recent statement stated that he would not be panicked by alarmists. It appears that he has already been greatly influenced by those who have brought to his attention the dangers confronting our Nation because of unemployment and business conditions. It was only a few months ago that he stated that the country was only taking a breather. Then why the appropriation of the billions of dollars for public works? The facts are that he has discovered that the alarmists had uncovered the true conditions that were prevailing throughout the Nation, and brought to his attention that the economy was deteriorating rapidly. That is why the billions for public works.

If the American people would only take time to properly evaluate the cause that has produced poverty in the midst of abundance—if they understood the two dynamic forces which are producing unemployment and poverty—inflation and automation, we could begin to take the necessary steps to create jobs for our unemployed workers, by building up the purchasing power of our poor and needy, who are in dire need of the things of life.

In the last 5 years billions of dollars have been spent on new plants and new labor-saving machinery. The robot worker is fast displacing the human worker in many of our factories and offices. And if we take the time to examine closely the workings of our mixed economy, we will find that the other big factor in creating unemployment has been inflation—inflation during a recession. This is something new in the economic picture. The rule heretofore has been, that when business is poor, prices drop. Not this time. The high prices in 1958 are not the result of scarcity. Our warehouses are full of merchandise. Then what is it? Could it be monopoly? Nobody seems to give us the answer.

We do know that the millions who are on low fixed incomes have had their purchasing power greatly reduced by inflation. This takes in about one-fifth of our population. Their reduced purchasing power resulted in their buying less food, less goods, etc. The effect, less help in the factories, stores, etc. Unemployment naturally followed, like night follows day. A vicious process was started. As more workers were let out of jobs, the buying power was further reduced. And so the vicious process goes merely on, where it will stop nobody knows. It can only be stopped by a reversal of the present trend.

Professor Neil F. Jacoby, of the University of California, in his book Can Prosperity Be Sustained? wrote:

"Price inflation during the past decade has pauperized millions of our elderly and disabled Americans living on fixed dollar pensions, State aid, social security, and annuities."

The professor had hit upon one of the basic causes which brought on our present recession. The other force is automation—the robot worker. He is rapidly displacing many of our human workers. He needs no food, clothing or shelter, and he is able to work long hours, if what he produces can be sold. In fact, he is a very much cheaper worker than the slave of the old south.

The first thing that the Nation needs to do is to restore the buying power to the millions that have lost it through inflation—

these are our poor and needy, our old folks. These people with small incomes are in dire need of the things of life. Why not restore to them their original buying power that they had when they first received their social security and old-age assistance checks? It would be far better if the Nation would not only do that, but raise their purchasing power in this critical period above their usual buying ability to purchase the needs of life. This will give a spurt to jobs everywhere, over the entire Nation.

To make the Nation stronger, we must remove poverty altogether. Franklin D. Roosevelt, in a statement he made during the depression of the thirties, said: "We have come to a clear realization that individual freedom cannot exist without economic security and independence."

Can this be a warning, that if we fail to build security for our people in all stratas of our social order, that it will be the end of our free enterprise economy?

The robot worker, automation, has made the good life possible for all. When our Congress makes the needed changes in our health, education and welfare policies, to meet the needs of all our people, it will spell the end of poverty in our Nation.

In the meanwhile, the pressure of unemployment will keep on increasing, regardless of the billions of dollars that the administration is planning to spend, until purchasing power becomes better balanced with production.

The road building and other Government projects, which require skilled labor, will help the wage-earners in the high income brackets. But the present unemployed army comes from our factories, stores, offices and service businesses. Most of them will remain unemployed, unless purchasing power is placed into the hands of those in dire need of the things of life. One big factor in a public works program, it takes nearly a year to get it underway. Can the Nation wait another year for to cure its ills? The extension of unemployment compensation for 13 weeks will only help to keep the wolf away from the door a little while longer. Jobs, not charity, is the only correct answer.

In the great challenge of 1958, will be have the will and the wisdom to reorganize our Nation on a more solid foundation? Or, will we follow the leaders of the blind, and move toward greater unemployment, and a much deeper depression than what we had in the thirties?

If we remain callous—indifferent to the misery prevailing in our midst—if we procrastinate on the vital problems of our Nation, we may be too late to act—the destructive forces will have made big inroads into our way of life.

The late Justice Louis Brandeis, once said: "The failure to solve today's problems only accentuates an complicates tomorrow's."

How correct he was, and how timely is his reasoning for us today. It is indeed tragic when one sees how indifferent we have become toward the millions of our poor and needy. Wider, wider, becomes the gap between production and consumption. A nation which has been able to reach a state of abundance, should have the intelligence and the will to correct this terrible condition which prevails in our democracy.

The Nazarene said to the people of His day, "Come unto me and I will give you life, and I will give it more abundantly."

In His day, the struggle to survive was very difficult. The people used crude hand tools to obtain their living from the soil. It was quite a task to produce the needs of life. How different it is today. One robot machine can produce enough for a hundred human workers. There is no need for poverty to prevail in our midst. The 65 million workers and the millions of robots can, and have, already produced a state of abundance of many products.

And, if we fail to understand the signs of our times—if we fail to appreciate our freedoms—if we fail to solve our economic problems, as the free nations down the ages failed, our weakness in the midst of strength, will destroy us.

A tax reduction will only be of great benefit to the wealthy. It will not solve the unemployment problem. A tax reduction will give inflation the biggest spurt it has had for many years. Some of the daily papers, with their well camouflaged headlines, are leading the people up a blind alley. A tax cut across-the-board will surely enrich the rich—more money will be put into banks, vaults and secret hiding places, but their dollars will keep sinking in value far faster than ever before.

America's political leaders and America's business leaders are facing the greatest challenge in the history of the Nation. Are they capable to meet the challenge of 1958? Have they the wisdom and the understanding to save this Nation and its freedoms from destruction? They can only do that, by building opportunity for all to enjoy the good life. Yes; it will take a great deal of spending which might be used to purchase a few more missiles. But it will unite the Nation, and it will become stronger than it has ever been. Its freedoms and progress will be assured.

The wealth this Nation had produced in the height of its prosperity will become a mere mole-hill, when once the Nation is fully united to produce abundance for all—it will build a mountain of wealth, and convince the world that our way of life offers the greatest opportunity for the well being of mankind.

This Nation can well afford to be lenient and liberal to its poor. It can well afford to lift our poor and needy out of the mire of poverty to the better life and greater security. It will cost much less than to keep up thousands of charity organizations, hospitals, mental institutions, large police forces, jails, racketeers and gangsters. Will our Nation's leaders have the will and the courage to tackle the great human problem of the ages? Then only will we be able to say that the dream of the Founding Fathers of this Nation is coming true—a Nation of freedom and opportunity for all.

Soil Conservation Districts: 1957 Reports

EXTENSION OF REMARKS

OF

HON. GARDNER R. WITHROW

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1958

Mr. WITHROW. Mr. Speaker, I just received a progress report from State Conservationist M. F. Schweers, of the Soil Conservation Service, indicating 1957 accomplishments made by the agency operating through the 71 county soil conservation districts in Wisconsin. This information was contained in a letter addressed to district supervisors in acknowledging their past year's reports.

I have an especial interest in the progress being made by the Soil Conservation Service because the first large-scale demonstration undertaken by it in the entire Nation was established in my congressional district, in the Cook Creek watershed to be precise. The practices originally established there have been a model for soil conservation work in the Midwest. This year, 1958, marks the 25th anniversary of the initiation of this project.

Under unanimous consent to extend my remarks, I include the progress report sent out by M. F. Schweers, Wisconsin State conservationist, May 5, 1958:

UNITED STATES DEPARTMENT
OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Madison, Wis., May 5, 1958.

To: Soil conservation district supervisors.
From: M. F. Schweers, State conservationist.
Subject: Acknowledgment of your 1957 SCD annual reports.

Recognition banquets and annual meetings for cooperators were among soil conservation district highlights for 1957, according to enthusiastic remarks contained in many of your interesting and informative annual reports. In quite a number of districts the outstanding soil conservation couple(s) of the year was selected and presented with an award(s).

I know we are all aware of the fact that the farm families who till the land are the ones responsible for the sucess of the soil and water conservation program. Your showing appreciation of their efforts through these recognition events was a commendable and appropriate gesture. I have been told that these people sincerely appreciate what you have done for them in this connection.

NINETEEN HUNDRED AND FIFTY-SEVEN REPORTS

Each year your annual reports get better in makeup, content and attractiveness. We have said this in past years, and 1957 is definitely no exception. Sending copies of these reports to district cooperators and the agricultural leaders of your county is an excellent idea.

Many reports contained some thought provoking philosophies as expressed in the following example:

"After all, what we are all striving for is better living for people. I'm confident that our district program here is making that contribution. I'm personally proud to be part of it and I'm proud of the agencies and people—particularly farmers—who are contributing to better living for all our people."

Several of your reports contained testimonials made by SCD cooperators, such as:

"We are not done with the program even though we started way back in 1949. I will say when a farmer says he is through with conservation he must be done farming."

"If you are interested in maximum production at a minimum cost, my advice is to contact your soil conservationist for help in developing a complete plan for your farm. You too will be amazed at the results."

I could have acknowledged each of your reports with a separate letter. However, it seemed that a single communication could be more effective and so I am following the pattern employed during the past several years.

SCS Administrator Don Williams asked me to convey greetings to you. I am sure he wishes that he had the time to personally acknowledge each one of your reports.

ACCOMPLISHMENTS

In writing you 2 years ago we started this section with these words: "The best year we ever had." I am pleased to inform you that 1957 achievements surpased those made in 1955. As evidence, we present the following table showing work performed by the Soil Conservation Service through your districts:

Item	Unit	Accomplishments		1957/1955 percent
		1955	1957	
New cooperators	Number	2,996	2,004	67
Basic conservation plans	do	1,216	1,740	143
SCD cooperators serviced	do	13,022	15,829	122
Soil surveys	Acre	550,395	557,882	101
Soil descriptions	Number	102	60	59
Contour strip cropping	Acre	59,174	52,128	89
Waterways	Mile	345	390	113
Terraces	do	335	282	84
Diversions	do	198	195	99
Land smoothing	Acre	731	2,005	274
Surface drains	Mile	977	737	75
Closed drains	do	232	356	153
Pasture improvement	Acre	20,773	29,980	144
Prevention of grazing damage	do	20,969	26,140	125
Woodland management [1]	do	5,599	4,932	88
Tree planting	do	3,185	11,918	374
Field windbreaks	Mile	33	45	136
Wildlife area improvement	Acre	903	2,955	327
Drop inlets	Number	18	81	450
Drop spillways	do	7	95	1,357
Farm ponds	do	79	163	206
ACP referrals	do	14,670	15,153	103
ACP farms serviced	do	15,112	14,135	94
Soil Bank participants assisted	do	0	849	----------
Work in rural development counties	do	0	2	----------
Direct assistance to SCD's (includes part-time aids)	Man-years	155	175	113

[1] Employees of the Wisconsin Conservation Department were primarily responsible for the woodland management accomplishments and they cooperated very closely with Service personnel in the tree-planting program.

The increase in construction of drop inlets and spillways was a major factor in establishing this new record for the State. Upping the number of these structures from 25 to 176 is really an outstanding expansion of these much needed installations.

While the Service does not maintain records on items such as desirable land-use conversions, improved rotations, influence on increasing farmer purchases of needed liming and fertilizing materials, etc., these are basic factors considered while assisting farm families in developing and carrying out their conservation plans.

From time to time questions are raised concerning SCS policies on drainage. You are no doubt familiar with these policies, but it wouldn't be amiss at this time to quote a portion of a directive issued by Administrator Williams on March 30, 1956:

"In accord with the current policy of the Department of Agriculture, the Service will not provide assistance to cooperators in drainage, the primary purpose of which is to bring additional land into agricultural production."

The SCS also assisted district governing bodies and collaborated with the Agricultural Extension Service and the State Soil Conservation Committee in planning for and carrying out educational and informational programs. We do not have data on the extent of these activities.

In summarizing this section, I certainly am in accord with the statements made in many of your reports to the effect that "1957 was indeed a good year soil and water conservation-wise."

AGRICULTURAL CONSERVATION PROGRAM

Without ACP cost-sharing assistance, the record-construction program would not have risen to the heights it attained in 1957. This same appraisal is applicable to increased amounts of other measures for which cost-sharing assistance is provided.

County agricultural stabilization and conservation committees transferred more than $165,000 to the Soil Conservation Service under the SCS–ACP 5 percent agreements. Of this amount the Service earned about $155,000. These funds were used to supplement district staffs in handling the additional workload resulting from the agricultural conservation program.

The past year saw the completion of the first ACP pooling agreements in the State. Through this arrangement, two or more farmers can cooperate and pool their ACP payments on eligible practice.

WATERSHED ACTIVITIES

There are more than 60 informally organized watershed associations in Wisconsin. One of our work-unit conservationists estimated a 10 percent increase in accomplishments by working through groups rather than with individuals.

A brief rundown on watershed activities under Public Law 566, the watershed protection and flood prevention act, up to May 1 is as follows:

Watershed	Approximate acreage	County SCD's	Remarks
Lost Creek	7,000	Pepin	Approved for operations. Contracts for construction of 3 floodwater-retarding dams should be entered into prior to June 15.
Mill Creek	40,000	Richland	Approved for operations. Detailed surveys are being made and structural designs being prepared.
Mill Creek (Alma)	11,000	Buffalo	Work plan 15 percent completed.
Black Earth-Cross Plains.	30,000	Dane	Work plan 40 percent completed.
Bogus Creek	8,000	Pepin, Pierce	Work plan 5 percent completed.
Coon Creek	92,000	La Crosse, Monroe, Vernon.	Final draft of work plan being reviewed by the several agencies concerned. It has been approved by the local endorsers.
Bad Axe	122,000	Vernon	Application for planning assistance submitted to the State soil conservation committee and SCS.

COOPERATION

Every SCD annual report made some complimentary reference to the friendly and effective relationships existing among all people interested in the conservation programs of your respective soil conservation districts.

In your narratives you commend personnel of the Agricultural Extension Service, Agricultural Stabilization and Conservation Service, the State Soil Conservation Committee, Farmers Home Administration, Vocational Agriculture, Vet Trainers, Wisconsin Conservation Department and Soil Conservation Service for their contributions. Then there were county highway commissioners and committees, sportsmen's clubs, bankers' associations, machinery dealers, business organizations and several other groups who also participated in advancing your program.

Newspapers, radio and TV have evidently given you all the space and time you can effectively use in telling the people about your program.

And, we do not ever want to overlook the families on the land. As mentioned at the outset, they are the ones who hold the key to a successful program.

Insofar as the Soil Conservation Service is concerned, we sincerely thank you for the very fine tributes you paid our personnel. Bearing a bit of repetition taken from a previous acknowledgment letter, I am sure our field personnel join me in saying: "we thoroughly enjoy having the opportunity of working with you supervisors and serving the fine farm families in the district. We will continually strive to do a better job."

YOUTH PROGRAM

This is evidently an important activity in all soil conservation districts of the State. A few selected quotes on this matter are in in order, I believe:

"The aim of the education department is to develop and keep conservation attitudes in the minds of boys and girls from first grade through graduation from high school, and for these attitudes to remain there for life." (We pay tribute to the County Superintendents of Schools and teachers who spearhead this activity).

"Soil conservation as a 4–H project is encouraged to point out conservation needs and application to the rural youth. Through a combined effort we feel that conservation is being presented to and accepted by the people."

GOVERNING BODY ACTIVITIES

The holding of monthly meetings of supervisors is a standard practice in most districts of the State. We are told that these sessions are generally well planned and the programs carried out in an effective manner.

General tours and demonstrations and recognition events for cooperators have been carried out in many districts.

A number of county boards appropriated funds to district governing bodies in amounts varying from one to several hundred dollars. This permitted you and your associates to do some of the things that you would have been unable to do otherwise.

Your State association has several organized committees whose responsibility is to sponsor specific activities on a statewide basis. These are:

Rural Life Sunday and Soil Stewardship Week: At least two-thirds of your reports indicated that successful programs were carried out last year under your sponsorship and direction.

Farm Progress Days: The 1957 Juneau County SCD event drew over 40,000 people.

Goodyear soil conservation awards program: The Wood County SCD governing body won first place in the 1956–57 contest, with Marathon being runner-up.

Soil conservation speaking contest: This activity got a good start last year. A supervisor for the Marinette County SCD won the 1957 adult championship while a high-school student from the Outagamie County district won the youth title.

Dealer district program: Excellent plans have been developed for this project. According to reports very little was done in this activity during 1957.

Several soil conservation districts have set up some committees patterned after those

established by the State association. From what we have heard these have been very successful, particularly from the standpoint of bringing more local leaders into active participation in SCD affairs.

Effective semiannual area meetings of supervisors were mentioned in several reports. Reference was also made to the annual State conference held in Madison.

"Excellent meetings" was your appraisal of the four 2-day workshops held for supervisors of western Wisconsin last winter.

The above activities by no means present a complete picture of the numerous projects being sponsored by you and your associate supervisors. One must definitely acknowledge that your job is a big one and is getting even bigger year by year.

OUTLOOK

In retrospect, 1957 was the banner year in joint SCS-SCD operations. Looking forward, many of you predict, and we have every reason to believe, that 1958 will surpass it.

Generally, the workload in every soil conservation district in the State is on the increase. Several of your reports include formal requests for additional help from the Service. We hope we can satisfy your needs. We mush prefer having too much work rather than not enough. This is a healthy situation. We are confident that through a united effort we can make 1958 top all other years in terms of increased accomplishments.

THANK YOU

Extending personal regards and thanking you for the many courtesies and fine cooperation you have extended to all of us in the Soil Conservation Service, I am

Sincerely yours,

M. F. SCHWEERS,
State Conservationist.

The Agricultural Dilemma

EXTENSION OF REMARKS
OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1958

Mr. HARVEY. Mr. Speaker, I submit for the RECORD an address delivered by Earl L. Butz before a recent session of the United States Chamber of Commerce.

Director and Dean Butz, now head of the School of Agriculture at Purdue University, was formerly an Assistant Secretary of Agriculture in the present administration. In the following remarks, which were edited to meet space limitations, Dean Butz sets forth a challenging analysis of the farm problem, and I am sure the farm future he pictures will be subject to sharp debate within the halls of the Congress:

THE AGRICULTURAL DILEMMA

Agricultural technology and farm-belt politicians have squared off for a major tug of war.

Modern agricultural science and technology are bringing far-reaching sociological and economic changes. This, of course, calls for adjustment in our whole agri-business complex. And adjustment is always painful.

Many farm politicians direct their energies essentially toward maintenance of the status quo. * * *

The main effect of many governmental programs in agriculture is to slow down adjustment to change that would take place in the absence of such programs.

* * * * *

We are now experiencing the third great agricultural revolution in this country. The first came in the middle of the 19th century, when we substituted animal power for human power. * * *

The second great revolution in American agriculture occurred beginning in the 1920's, with the substitution of mechanical power for animal power. * * *

Agriculture is now in the midst of its third great revolution. It is changing from a way of living to a way of making a living. It is changing from a business of arts and crafts to a business undergirded with large amounts of science and technology.

THE DILEMMA WE FACE

The dilemma we face, therefore, is this: Will the people who man the farms of America be permitted to share fully in the benefits growing out of modern science and technology, or must they live with a ceiling over opportunity imposed by governmental programs designed to maintain small, inefficient, often peasant-type production and living units on the land?

* * * * *

The present agricultural revolution, resting on basic science and closely allied with the widespread advance of automation in both production and distribution, is threatening the traditional patern of owner-manager-operator all wrapped up in a single person. * * *

FACETS OF ADJUSTMENT

There are five fundamental characteristics of the current agricultural adjustment which bear on the problem under discussion. These adjustments are the inevitable result of the scientific and technological revolution in modern agriculture. The pressure behind these adjustments is building up each year.

1. Capital requirements for agriculture will grow, in total, per farm, and per man. * * *

Many family commercial farms today have total capital investment exceeding $100,000. It's not uncommon to have capital investment approaching or exceeding $200,000 on family commercial farms in the Corn Belt.

Last year a group of 273 family commercial farmers throughout central Indiana kept records in cooperation with Purdue University. Their average size was 280 acres. They had a total capital investment per farm that exceeded $95,000. These farms used labor so efficiently that they averaged only 1¾ men per farm on an annual basis, including the operator. This means that on these farms there was an investment per worker in excess of $55,000. Many of the individual farms had an investment per worker that went up as high as $75,000 to $100,000. But the average for the entire group was $55,000 per worker. A comparable figure for investment per worker in American industry is approximately $15,000. This means that it takes between 3 and 4 times as much capital investment to create one agricultural job on our good family commercial farms in central Indiana as it does in American industry.

As agricultural science continues to advance, it is inevitable that the business units in agriculture will get bigger and bigger with still larger amounts of capital required. This trend cannot be stopped. Nor should it be. * * *

2. The trend toward larger and fewer commercial farm units will continue. Machines will continue to displace men on our farms. We will produce more with fewer farms and fewer workers than at present.

* * * * *

As our farms become larger and more specialized, with total investment per unit pushing hard against a quarter of a million dollars, there will be growing pressure on the combination of owner-manager-operator in one man as the typical institutional pattern of farm operation.

We have departed from this pattern in the majority of other major business sectors of America. Time was we had many family entrepreneurial foundry shops, tailor shops, bootmakers, corner grocery stores, and, yes, even automobile assembly plants. These have given way, in the main, to larger units, with more capital, with higher levels of management, with more specialization of labor, and, if you choose, with a higher degree of integration. * * *

It's not necessary to dwell at length on the difficulty of passing a $200,000 farm unit intact from father to son, without pausing at least to catch one's breath as he passes the tax collector.

Moreover, if the son has to face the prospect himself of getting on top of this kind of capital structure, perhaps by paying off 2 or 3 other heirs in the family, he may choose to spend more of his current income in living, and less in savings, than his father before him chose to do. This means that he will be not only willing, but anxious, to enter into some kind of financial arrangement whereby a third party puts up some of the capital, or perhaps becomes a financial partner, on a permanent basis, at the time of father's death.

Managerial capacity is even more difficult to pass from father to son than is accumulated capital. * * * It is equally true that fathers don't necessarily breed vocational preference into their sons. With the growing tendency for farm youth to be educated beyond the high school, many farm-reared youngsters will have their vocational preference tipped away from the "3-in-1" farmer their father was. They might prefer to train themselves for manager, for manager-operator, for part owner-operator with some "integrator" supplying part of the capital and part of the management, or for some combination of these.

* * * * *

3. Management has become the key factor in successful farm operation. * * *

The typical cycle of farm ownership and operation of our present system of fee simple ownership by individuals is essentially the life cycle of an individual. In the main, our farms need to be rather completely refinanced each generation. But still more impotrant, with the process of refinancing usually comes a shift in management and operation. This is seldom accomplished without considerable disruption of the farm as a going concern. This disruptive process in transfer will increase as the size of unit grows, as financing becomes more difficult, and as the importance increases of maintaining a unit large enough to be economically efficient.

Industry has met this problem by having divisible shares of ownership which in many cases are not even remotely related to management or to operation. This permits passing ownership from one generation to the next without disrupting management or operation. This permits the accumulation under single management and single operation, or under single management and multiple operation, of units so large as to be beyond the capacity of the ordinary individual to accumulate in his productive years, and yet large enough to attain the economies associated with scale of operation.

The pressure is in this direction in commercial agriculture.

This does not necessarily mean the growth of corporate farms. This may be accomplished in a number of ways. We shall see the gorwth of family shares of ownership of the family farm, instead of placing the farm in an estate to be sold as a unit. The family shares will be transferable, so that one of the heirs, wishing to convert his inheritance to some other form of property, may sell his share to a third party who may be entirely outside the family. But in this way the

farm unit will remain intact. Thus what starts off as essentially a family-owned farm may end up as a farm under group ownership, but still as a single unit and single operation, with single management for the entire unit. Increasingly, on units of this kind, management will be provided by a professional management group, standing between the individual owners and the operator of the farm * * *

Another way of meeting this problem is single operation of multiple tract ownership. The operator may be either a part owner or a complete tenant. In either event, he shares with others part of the traditional owner-manager-operator function. He surrenders certain freedoms and privileges in the process, but he gains greater rewards in return.

It is obvious from the above analysis that we will continue to develop a professional management group in agriculture. This won't necessarily be at the level of the general professional farm manager. The big growth will be in enterprise managers. After all, integration generally involves single enterprises—not whole farms.

Witness the managerial arrangements in contract broiler production, fruit and vegetable production under contract with canneries or freezing plants, and other specialized types of agricultural production where management can be easily separated as a package and assigned to someone other than the producer himself.

This may alter the traditional entrepreneurial, risk-taking function of the individual farmer. It may even move him in the direction of a quasi-riskless, semiguaranteed wage earner. But this is not necessarily bad per se. He may be, and frequently is, better off this way than he was before.

* * * * *

4. The commercial farm will increasingly assume the characteristics of a manufacturing establishment. * * *

5. Our countryside will be "rurbanized." Our modern science and technology have made it possible for farm and city folk to live alongside each other in our newly "rurbanized" communities. The effect of the resulting intermingling has been that there is no longer a clearly defined farm population and an industrial population, especially within 40 or 50 miles driving distance of our big industrial centers, and that includes practically the whole eastern and central parts of the country.

Today the commercial farmer not only takes on the financial aspects of a big-business man, but because he now associates with businessmen and laborers who live nearby him in the country and whose children go to the same school, increasingly this farmer is beginning to think like they do.

* * * * *

PREFERENCE FOR SMALLNESS

Political leaders will resist the trend toward large, well-capitalized units in agriculture, both in their oratory, in their congressional hearings, and in their legislation. The philosophy of the small, owner-operated family farm is deeply ingrained in our social and political mores. The controversy over this issue is often more emotional than economic.

Political pressure will continue to be on the side of maintaining small family farms, even though modern technology dictates strongly that family farms become larger.

Witness, for example, the language in the report of the Subcommittee on Agricultural Appropriations of the House of Representatives, issued March 28, 1958, as Report No. 1584. I quote from page 4:

"A job in town is no answer to the problems of the low-income farmer. * * * Yet the principal efforts of the Department (USDA) during the past few years have been directed toward urging farm families to obtain off-farm employment and to move off their small farms.

"To leave the farm for town under present conditions would only swell the unemployment rolls. * * * As a matter of fact, it may soon be necessary to start thinking in terms of moving people back to the farms where they can at least find food and shelter.

"Further, moving the small farmers off their farms will have very little effect on the level of agricultural production. The small farms contribute very little if any to surpluses. * * *

"Therefore if all small farmers were removed from their farms, and their land were allowed to remain idle, the maximum possible reduction of surpluses would be 9 percent. It is probable, however, that land released from small farmers would be added to larger producing units which, being more efficient, would increase production on that land and thereby further increase surpluses."

Seldom has the language been plainer in any congressional report that political influence will be on the side of preserving small, inefficient, low-income units on the land, even though it is clearly indicated that agricultural efficiency would be increased by reversing the trend.

* * * * *

We are all familiar with the fact that something over half of our farm units in the United States are so small or so inefficient that they don't yield their operators a decent standard of living. It's economically impossible for them to do so.

LET'S BE SENSIBLE

We must help the marginal farmer and the operator of an undersized acreage to become a better and more efficient farmer, or failing that, to find opportunity in other fields where he is better suited and where his income opportunities are larger. * * *

It is not at all coldblooded to suggest to a farmer that he seek other employment if he can't make a good living in farming. It is really coldblooded to attempt through legislative programs to keep him tied to a farm which everyone knows is inadequate to provide a decent living for himself and his family. * * *

In many areas of the country, in the years ahead, there will be a job waiting in industry, a job with good pay, for the farmer or member of his family who finds that farming is not his long suit. And if his children want to go into engineering, into medicine, into teaching, or into the skilled crafts in the city, they'll find a position there when they finish school. There's nothing dishonorable about this kind of vocational shift. It has been taking place ever since the founding of the Nation. Without it, our high level of living would have been impossible. We would have been a Nation of peasants, with each family tied to its small acreage of land. We would have advanced little beyond the current status of major agrarian populations in the Near East and the Far East.

Most of our low-income farm families on our more than 2 million small-scale, part-time, or residential farms get little or no direct benefits from price support and commodity stabilization programs. They are almost completely by-passed by the expensive commodity price-support programs the Government operates. Likewise, the soil bank doesn't have much to offer them. By the same token, their hope does not lie in easier and less expensive credit.

A large share of these farm units, although classified in agriculture, are operated by farm people who really need more opportunity to improve their situation either through enlargement of the individual farm business or by additional employment off the farm. Many of these people are so situated that the solution of their problem must be found outside agriculture. Indeed, for all practical purposes, many of them have already left agriculture. We just haven't stopped counting them. They are increasingly turning to off-farm employment as their principal sources of income. * * *

At the end of the Civil War, President Lincoln instructed General Grant to disband the Army and see to it that every soldier who wanted it could have 40 acres and a mule.

OPPORTUNITY CEILING

The modern counterpart of this philosophy is found in the politics of equal shares, when the Government rations the right to produce wheat, cotton, rice, tobacco, peanuts, and corn—the six basic commodities.

* * * * *

Consider for a moment what production allotments are doing to some of our farmers. The rationing of the right to produce among smaller and smaller production allotments results in a larger number of relatively inefficient production units. This tends to raise unit production costs for the entire production. As a result, important sectors of agriculture production, in our most scientific and mechanized agriculture in the world, now find they are being undersold in foreign markets by underdeveloped areas of the world.

* * * * *

Under this system, increasing numbers of growers who are efficient, ambitious, and capable, must live with a ceiling over opportunity imposed by their Government.

* * * * *

Let us sit for a moment alongside producers of our so-called basic crops and think through their problems. Many such producers have so small an allotment that they find it difficult to meet operating and living costs with production so curtailed.

A cotton farmer with his 3-acre allotment, a tobacco farmer with his half-acre allotment, or a wheat farmer with an allotment of only 60 percent of what he used to grow, needs something besides 90 percent of parity. One hundred percent of parity won't solve his problem. There isn't much that any kind of price support program can do for him. His big need is for an opportunity to expand production. But his Government prevents him from producing enough to make a decent living.

PERMIT TO FARM

Let us consider for a moment the case of a wheat farmer and his son. This is a farmer who has high yields, high quality, and low production costs. He is a good wheat farmer.

He has taught his son how to be a good wheat farmer also. His son decides he wishes to become a wheat farmer, and follow the vocational footsteps of his father.

How can he do that in America in 1958? There are 3 ways, and only 3 ways:

1. The son can take over the production quota assigned his father, as his father retires from the wheat business.

2. The son can purchase the neighboring farm and take over the quota assigned to that farm, as his neighbor retires from the wheat business.

3. The son can marry a quota, as father-in-law retires from the wheat business.

There is no other practical way for a young man to get started in the wheat business in this country today. Or the cotton business, or the tobacco, rice, or peanut business.

* * * * *

TECHNOLOGY WILL WIN

Many agricultural and political leaders are frightened by the technological changes taking place in agriculture. They should not be any more wary of these changes

than of other economic and sociological changes occurring in modern society.

* * * * *

It is clear from the preceding analysis that the forces of politics and the forces of economics are and will continue to be on opposite sides of many of the broad changes engulfing agriculture. In this engagement, politics will fight a delaying action. They will neither stop nor reverse the economic trend. They will only delay and confuse it. In the final analysis, the economic forces working in this process will be overwhelming.

* * * * *

It has been said that the proponents of the status quo are often the villains of history.

Those who resist inevitable change frequently perish in the process.

Those who manage our agricultural production, processing, and distribution firms are challenged to give intelligent direction to the changes ahead, so that our great food and fiber industry will function even better than now.

Those who man the political battalions in our legislative halls should be challenged to do likewise.

Mission for the Middle Class

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely article by Mr. Eric Johnston, which appeared in the Elks magazine for May 1958:

MISSION FOR THE MIDDLE CLASS

(By Eric Johnston)

The Soviet Empire has a mission and makes no secret about it. The Soviet Empire poses as the champion of the proletariat, of the marching majority of the 2.6 billion people who inhabit the earth. It defines the proletariat as everyone short of the upper class. By simple subtraction and tricky logic, the Kremlin promotes the doctrine that the free world leaders are rear guardsmen for an upper-class minority—and that this minority is now on the run.

The Soviet Empire conveniently and consistently ignores the democratic middle class, which is the real powerhouse of the free world. Unfortunately, the free world's middle class has also ignored its own power. It has not yet fully recognized and seized upon its own mission. Unless it does so, the Soviet Empire could ultimately win the world. It would do so through the oldest weapon in the Marxist arsenal—the doctrine of class warfare.

In all the advanced democracies, the middle class has been supremely successful. In our own country, it has been the vital shaper and molder of society. The middle class set the taproots of enterprise across our continent, it established our communities, it founded our schools, it became the repository of our freedom and strength.

With all its past and present success, why has the middle class failed to find its modern mission? The reason, I think, stems from the Communist concept of class warfare—a doctrine beloved by the Marxists and repugnant to democratic beliefs. Instead of meeting this concept head on and knocking it down as it deserves, the middle class democracies too often have turned their backs and buried their heads in the sand.

This ostrich attitude might be condoned if the Kremlin's tactics were not making headway. The trouble is that they are, particularly among the millions of impoverished and uncommitted peoples of Asia, Africa and the Middle East. The doctrine of class warfare is carefully designed to lure new followers to the Communist banner and to spread dissension among its foes. The doctrine is still succeeding by our default.

If democracy and freedom are to survive, the middle class must fight back and triumph in the class war which is being waged against it. In fighting this battle, the middle class needs a mission and a sense of urgency. It must frankly and openly assert that it is out to eliminate the proletariat not by liquidation but by mass conversion. It must assert that what the Russians call the proletariat is in reality simply the poor and oppressed. It must prove that middle-class democracy offers far more hope for the poor and oppressed than does Soviet Russian slavery.

This shouldn't be hard to prove if we have the imagination to prove it. Our clearest example is closest to home. In our own country, we've welcomed millions of immigrants since the turn of the century. They were, for the most part, an impoverished horde of landless peasants and unskilled workers denied human rights in their own homelands. In Marxist language, they were proletarians.

But in an unbelievably short span of time, these proletarians and their children have become dignified citizens with a stake and status in our society, a voice in our market place and in our voting booths. They did not become the petit bourgeoise of Marxist legend, the weaklings and functionaries at a decadent capitalist table. They became a vital and vitalizing force within our society.

Surely what has been accomplished in America without a blueprint could be expanded throughout the world through an organized mission backed by a carefully planned program.

Such a program would not get beyond the talking stage without the development of human skills and basic enterprise in the underdeveloped areas. But the middle class democracies already have a beginning in international cooperation through the sparking spirit of American economic aid programs.

It would take more a shift in emphasis than in philosophy to convert American technical and financial assistance into nose cones for the mission of expanding the middle class. The path is wide open and inviting for other advanced nations to follow the American initiative. Together, the middle-class democracies would assert that the objective of economic aid is not merely to achieve stability and development abroad but to convert the proletariat into a middle class and the middle class into democratic electorates.

Paralleling the new emphasis of overseas aid, a blueprint of specific middle-class aims and principles could be formulated. This charter of the middle class would set minimum standards for all segments of a modern society—from agriculture to manufacturing to education.

These minimum standards could be set by working parties of specialists in each field of endeavor. These experts from many nations would also set timetables, country by country, for achieving these minimum standards. Without realistic timetables geared to the problems and promise of each nation, unrealistic deadlines would be set, and failure to meet them would lead to frustration and bitterness.

For instance, a young and troubled nation like Indonesia has reputedly only one doctor for every 89,000 people, while in the United States the ratio is one in less than a thousand. The gap is now so wide that its mere realization by Indonesia could lead to despair, particularly if the country's leaders tried or promised to catch up in, say, 5 years. However, in a carefully worked-out timetable which called for an increase of doctors to a ratio of 1 to 50,000 in 5 years, and steady improvement thereafter, the progress made and the improvement noticed would generate optimism and even enthusiasm.

Above all, what the middle-class expansion program needs are evangelists and true believers. They must create a sense of personal involvement in the campaign—a sense of individual participation, responsibility, and benefit. They need to inspire and to recruit. They must rally the middle class and its converts behind their charter.

How could this program be brought into being? Where would it start? The United Nations would make an ideal instrumentality for the middle-class campaign, but the professional proletarians would be likely to block all efforts in that direction. Then should the United States Government take it over? In my judgment, the program should by no means be the sole responsibility of government.

Government has a role to play, of course. The major instruments of our foreign economic and political policy could be brought to bear upon this effort—from the mutual-security program to the Voice of America. But the preeminent and decisive role must be played by people. It is a job for organizations, and groups, and communities. It is a job for business, and labor, and agriculture—for all of us because all of us have a stake in its success.

The channel for all these energies, I think, should be a broad-based public organization. It might begin in this country. It could generate a global endeavor. As a start, the organization should bring together the separate and almost infinite efforts of private and public-spirited groups within our society; the corporations granting scholarships and training and job opportunities; the philanthropic foundations doing quiet but spectacular work toward human progress; the work of labor, and agriculture, and business generally to advance and strengthen our middle class.

I think it is time to make these sinews of democracy—of our middle class—clear and understandable throughout the world. It is a tremendous and vitalizing force. Outside of the western democracies it is seldom understood or recognized. It is time to gather this force under one roof, to make its good works evident, to employ it for the expansion of the middle class across the earth.

The middle class expansion drive could have a great impact and a decisive influence upon today's crisis in world affairs. It could go a long way toward pressuring the Soviet Empire itself into paying more attention to the needs of its own people and adopting a more neighborly attitude toward the rest of the world. It could drastically alter her priorities.

The fact that the Soviet Union has never gotten around to paving a road across Siberia, an engineering job the ancients could have performed without too much difficulty, did not discourage Nikita Khrushchev from recently challenging the United States to meet the Soviet Union in an electronics duel on the rocket range.

This gambit is typical of Kremlin tactics nowadays. The U. S. S. R. trumpets her strong points, built up through crash programs, while hiding the weakness of an unbalanced society brought about largely by such crash programs.

For instance, the Soviet Union was only too pleased to furnish the Economic Commission for Europe with figures showing an

impressive increase in Russian crude steel production. But it stood mute when asked for data on infant mortality rates and life expectancy within its own borders.

By the same token, the Kremlin readily cooperated with the United Nations in revealing statistics showing a sharp gain in Russia's output of electrical energy. But it hastily rang down the iron curtain when queried on crops and harvests.

These tactics are strictly in line with the Russian concept of competitive coexistence, which is to compete in hand-picked events and run them off under Kremlin ground rules. In these circumstances, it's no wonder that the U. S. S. R. often looks good by comparison.

In the same fashion, the Kremlin has succeeded in jockeying the democracies into an arms race which, in the long run, must take place at the expense of the civilian economy. For Russia, seeking glory in the sky while ignoring misery on earth, this should prove much less of a hardship than for the advanced democracies.

Continued indefinitely, the arms race could mean the virtual disintegration of the democratic way of life without a shot being fired or an enemy soldier setting foot on our soil. Our social, political, and economic systems could ultimately stumble and crumble under the crushing weight of a modern war machine maintained indefinitely. It might mean living permanently in a garrison state where political freedoms and economic rights could be stunted if not uprooted altogether. The bleak and terrifying alternative under present circumstances would be a general war of utter devastation.

As matters now stand, competitive coexistence, Russian-style, gives the Kremlin frightening influence over the way we live today. It has an important if not direct voice in the determination of our budget, of our foreign policy, and even of our domestic programs right down to the county level.

If Soviet influence in our own country can't be discounted, it can't be discounted elsewhere either. The policies and attitudes of our allies clearly reflect the impact of the Soviet Union upon them. In the uncommitted nations where we have given far more material assistance than have the Russians, Soviet influence seems to be growing, sometimes at our expense.

The Soviet Union is trying to hold the initiative in the contest between the democracies and the police states. Unless it is wrested from her, she could be the eventual winner. If the free world is to endure, the present state of affairs must be altered in our favor, it must be altered sharply and it must be altered without delay.

Arms alone cannot safeguard political independence and social integrity, important as it is to deter potential aggressions by military strength. To survive, political independence must be reinforced by economic and social stability. The government that fails to meet the needs of its people cannot endure.

To this rule, the Soviet Government is no exception. It cannot go on forever slighting the desires of its own people. Therefore, as one flank of our middle class mission, we should launch parallel campaigns to build up pressures within Russia herself to whet consumers' appetites, to stoke popular demands for better living.

Such campaigns could induce the Kremlin to divert manpower and resources from its military crash programs to meet growing consumer demands—or run the risk of increased internal discontent. This in itself could serve as a deterrent to aggression, for no government at odds with its own people would dare to arm them and trust them in any outside adventure.

The time is ripe for us to counter the Russian impact by exerting our own influence on the Russians—on their budget, their policies, their priorities. A dynamic drive to expand the middle class at the expense of the proletariat will do just that if it succeeds, no matter how much jamming the Kremlin does.

By fighting fire with light, the middle class should find in the so-called proletariat highly eager recruits for its ranks. We would draw them as surely, as directly as a magnet. We would draw them because of the unique attribute of middle class democracy, an attribute which the Communists, whatever their priorities, cannot equal or imitate.

The Soviet Russians have achieved industrial and technological strength at the expense of their people. The middle class democracies have achieved it at the behest of their people. In building our strength, we have not sacrificed our freedom, our individuality, our right to share in our own success. Instead, we have enhanced these attributes.

And this is our drawing power today, the source of our middle class mission. It is a magnet the Kremlin abhors and can do nothing whatsoever to demagnetize. It is high time we put it to use.

World Law or World Holocaust

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1958

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "World Law or World Holocaust," delivered by Charles S. Rhyne, president of the American Bar Association, at the annual meeting of the New York State Bar Association on January 31, 1958.

Mr. Rhyne, president of the American Bar Association, is exemplifying what we look for in those who from time to time lead our great professions and civic organizations. He is dedicated to his task, and is working hard at it. He is displaying an initiative and a consciousness of the public interest which is extraordinary and admirable.

I mention this fact particularly with respect to Mr. Rhyne because he has been addressing himself to subjects with respect to which lawyers are truly the guardians for the whole public interest, based upon their special professional knowledge. I think it should be noted that as a man builds a reputation for service, it is gratifying to his friends and colleagues in the profession, as it must be gratifying to him, to have it recognized as he proceeds step by step.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WORLD LAW OR WORLD HOLOCAUST—LAW AS A REPLACEMENT FOR WEAPONS AS DECIDER OF DISPUTES BETWEEN NATIONS

(By Charles S. Rhyne, president, American Bar Association)

I am highly honored and pleased to have the privilege of speaking to you lawyers of New York. Through the many leaders you have furnished to the American Bar Association I have acquired quite an intimate knowledge of this great New York State Bar Association and its tremendous achievements. Your outstanding record under my dear friend Clarence Runals insures that your productive past is but a prelude to even greater accomplishments in the future.

If civilization is to survive in the space era, law and reason must replace weapons as the ultimate mechanism to resolve disputes between nations. That is the thesis I am here to present for your consideration.

One must concede that weapons must maintain peace and remain as the ultimate decider until the mechanism for peaceful settlement of disputes between nations under the rule of law is developed and accepted. That such development and acceptance cannot come dramatically and be achieved overnight is also conceded. The use of law to replace weapons in the international arena must go through many growing or formative stages before the idea can function as it should and must. But "the longest journey begins with the first step." I am here to ask your help in achieving that first step.

Let us begin by focusing upon the broad picture of the world in which we live. The miraculous technical and scientific achievements of our day have created unprecedented peril from abroad and unprecedented growth and change at home. Distance is now almost meaningless as rapid transportation and communications have shrunk nations to neighborhoods. Our era has witnessed such achievements as flight faster than sound, man-made satellites in space, the splitting of the atom, miracle drugs and other rapid and turbulent changes in the scientific, economic and social fields almost too numerous to name or to evaluate under prior standards and experience. The whole pattern of our existence is being reshaped at an undreamed of pace.

At this critical turning point in mankind's history we must face the fact that some of the traditional thinking and concepts of the past are no longer a secure basis for the dynamic present and the uncertain future. I hasten to say, however, that the idea I here espouse does not fall into the area of new concepts. It is rather an expansion of an old idea to a new frontier and the new horizons created for us by the marvels of our day.

In what one can justifiably call a new world where technological and intellectual advances can make mankind's existence so truly wonderful, we are engaged in an all-out struggle with an enemy who seeks to destroy us through clever economic, psychological, and subversive tactics as well as by weapons. And it is unrealistic not to realize that this is a struggle that may well last for months, for years, and even for generations.

This in capsule form is the background picture against which I would like to discuss with you a readjustment of our thinking so as to take a new approach to the all important problem of disarmament and peace. No one can deny that the No. 1 problem of our day is how to achieve and maintain a lasting peace. Certain it is that this problem has plagued man since the beginning of time. Certain it is also that never before has its solution been so imperative. A generation that has achieved so much heretofore deemed nearly impossible should not be dismayed by these past failures but should in fact be spurred on by the challenge of our times to achieve this great goal of peace.

We are engaged in an ever-accelerating arms race with Russia. And we must win this race for supremacy in capacity to destroy—on that point I find no disagreement in Washington or elsewhere. It is recognized that peace in today's world can only be maintained by our winning the arms race and by our keeping on winning it even though this requires billions upon billions of dollars and a great economic drain upon our Nation. No one can or will quarrel with the fact that 64 percent of the proposed new budget goes for national security—in fact the only quarrel is that the amount may be too small. But

a world divided into two mighty armed camps is no pleasant future to envision. The peril from such a situation is obvious. History teaches that every arms race has ended sooner or later in war. We must, therefore, conclude that war with Russia is as certain as tomorrow's sunrise unless a formula or mechanism can be developed to maintain peace other than through arms. It is such a formula or mechanism which the rule of law offers, with persuasion and reason replacing weapons in the all-important international dispute arena. We cannot be saved from the holocaust of war by science or weapons alone.

Russia makes no secret of her ceaseless efforts to carry out her plan to create a peaceful world by making it 100 percent Communist. We must not only say but we must demonstrate beyond question that we offer both peace and freedom. With the contest thus narrowed to freedom or slavery the decision is certain if we but seize our opportunities and provide the essential leadership.

As we listen to the roar of current history it is absolutely clear that we must learn to live together or see our civilization go up in the senseless devastration of war. The atomic and hydrogen bombs, the sputniks, and ICBM's have attuned the people of the world to an overwhelming desire for peace which is probably stronger than any such desire in all history. There is a common realization that under present conditions every man, woman and child will be in the front line trenches if the holocaust of world war explodes. This most urgent desire to prevent war thus offers a unique and unparelleled opportunity to develop the legal machinery that is essential for peace with the overwhelming support of world-wide public opinion. Never have the people of the world needed or demanded leadership on the issue of peace in a more concerted way. Either we furnish that leadership or someone else will.

In ancient times disputes between individuals were settled by brute strength in a fight. The rule of the jungle prevailed and might made right. We have now largely progressed to a point where such person versus person disputes are settled under the rule of law in the courts. But from ancient times to now the rule of the jungle has largely prevailed as the ultimate decider of disputes between nations. We must now progress to point where the rule of law is applied in the courts to disputes of nation versus nation. The need for law in the world community is indeed the greatest gap in the legal structure of civilization.

Law exists now in some form in all nations. It is a universal term which all peoples understand. Justice and law connote innate fundamentals of fairness embodying the wisdom of the centuries. They are so understood by all peoples. The average person is not learned in the law but the idea of justice under the law is to him very real. We need not so much then to acquaint the people of the world with law but to strengthen and use it in an area where it is little used today. Of all human institutions, law has the best historical claim to satisfy the need for peace and order. Law could offer the long sought common denominator for the creation of a method of the settlement of disputes between nations short of war. I firmly believe that law offers the best growing point toward order in a disordered world and the best path to disarmament and peace.

The most important public service open to our legal profession today is therefore the opportunity to mobilize the prestige and the power, the sanity and the skill, the judgment and the judicial temperament of the lawyers of the world in behalf of the goal of peace under law. We must build upon the experience of the past and the possibilities of the present to insure a peaceful future. To do this we lawyers must evaluate world law and develop new international legal machinery which will maintain essential national sovereignty, yet still provide for peaceful settlement of disputes between nations under the rule of law.

Let me give you two simple illustrations of instances where law has replaced weapons as a decider of disputes in situations somewhat similar to that prevailing in the international community today. This summer during our pilgrimage to the fountains of the common law in England we were reminded that the barons and lords of England maintained private armies and fought out their disputes in pitched battles, until the time came when the law became enforceable in the Kings' courts. A homely but nevertheless realistic lesson is also found in the western movies your children and mine watch so avidly on TV. Before the law arrives the good men must stay armed to the teeth in order to exist and fight off the bad outlaws. But when the law arrives armed might ends as a decider of disputes.

Disarmament conferences have been held down through the centuries, but no agreement resulting from such a conference has ever contained a successful formula to maintain peace. The best evidence of this is the fact that every disarmament conference or agreement has been followed sooner or later by an arms race—then war. My study of the conferences and agreements of the past 100 years reveals that the reason they have failed was an inherent inability to devise a method for so weighing armed might that all participants in such conferences would always feel that they were treated fairly. In essence this means treated equally.

The formula here presented does not contain this inherent defect, as under it all nations would be on a basis of equality before the law.

Are there reasons why nations should not be on a basis of equality before the law? I think not. There are perhaps some disputes to which present legal principles cannot be applied, but we of the legal profession have always developed new law to meet the needs of new problems. Our creative capacity should not be paralyzed now by the constant crisis in which we live, but it should be in fact spurred on to even greater achievements. We must not allow law, legal procedures and legal tribunals to continue to lag behind the needs of the world in this vital field of settlement of disputes between nations.

And so it is that on the vast new frontier of the international community, disputes previously settled by the bloodshed of a war must be settled by tribunals of justice. The International Court of Justice is perhaps the best known but the most unused existing tribunal of justice for the decision of international disputes. It has decided only an average of slightly more than a case per year since its creation in 1945. This situation indicates that as presently operated it may be inadequate and need changes to make it more acceptable, effective, and useful.

The statute creating this Court allows it to sit—in its discretion—all over the world and in chambers of three or more judges. So far it has sat only at The Hague. The inaccessibility of the International Court and lack of knowledge of its jurisdiction, procedure, and precedents are major reasons why it is not used by nations to settle their disputes. This Court should make known its willingness to sit elsewhere than at The Hague. The entire Court, or even a chamber of the Court, should sit rather constantly at United Nations headquarters in New York, for example, so that its advisory jurisdiction would be used more than it is now, and law would move more to the forefront in the deliberations of the United Nations.

Just think of the possibilities for calm and considerate use of law in this Court in such disputes as Suez, border incidents such as that between Spain and Morocco, and similar controversies now fought out in the arena of power politics and backstage diplomacy or by armed might. Public opinion which forced an end to the use of arms in Suez could—if properly and justifiably directed—so crystallize as to require use of this Court, or of other such tribunals, and force reluctant nations to take their disagreements there for decision.

The latest example of a provision for peaceful settlement of international disputes under law is in the treaty creating the European Economic Community. There a seven-member court is created to decide disputes between members of that Community. The Charter of the Organization of American States provides that "every American State has the duty to respect the rights enjoyed by every other State in accordance with international law." But there is no court such as the new European Court to decide disputes. There is an Inter-American Council of Jurists which now serves as an advisory body and could easily be transformed into a court. Here is a chance for the Americas to show leadership in the search for machinery to maintain peace by creating such a regional court as a part of the Organization of American States. Such a step could well be a historic breakthrough of momentuos proportions because of the example it would offer to the world.

It is my earnest belief that we should take a new approach to the problem of peace and concenttrate first on obtaining an agreement among the nations of the free world to submit their future disputes among themselves to international tribunals of justice for decision under the rule of law. We must go beyond the largely unused and inaccessible International Court of Justice as presently administered. If that Court will not or cannot meet the needs of the world by opening regional branches or chambers all over the world, we must create new regional and other courts. Those new courts must be assured of immense prestige by appointing our greatest jurists as judges, with their independence of judgment insured by lifetime tenure. These new courts should be set up and operate like our Federal circuit courts and move from nation to nation for the speedy hearing and decision of such disputes. A clerk's office should be opened and maintained in many areas of the world so as to be easily accessible for the filing of complaints.

The organized administration of justice historically and logically precedes the development of detailed rules of law so it is essential that we should first provide courts and the development and codification of a law of nations will then grow out of the decisions of those courts. We should invite all nations to join in this agreement to develop the court mechanism for peace under law. The possibilities of armed force use, such as in Suez and the Spain-Morocco border incidents should then be gradually narrowed as this mechanism begins to work and demonstrates its worth. Other nations including the neutrals and the uncommitted should come into the fold after the precedents of successful use of law are amply demonstrated and the pressure of world-wide opinion begins to make itself felt in support of law and order through the courts.

Nations which have been accustomed to settling their disputes by hard bargaining, with little regard for justice or law, will begin to realize that it is to their advantage, in the long run, to submit their disputes for decision by impartial judges under the rule of law. The idea of the supremacy of intellect over physical violence should ultimately be decisively accepted and put into practice by mankind. Thus, on a gradual basis our goal can become a reality. Let the free nations of the world agree on a plan to snuff out war

among themselves before the next step of tackling Russia. Let us offer this plan for settlement of disputes under the law in the courts as the free world's path to world peace. If we are not willing to do it among ourselves we cannot expect others to agree.

What of enforcement of court decrees against sovereign nations? The chief reliance must be the forceful pressure of crystallized public opinion. Such pressure should take care of most enforcement needs. The multilateral convention or agreement to use only law as a decider of disputes—an agreement going far beyond the statute of the International Court of Justice or the Charter of the United Nations—could also provide for economic and other sanctions against any signatory nation which did not honor a Court decree.

Certain it is that this is a long, hard road to travel, with many pitfalls and problems and much hard work to achieve success. But there is no easy road to world peace. Law has replaced force as the best means for settlement of disputes between individuals. It should be given the chance to prove its value in peaceful settlement of disputes between nations.

We have here one of the great new frontiers not only of the law but of the world. It is a frontier, too, in human relationships through governments. By success on this frontier we not only save billions, now consigned for destructive purposes, for constructive purposes, of improving mankind's peaceful existence, but we move mankind out from under the shadow of the almost certain death and destruction of atomic warfare.

World government, which will not, and should not, arrive in the foreseeable future, is not a part of the picture I paint. Such a government has inherent defects similar to those of disarmament agreements. This idea of peace under law envisions law which can grow out of the enlarged use of the law by the world community and does not require any super or other world legislative body.

No system of international law can be the overnight creation of any individual genius. Our own legal system has grown up through experience and is based upon the combined wisdom of past centuries. The writers of our Constitution were not supermen who created the ideas contained therein by their own tremendous intellect. They borrowed from the great lawgivers of history, Moses and Aristotle, Locke, and Montesquieu, and others too numerous to list. Our Constitution is not made up of novel and untested principles, but it in fact contains the best of those already known at the time it was written. That is the main reason it has endured and met new and novel needs. The idea of due process came from Magna Carta. The natural rights of man, or our Bill of Rights, are in substance the common law rights of Englishmen. And so it can be in the international field. The courts can decide according to fairness and reasonableness in rendering justice upon each case's facts. The body of law needed here can grow as did the common law out of the use of law in judicial tribunals. The decisions under law of the tribunals in each international dispute can serve as precedents until a common or universal law of nations grows into a reality.

No plan for peace is worth mentioning unless it takes Russia into account. And Russia could not be expected to favor a plan for peace under law and justice. But this plan can capture the minds of the uncommitted peoples of the world for its sponsors and leave Russia naked of friends. Even Russia does not envision such nakedness as desirable—that is the reason for her constant propaganda efforts. To launch this plan—unlike a disarmament agreement—we do not need her, nor do we need to trust her word. She can hurt only herself by her failure to cooperate. Russia's often dishonored signature is worthless on a disarmament or any other agreement, but here only actions would count and all could evaluate those as we go along developing peace under law.

We should, therefore, counter Russia's sputnik fear-propaganda and her fake peace blackmail letters by a plea to the peoples of the world based upon freedom and justice and peace through law. The mere mention of freedom will recall Hungary. The mere mention of justice will recall its absence behind the Iron Curtain. And the idea of peace—of peace through law rather than weapons—will appeal to the foremost yearnings of all men everywhere. In the world-wide fight for the minds of men we would thus emphasize the moral principles which distinguish us from communism. Such a program can aid in regaining the psychological initiative we may have lost through the sputniks.

Without a vision of better things to come we cannot capture the minds of men for the freedom under law which is the great idea and ideal we offer to the world. We must not let the appeal of that great idea be dimmed by any Soviet technological achievement or boastful claim.

The history of the rise and fall of nations and civilizations is the history of the rise and fall of ideas. Among all the contending ideas which have fought for the minds of men since the dawn of history, the concept of individual human freedom has been outstanding. On this concept, which embodies the natural law, which was the heart and core of Magna Carta, which is the spirit and guiding light of our Bill of Rights, we can build with every confidence that it is a foundation not of sand but of everlasting rock.

An idea can be more powerful than any atom; and an idea whose time has come is too powerful to deny. Our task is to see to it that the time of the rule of law as a decider of international disputes arrives before atomic annihilation overtakes us.

Mankind stands at the crossroads of one of the great dramatic and decisive moments of history. One road can lead to war and annihilation or, what is worse, the slavery of communism. The other road can lead to peace and freedom under law.

We have arrived at this crossroad through the tremendous achievements of the scientists. I sincerely believe that the combined brainpower of lawyers can create and achieve as greatly as our scientists in meeting the needs of the world today. From its inception to the present zenith of its power our governmental machinery has been in large part conceived, formulated, and operated by lawyers. Now is the time for leadership in a broader and more difficult area. Let us use our talents in taking the broad vision of a formula for peace under law herein presented and making it a reality in the world community. As lawyers we should be proud that our profession is afforded this opportunity to render such a magnificent service to mankind. No greater challenge exists for any profession. No greater public service can be performed.

The Importance of Adequate Nutrition for Teen-Agers

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1958

Mr. WILEY. Mr. President, one of the interesting findings of current surveys is this fact:

Despite the fact that most of the people of the United States can afford good nutrition, a great many of them fail to get adequate nutrients. They do not drink enough milk. They do not eat enough other vitamin-rich products for their own good health, such as good Wisconsin cheese.

One such group in our population which is sadly deficient in its eating habits are the Nation's teen-agers. It is a sad thing to note that in this land of abundance, where we have surpluses, our youngsters do not receive sufficient nutrition.

Somehow, a considerable proportion of youngsters has gotten out of the milk-drinking habit and into the habit of poor nutrition.

Yet, obviously, these youngsters, boys and girls soon to be full adults, should be among the soundest eaters in this country.

I was interested, therefore, to receive from the National Dairy Council a text of an interview with the chairman of the board of that fine organization, pointing up the importance of good nutrition for these youngsters.

I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEEN-AGERS: A VITAL MARKET FOR THE DAIRY INDUSTRY

(By George S. Bulkley, chairman, board of directors, National Dairy Council)

Question. Mr. Bulkley, why is the National Dairy Council concentrating strongly on teen-agers as a special market for dairy foods?

Answer. There are several reasons but perhaps the paramount one is that teen-agers, a as group, are a nutritional problem. These young people, according to surveys and health leader observation, are inclined to break away from sound eating habits—such as sufficient milk drinking—and this will have an effect on future national health.

Question. That sounds pretty important, But is it really as serious as that?

Answer. Yes. It is serious. For example, many childbirth complications are the result of earlier teen-age malnutrition. As you know, a large proportion of American mothers have their first child before they exceed the teen years. Many girls are marrying at a younger age than they used to. Their eating habits as teen-agers can be a powerful force for healthy motherhood.

Question. I know that a large part of the philosophy of dairy council is to be of public service. Dairy farmers and dairy industry men supporting the dairy council program are proud of this fact. Does that tie in with the teen-age emphasis?

Answer. Absolutely. The dairy council concept is to promote the consumption of dairy foods, in line with scientific recommendations, and by this action to help improve national health and at the same time strengthen the dairy industry and American agriculture. If teen-agers were eating as they should, health leaders would not be worried about them and the dairy council program would not be throwing its weight so heavily in that direction.

Question. To be strictly practical, from a business standpoint, for a moment—how big is the teen-age market?

Answer. One of the largest. It has been estimated that during the summer of 1957 the teen-age working force was approxi-

mately 10 million youngsters. In terms of money, reliable sources say that teen-agers control the saving and spending of at least 25 percent of all income. National Dairy Council estimates there are 16 million teen-age consumers (13 to 19 years of age) and every projection I have seen insists that the teen-age portion of our population will increase by 1965 far more than any other age group. And that teen-agers will have over $14 billion to spend as they wish.

Question. How much milk do they drink?

Answer. National Dairy Council sponsored a survey conducted by the Rand Youth Research Council which covered 10,000 teen-agers. According to that study, the average is 2.72 glasses of milk per day for boys and 2.45 for girls—in the 11 to 13 age bracket. At the 17 to 18 age level, however, girls were down to 1.79 glasses a day, and boys to 2.05 glasses. This is, in my opinion, a challenge to the dairy industry to tie in with the Dairy Council program to reverse this trend and sell more milk.

Question. How much milk would be involved if all teen-agers consumed what they should?

Answer. About 6 billion quarts of milk per year (12.9 billion pounds of whole milk) would be used by teen-agers if they all drank at least 1 quart a day. A projection from our Rand survey indicates that teen-agers are drinking slightly more than 3½ billion quarts of milk per year. Consequently, the increase, if they consumed the 6 billion quarts, would amount to about 80 percent—or roughly 2⅔ billion more quarts of milk each year. This is a handsome market to strive for, and a wonderful secondary impact would be that if teen-agers can be induced to drink enough milk and consume adequate amounts of other protective foods, they will be healthier adults and better consumers throughout their lives.

Question. The catch, then, is to keep young people from throwing good eating habits out the window when they reach the age of freedom of choice?

Answer. That's it. As teen-agers progress in years, they start identifying themselves with adults who are regarded generally as poor milk drinkers. I imagine that a certain proportion of the teen-age breaking away will never be stopped. Perhaps asserting one's independence, even to the point of not doing some things that are good for you, is all part of growing up. But we ought to be able to keep this sort of thing at a minimum, at least where something as crucial as good-health eating is concerned.

Question. If teen-agers progressively like to imitate adults, why not go after the adults to set better a example?

Answer. We are. National Dairy Council has four major program projects giving special emphasis to its overall programs of nutrition education for all segments of our population. The teen-age project, we have been discussing. Overweight and underweight people are covered by National Dairy Council's weight control project. Senior citizens is the name of another project which hammers at the food needs of an increasing segment of our population. And National Dairy Council's young homemakers project works to consolidate and expand the gains which have been made in teaching nutrition in terms of the American family at a time when young women are health conscious in terms of personal responsibility. But if we get off on these projects, this interview is going to be of record length.

Question. I'll agree to that. So, what else do you think the dairy industry ought to know about the Dairy Council approach to teen-agers?

Answer. Well, it seems to me when you have a specific target, a market opportunity that is sharp, concise, and backed up by research facts, you have an ideal chance to increase sales and make them stick.

Question. Want to elaborate?

Answer. Yes. I think National Dairy Council and its network of affiliated dairy council units across the Nation are doing a marvelous job of aiming market conditioning efforts toward practical goals. The educational activities aimed at teen-agers reach these young people in three ways as I see it. First, there is the formal approach through the school classroom. National Dairy Council currently has 22 printed pieces of material, especially slanted at teen-agers on how they should eat. Also, there are specific National Dairy Council motion-picture films. These educational tools help the teachers of teen-agers.

Then there are youth groups outside the sphere of formal education who work with National Dairy Council and local dairy councils. These include groups such as Key Clubs, YMCA, YWCA, 4–H Clubs, Senior Girl Scouts, and Campfire Girls, to name only a few. Finally, there's the public press, radio and television through which news releases and subject matter are disseminated on teen-age nutritional needs.

Question. That sounds like market conditioning of the first order. Is there evidence of its effectiveness?

Answer. Yes; there is. National Dairy Council asked the Rand Youth Research Council to break down its findings, to compare markets included in the study in which local dairy council programs have not been organized.

The results were revealing. It turned out that per capita teen-age milk drinking in dairy council markets is 13 percent higher than in similar cities not served by dairy council community health education programs. Also of real interest is the fact that in the dairy council markets, 17 percent more teen-agers stated that physicians and teachers influence their eating habits.

Question. Sounds to me like physicians and teachers in dairy council markets may have a greater appreciation for dairy products, as well as better teaching aids with which to put across the story of nutrition.

Answer. That's right. And when you say that, you've hit on the crux of dairy council value in terms of practical market conditioning. If health leaders are recommending your product, it means your sales-promotion efforts are going to be far more effective.

Question. Do dairy farms tie in with themes such as the dairy council teen-age project?

Answer. Some do. It varies. But National Dairy Council wishes a great many more dairy foods distributors would tie in. There are materials and information available from National Dairy Council to help them do it. That way, everybody would be going down the same street at the same time and the impact would be that much greater in terms of healthier teen-agers and greater sales of dairy foods.

Governor Blair's Recommendations on Social Security

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. MOULDER. Mr. Speaker, the State of Missouri is most fortunate in having a great and outstanding Governor, James T. Blair, as our chief executive. His courageous conduct and magnificent leadership in the complicated affairs and problems of our great State is and will continue throughout his administration with national distinction.

On the 9th day of last month, he made a brilliant and informative speech on the subject of public welfare and social security problems. In his speech Governor Blair made some of the most sound, practical and sensible recommendations I have heard as a solution and improvement of the Social Security Act. I urge the Ways and Means Committee and all Members of this Congress to give favorable consideration to his speech and recommendations as follows:

SPEECH BY HON. JAMES T. BLAIR, JR., GOVERNOR OF MISSOURI, AT THE OPENING SESSION OF THE CENTRAL STATES REGIONAL CONFERENCE OF THE AMERICAN PUBLIC WELFARE ASSOCIATION, STATLER HOTEL, ST. LOUIS, MO., WEDNESDAY, APRIL 9, 1958

Bishop Byrne, Dr. Winston, Mr. Carter, ladies and gentlemen, Missouri is honored to be host to the Central States regional conference of the American Public Welfare Association, and, as Governor, I extend to you a warm welcome.

The accomplishments of the American Public Welfare Association in the field of social welfare are well known. The majority of the social-security measures that have been enacted into Federal law and translated into State law in recent years, for the benefit of the aged, dependent and neglected children, the blind, and disabled have had the active support of the American Public Welfare Association. As spokesman for the public welfare departments in the States and Territories, the association represents the well-being and security of over 6½ million people who are receiving public assistance within these jurisdictions.

Since I have been governor, and during some 30 years in public life in Missouri, it has been my good fortune to know firsthand the work of the American Public Welfare Association. I recall the valiant fight made in the 85th Congress when most of the welfare programs in the country were threatened by legislation which would have radically changed the formula for Federal-States sharing of public welfare costs, and would have greatly decreased the amount of Federal funds for administration. This, in itself, would have seriously crippled most of the welfare departments throughout the Nation.

I know of the efforts you are now making in behalf of needy unemployed people in our Nation to persuade the Federal Department of Health, Education, and Welfare, and the Congress, to allow Federal participation in a program of general assistance on a basis similar the Federal-State sharing in the categorical aid programs. I find myself wholeheartedly in accord with your stand in this matter.

Your meeting comes at a time when the Nation is in a period of business and economic recession. The latest unemployment figures show over 5 million Americans out of jobs. Missouri has its share of the unemployed, with 71,000 people out of work in the St. Louis metropolitan area, and serious unemployment facing other major urban areas in our State. Plans have been developed recently to provide Federal surplus commodities for the unemployed in St. Louis city and county and Kansas City.

The Congress is moving rapidly, I believe, in its efforts to halt the recession and start our Nation back on the road to full employment. I was particularly pleased to note that Federal funds for highway construction have been accelerated through congressional action. Here in Missouri we will be able to take advantage of additional State and Fed-

eral highway programs and thereby provide more jobs. I hope this will also be true in your home States.

The recession has increased the problems of our State division of welfare, particularly with respect to aid for dependent children. When unemployment increases, women and the physically handicapped are generally the first persons to lose jobs. Working mothers who have previously been able to support their children have been forced to apply for assistance. At the same time, physically handicapped persons have swelled the disability and general assistance rolls. I am told the same situation prevails generally throughout the Nation, and this, of course, adds greatly to the burdens of you in the field of public welfare.

Much social progress has been made in Missouri through legislation enacted last year by the 69th General Assembly. It is not as much as we hope to attain in the future, but in planning for the future, the citizens of our State must first and foremost determine the methods of obtaining revenues to pay the bill. Public asistance programs in this State now take $1 in every $3 derived from all tax sources. Missouri ranks very high among the States in the Nation in total expenditures for public assistance as compared to total tax income. But on the other hand, assistance grants to those on assistance rolls in Missouri are far too low, due principally to the fact that relatively liberal welfare laws in this State qualify large numbers of persons in each of the welfare categories.

To cite a few recent major improvements in welfare legislation in Missouri, I point to the following:

An obsolete juvenile court code was completely revised by the 69th General Assembly and we now have a statute in effect which incorporates the modern approach in the treatment of children. However, I think the code should be amended and strengthened in certain respects and the administration made more compassionate.

The age maximum for aid to dependent children has been increased from 16 to 18 years. This will enable many children to finish high school and will, we believe, have a salutory effect on the problem of juvenile delinquency.

Following the terrible fire in the Warrenton nursing home which cost the lives of 73 aged and disabled persons, the legislature passed a modernized nursing home licensing law which incorporates a number of safety features now being rigidly enforced.

Much progress has been made in the education and care of handicapped children. Three laws were passed by the legislautre establishing a commission for handicapped children, establishing training centers for trainable mentally retarded children, and providing special education for handicapped children where there are 6 or more such children between the ages of 6 and 20 in any school district, where such children are educable but special facilities are needed.

A major reorganization of the division of mental diseases has also been accomplished by the law which created a mental-health commission and placed the administration of the mental-health program under a trained and experienced psychiatrist.

We have great hopes for improvement of the health care situation in rural Missouri as a result of the establishment of a 4-year school of medicine at the University of Missouri, accompanied by the construction of one of the most modern hospital facilities in the country.

Since the prison riot in 1954, marked progress has been made in the administration of the penal institutions in Missouri. Plans are going forward for the construction of a completely modern medium security institution, which will reduce the population at the main penitentiary and will permit us to use modern techniques designed toward rehabilitation of the adult offender.

As you well know, and as you will hear in detail at other meetings of this conference, there are a number of vitally important legislative proposals being considered by the United States Congress which will affect the welfare programs of each State represented here. Among those which I would consider most important in their effect on Missouri are the following:

1. For immediate help with the extremely critical problem of unemployment, I believe the Congress should add a new category to the Federal Social Security Act, to establish a program for general assistance, and one which would include both the unemployables and the unemployed unemployables.

2. Another change which would have a significant place in long-range planning would be the elimination of the age requirement in the Federal disability-insurance program. I believe we have had enough experience to demonstrate that the disability phase of old-age and survivors insurance can be properly handled. Extension of the program to the totally disabled regardless of age would result in smaller numbers of persons having to receive assistance under the Federal-State program of aid to the permanently and totally disabled in the future.

3. An increase in the amount of the benefits in the old-age and survivors insurance program would likewise reduce the number of persons in the future who will need to be helped through the old-age assistance program.

4. Special emphasis needs to be given to the problems connected with juvenile delinquency. I believe the Federal Government should enact legislation on this subject similar to that proposed by the Senate Committee on Labor and Public Welfare, and appropriate funds to the States to assist them with this problem. Senator THOMAS C. HENNINGS, JR., of Missouri, our senior Senator, headed a subcommittee which did a magnificent job in connection with pinpointing and suggesting solutions to the problem of juvenile delinquency.

5. In order for the States to be able to use better methods and knowledge in rehabilitating assistance recipients, the Congress should provide funds to implement the 1956 amendments to the Federal social security law in regard to staff training, research, and demonstration projects within State welfare departments.

Enactment by the Congress of the program set forth above would go far toward helping to alleviate many of the unnecessary and tragic effects of poverty in this wealthy land in which we live.

Among measures which are needed in Missouri, through action by the State legislature to improve the welfare program, I would list the following as being of greatest importance:

1. We must have a medical care program in this State for the recipients of public assistance. An adequate medical care program would, in my opinion, reduce the number of our citizens who will need to receive assistance in the future solely because of the lack of proper medical care now.

2. We need to give a great deal of attention to the special problems of the aged. Many States have a special agency or commission of the State government established for the purpose of studying the problems of aging, making recommendations for legislative changes, and encouraging activity on the part of local communities toward bettering the lives of our older citizens. I believe that the establishment of such a program would be highly desirable for Missouri.

3. Our State mental hospitals have a sizable number of senile persons who could be released if there were an adequate plan for their care outside the institutions. The space they now require could be made available to mentally ill persons who are potentially curable, many of whom could be returned to society. I believe a family care or boarding plan for aged persons, and others, who could be released from the mental hospitals is much in order.

4. Our probation and parole department has for many years been operating with insufficient staff. I believe many persons now in our penal institutions could be given a much better chance for a new and useful life if we had enough trained probation and parole workers to give the offenders proper supervision upon their release from the correctional institutions.

5. The vocational rehabilitation program in our State needs to be expanded as we know we have many persons who could use its services who are not now being cared for. Increased appropriations to take advantage of presently available Federal funds are needed. Increased staff would also be necessary in order to give more services to more persons. The main focus of vocational rehabilitation should be directed toward the welfare rolls with a view to restoring welfare recipients to gainful employment.

6. In order to make available the vastly increased knowledge we have in preventive services in the field of public health, we need to increase the number of local public health units in this State.

As I have mentioned before, any improvement in the social order for the betterment of our people requires the expenditure of major sums of money. Social programs are costly, but when thinking in terms of better health, better housing, more adequate nourishment and clothing for dependent children, the aged, the blind, the disabled, and others, some way must surely be found to meet the cost.

The program for this central States regional conference of APWA presents many challenging subjects. I am sure you will derive much benefit from your meetings. At the same time, I hope you will not overlook the opportunities you will find in St. Louis to enjoy yourselves and visit the many points of interest in Missouri's largest city. May your stay in Missouri be most enjoyable and may God guide you in your task of helping to shape a better way of life for our less fortunate citizens.

Agriculture's Importance in the Total Economy

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. COOLEY. Mr. Speaker, in a statement to the House on March 24, and on several other occasions, I have expressed my dismay that the President's anti-recession economic proposals completely ignore the Nation's agriculture.

Not only does the President make no mention of agriculture in his program to fight the current business slump but he has vetoed our efforts in the Congress to prevent prices of major farm commodities from dropping this year below the price levels prevailing in 1957.

Mr. Speaker, this disregard of farmers seems to be associated with a growing

attitude in some quarters that the income position of the millions of people engaged in agriculture no longer is of any substantial importance to the health of the general economy. I pray that, before it is too late—before we have a full-blown depression in this country—the people in high places may develop some comprehension of the interdependence of our rural and urban people.

I recently have received a communication from Mr. D. C. Flowers, of Kinston, N. C., vice president in charge of sales of the Dixie Chemical Corp., enclosing a release from the University of Georgia which embraces a very clear discussion of the importance of agriculture in our total economy. So that this statement may be available to all Members of the House, under unanimous consent, I ask that it be published in the Appendix of the RECORD.

EXECUTIVE
COMMITTEE OF THE COLLEGE OF AGRICULTURE ALUMNI ASSOCIATION,
UNIVERSITY OF GEORGIA,
Athens, Ga.

A most unfortunate and dangerous situation in America is the widespread viewpoint that the prosperity of this Nation is no longer related to or dependent, except in a limited and minor way, upon the economic well-being of agriculture. Such is without foundation of fact and, if it persists, will result in untold damage to the total economy of this country.

No industry can for long withstand a continuing decline in sales with a concurrent increase in production costs. Such has been the experience of agriculture for 6 years. Cash receipts from farm marketing were $30,019,000,000 in 1957 against $37,060,000,000 in 1951. Farm production expenses during this 6-year period rose more than $600 million while cash sales were dropping $7 billion. A decline of almost $3 billion in net income is a drastic loss in purchasing power. It is the equivalent of 1 percent of the disposable personal income of America in 1957. No problem is of greater concern to this country at present than the loss in personal incomes resulting from unemployment. Could it be that this loss in farm purchasing power was a warning of what was to come which this country did not heed?

This decline in the income position of farmers if reflected in an increase of $5.6 billion in farm debts during this period. Non-real-estate debt rose $1.8 billion. Real estate debt went up $3.8 billion. Farmers continue to increase their debts at an alarming rate. A gradual deterioration in income position with sharp increases in debts can lead to widespread bankruptcy within this great basic industry. This must not be permitted.

America should never forget that agriculture serves as the basis for 35 to 40 percent of the jobs of all workers in this country. Even though only 12 percent of the people of this Nation make their living from the farm, never have so many people depended upon so few for their food, fiber, and economic livelihood. The well-being of millions of nonfarm people is directly related to the level of prosperity of those who serve as the foundation of their living. They in turn undergird the economic well-being of millions of other town and city dwellers. Agriculture as a basis industry is thus entwined with the prosperity of this Nation.

Farmers of the United States go into the towns and cities and purchase around $17 billion worth of manufactured goods to use in production each year. They carry home more than $3.8 billion in manufactured feed; $1.3 billion in fertilizer and lime; around $3 billion in farm machinery and equipment, and more than $1.9 billion in miscellaneous products ranging from insecticides to baskets and boxes to use in marketing their products. Agriculture must spend each year almost $3 billion to keep its machines running. The farm business is a user of basic commodities—steel, petroleum, electric power. A nation fares well as these great industries which serve as the mud-sills of a national economy progress.

It is significant that the industries from which farmers draw great quantities of supplies for production are at present the ones suffering rather severe economic recession.

Out of a declining net income farmers have made diligent efforts to maintain purchases of consumer items, strengthen their savings program and invest in capital items essential in the operation of modern farms. Obviously, it has been an impossible undertaking. The decrease in buying by farmers is evidenced in the widespread complaints of merchants and others who provide farmers and their families with production and consumer goods and services. The chain reactions which emanate from a slowing down in purchases by farmers and their families cannot and must not be underestimated as to their potential and ultimate effect upon national economic welfare.

Throughout history the welfare of the rural and the urban, agriculture and industry has been inseparable. No nation can long exist which thinks of agriculture as separate from industry and the purchasing power of people generally, to do so would be national folly and suicide. Yet, America trends in that direction today. Before too late, this great country must look to its foundation, return to its traditional assessment of basic values, correct its mistakes, and provide the economic environment in which a strong and prosperous agriculture can help build, as it must, the Nation that will be the leader of the world.

The Phony Panic Over College Admissions

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. KNOX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the May 4, 1958, issue of the American Weekly. The article follows:

THE PHONY PANIC OVER COLLEGE ADMISSIONS
(By Theodore Irwin)

Last December the anxious mother of a high-school senior in Philadelphia virtually locked her daughter in her room every evening for 10 days, banning all dates. The nerve-racked girl had to write and rewrite a brief autobiographical statement for a college application until it achieved perfection.

Tension that often verges on hysteria has gripped many high-school seniors and their parents in the currently ballyhooed college crisis. In recent years, the scholastic press and popular magazines have been sounding a strident alarm: it's tough to get into college.

Under such scare headlines as "College Jam-up" and "Tidal Wave" we've been warned that "the squeeze is on for space on almost every campus * * * large numbers of students have been frozen out of classrooms filled to capacity * * * waiting lines are a lot longer * * * the enrollment pressure has begun to build up alarmingly * * * it's a crisis of major proportions."

As a result jittery high-school seniors have been applying simultaneously to as many as 20 colleges to make sure they'll be invited somewhere. Special coaching courses for college entrance exams are mushrooming.

In one community, a college skills center was even set up at a local hotel. Many youngsters are pushed into expensive prep schools on the theory that they'll have a better chance of getting into college.

An increasing number of distraught parents are flocking to high school guidance counselors. "A panic has been created in the minds of parents and students," says Miss Cleo Richardson, guidance coordinator at the White Plains (N. Y.) High School.

Elsewhere, counselors observe that many students have become "highstrung and nervous" and that the senior year—which should be a happy one—has turned into an ordeal of waiting for college decisions.

In Cleveland, Chicago, and other cities, schools have had to augment their guidance staffs. PTA's invite experts to address them on "the serious college problem." Even parents of children in the fifth and sixth grades are showing concern.

The father of one high school senior went so far as to obtain letters of recommendation for his son from a governor, a United States Senator, a bishop, and 13 other prominent citizens. As it turned out, the boy was accepted by the college he wanted, solely on his merits.

Is such extreme anxiety justified? How real is the college emergency?

The truth is, as recent surveys show, that any qualified high school senior can get into a college today, on his own level.

"The fright aroused in parents and students has been one of the greatest frauds perpetrated on the American public," says T. Leslie MacMitchell, visiting representative of the college entrance examination board.

"The overselling of the scare is disgraceful," maintains Bernard Ireland, the admissions director at Columbia College.

Last year, MacMitchell visited over 200 high schools in the East, Midwest, South, and west coast. "I have yet to talk to a counselor," he reports, "who has had any difficulty this year, or last, in placing students in college."

William C. Reich, guidance supervisor in Chicago, last month told the American Weekly: "There's always at least one good educational institution for each high school senior who realistically wants to go to college."

Actually, of the 1890 colleges in the United States, a genuine traffic jam exists in only about 40 popular or prestige schools, including the Ivy League and the Seven Sisters (the Vassar-Radcliffe type).

Evidence comes from Robert J. Norwine of Weselyan University (Connecticut), who recently conducted a survey of colleges in 36 States for the Association of College Admissions Counselors that a vast number of accredited colleges opened their doors last fall with many empty seats. "I felt," he explains, "that many admissions officers were being fooled about the difficulty of getting into college."

Of the 200 accredited colleges answering the Norwine questionnaire, 150 frankly stated they would have liked to have had more freshmen in the present class. Not counting the larger State universities in the Midwest, the 150 schools conceded there were about 10,000 more openings.

The American Council on Education reported last January that 17 States had actually shown a decline—as high as 9.7 percent—in the number of students attending college for the first time. States with the heaviest drop included Indiana, South Dakota, Virginia, Georgia and New Hampshire.

Another survey disclosed that the following schools—a fair sampling—had room last fall for more students: University of Alabama, Loyola (Chicago), Washington University (St. Louis), University of Chicago, Carnegie Tech, Tennessee, New York University, and Louisiana State.

Other colleges with vacancies included Vanderbilt, Dickinson, Syracuse, Bates, Bowdoin, Emory, Oglethorpe, University of Texas, West Point and Annapolis, the service academies reporting a decrease of 15.9 percent.

Some officials of well-known institutions which want to be known as being in demand are reluctant to confess they can accommodate more freshmen and want them. As Dr. Thomas Robinson, New York University admissions director, observes: "Nobody likes to go into a department store that is not doing a booming business."

Last June, the admissions dean of 1 excellent college in Pennsylvania was instructed by his president to sign up 100 more freshmen for the coming year. He fell far short of his quota.

Far from being overwhelmed by freshmen, a number of colleges have quietly lowered entrance requirements and recruited students who barely slipped through high school. Fifty of the colleges that participated in the Norwine poll said they would gladly accept applicants who finished in the bottom third of their classes.

"To fill their quotas, many accredited colleges and universities are offering admission to poorly qualified students," observes Charles R. Dalton, admissions director at the University of Rochester, which maintains its high standards.

The popular notion that all our colleges are faced with an avalanche of freshmen stems chiefly from impressive but misinterpreted statistics which infer that 5 or 10 times as many freshmen knock on campus gates as can be admitted.

The whole picture is badly clouded by the phenomenon known as multiple applications. Too many high school seniors apply to 5 or 6 colleges, which means that all but the school finally selected are left with ghosts.

"What we have now," R. L. Tuthill, registrar at Duke, informs the American Weekly, "is more new applications rather than new applicants."

Harvard, for example, had to accept 1,800 last year in order to enroll 1,100 freshmen; it was rejected by 700 candidates who finally preferred other schools. Another topflight university was turned down by 55 percent of the high school seniors who were notified they were "in." Thousands of youngsters never bother to reply when the deadline arrives for answering offers of acceptance. Vacancies in the fall are largely due to these "no shows."

The origin of the shortage scare and the resulting confusion probably can be traced to a complacency-shaking brochure, The Impending Tidal Wave of Students, prepared 3 years ago by Dr. Ronald B. Thompson, of Ohio State. Projecting college-age population trends to 1973, when Dr. Thompson predicted we'll have about double the number of students, his "tidal wave" alarm swept the Nation. At the time, he stated flatly that "most of our better colleges are turning away more and more students each year." Ironically, Dr. Thompson's Ohio State acknowledges that it could have taken 1,000–2,000 more students this year.

"A sober second look at the situation," says Dr. Frank P. Bulger, president of the Association for Higher Education, "indicates it's certainly not as serious as we thought."

While a bona fide crisis doesn't exist today, Dr. Bulger and other authorities estimate it probably will begin within about 5 years. Census figures point to a sharp rise in college-age youngsters by then.

To combat the "no show" chaos in our colleges this year and next, admissions deans are urging high schools to limit the number of applications permitted each senior.

College advisers recommend that a youngster should start thinking about college in his sophomore or junior year at high school. He should scrutinize college catalogs, visit campuses, freely consult his high-school counselor. His chances at specific colleges should be evaluated realistically.

To parents of college-bound offspring, Dr. Bulger advises, "Don't let such panic phrases as 'tidal wave' lull you into a false sense of insecurity."

The premature crisis apparently has had some good side effects. "If the false alarm," says Miss Maureen Rush, Cleveland guidance director, "has alerted students and parents to approach the college problem seriously, they are the gainers."

Address by Hon. Walter Rogers Before Panhandle Producers and Royalty Owners Association, Amarillo, Texas, May 1, 1958

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1958

Mr. IKARD. Mr. Speaker, on May 1, Hon. WALTER ROGERS, my distinguished and able colleague from Texas, delivered an address to the Panhandle Producers and Royalty Owners Association at its annual meeting in Amarillo, Tex. This address covers a subject of great importance to our Nation:

ADDRESS OF THE HONORABLE WALTER ROGERS, MEMBER OF CONGRESS, 18TH DISTRICT OF TEXAS, BEFORE THE PANHANDLE PRODUCERS AND ROYALTY OWNERS ASSOCIATION MEETING, MAY 1, 1958, AMARILLO, TEX.

Mr. Chairman, members of the Panhandle Producers and Royalty Owners Association, and distinguished guests, it is always an honor and a privilege to be back home. And, I am especially honored on this trip to have brought with me a very distinguished gentleman who hails from the great State of Arkansas and who has made such an outstanding record in the field of statesmanship. He is my chairman on the Committee on Interstate and Foreign Commerce—the oldest committee in the Congress—and I am highly pleased that he is with us and will address us tonight on a subject that will be of great interest to all of you, and a subject on which he is thoroughly qualified to speak.

I am most happy to have this opportunity to discuss with you a matter that is of great concern to all of us and one that must be corrected without delay if we are to escape some telling effects on the general economy of the entire Nation.

All of you have been reading in the newspapers and hearing over the radio and television during the past few months the stories of recession and the many suggestions as to how the problem should be handled. I have received a sizable amount of mail on the subject. Some of these letters undertake to spell out the causes of recessions and the cures therefor; others condemn those who speak of a recession and insist that there is no economic setback; while others take the position that economic recessionary periods are part of life and that the thing to do is to make the best of it. Needless to say, I am most grateful to those who write, because it provides the opportunity for a clear-cut broad view of what the people are thinking, and it is out of this thinking of the people that answers to all of our problems must come.

Economics has always been somewhat of a mystery because of the human element involved. It is the inability to anticipate the future reactions of human beings that will always prevent economics from being an exact science. Economic ills that arise in the general trend of events must be dealt with as they arise. There is no one-shot cure, and there never will be. In order to mount an effective attack on the economic front, we must first find the cause behind the problem, and there may be many, many problems at the same time. It is one of those problems that I want to discuss with you today—a problem that, in my opinion, can be solved, and the solution of which will contribute much to the overall welfare of our country. I speak of the import problem as it affects the fuels industry. I say fuels industry, because although I refer to petroleum imports, I point out that these petroleum imports affect our entire fuels industry in this country.

Only recently I held several days of hearings on a number of bills that had been introduced that were designed to set up a new bureau, agency, Board, or whatever you desire to call it, for the research and development of coal resources. There seemed to be no objection to the adoption of such a program at Government expense. The only controversy that seemed to arise was the manner in which the program was to be administered. Some wanted to set up an entirely new and independent agency; others suggested placing the program under the present Bureau of Mines in the Department of Interior; while the Department of Interior, itself, recommended that a new agency be created inside the Department of Interior and answerable to the Secretary of the Interior. Some wanted the Government to operate the program as a Government installation, while others suggested a joint operation between Government and the coal industry. The administration supported the theory that the program should be administered under the direction of the Secretary of the Interior who would have the discretion of contracting much of the work to private enterprise on long-term contracts. The beginning cost was estimated at $2 million, but a realistic look would indicate that its cost would be a continuing one and could very easily absorb many times the $2 million figure in the first few years. We listened to a number of witnesses who outlined the economic distress that was gripping many of the coal areas of this country. At the conclusion of the testimony of each, I asked the question: "What is the major cause of this economic distress in our coal fields?" Almost without exception the answer was: "Residual oil from imports." I then asked the witness "How much the cost of coal would need be reduced in order to compete with the residuals of this imported crude." The answer to that question was "that it would make no difference how much you reduced the price of coal, because the price of the residual oil would be dropped below it." Their position was that the residual oil was what you might call, economic gravy, and whatever price it brought over and above its transportation cost would be profit. Whether or not this is true, I am not here to say, but I am telling you what the import problem is in the coal fields. It is associated with your own problem because the residual oils, upon which they blame their economic troubles, is only a part of the imported crude that is causing yours. In addition you have another interest in this problem, because if

the legislation to set up a research and development program to be paid for by the Government is passed, you will be required to pay part of the taxes to support that program.

At the same time that these efforts are being made to bring the Government directly into one segment of this fuel problem on the primary basis of the existence of distress economic areas in this country, a great number of the people on the eastern seaboard are being led to believe, by a subtle but very effective advertising program which borders on propaganda, that if it were not for petroleum imports many factory furnaces would grow cold and many people would be put out of work.

One major oil company, and I will not call it by name, is presently conducting an advertising campaign that must have been designed to convince the American public of a great and continuing need for petroleum imports. It was a representative of that same company who was testifying before the Interstate and Foreign Commerce Committee during the Suez crisis and insisting that the production of this State and this section of the country be increased to meet the needs of Europe and sections of our own east coast that had been using imported oil. I asked this witness at the time what, in his opinion, would be done with this increased production as soon as the Suez Canal was reopened. I had hoped that he would say that some degree of balance would be sought in order to maintain the economic situation created by the increased production from our own wells. However, he simply stated in effect that he could speak only for his own company and that they would expect to pursue in the future the same program that they had pursued in the past, and that was a sound import policy. What he failed to say was that he meant a sound import policy for his company. Whether or not such a policy would be a sound import policy for the country as a whole is a debatable question, but if I am allowed an opinion on the subject, I would suggest that experiences since the Suez crisis clearly indicate to me that the import policies that have been followed have not been for the best interests of the country. And, in other fields concerning natural resources, it is my opinion that our import policies have not been in keeping with what in the future we may well wish we should have done. I especially refer to many of the strategic minerals and metals which we might find ourselves unable to produce in needed quantities on short notice. We have permitted our needs to be met by foreign sources at the expense of domestic development. It is true that much of this policy was based upon a sound foreign-trade policy, but on the other hand, much of it was based upon an economic situation that permitted these minerals and metals to be produced at much less cost in foreign countries. Our activities in this regard could well prove us to be penny wise and pound foolish, although we hope that such will not turn out to be the case. I refer to the possibility that should a conflict break out, it would be a swift and devastating thing and we would not be given the time to prepare that we have had in previous wars.

Should our foreign sources of supplies be cut off overnight, our needs for strategic minerals and metals cannot be met by reserves that are in the ground, but will require from 6 to 18 months to produce.

It is true that we have a large stockpile, much of which came from foreign sources, but we cannot and must not depend on that alone. Our petroleum reserves are vast, but the next war, if we have one—and God forbid that we do—will not be won by petroleum reserves that are in the ground but untapped. It will be won by petroleum reserves that are available for immediate use. It will be won by strategic minerals and metals that are available.

On the economic side, and I feel that a sound and vigorous economy is an indispensable essential in a defense program, speaking not only from a military standpoint but from a political standpoint, in the eyes of the world, many of the ills that can flow from an unrealistic import policy affect us more directly. If we are to yield to the rest of the world on the foreign trade issues, we must be prepared to pay as a price our standard of living. This we are not going to be willing to do. Yet, that will be the final result, voluntarily or involuntarily, unless we search for and find a proper balance in this program. It was only a few years ago that some very able statisticians estimated that within a very few short years, the demand for petroleum products in this country would reach such proportions that we would be dependent upon imports; that our reserves were just simply not sufficient to even begin to meet the demand. The fact is that these statisticians were wrong twice. In the first place, they underestimated the demand for petroleum products. They estimated a daily demand in the United States much greater than productive capacity. The fact is that the daily demand increased much more than the estimates. The second mistake that was made by these statisticians was that they underestimated the ability and the know-how of the oil people in this country to search out and find petroleum products and to develop them. Contrary to the statisticians' reports, the increased demands found us not only not dependent upon foreign oil, although much had been discovered in foreign places, but in fact ready, able and willing to meet our own needs and to export petroleum and petroleum products. Yet, what is the reward that we are receiving for such enterprising activity? Tools are being stacked, businesses shut down, people thrown out of work, and the possibility of increased State taxes to absorb losses created by cutbacks in oil production.

I do not want to appear unrealistic in approaching this very serious problem. In fact, I think that I am most realistic when I take the position that the primary premise in this whole complexity is Mr. and Mrs. United States citizen. If they are not the primary premise, then what are we working for? What are we disturbed about? The fact is that they are and should always be the number one concern. I fully realize that foreign trade is an essential element in the welfare of all of us, but by the same token I also realize that foreign trade should be incidental to our economy and not the controlling factor thereof. Whether we undertake to find an answer through tariff controls or through a quota system, or through any other method, we must not permit any of our people to be blinded by a temporary economic advantage that will redound to the detriment of all. We must keep in mind at all times the welfare of the individual citizen of the United States, and when we fail to do this, we can expect to eventually suffer from the impact of the force that injures him or her, as the case may be. I think it is well to point out that our economic situation with relation to many different materials and items is such that tariffs may work in one case while quotas might be required in another. Each of these situations must be carefully weighed with relation to the particular circumstances surrounding it. It was this thinking that caused the Congress to adopt the so-called peril-point amendment in 1951 and subsequently in 1955 adopt the national defense amendment to the Trade Agreements Act. The Senate Finance Committee report in the 84th Congress stipulated in effect that the national defense amendment was adopted so that the President, "when a proper showing was made that the national security was threatened with impairment, could take whatever action was necessary to adjust imports to a level that would not threaten to impair the national security." The President's Cabinet Committee on Energy Supplies and Resources Policy had found and reported to the President that if the imports of crude and residual oils should exceed significantly the respective proportions that these imports of oils bore to the production of domestic crude oil in 1954, the domestic fuels situation could be so impaired as to endanger the orderly industrial growth which assures the military and civilian supplies and reserves that are necessary to the national defense.

When these imports in 1955 exceeded the 1954 ratio; when these imports in 1956 exceeded the 1954 ratio by double what they had exceeded it in 1955; and when these imports continued to grow larger and larger in 1957, the people of this country had the right to expect the President of the United States to act in accordance with the powers accorded him under the national defense amendment.

Percentagewise, this ratio had increased from a little over 16 percent in 1954 to over 21 percent in 1957. The President acted by appointing a special committee to investigate. This committee found that the national security was being threatened and recommended action. That action was a voluntary program on the part of the importers made up mostly of major American oil companies. Great effort was put into this gesture to make it suceed, but we all know, that noble as it might have been, it was doomed from the beginning. It had about as much chance of success as a voluntary conservation program in Texas would have had. We were whistling in the dark when we told ourselves that such a program would work. We knew in our own hearts that sooner or later we were going to be required to face up to the issue, and when I say, we, I am talking about the President of the United States as well as everyone remotely interested in the problem. It makes no difference how good a law might be, it is ineffective unless it can be enforced.

The time has now come for the issue to be faced and to be dealt with. It is in this session of the Congress that we must act on the extension of the Reciprocal Trade Agreements Act. Everyone, I feel, believes in reciprocal trade, but the big question that is in the minds of many is whether or not our foreign trade is reciprocal, when a vital segment on our economy is placed under the burden that it has been carrying these past several years with no effective action coming from the executive branch of the Government. It is patently obvious to me that the first step that must be taken if we are to bring about a cure or a hope of a cure, is to act through legislative processes to create an enforceable procedure of a protective nature. Much thought has been given to the problem and a vast amount of research has been done. A proposal has been offered to the Congress in the nature of an amendment to the Trade Agreements Act. It was orginally introduced by our neighbor and good friend, the Honorable FRANK IKARD, of Wichita Falls, Tex., who presently serves on the Ways and Means Committee, which is the committee that has held extensive hearings on this subject. FRANK has done an outstanding job on this subject and is entitled to the thanks and acclaim of all the people of this country for a basic realistic approach to the problem. The proposed amendment is being supported by a number of other Members of Congress, some of whom have introduced the bill. I might say at this point that whether or not a Member of Congress is in support of a proposition does not depend upon whether or not he introduces the bill,

The fact is that it might be a mistake for all members of the Texas delegation to introduce the same identical bill. This legislation affects people all over the United States, and it would certainly not be a good idea to create an original impression in the mind of some member far removed from the State of Texas that the proposal was primarily a Texas proposal.

What we want to do is to adopt some effective legislation and get it on the books. We are not looking for notoriety; we are looking for results. The proposed amendment would direct the President to limit imports of petroleum to or below the ratios that existed between domestic and imported crude and all petroleum products as they existed in 1954. In other words, it would fix a definite guide for the President and not leave the question of threatened impairment to the discretion of the President. It would provide certain rules and guides for the limitation of the petroleum imports. The bill would vest the President with discretionary authority to allocate the import quotas among the several countries or areas from which our oil imports come. It would require the President to put up for bid each quota. Persons desiring to import petroleum or petroleum products could bid for the license to so do. It is contemplated that the highest bid for these import licenses would be the controlling factor, but discretionary authority is left in the President because the award of the import license is subject to approval by the President. The duration of the license would be at the election of the President and could be determined by him.

The question has been asked as to how the amounts to be imported would be determined. This would be done by a Bureau of Mines forecast of the daily average domestic petroleum production during the next calendar year. By applying the 1954 ratio between imports and domestic production to the Bureau of Mines forecast, an initial quota could be determined, and import licenses could be issued on that basis. Of coure, the quota could be adjusted for each quarter of the year in order to take in seasonal variances in consumption. Public notice would be issued as to the quota established and also that bids would be received. Should the forecast prove erroneous for any particular quarter, the bill allows proper adjustment to be made in the following quarter. It was felt that the licensing procedure as outlined would be fair, would be based upon the economics involved, and would be as free as possible from Federal Government control. It would also provide a safeguard against possible corrupt practices that are so reprehensible in the administration of many of these programs.

The bid basis would not only provide some additional income for the Government that would go a long way in defraying the administrative expenses involved, but it would also provide a quasi-bulwark against the economic advantages incidental to foreign oil.

There are other features of the bill that I will not undertake to discuss at this time because they have to do with certain emergency situations concerning petroleum, and there are other features that have to do with fluorspar. The points that I have mentioned are the ones that are necessary as a beginning to the solution of our problem. I would say that if this bill proves successful, it is my opinion that its provisions will be extended to include many other items in the natural resource field not now mentioned herein.

I would conclude by saying that this proposal is, in my opinion, basically sound and provides a possible early solution to a very knotty problem. It will go a long way toward enabling the independent to survive. Unless he does survive, we can not only look forward to the deterioration of the towns and communities whose economies are tied so closely with the fuel industry's, but we can expect a definite and speedy trend toward monopolism in this industry—a monopolism which you and I know the American people will not tolerate for long. The serious question is where do we go from the monopoly category. Some think that we would probably go to nationalization of the fuels industry. May I say that unless some action is taken on our present import problem that will produce the proper results, nationalization of the fuels industry during our lifetime could very easily become a probability rather than a possibility. Private enterprise could well hang in the balance. Let us all hope that we are successful in our efforts to control these imports.

A Resolution Opposing Quotas on Imported Hardwood Plywood

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1958

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution which expresses the position of the San Francisco Area World Trade Association of the San Francisco Chamber of Commerce on the matter of placement of quotas on imported hardwood plywood. This resolution expresses in its text the very concise point that the United States Tariff Commission has found the increasing imports of hardwood plywood have not injured the domestic industry, but actually have opened up new markets here in this country and, further, that hundreds of American firms and thousands of workers in various industries such as flush-door firms, boatbuilding companies, and others are largely dependent upon the maintenance and flow of imports. I am happy to join with the World Trade Association in expressing their position on this matter. The resolution as adopted follows:

RESOLUTION OPPOSING PLACEMENT OF QUOTAS ON IMPORTED HARDWOOD PLYWOOD

Whereas the imposition of arbitrary quotas on any phase of the American economy is inconsistent with the principles of free competitive enterprise; and

Whereas legislation now pending in the Congress (including S. 1598 and H. R. 5837) would impose an arbitrary quota on imports of hardwood plywood; and

Whereas the United States Tariff Commission has found that the increasing imports of hardwood plywood have not injured the domestic industry but have, in fact, opened up new markets within the United States; and

Whereas hundreds of American manufacturers and thousands of workers in the flush door industry, the boat-building industry and others are largely or completely dependent upon the maintenance and flow of imports; and

Whereas the Congress has established the United States Tariff Commission as the expert body to investigate claims of import-caused injury to a domestic industry, under section 7 of the Trade Agreements Extension Act of 1951: Now, therefore, be it

Resolved, That the San Francisco Area World Trade Association opposes the pending legislation that would impose arbitrary quotas on imports of hardwood plywood; and be it further

Resolved, That a copy of this resolution be forwarded to the appropriate Members of the Congress.

APRIL 1958.

(This is an extension of an existing world trade policy statement of the association.)

Alaskan Statehood

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1958

Mr. GAVIN. Mr. Speaker, I want to call to the attention of my colleagues a suggestion that many of the country's foremost conservation leaders are making regarding Alaskan statehood. Under the terms of a law enacted last year by the Alaskan Legislature, the invaluable fish and wildlife resources of the Territory will be handed over to commercial fishing interests on the attainment of statehood. The proposal became law without the Governor's signature, because, as he pointed out in a message to the legislature, it discriminated against the many others who are interested in those resources.

Conservationists in the United States and Alaska suggest that the Federal Government retain administrative responsibility for the fish and wildlife resources, after statehood, until such time that the Secretary of the Interior can certify that the Alaska Legislature has taken steps to provide for the administration, management, and conservation of those resources in the broad national interest.

Mr. Speaker, I believe that recommendation is sound and fair. It is one that the proponents of Alaskan statehood should consider favorably. The conservationists do not want to delay Alaskan statehood. Rather, they want to strengthen it by making sure that the basic economy of the Territory which is dependent on its fish and wildlife resources is not put in jeopardy. I include for the RECORD a communication received recently from the conservation leaders and suggested wording for an amendment that should be considered:

WILDLIFE MANAGEMENT INSTITUTE,
Washington, D. C., May 5, 1958.

To All Members of Congress:

The undersigned representatives of national conservation organizations believe that the Alaska statehood bill now pending before the House Committee on Rules contains no safeguards for the future welfare of the Territory's fish and wildlife resources. Adoption of the statehood bill, without a clarifying amendment, would jeopardize those invaluable resources upon which a major part of the Territory's economy is based.

The stage already is set in Alaska for the commercial interests to take over the administration of the invaluable fishery resources upon statehood. Under Alaska Senate bill No. 30, which was passed last year and permitted to become law without the Governor's signature, commercial interests are assured complete domination over the Territory's fish and wildlife resources on the advent of state-

hood. That law has been denounced vigorously in Alaska and in the States.

It is believed that the responsibility for managing Alaskan fish and wildlife resources should not be relinquished by the Federal Government until the new State legislature makes provision to protect the broad national interest. This could be achieved by amending the pending bill to stipulate that the fish and wildlife resources will be turned over to the new State as soon as the Secretary of the Interior can certify to the Congress that the Alaska State Legislature has made adequate provision for the proper administration, management, and conservation of the fish and wildlife resources.

Sincerely,

C. R. GUTERMUTH,
Vice President.
RICHARD W. WESTWOOD,
President, American Nature Association.
JOSEPH W. PENFOLD,
Conservation Director, Izaak Walton League of America.
FRED M. PACKARD,
Executive Secretary, National Parks Association.
CHARLES H. CALLISON,
Conservation Director, National Wildlife Federation.
GEORGE B. FILL,
Executive Director, Nature Conservancy.
HOWARD ZAHNISER,
Executive Secretary, the Wilderness Society.

Provided, That the administration and management of the fish and wildlife resources of Alaska shall be retained by the Federal Government under existing laws until the first day of the first calendar year following the expiration of 90 legislative days after the Secretary of the Interior certifies to the Congress that the Alaska State Legislature has made adequate provision for the administration, management, and conservation of said resources in the broad national interest.

Still Going Up

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks I wish to include an editorial entitled "Still Going Up," which appeared in the Savannah (Ill.) Times-Journal on May 5, 1958. The editorial follows:

STILL GOING UP

There has been so much gloom and doom written for and about the farmer in recent years, that we simply must record the good news now on every occasion.

Farm prices shot up another 4 percent during the month ending March 15. This is the highest level reached since May 1953, and that, gentle reader, was smack in the boom years of the Korean war.

Further, farm prices are now at 87 percent of parity—4 points above a month ago and 6 points better than a year ago. Potatoes are actually at a parity rating of 133; beef and calves, 94; eggs, hogs, and grapefruit, 93.

It is further significant that the greatest gains are being made by commodities which have not had price supports from the Government. Least well off—and most fondled by the Washington fumblers—are the grain farmers where subsidies still exist.

I Am the Flag

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. SCHWENGEL. Mr. Speaker, on April 14, I had the honor and privilege of attending the opening of the DAR convention. At this session Miss Jill Visnak, a senior at Upland High School, Upland, Calif., delivered a dissertation on our flag which was one of the most effective presentations I have ever heard on this subject.

Her statement, entitled "I Am the Flag," was written by Ruth Apperson Rous, national chairman of the flag of the United States of America committee of the Daughters of the American Revolution. It was most inspiring, not only for content but for delivery which made every word ring with sincerity and meaning.

I am sure that it will inspire others as it has me. I include it in the Appendix of the RECORD.

I AM THE FLAG

(By Ruth Apperson Rous, national chairman, the Flag of the United States of America Committee, Daughters of the American Revolution)

I am the flag of the United States of America.

I was born on June 14, 1777, in Philadelphia.

There the Continental Congress adopted my stars and stripes as the national flag.

My 13 stripes alternating red and white, with a union of 13 white stars in a field of blue represented a new constellation—a new nation dedicated to the personal and religious liberty of mankind.

Today 48 stars signal from my union, one for each of the 48 sovereign states in the greatest constitutional republic the world has ever known.

My colors symbolize the patriotic ideals and spiritual qualities of the citizens of my country.

My red stripes proclaim the fearless courage and integrity of American men and boys and the self sacrifice and devotion of American mothers and daughters.

My white stripes stand for liberty and equality for all.

My blue is the blue of heaven, loyalty, and faith.

I represent these eternal principles: Liberty, equality, justice, and humanity.

I embody freedom: Freedom of speech, religion, assembly, the press and the sanctity of the home.

I typify that indomitable spirit of determination brought to my land by Christopher Columbus and by all my forefathers—the Pilgrims, Puritans, settlers at Jamestown and Plymouth.

I am as old as my Nation.

I am a living symbol of my Nation's law: The Constitution of the United States and the Bill of Rights.

I voice Abraham Lincoln's philosophy, "A government of the people, by the people, for the people."

I stand guard over my Nation's schools, the seedbed of good citizenship and true patriotism.

I am displayed in every schoolroom throughout my Nation; every schoolyard has a flagpole for my display.

Daily thousands upon thousands of boys and girls pledge their allegiance to me and my country.

I have my own law, Public Law 829, the Flag Code, which definitely states my correct use and display for all occasions and situations.

I have my own special day, Flag Day; June 14 is set aside to honor my birth.

Daughters, I am the sacred emblem of your country. I symbolize your birthright, your heritage of liberty purchased with blood and sorrow.

I am your title deed to freedom, which is yours to enjoy and hold in trust for posterity.

If you fail to keep this sacred trust inviolate, if I am nullified and destroyed, you and your children will become slaves to dictators and despots.

Eternal vigilance is your price of freedom.

As you see me silhouetted against the peaceful skies of my country, remind yourself that I am the flag of your country—that I stand for what you are, no more, no less.

Guard me well, lest your freedom perish from the earth.

Dedicate your lives to those principles for which I stand, "One nation under God, indivisible with liberty and justice for all."

I was created in freedom—I made my first appearance in a battle for human liberty.

God grant that I may spend eternity in my "land of the free and the home of the brave" and that I shall ever be known as Old Glory, the flag of the United States.

Adley Express Co. Story Is One Typical of Success in America

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. CRETELLA. Mr. Speaker, on April 12, I had the great pleasure of partaking of the ceremonies in observance of the 40th anniversary of the Adley Express Co. and the opening and dedication of its new magnicent maintenance terminal in Orange, Conn., in the Third District which I represent in this Congress.

The Adley Co. is one of the largest and most efficient freight networks in the Nation. Hard work and ingenuity have placed the Adley name on over 1,600 trucks which roll night and day over the highways of the eastern United States through all kinds of weather. The company now has 24 freight terminals located in the main cities of the East, and its operation is often described by businessmen as one of the smoothest in the industry. The newly dedicated terminal is of ultramodern design and one which will contribute to the movement of raw materials and finished goods through freight arteries to the retailer and the consumer.

At the ribbon-cutting ceremonies, I noted that the story of the Adley Express Co. is one typical of success in America, and indeed it is. For the three Adley brothers, Dan, Mike, and Ralph, have

shown their faith in the future and the economic growth of America.

Their beginnings in the climb to the pinnacle of success could not have been more humble. They were the children of Italian immigrants. A good part of their childhood was spent in an orphan asylum after the passing of their parents. With a minimum of financial means and a maximum of courage, imagination, and foresight, the Adley brothers started off with one truck and through the years built their business into the vast operation as it is known today. They are men of integrity, keen business acumen, and character. It is these characteristics which have helped to make the story of success come true and to bestow upon these men the admiration and respect they have today from the community. Dan, Mike, and Ralph Adley can take a good measure of justifiable pride in their business accomplishments and their many civic contributions. They count hundreds among their friends in the New Haven area, of which I am honored to be one.

The Adley story is one which serves as an inspiration to others who recognize that perseverance, teamwork, and unwavering faith in one's self have their reward. These men have truly earned their success and the congratulations and best wishes which have been heaped upon them by so many.

The Security of the Country Demands an Increase in Size of the Army

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. BROOKS of Louisiana. Mr. Speaker, on May 5 I appeared before the Appropriations Committee to urge approval of additional funds to increase the size of the Army to 925,000.

Special Subcommittee No. 1, of which I am chairman, has held extensive hearings on the adequacy of the strengths of the military services and the Reserve components. After hearing the testimony of our military strategists, all of which was taken in executive session under oath, I am convinced that the security of the country demands an increase in the size of the Army.

Certainly, world conditions do not justify our cutting the Army to 870,000 but rather indicates that we should increase it to 925,000.

So that all Members of the House may be informed on this important matter I am including the statement I made before the Appropriations Committee, the statement of Hon. CARL VINSON, chairman, Armed Services Committee, which was sent to the Appropriations Committee for insertion in the RECORD, and a letter I have received from the Director of the Army Budget, Maj. Gen. David W. Traub, which shows the cost of increasing the size of the Army from 870,000, as recommended in the President's budget, to 925,000:

STATEMENT OF HON. OVERTON BROOKS, OF LOUISIANA

Mr. Chairman and members of the committee, I wish to thank you for permitting me to appear before you today in support of an increase in strength of the United States Army to 925,000.

I regret that Chairman VINSON cannot be with you today, but I know you recognize that the Full Armed Services Committee is holding both morning and afternoon sessions on the proposed reorganization of the Defense Department. In lieu of making a personal appearance I understand he has submitted a statement for the record which concurs in my views to the effect that the size of the Army should be increased.

At the outset I should tell you that shortly after the Congress convened the chairman of our committee appointed several subcommittees to conduct inquiries, on assigned subjects, concerning the state of the national defense. As chairman of Special Subcommittee No. 1, I was assigned the following mission: "To conduct an inquiry into the adequacy of strengths of Army, Navy, Air Force, and Marine Corps, and Reserve components (including National Guard), to meet assigned missions for the defense of the United States, and to comply with treaty obligations. Soundness of a stable force concept for the foreseeable future. Analysis of the present combatant capabilities of armed services, including major combatant forces (aircraft, divisions, naval vessels, etc.). The capability of our Armed Forces to wage nuclear, conventional, limited and/or total war."

Subcommittee hearings were held on these important subjects in executive sessions, with all witnesses put under oath. We took testimony from the Chief of Staff of each service and the Chief of Naval Operations and the Commandant of the Marine Corps. In addition, we heard from the Assistant Chiefs of Staff for Operations in order to get the full picture insofar as material and equipment were concerned.

Now much of this testimony was of the highest security classification but I can say in this open session that the Chief of Staff of the United States Army is definitely of the opinion that the security of the United States is being impaired by the drastic reductions in the size of the Army.

When will this country learn that we should not pare down our Armed Forces to a point where it invites aggression?

Haven't we had sufficient experience following World Wars I and II to realize that we are now repeating these sad chapters in our history?

Are we all so complacent that we fail to recognize that the Soviet Union is watching these moves with the greatest of interest and satisfaction?

What has changed in world conditions which justify our taking this drastic action?

The Soviet Union still maintains over 2½ million men in its land forces, to say nothing of the millions under arms in its satellites. This force is not all needed for the defense of the Soviet Union. Is Russia keeping all of these 175 Soviet divisions in the field fully equipped with modern tools of war because it fears our 5 divisions in Western Europe may go on the march?

We have started the same old pruning business all over again. In 1956 we had a strength of over 1 million in our Army. In 1957 it was cut to 950,000. By July 1, 1958, it will be down to 900,000. And if that isn't enough, we plan to cut it to 870,000 by the end of this next fiscal year. By that time we will be down to 14 divisions. Mind you, I said 14 divisions.

Logistic and support forces are being decimated. The strategic Army Corps is being riddled. We will have two divisions in Korea without a division in reserve—not a division for replacement.

Does time pass so quickly that we have all forgotten that our forces were almost pushed into the sea by the Chinese Communists in Korea in 1950? One of the reasons was that we had no replacements, no divisions in reserve.

The American soldier is the finest fighting man in the world but you can't expect the impossible of him. He is not a superman. He needs rest and relief and replacements for combat losses just like any other army in the field.

Of course, I recognize that we have built up a substantial force in Korea made up of Republic of Korea troops but, even so, about 15,000 Korean Army troops will have to be used to fill up United States combat and logistical units which cannot otherwise be kept at full strength.

We cannot expect the Republic of Korea troops to carry the entire brunt of battle if the Chinese Communists again go on the march. If we do we will not be keeping faith with the thousands of Americans who laid down their lives between 1950 and 1953 in order to keep South Korea out of the hands of the Communists.

All of the leading military strategists who appeared before my subcommittee agreed that the possibility grows, day by day, that we may be reaching a stalemate insofar as an all out atomic and hydrogen war is concerned. Both the United States and the Soviet Union are rapidly approaching the point where their arsenals will be bulging with weapons of such utter destruction that neither side will dare use them against the other for fear of retaliation. But this fear does not extend to conventional warfare and these same military strategists have urged us not to permit our Army, Navy, Air Force, and Marine Corps to be decreased to the point where they may, for all practical purposes, become impotent.

If we are to maintain our international commitments there is a point below which we cannot decrease our forces and, at the same time, provide for our own security. We have reached that point. It has become necessary for our Strategic Army Corps to become training divisions because each of these divisions are required to accept 6,000 trainees who are receiving basic training in order to keep the strength up to an acceptable level. This same Strategic Army Corps is the one which will be committed to battle immediately in case of an all-out war. So, if we do not change this plan we will do as we have done before—send partially trained men into the worst type of combat.

The Chief of Staff of the United States Army has stated unequivocally that we have had to reduce our support type logistic units in Europe to the point where they are only marginal. Any further reduction will be disastrous. Both General Norstad and General Gruenther have expressed the feeling that the ground forces in Europe at the present time are unduly weak.

Has this great country come to the point where we cannot afford to adequately support our troops deployed overseas?

Mr. Chairman and members of the committee, one of the matters stressed over and over again to my subcommittee by members of the Joint Chiefs of Staff was that we should have a stabilized force. We should put an end to the peaks and valleys which continue to occur in our military strength. If we would stabilize our forces we could make great savings and we could put an end to the personnel turbulence that characterizes an army that is going up or down. There would be lesser requirements for the intake of new people, lesser require-

ments for men who would be either trainers or recruits, so that out of the total force, in a matter of 1 or 2 years, the Army could anticipate much greater combat effectiveness. There would be fewer in training camps being trained or giving training and those men would therefore be in combat units for greater effectiveness.

General Taylor says that he could not begin to estimate the savings but he believes they would be great and certainly, in terms of combat effectiveness, there would be great savings.

The Chief of Staff of the United States Army has said that in his considered judgment he believes that the minimum size of the United States Army should be 925,000, and I submit to you that if we do not peg the size of the Army at that figure we are allowing budgetary considerations to override considerations of national security.

STATEMENT OF HON. CARL VINSON, CHAIRMAN, HOUSE ARMED SERVICES COMMITTEE

For the past 3 years I have watched the continuing reductions in our armed services with growing concern. The situation has deteriorated to a point where I can no longer remain silent. In my judgment the time has come to take a stand and that is the object of my appearance here today.

In order to have a clear perspective of our situation, let me briefly review the current situation with reference to our armed services.

In fiscal 1959 the Navy is programed at a strength of 630,000. With that manpower strength it will operate 864 active ships, of which 396 are warships. Included in this total are 14 attack carriers which, with their assigned carrier air groups, constitute a potent nuclear deterrent and, in addition, have an outstanding capability in the field of conventional war. Of course, the Navy is developing its family of missiles, as are the other services, and I think it quite likely that the Polaris submarine and its assigned missiles will prove to be the most important advance which we have made in the missile field.

I realize that the Navy has heavy responsibilities and probably desires to have greater numbers of both men and weapons. But, in the current balance of forces, I think our Navy is strong, highly efficient, and fully capable of discharging the missions currently assigned to it.

The planned manpower strength of the Air Force for fiscal 1959 is 850,000. With this manpower the Air Force will man 43 strategic air wings, 27 air defense wings, and 35 tactical air wings, for a total of 105 wings. In addition, the Air Force is in the process of activating units to man the various new missiles which will become operational beginning in 1959.

In addition to replacing our B–36's with B–52 jet bombers, a recent decision of the Secretary of Defense will add an additional number of B–52's over those previously planned. Limited procurement of the B–58 supersonic jet bomber is also scheduled for fiscal 1959.

I think all of us will agree that the great striking power of the Strategic Air Command, their high degree of training, and their ability to react within minutes, has been the greatest deterrent force which we have possessed in our military arsenal. Obviously the Soviet Union is well aware of that capability and of our determination to maintain it.

But I want to point out that if the Strategic Air Command is required to drop a single atomic or hydrogen bomb, or fire a single long-range missile with an atomic warhead—in anger—those weapons will have completely failed in their primary purpose—to deter a third world war.

This brings me to the principal reason for my appearance—the future of the United States Army.

On January 26, 1955, Secretary of Defense Wilson appeared before the House Armed Services Committee to discuss our military capabilities. For some time prior to his appearance I had been urging a national military policy which was based upon a stabilized-force concept. For 40 years I had watched the rise and fall in military strength and preparedness, and had witnessed the tragic results of our unwillingness to remain militarily strong. Each succeeding war found us unprepared, and at the close of each of those wars our military strength simply disintegrated in response to the public hue and cry. We remember only too well, that the outbreak of hostilities in Korea found us with one untrained battalion of ground troops which we could air lift from Japan to Korea and commit to the fight. What a tragic record for the Nation which claims to be the greatest on the face of the earth.

For a little while after Korea we were able to maintain a respectable military ground force, simply because Korea was settled with a truce, not a victory. But then complacency again set in and history is again repeating itself.

At the end of fiscal 1955 we had an Army of about 1.1 million men. That force remained relatively stable until about a year ago. You will recall that in 1957 Secretary Wilson ordered a 100,000 reduction in all of the armed services. But the Army had to absorb half of that reduction. Rumors persisted that there would be other cuts. This prompted me to seek a conference with Secretary Wilson, and I talked with him at some length just before the first session of this Congress adjourned. He confirmed my fears that he planned a further cut in the Army. I did my best to try to hold the line for an Army of 950,000. In any event I hoped it would not be cut below 925,000. But we had scarcely returned home following the adjournment of the first session when another 100,000 cut was ordered. Again, the Army was ordered to absorb half of that cut. So, the Army is now going down to a strength of 900,000 by June 30 of this year. Then to further compound our difficulties a third cut of 100,000 has been ordered, with the Army again being required to absorb one-half of that cut.

Even Secretary Wilson concluded that he had gone too far and in response to the plea and obvious justification made by General Taylor, Army Chief of Staff, 20,000 were restored. So, we are now faced with an additional cut of 30,000 for the Army in fiscal 1959, from 900,000 down to 870,000.

When Mr. Wilson appeared before the House Armed Services Committee in January 1955, he agreed with my concept that we should maintain a stable military force. Here is what he said:

"The lack of reasonable stability in our military programs is a most wasteful and expensive practice. We cannot afford to revert to the feast and famine pattern of our past history, not just because of the effect upon our economy but primarily because we cannot take the military risks involved in such a policy. Development of a sound long term security requires that we design our forces so as to assure a steadily increasing efficiency, in step with scientific advances, but characterized by a stability that is not materially disturbed by every propaganda effort of unfriendly nations or wishful thinking on the part of ourselves or our allies."

The hearing which we conducted before the committee on that day will show that we discussed this particular point at great length. Secretary Wilson did not want to be confined to a finite number in discussing the future size of our Armed Forces. However, he was quite firm in saying that we should have a stable force and when we attempted to reach a mutual understanding as to how much those forces could vary and still be considered stable the figure that was generally understood to be acceptable was a variation of 5 percent. But what has happened during the intervening period? The Army is already in the process of absorbing a reduction in force of almost 18 percent, and if it is cut to 870,000 in fiscal year 1959, it simply means that we will have reduced the Army by approximately 24 percent since January 1955 when we were talking about stability of forces.

I am not at all certain just what I can do about this. But I am certain that I am in disagreement with it. As a matter of personal judgment, which is shared by a substantial majority of the House Committee on Armed Services, these Army cuts are too deep. They not only jeopardize the ability of the Army to discharge its roles and missions, particularly in the area of conventional warfare, they may make it impossible to do so.

Now let's analyze the situation confronting the Army.

The Army strength of 1.1 million at the end of fiscal 1955 enabled us to have 20 active divisions. A strength of 870,000 will produce 14 divisions by the end of fiscal 1959.

Of the 6 divisions then remaining in the United States, only 3 would be available for early deployment. The other 3 divisions and the armored combat command would be heavily involved in the training of replacements and would be incapable of early deployment.

With an Army of 870,000 men, we would still retain 8 divisions overseas, with 5 in Europe, 2 in Korea, and 1 reduced strength division in Hawaii. But these overseas commands would be required to accept an additional personnel strength reduction of about 20,000. The servce and logistical support of those activities have already been reduced to the minimum. For instance, in Korea about 15,000 Korean Army troops must be used to fill up United States combat and logistical units which could not otherwise be kept at full strength. Yet, we are told that we must further reduce the Army.

We have our international commitments overseas. These cannot be reduced to any extent. The Army has a training and logistical base to support these overseas units and this base has been reduced to the minimum. As a result the declining strength has taken its toll in combatant and logistical support units for our deployed forces and our strategic Reserve forces in the units. We have reduced these support units until we are in a dangerous state.

Is there anyone who seriously contends that the Soviet threat has lessened any in view of the Soviet missile successes, the Communist penetration in the Middle East, and the current strength of Soviet military forces? I think we can only safely conclude that the threat is greater, not less.

The Soviet Army has a strength of more than 2½ million men. They have been completely re-equipped and modernized since World War II. Therefore, they have greatly increased mobility and firepower. It is common knowledge that they have a new family of missiles, new type artillery and small arms, new combat vehicles to include armored personnel carriers, medium tanks, amphibious vehicles and helicopters. We have done much less.

Our five divisions in Europe comprise the hard core of the NATO shield. Does anyone question the magnitude of the task which they face? In Korea our 2 divisions, with our allies, face Korean and Chinese forces of over 2½ million men. I am sure those divisions take no comfort from the withdrawal of Chinese forces back of the Yalu River. Like a pocket pistol, they are out of sight but immediately available.

The strategic Army forces maintained in the United States are necessary in the cold war to demonstrate to both our allies and

our friends that the Army has the backup strength ready to reinforce the overseas forces if they are attacked, or ready to put out brush fire conflicts wherever they may occur. Continued reduction of these forces from their present understrength levels might well require the abandonment of our forward strategy and the dissolution of our system of collective security. These continued reductions are simply an invitation to renewed aggression on the part of the Communist bloc.

While Secretary Brucker is a good soldier and follows the directions of his Commander in Chief, both he and General Taylor have clearly indicated in their testimony before the House Armed Services Committee that the 870,000-man Army provided by the fiscal 1959 budget falls short of the kind of Army they feel that they should have. They have indicated that 925,000 and 15 divisions would be a desirable goal for the Army, and I support that objective. If the Army were given a strength of 925,000, we would be able to add one missile command in the Far East, and give some badly needed help to our combat and logistical support units.

Our new forces in Europe would be augmented by one air transportable missile command, and an increased number of combat and logistical support units.

Approximately 45 percent of the additional strength would be allocated to the strategic Army forces. This would provide for one additional division, one heavy missile command, and an increased number of combat and logistical support units.

Furthermore, it would increase from 3 to 4 of the number of divisions available for early deployment.

Mr. BROOKS, chairman of our Subcommittee No. 1, has held extensive hearings on the strength of our Army National Guard and Army Reserve and will report the recommendations of the House Armed Services Committee on this subject to you in greater detail. I simply want to point out that as the science of warfare progresses and warning time diminishes, it seems to me more important than ever that those Reserve forces should be maintained at their present strength, be adequately trained and prepared for early entry into combat.

The basic problem facing the Army is an inadequate budget. Even though the Army does sound planning and programing for a modern and well equipped force, adequate funds have not been available to implement these plans and programs. The Army suffers from inadequate strength and the inability to keep its forces modernized.

Of course, with the forces permitted by the limited budget, the Army has moved forward with its pentomic reorganization. But reorganization alone will not maintain a modern army nor give effectiveness to the reorganized units. They must have improved firepower, communications and mobility. But since the end of the Korean War the Army has had progressively less money to keep its forces modern. New ideas and increased technical skill have moved ahead, but the Army has simply lacked the necessary money to convert the ideas and skills into reality. New rifles, mortars, rockets, and other new weapons are available to improve the firepower of our ground forces. New lightweight cross-country vehicles, armored personnel carriers, self-propelled artillery, and tanks have been developed to meet the requirements of ground mobility on the atomic battlefield. But, the money simply is not available to procure them.

All of us realize the great importance of missiles and the more glamorous items in our defense arsenal. But I am fearful that the natural appeal of these new weapons is causing a disproportionate amount of material support to be diverted to them. This can only occur at the expense of our capability to wage conventional warfare.

For example, consider the tank. Since the end of the Korean war I believe we have produced about 8,000 tanks, and during the same period we have disposed of or sold to our allies about the same number of tanks. So, while there has been some improvement in the quality of our tank inventory, it has not increased in numbers.

I recognize as well as you that appropriated funds do not come from a bottomless pit, nor can we be unmindful of national solvency. But, on the other hand, I do not subscribe to the current practice of allocating an arbitrary number of dollars for defense and then requiring our military services to adjust themselves to that dollar limitation. That is precisely what is occurring today, and, in my judgment, it is almost disastrous to the Army.

I continue to believe that we must maintain the capability to fight any kind of war which is thrust upon us. All of us have the greatest pride in the capabilities of our Strategic Air Command, the support capabilities of the Navy's weapons, and the other deterrent weapons which are calculated to prevent an all-out nuclear war. They are achieving their mission and we must keep them sharp and ready. To the extent to which we succeed in this area we will have produced a nuclear stalemate, and those weapons will not be fired in anger. So, in my judgment, the most likely type of conflict which we face is conventional warfare rather than atomic warfare. But it is precisely in this field of military capability that we are becoming the weakest. It is this conviction which has prompted me to come before you today with recommendations which I believe to be required in behalf of the defense of America.

My recommendations are:

First, to maintain an active Army strength of 925,000 men for fiscal 1959.

Second, to maintain the Army National Guard at a strength of 400,000, and the United States Army Reserve at a strength of 300,000.

Third, to accelerate the modernization of the Army.

Of course, the attainment of these objectives would cost money. But it is my firm opinion that some readjustments, even within the projected fiscal 1959 budget, should be made, if necessary, in order to accomplish these objectives. While I would far prefer that our troops be fully equipped with modern weapons, I would reluctantly agree that it would be better to have an Army of 925,000 well-trained men, equipped with the best weapons available, than to have an Army of 870,000 being modernized on a piecemeal basis. If the conflict should come tomorrow we will fight with what we have on hand, not what we hope to procure in fiscal 1960.

I would not presume to tell you gentlemen who deal with this subject every day the precise amount of additional appropriations which would be required to implement my recommendations. For military pay for the active duty force of 925,000, I would estimate it to be approximately $138 million. Operation and maintenance funds would also be required and that could involve any sum up to $450 million, but I am sure that it could be accomplished in a reasonable manner with considerably less.

The maintenance of Reserve forces would require approximately $87 million more.

Modernization would depend entirely upon whatever internal adjustments could be made which would increase the program above the $1.6 billion presently scheduled.

Since the projected defense budget for fiscal 1959 is already in excess of $40 billion, I want to assure you that I would not make this request for an increase in funds for the Department of the Army unless I had the deep conviction that it was not only justified but required in behalf of our national defense. Let us not become so preoccupied with our new missiles and other glamorous weapons with all of their natural appeal, important as they undoubtedly are, lest we become unprepared to meet the most likely type of conflict which we will face. If we should be faced with brushfires and conventional warfare and find ourselves unprepared to meet such a challenge, that unpreparedness would undoubtedly force us to atomic warfare, the very thing we are trying to avoid.

DEPARTMENT OF THE ARMY,
OFFICE OF THE COMPTROLLER OF THE ARMY,
Washington, D. C., May 6, 1958.

Hon. OVERTON BROOKS,
Armed Services Committee,
House of Representatives.

DEAR MR. BROOKS: In response to your request to me today, the following appropriation increases are directly relatable to increases in and strengths of the Army from 870,000 to 900,000 and 925,000, respectively, for fiscal year 1959:

	End strength increase of from 870,000 to 900,000 (col. 1)	End strength increase of from 900,000 to 925,000 (col. 2)	End strength increase of from 870,000 to 925,000 (col. 3—cols. 1 and 2)
Military personnel, Army	$45,000,000	$72,000,000	$117,000,000
Operation and maintenance, Army	39,000,000	59,500,000	98,500,000
Cost of additional military personnel	(34,000,000)	(54,500,000)	(88,500,000)
Retain troop installations	(5,000,000)	(5,000,000)	(10,000,000)
Total	84,000,000	131,500,000	215,500,000
Increased man-years above the plan of reducing the Army from 900,000 to 870,000	15,500	24,800	40,300

You will note that the additional fund requirement for the 900,000 to the 925,000 man plan exceeds that for the 870,000 to 900,000 man plan. This is explained by reference to the difference in man-years above which indicates a faster phasing of personnel under the 900,000 to 925,000 man plan than under the 870,000 to 900,000 plan. Thus the units to be organized from the additional personned under the 900,000 to 925,000 man plan will be trained and available at an earlier date than if the input were accomplished more slowly.

The question might well be asked as to why the phasing in the 870,000 to 900,000 man plan was not planned as rapidly as in the 900,000 to 925,000 man plan. The answer lies in the fact that the dollar figures in this plan are the savings in reverse from the plan which phased the Army down to a strength of 870,000 from 900,000, and in this plan the Army was, with reason, retaining its men as long as possible, that is phasing them out relatively slowly.

Sincerely,

DAVID W. TRAUB,
Major General, GS,
Director of Army Budget.

Let's Bring Our Wiretap Laws Up to Date

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1958

Mr. KEATING. Mr. Speaker, I have today introduced two wiretapping bills designed to augment the Justice Department's organized crime drive and generally to bring our communications laws up to date. These bills have been drafted to meet new conditions and thus expand and make more explicit portions of a wiretapping bill I have sponsored for a number of years in Congress.

One bill would reverse a recent Supreme Court decision by giving congressional approval to wiretapping by State officials when authorized by State law. Such evidence would be admissible in both State and Federal courts.

The second bill would permit agents of the FBI, Bureau of Narcotics, Internal Revenue Service, and Secret Service to tap wires in felony cases where authorized by the heads of their departments. It would also allow the introduction in evidence of information thus obtained if a Federal court order authorizing the tap had been secured in advance. Under the bill, all unauthorized intereeptions, not just interception and divulgence, would be proscribed.

These two bills are designed to clarify and extend a wiretapping bill I have sponsored for a number of years, in the light of a recent court decision and the coordinated drive by the Federal Government against organized crime. The portion of my original bill, which would allow wiretapping by Federal officials in national security cases, is still sound and necessary and should be enacted. But recent developments have highlighted the need for broader and pinpointed legislation dealing with certain parts of my original bill.

Congress never intended to prohibit State officials from tapping wire when authorized by State law. My first bill would set this straight and at the same time correct the Supreme Court's Benanti decision. This bill spells out explicitly that evidence obtained by authorized State wiretapping would be admissible in Federal and State court. Enactment of this measure would give State officers the weapons with which to complement and coordinate effectively with the Federal Government's efforts to curb big-time crime in this country.

The State-authorized wiretapping approval by Congress would be especially helpful in New York State, which for some time has made careful and effective use of its wiretapping laws. Since many of the kingpins of organized crime in America operate in and out of this State, and the drive will be initially concentrated there, use of wiretapping by State officials can be of inestimable help. I would estimate conservatively that over half of the 100 top hoodlums sought by the Justice Department have their roots in the Empire State. Proper wiretapping can help wipe out the power of invisible government which has infected portions of the State.

The second bill would, under proper safeguards, allow the Federal agents most directly concerned in the anticrime drive to tap wires in important cases. It expands the tapping right beyond the FBI, as provided in my original bill, to all agencies working to curb organized crime in the new campaign. This is in keeping with the need for coordinating the work of all these agencies which is the keystone of the drive.

By requiring executive approval for taps and, in addition, judicial approval for court use, the bill assures that innocent individuals involved would be amply protected. Thus, it in no sense provides a carte blanche to law enforcement agencies, but simply makes our laws more realistic and more attuned to the modus operandi of the modern criminal.

In addition, it would strike hard at all snooping by outlawing all interceptions by unauthorized persons. This would tighten the present statute, which requires interception and divulgence before the law is broken. Thus, private eyes and other telephonic snoopers could be stopped in their tracks. The law would not have to wait until the damage had been done before stepping in to prosecute.

Radio, telegraph, and telephone lines are now efficient and dangerous channels through which criminal conspiracies can operate with impunity. Our present laws make the wries a sanctuary for criminal elements while blocking their use to those who are trying to protect the public.

Giving Federal and State agents the power to tap wires, under trustworthy surveillance, would shut off this legalistic no-man's land for criminality. It would allow tried and true Federal agencies to act swiftly where great need was demonstrated. It is one of the most effective means by which Congress can implement the Justice Department's full-scale war on bigtime crime.

Congress has dallied long enough in modernizing our communications laws. Now, while the iron is hot and the Government is about to make an all-out drive on the big-shot crooks, is the time to give them the tools to do it. I hope Congress will respond with the action so sorely needed.

Texts of the two bills follow:

A bill to amend chapter 223 of title 18 of the United States Code to permit the introduction into evidence of certain communications intercepted by State law-enforcement officers, and for other purposes

Be it enacted, etc., That chapter 223 of title 18 of the United States Code is amended by adding at the end thereof the following:

"§ 3501. Evidence of intercepted communications.

"(a) There may be introduced in any court of the United States evidence relating to the existence, contents, substance, purport, effect, or meaning of any communication by wire or radio which has been intercepted by any law-enforcement officer or agency of any State or political subdivision thereof, where the interception of such communication was authorized by the laws of such State and was carried out in conformity with such laws.

"(b) No law of the United States shall be held to prohibit the interception of any communication by any law-enforcement officer or agency of any State or political subdivision thereof, or the introduction in any State court of evidence relating to such communication, where the interception of such communication is authorized by the laws of such State and is carried out in conformity with such laws.

"SEC. 2. The analysis of chapter 223 of title 18 of the United States Code is amended by inserting immediately below

"3500. Demands for production of statements and reports of witnesses."

the following:

"3501. Evidence of intercepted communications."

A bill to authorize the interception of communications by certain investigatorial agencies of the Government, to establish a procedure for the admission into evidence of information so obtained, and for other purposes

Be it enacted, etc., That no person shall intercept or attempt to intercept any communication by wire or radio, not being authorized in advance by the sender or recipient thereof, except (1) authorized agents of the Federal Bureau of Investigation of the Department of Justice upon the express written approval of the Attorney General of the United States, and (2) authorized agents of the Internal Revenue Service, the Bureau of Narcotics, and the United States Secret Service of the Department of the Treasury upon the express written approval of the Secretary of the Treasury of the United States, in the course of any investigation to detect or prevent any felony as defined in the United States Code, as amended, and conspiracies to commit any such felony.

SEC. 2. Information lawfully obtained after the effective date of this act through the interception of any communication by wire or radio in accordance with the provisions of Section 1 of this act shall, notwithstanding the provisions of section 605 of the Communications Act of 1934 (48 Stat. 1103), be deemed admissible, if not otherwise inadmissible, in evidence in any criminal proceedings in any court established by Act of Congress in criminal cases covered by Section 1 of this act: *Provided*, That prior to intercepting the communications from which the information is obtained, an authorized agent of any one of said investigatorial agencies shall have been issued an ex parte order by a judge of any United States Court of Appeals or a United States district court, authorizing the agent to intercept such communications. Upon application by any authorized agent of any one of said investigatorial agencies to intercept communications in the conduct of investigations pursuant to this section, a judge of any United States Court of Appeals or a United States district court may issue an ex parte order, signed by the judge with his title of office, authorizing the applicant to intercept such communications, if the judge is satisfied that there is reasonable cause to believe that such crime or crimes have been or are about to be committed and that the communications may contain information which would assist in the conduct of such investigations.

SEC. 3. No person shall divulge, publish, or use the existence, contents, substance, purport, or meaning of any information contained in any aforesaid ex parte order or obtained pursuant to the provisions of this act otherwise than for the purpose hereinbefore enumerated.

SEC. 4. Any person who willfully and knowingly violates any provisions of this act shall be fined not more than $5,000 or im-

prisoned not more than 1 year and a day, or both.

SEC. 5. All carriers subject to the Communications Act of 1934 (48 Stat. 1103) are authorized to permit such interception and disclosure of any such communications by wire or radio.

SEC. 6. If any provision of this section or the application of such provision to any circumstance shall be held invalid, the validity of the remainder of this section and the applicability of such provision to other circumstances shall not be affected thereby.

You're Very Wrong, Mr. Eaton

EXTENSION OF REMARKS
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. KITCHIN. Mr. Speaker, I invite your attention and that of our colleagues to the vicious and unfounded statements concerning the Federal Bureau of Investigation which were made by Cyrus Eaton on a national television program last weekend. Mr. Eaton is a wealthy industrialist from Ohio whose great affection for the Soviet Union has earned him headlines time and again in recent years.

Fortunately for those of us who love freedom and abhor the tyranny of atheistic communism, Mr. Eaton's manner of showing his affection for this—his adopted country—is strange, indeed. In 1955, for example, he was approvingly named in the Soviet press as a millionnaire who endorses the Communist propaganda slogan of "peaceful coexistence." Mr. Eaton has entertained Soviet representatives at his country estate in Ohio. He presented a Shorthorn bull to one Soviet delegation, and he has fed invaluable quotations to the Iron Curtain propagandists.

Last October, a weekly magazine published in Moscow printed an article by Cyrus Eaton in which he hailed the progress made by the Soviet Union in the past 40 years. In this article, he told the enslaved people of Russia that it was good "to observe a nation of such sturdy, healthy people enjoying more and more of the good things of the world." In an article which was published last March, Mr. Eaton asserted that the United States is primarily responsible for the tension which exists between our country and the Soviet Union.

Innocently or otherwise, Cyrus Eaton has done much to ingratitiate himself to the international Communist conspiracy. Like the Soviets, he has not allowed the facts to influence his inane babblings. That is why I feel the following editorial from the May 6, 1958, edition of the Miami News is an excellent rebuttal of Mr. Eaton's baseless attack upon the FBI:

YOU'RE VERY WRONG, MR. EATON

Ordinarily, the Federal Bureau of Investigation needs no defense of its manner of operation. However, when a person of the stature of Cyrus S. Eaton, Cleveland industrialist, likens the FBI to Hitler's gestapo it is time to speak out.

The FBI is not and never has been a gestapo. Under its longtime director, J. Edgar Hoover, it has developed into a superb investigating arm of the Government.

In a filmed television interview, Mr. Eaton asserted that freedom in the United States was in jeopardy because scores of agencies were engaged in investigating, in snooping, in informing, in creeping up on people.

Then he singled out the FBI for particular criticism. Science in the United States has been retarded, he said, because the American scientist is aware that the FBI is breathing down the back of his neck all the time.

It is true that we have had witch hunts in this country, particularly those conducted by the late Senator Joseph McCarthy, but the FBI was in no way involved.

The high standard set for the Bureau by Mr. Hoover has kept the FBI from becoming a national superpolice agency. The Bureau's agents are carefully chosen. Most of them are college men and they usually possess law degrees.

The FBI has kept close tabs on the Communist movement in this country. Undercover agents have operated within the Communist Party and from time to time have exposed the working of that criminal conspiracy against our form of government and our freedoms.

What is wrong with that? Would Mr. Eaton have us remain ignorant of the machinations of the conspirators?

Rather than jeopardizing our freedoms, the FBI is constantly guarding them. An important part of the Bureau's work is investigating violations of civil rights by local police.

Mr. Eaton is noted as a shrewd and capable businessman of vast interests. He has done his country a disservice by his thoughtless and baseless charges against the FBI.

American Ownership of Shipping Under Foreign Flags

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, May 8, 1958

Mr. BUTLER. Mr. President, in the quest for authoritative information relating to controversial questions before the Senate, it is most helpful to have the views of experienced and well-informed citizens whose accuracy and reliability are unquestioned. Such a situation obtains in reference to the subject of American ownership of shipping under foreign flags. This topic was the subject of discussion before the National Security Commission of the American Legion in Washington when Carl F. Vander Clute, general manager of the Gulf Oil Corp., marine department, delivered a most interesting address. Mr. Vander Clute is considered as a knowledgeable and clear-thinking industrialist, and in order to have all information available to the Congress I ask unanimous consent that a portion of his address be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

PARTNERS IN AMERICAN SECURITY

The merchant marine has always been an indispensable part of American military security. However, in contrast to all other defense instruments, this one is almost entirely a private, nongovernmental enterprise in time of peace. Nowadays, it falls into three broad categories: passenger liners, dry cargo ships, and tankers, with a few specialized carriers thrown in for good measure. The tankers, vitally important to the mobility of naval, air, and land forces today, are the group with which I have been most directly connected.

* * * * *

In connection with our forward picture I feel we are fortunate to have a Maritime Administration that has the know-how and an Administrator that has the initiative to step out in an effort to give the American merchant marine a transfusion. Results may be seen in the new building program of subsidized lines, the passenger and cargo ships, the United States Lines, Grace, Moore-McCormack, Lykes, and others. The Administration demonstrates the forward thinking through its activities with the atomic ship, free piston, gas turbines, submarine tankers, and hydrofoils. With all the indicated initiative toward progress it must be disappointing to meet with demands such as a 20-percent increase in pay by the engineers on the free piston ship, or the demand in Puerto Rico by the stevedors to be paid for work not required to unload the lift-on lift-off ship. The ship sailed back after 27 days with its cargo. It is tough to make progress in the light of such actions. It is, nevertheless, reassuring to have such forward-looking people in Government because today we find ourselves again at a crossroad in maritime history. However, we are now faced with the incontrovertible conclusion that in any conceivable war in the future we will not have the time to rectify, at leisure, errors of judgment of the moment.

Now you may properly wonder whether we, in the maritime industry, are not living in a world of the past, considering the progress made in the weapons of war. Some may think that in this sputnik world the traditional role of the merchant marine in our Nation's defense will never again be played. I cannot dissuade the doubtful that this is a totally unrealistic point of view. I will leave it to General Twining, Chairman of the Joint Chiefs of Staff, who within the past few months said the following:

"It seems incredible to me that anyone could argue seriously or with justification that new concepts of warfare obviate the necessity of further fostering a merchant navy. * * * If the catastrophe of a general war should be forced upon us by the necessity of retaliation against surprise attack, the merchant marine, after the initial period of devastating nuclear exchange, would play a most vital role. Indeed, it might well be the one source of strength of the free world which would pluck victory from chaos."

* * * * *

In case of another international military struggle, would the United States control enough tankship tonnage to meet our needs at home and overseas? The most recently published joint Maritime-Navy Planning Group recommended that the size of our oceangoing tanker fleet to support our defense should be roughly 10.5 million deadweight tons.

I am happy to report that our efficiently controlled tanker tonnage is in excess of 12 million deadweight tons. This fleet is broken down roughly half owned under American flag and half owned under the flags of Panama, Liberia, and Honduras. In addition to our controlled tanker fleet now is existence, there is under construction or on order approximately 8 million tons,

mostly to be registered by American companies under what I call flags of necessity.

* * * * *

A closer look points out certain severe limitations. About half of our tanker tonnage is war-built and subject to pressing problems relating to block obsolescence. Over half is not capable of speeds in excess of 16 knots.

A glimpse at a few figures will immediately reveal a few facts about the recent history of petroleum transportation by sea and indicate why our commercial fleet has come such a long way in becoming a vital part of our military potential. According to United Nation's figures, in approximately the 3 decades since 1929, the world's seaborne trade in nonpetroleum products has increased from 385 million tons to about 460 million tons or by some 20 percent. Petroleum has gone from 70 million tons to 360 million tons or an increase of over 400 percent. In 1929, 15 percent of the world's seaborne trade was in tankships while today it is about half and petroleum is far and away the largest single commodity class moving by sea.

I am pleased to be able to say that my own company has played a proud role in adding to the progress of humanity created by this increased use of petroleum and in the augmentation of the tanker fleet available to this country. Both are vital segments of modern civilization, creations of free enterprisse but always available to our Nation in an emergency. Since the close of World War II, we have been consistently optimistic about the petroleum industry and our investment in new transportation and other petroleum facilities is a manifestation of our faith in the future. Yes, we had faith and have a large building program underway including 10 super tankers and 9 T-2's being jumboized all in United States shipyards to operate under the American flag. We also have a number being built which will sail under flags of necessity. Our optimism has been sorely tried in recent days by the drastic reduction in crude oil importations which will materially reduce ship utilization and increase costs to the ultimate consumer.

As I have indicated it would appear that, omitting considerations of vessel retirements and losses, our citizen-owned fleet under effective American control will reach in the neighborhood of 15 to 20 million tons, of which approximately two-thirds will be under the flags of necessity.

It is perhaps logical than that some issue should arise over the extent of the effectiveness of this control and why the necessity for non-American registry.

* * * * *

The Merchant Marine Act of 1936 declared that the United States shall have a merchant marine owned and operated under United States flag by citizens of the United States insofar as may be practicable. Your particular attention is called to the words "insofar as may be practicable." We do know that the number of ships that it is practicable to have under the United States flag is far from sufficient to satisfy the needs of our Nation in the event of an emergency. History has taught us the sad lesson that we cannot depend upon foreign-flag tonnage to come to our rescue in the event of war. History has also shown us that the presently term European western nations were unable to fulfill their own needs as far as tonnage was concerned in the last war, particularly insofar as tankers were concerned: witness the crash program on the T-2 tankers.

How can we put ourselves in a position to prevent a reoccurrence of such a situation? Bear in mind that the next war is not going to be one that will allow a long period of time for the construction of ships to put ourselves in a position where we can properly carry on a campaign. How then can we put ourselves in a position to avoid the dire consequences of an unwarned attack and an undeclared war? I like to think that the legislators that passed the Merchant Act of 1936 were farsighted enough to realize that the number of ships operating under the United States flag would be insufficient to meet our needs and that the choice of words "insofar as practiable" were put there for the specific purpose of indicating that the postion was recognized and, at least by innuendo, indicating that ships American-owned and American-controlled, regardless of what flag they sailed under, would be considered a part of our merchant marine.

The importance of American-owned and controlled vessels under flags other than the United States flag was amply demonstrated during World War II. In fact, many of the vessels urged into Panamanian registry by our own Government because of our Neutrality Act were the very ships which brought victory in the Battle of Britain before our entry into the war. During the Korean situation we had the voluntary tanker plan, under which all American owners pooled their tankers for the benefit of the United States Government and these tankers included vessels owned and controlled sailing under foreign flag. These vessels sailing under foreign flag owned and controlled by American citizens were made available to the United States Government at a nominal charter hire even though the charter market at that time was sky high. It has been estimated in various sources in the industry that the cost to the industry to make vessels available under the voluntary tanker plan cost in the neighborhood of $35 million.

What happened during the Suez Canal situation? Our friends in Europe were pleading and praying for aid and assistance to have oil transported to their countries to prevent the shutdown of industry and avoid the hardships of a winter that could have been experienced by their peoples. Our Government requested the oil companies and tanker owners to cooperate, and I might say the oil companies and tanker owners were commended by our Government for the great spirit of cooperation with which the Government's request was answered. The United States-flag tankers and the American-owned and controlled ships under foreign flag did a yeoman job in carrying oil to our friends in Europe. If, as as has been stated in some quarters, all ships American-owned should be placed under the United States flag I regret to say that the number of tankers that would be available to the Government would diminish exceedingly, because United States-flag vessels cannot be operated in competition with foreign-flag vessels, which operate anywhere from 30 to 50 percent cheaper than United States-flag ships. The United States Government could put them on a parity, through a subsidy, to make up the difference between the cost of operating under foreign flag and that of operating under United States flag. I might say, however, that the American businessman is imbued with the doctrine of free enterprise and, therefore, the tanker owners, particularly, do not look kindly upon the Government getting into its business and taking out of the pocket of the taxpayer money to subsidize the operation, when it can be done just as effectively and with the same degree of protection for our Nation without subsidies or imposing upon the American citizen the burden of added taxation.

It being impracticable to put all ships under the United States flag, then in the language of the Merchant Marine Act if the number of ships under the United States flag fulfills the requirement, "insofar as may be practicable," and it having been shown that it is impracticable to have all ships under the United States flag, then it follows that in order to have ships available to the United States Government we must find them somewhere else. They have been found and are in existence by being American-owned and controlled but operating under foreign flag on a basis which puts them in a position where they will be competitive with our competitors.

* * * * *

Bear in mind also that these American-owned American-controlled ships under foreign flag are a great asset to the economy of the country and aid and assist in continuing and maintaining the ship repair business in this country. Many of the ships presently sailing were built in the United States and a large number of them have repairs accomplished in the United States. Supplies are purchased in the United States, bunkers are taken aboard; at least a good piece of the insurance is bought here. There is a constant flow of money into the coffers of our people which would not flow if cargoes were carried in foreign-owned bottoms and we abdicated from the field of foreign competition and left all of such transportation to our competitors, as they would like to have us do and for which purpose they are creating all this hullabalioo about flags of convenience.

They have bombarded our shores before; most recently in an attempt to eliminate the so-called 50–50 provision which has meant so much to the well-being of the American freighter fleet. Then, as now, their attack was clearly devised and patterned to fit the particular issue. During that campaign one of Europe's most prominent maritime leaders, in seeking an end to American-flag preference, asked, "Is the United States really going to side with the forces which are for government interference, restrictions and discrimination—with inherent and ultimate dangers to the continuance of private enterprise in international sea transport?" We now ask, is this not exactly what our competitors in Europe are seeking? We would answer this inquiry in almost precisely his own earlier words, "It is, therefore, obvious that barriers to the free international movement of shipping inevitably serve to increase transportation costs and to retard world trade." Is this what our European competitors seek?

Our foreign competitors, knowing that the high cost United States flag ships cannot compete with them, broadcast their propaganda for the sole purpose of eliminating competition so they may have the field to themselves. If they succeed in their efforts, the American-owned fleet of ships under the "flags of necessity" would not be available to us in the event of an emergency and, likewise, would not be available to them if they come pleading for help again. We hope such a situation will not arise but we must be prepared.

I leave with you the thought that the ships I am talking about are our partners in our security and are not sailing under flags of convenience but under flags of necessity—necessary for us to meet foreign competition to remain in foreign trade and bring into our country some of the money which our foreign competitors would like to have flow into their coffers but, above all, to maintain ample tonnage to meet the needs of our Nation and its Armed Forces in the event of an emergency and give us that vitally needed security.

Proposed International Development Association

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, May 8, 1958

Mr. DOUGLAS. Mr. President, one of the most constructive, new proposals for the strengthening of our international policies was recently made by the junior Senator from Oklahoma [Mr. MONRONEY], when he introduced his bill for an International Development Association. Senator MONRONEY's proposal has met with a very favorable reaction in many places, including the editorial columns of the Springfield (Ill.), State Journal. While I do not endorse all of the critical statements in the article about our aid programs, I ask unanimous consent to have printed in the appendix of the RECORD, the editorial entitled, "Loans versus Giveaways: New Approach on Foreign Aid," published in the State Journal for March 12, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Springfield (Ill.) State Journal of March 12, 1958]

LOANS VERSUS GIVEWAYS: NEW APPROACH ON FOREIGN AID

Taxpayers in this area as well as elsewhere should cheer the bipartisan effort, led by Senator MIKE MONRONEY, Democrat, of Oklahoma, to shift the emphasis on our foreign aid program from a giveaway basis to a loan basis.

Outright gifts seem to have bred contempt for the United States in some countries as witness the familiar tag of "Uncle Sugar" or "Uncle Sap," hung on this country.

Furthermore, the foreign aid program has been sharply criticized in recent months in connection with waste and inefficiency. Public projects abroad, financed by American giveaway money, have been partly built, then abandoned. Jet planes have been given away that are now rusting from disuse.

It was entirely proper and efficacious to give money to countries devastated by Communist-initiated wars, such as South Korea and Vietnam. It was to our best interests to give money to Guatemala after it overthrew communism.

But many countries like India don't want free money. They do want loans. For instance, Brij Kumar Nehru, a cousin of Prime Minister Nehru of India, is now in the United States seeking a $225 million loan for India's 5-year plan. He doesn't want charity. He wants long-term loans, and this he prefers to short-term loans which the Russians have made to India.

Loans have one big advantage over outright gifts. The Communists can't accuse the United States of attaching "imperialistic strings" to loans. It has been a popular propaganda line in the Kremlin to label all "giveaway" money as a form of imperialism—a line, incidentally, which demagogs in Asia have echoed.

The Kremlin propagandists couldn't very well label a loan program as "imperialistic" when Russia itself is making loans.

In fact, under MONRONEY's plan we would be one step ahead of the Soviets. MONRONEY suggests that a multilateral loan system be set up through an International Development Association. Such countries as the United States, England, Canada, and West Germany would put money into the IDA. As a starter, MONRONEY suggests a billion dollars with the United States contributing a third of that sum.

The advantage of a multilateral system over the unilateral system is obvious. Russia's unilateral loan system was set up to further the cause of communism. A multilateral system would have no doctrine attached to it. The countries receiving loans through that plan would retain their feeling of independence.

MONRONEY thinks the United States' share of the capital for the IDA could be taken in part from tax revenue and part from the sale of farm surpluses abroad. He believes that the plan "would have the triple advantage of (a) ultimately lessening the need for direct economic aid by making more effective use of local currencies (money from surpluses), (b) promoting the sale of agricultural surpluses, and (c) promoting international trade and economic well-being."

Whether it would actually work out that well would remain to be seen. At least the plan, or a modified version of it, ought to be tried. We can't go on giving away money forever. We would go broke in time.

Edna Ferber's New Novel Emphasizes Case for Alaskan Statehood

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, May 8, 1958

Mr. NEUBERGER. Mr. President, earlier this week the able junior Senator from Idaho [Mr. CHURCH] in an outstanding address highlighted the urgent justification for statehood for Alaska.

There is also extant in the Nation today a new novel by the gifted American writer, Edna Ferber, entitled "Ice Palace." Several years ago Mrs. Neuberger and I had the privilege of entertaining Miss Ferber at luncheon in the Senate dining room when she was visiting in Washington with that illustrious advocate of Alaskan statehood, Delegate E. L. (BOB) BARTLETT. As a result of her visit to Alaska under the auspices of Delegate and Mrs. Bartlett, Edna Ferber has written a novel which will bring to millions of readers the case for Alaskan statehood in dramatic and vivid form.

An informative editorial in the Oregonian of Portland, Oreg., for May 5, 1958, under the title, "Brief for Statehood," highlights how Miss Ferber's new novel underscores the reasons for Alaskan statehood. I ask unanimous consent that the editorial from the Oregonian be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRIEF OF STATEHOOD

There are a good many parallels between the Texas of Edna Ferber's widely read novel, Giant and the Alaska of her first novel in 5 years, Ice Palace. Both are immense areas with tremendous resources. Both are remote in the sense that they are distant from the capitals of United States Government, finance, and culture.

The heroine of Giant raged against the exclusiveness of the male talk of booted Texans. The heroine of Ice Palace does the same when Alaskan males huddle. What could be more in the spirit of Texas than the following response of Christine Storm of Ice Palace when shown some Seattle roses?

"Such dear little things," she says with obvious sarcasm. "That's the trouble with all our Alaska flowers, I suppose, except the tiny ones that grow on the tundra. The cabbages are as big as bushel baskets, the strawberries are 3 inches around, and the delphinium grows 9 feet high."

The boastfulness of Texas was the foundation of the satire of the earlier novel. But the Texan qualities Miss Ferber finds in Alaska—its roughness, bigness, expansiveness—re judged generously in Ice Palace. She could poke fun at Texas, but she is deadly serious about Alaska.

Perhaps the reason for the sharp difference in attitude can be found in the fact that Texas, as a State, is to a great degree the master of its fate. It has come of age. Its juvenile traits are cause for laughter. But Alaska, giant though it is, is still held in subjugation by the parent States. Miss Ferber admires rather than derides its efforts to impress the Nation with its importance.

"The forests, the metals, the great fishing industry," says Miss Ferber's protagonist, Thor Storm, "it's all the same, it goes outside, it's owned outside, the world doesn't hear about it, or care. * * * It's part of a past era, like the old days of the grabbers and what they called the Robber Barons. It's still going on here, full blast, with Seattle and San Francisco and the lobbyists in Washington as the powerplant. But who cares."

The outside will be hearing much of Miss Ferber's case for Alaskan statehood. The book is already among the best sellers, and motion-picture rights have been sold for more than a half million dollars. Congress has just a few months to meet the challenge of statehood. If it fails to do so, as it has failed in the past, it can properly be cast among the villains in Ice Palace.

Plight of the Railroads

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 8, 1958

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Big Train Then and Now," published in the Norristown, Pa., Times-Herald of May 6, 1958, dealing with the plight of the railroads in America. This is an editorial which I think every Senator should read.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BIG TRAIN THEN AND NOW

Any railroad buff used to get a thrill to hear the train caller announce: "The 20th Century Limited—first section." First section? That was right. There were more to come.

The long all-Pullman train thundered away. Then, at roughly 5-minute intervals, came a second section, a third, a fourth. All full-length trains. On the busiest days, the Century, glamor train of modern Amer-

ica, ran between New York and Chicago in as many as seven sections.

Quite a sight to see. Seven trains barreling through, loaded to the vestibules with prosperous Americans bent on business and pleasure, all seven bearing the proud name of a famous limited.

To that plush estate had the Century risen from its modest beginnings as a 5-car train in 1902.

And from that estate has it now fallen, as rail travel has declined through the after-war years, until at last, one day not long back, it was stripped of its elegance and became just another day coach and sleeper train, with the extra fare abolished.

In its long life it has earned the railroad $200 million. So haughty had it become as it clung to its glory in the later years that it made no passenger stops at such big cities as Cleveland.

Maybe one day the Century will be restored to its old eminence. But men who know the railroad business as it is today are not counting on it.

The 20th Century Limited was frankly a luxury train. But as such it was a symbol of the throbbing business American railroads enjoyed for years as a key factor in the growth and maintenance of United States trade and industry.

What has happened to this train is a dramatic exclamation point which highlights the grim statistics of our tottering railway system. Further emphasis came from the Baltimore & Ohio's abandonment of all rail passenger service between New York and Washington.

How much more service will have to be abandoned or curtailed or downgraded before solid national effort is made to put the rails back on a sound footing where they can serve this country in both peace and war?

The Narcotic Addiction Problem in the United States

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1958

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an excellent statement entitled "Documentation of the Narcotic Addiction Problem in the United States," prepared by Mr. Lee Speer, field supervisor of enforcement activities of the Federal Bureau of Narcotics.

Mr. Speer, who served as chief investigator of the nationwide narcotics investigation conducted by the Senate Judiciary Committee, has spent nearly 20 years in narcotics enforcement in this country and in the Far East. He is a recognized authority, and I highly commend his statement to the reading of Senators.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DOCUMENTATION OF THE NARCOTIC ADDICTION PROBLEM IN THE UNITED STATES

(By W. Lee Speer, field supervisor of enforcement activities, Federal Bureau of Narcotics, before the annual symposium of the American Psychopathological Association, New York, N. Y., February 23, 1957)

A little more than 50 years ago, narcotic addiction in this country was recognized as a hideous, unnecessary social evil founded on crime and aimed at the destruction of masses of individuals. Legislative curbs were placed on the spread of traffic in 1909, 1914, and again in 1924, followed by the organization of the Bureau of Narcotics in 1930. From an ominous addict population of 250,000 in the United States in the twenties we have now progressed to the point that, after a thorough combing and searching of this country for 4 years by all enforcement agencies, we have of record 34,729 individuals who sometime during those 4 years illegally used narcotics. This survey coordinated by the Bureau of Narcotics, and found to be 95 percent accurate as to coverage by an independent agency, is being continued by the Bureau of Narcotics to provide an accurate and reliable yardstick of the extent of the narcotic traffic in this country.

Narcotic traffic and narcotic addiction are certainly not limited to the United States, although some countries are loath to admit the presence of a narcotic problem. In the United States, the Bureau of Narcotics under the able direction of Commissioner H. J. Anslinger is on top of the problem and has provided every assistance to congressional committees investigating the narcotic traffic with the result that the situation in this country has been well documented and well publicized. The point has been made repeatedly that addiction in the United States hinges on heroin. Nevertheless, the Bureau of Narcotics has a system in effect which immediately flags the purchases of a registrant, that is, a physician, hospital, druggist, dentist, etc., when they become excessive. In this manner diversions of legitimate narcotics are not only brought to the attention of the Bureau promptly, but the number of such diversions is kept to a minimum.

Under the above system there could never occur unnoticed in this country a situation such as has recently been publicized in England, a country often cited as being free of drug addiction. In the Dr. John B. Adams case, this doctor is reported to have enslaved some 400 people in narcotic addiction before he brought about their premature deaths and scattered their ashes over the English Channel. Excessive purchases by such a doctor in the United States would be evident immediately. In England the investigator wearing the derby hat and fawn-colored gloves was alerted to the narcotic diversion not by notice of excessive purchases of narcotics but rather by the town of Eastbourne having the highest death rate in the country. This case highlights one of the many instances in which there may be extensive undetected addiction unless enforcement authorities are abreast of the situation.

Another example of how the narcotic traffic, long smouldering, may break out and reveal addiction of startling proportions was brought to light by the 1956 report of the Permanent Central Opium Board of the United Nations which shows Denmark to be the world's biggest consumer of codeine, methadone, and ketobemidone, a synthetic drug so highly addicting that its production and use are prohibited in the United States and most other countries. In addition, the report reveals that Denmark's per capita consumption of the above drugs together with morphine and demarol exceeds by 11 percent that of the next highest consumer. Excess purchasing and prescribing of narcotics have brought this about. Approximately one-half the addicts in Denmark are known to be in Copenhagen. A superintendent of a mental hospital in Denmark, Dr. Jorgen Ravn, stated the medical profession must bear a large share of the blame for the present narcotic situation in Denmark.

Following several congressional investigations into the narcotic traffic in this country, from 1950 to 1955, former Senator Price Daniel, now Governor of Texas, as chairman of the Senate Subcommittee on Improvements in the Federal Criminal Code, conducted a nationwide investigation into the narcotic traffic with particular emphasis on the causes and treatment of drug addiction. Extensive hearings were held in 13 principal cities of this country including New York City. A hearing in the latter city was devoted exclusively to an investigation of drug addiction and lasted several days during which time testimony was taken from medical experts who have made studies of drug addiction for a quarter of a century. The testimony of these experts, that of other medical witnesses, and lay witnesses as well, is a matter of record and was used as a sound basis for the attack on the drug traffic embodied in the Daniel-Boggs Act of 1956 which, as stated by Commissioner Anslinger, is the greatest step forward our country has taken in the fight against the drug traffic.

The above-mentioned Daniel-Boggs act attacks primarily the availability of narcotics in this country, and aims at reducing the availability by removing convicted sellers of illegal narcotics from society for long periods of time, even providing for the death penalty in extreme cases. The penalty provisions of the act are mandatory. The effect of this act on the traffic was felt immediately following its passage, and the cumulative effect has become tremendous now that traffickers are realizing the full impact of the law which denies probation, suspended sentences, or parole to these illegal sellers of narcotics. Under this law, 5-year sentences now are equivalent to 15-year sentences formerly, and 10-year sentences, provided for second and subsequent offenders, are equivalent to 30-year sentences when parole was available. Reports throughout the country show the remarkable deterrent effect of such a severe penalty law in the gradually decreasing numbers of recruits entering the narcotic traffic from the underworld.

Senator Daniel's committee concluded that "whenever and wherever the penalties are more severe and strictly enforced, the incidence of both drug addiction and narcotic offenses has decreased proportionately." Congressman Boggs' committee, having conducted a simultaneous investigation into the narcotic traffic, reported, "the precipitating factor in drug addiction is contact with the drug" and added, "because contact with a drug is the essential prerequisite to addiction, the elimination of this contagious pestilence from our society can be most effectively accomplished by striking at the illicit trafficker."

The factor other than availability of the drug which leads to addiction is association. The fact that addicts create addicts is axiomatic and means that removing one addict from society not only saves another person from becoming addicted; it saves a geometric progression of possible addicts. Testimony of experts before Senator Daniel's committee established the extreme need for protecting society against this contamination through compulsory commitment of addicts to an institution for long periods of time. Dr. Leonard Scheele as Surgeon General of the United States testified that any "treatment of drug addiction must take place in a drug-free environment," reemphasizing the statement made by Dr. Royal Copeland some years before as health commissioner of the city of New York that "without absolute control of the (addict) and his complete isolation from clandestine sources of supply, there is no hope."

Dr. Harris Isbell, Director, Addiction Research Center, Public Health Service Hospital, Lexington, Ky., stated, "addicts do not want to be normal—they want to be loaded." Again Dr. Isbell, Dr. Victor Vogel, and Dr. Kenneth Chapman, all of whom have treated thousands of addicts at the Public Health Service Hospital at Lexington, have written, "Addicts connive to get more (drugs) than their allotted amount so they can continue to obtain a euphoric effect. They may sell or give away part of the extra supply—to

persons not addicted. This creates new addicts who are potential customers for the contraband market."

Dr. A. M. MacLeod, director, John Howard Society of Montreal, who has treated addicts both in Canada and in England, stated that addiction has the contagious qualities of a social disease, adding that, "without exception every addict whom I had in treatment either attempted to give expression to or fought against a clearly recognized desire to involve nonaddicts. It was my opinion this activity indicated a perverse inner need of the addict to turn his self-destruction against those around him as well as against himself."

The Senate committee concluded, "We believe that initial treatment must take place in an institution, and that rehabilitation of a drug addict (does not) begin until he is off of narcotic drugs and has undergone extensive physical and psychiatric treatment within an institution," and "It should be noted these recommendations for treatment and rehabilitation are not intended as a substitute for criminal confinement and punishment of those addicts who are convicted of law violations. They should pay their debt to society the same as nonaddicts, and proper law enforcement and confinement in such instances will do much toward minimizing the narcotics traffic and addiction in the United States."

Dr. Elmer Hess, president of the American Medical Association, recently expressed the following view of the so-called Daniel-Boggs Act: "A narcotic addict lives a living death and those who contribute to it deserve the punishment we reserve for those who take human life. The death penalty is justly deserved by the craven creatures who make narcotic victims out of our teen-agers."

Thus there is general agreement among medical, enforcement, and legislative authorities that narcotic traffickers, addicts, and nonaddicts alike, must be removed from society for a long period of time as a deterrent, to bring about possible rehabilitation, and to prevent the contamination of others. Midway of the 20th century it appears that only the uninformed and publicity seekers would attack this problem otherwise. This point is made clear by Dr. James V. Lowry, Medical Director, United States Public Health Service Hospital, Lexington, Ky., who says, "We cannot forget what happens to that person (an addict)", and classifies him as being in a "state of disease."

Of the 34,729 addicts of record, the general classification of addicts accounts for 29 percent of the total or 9,870 addicts; the Negro classification of addicts accounts for 60 percent of the total or 20,835 addicts; the Puerto Rican classification of addicts accounts for 5 percent of the total or 1,857 addicts; the Mexican classification for addicts accounts for 4 percent of the total or 1,399 addicts; and the Asiatic classification of addicts accounts of 2 percent of the total or 768 addicts.

The records of the Bureau of Narcotics also show that approximately 60 percent of all addicts are between the ages of 21 and 30 while another 12 percent are under the age of 21 years. However, in this latter group, 85.1 percent are 18 years of age or older. The age group from 31 to 40 accounts for 17 percent of the total number of addicts, which is a 43 percent drop in the incidence from the 21- to 30-year group. Those addicts over 40 account for only 11 percent of the total.

The above statistics point up the fact that entry into narcotic addiction is made by individuals between the ages of 18 and 30, indicating the attack on the narcotic traffic must be toward discouraging and preventing recruits in the younger age groups from toying or playing with narcotics in the underworld. For narcotics may be obtained in this country only by those individuals who are associating with or are a part of the underworld. This fact is remarkably demonstrated by the fact that 93 percent of all addicts in the United States use heroin, a drug which is completely outlawed in this country, and which has been obtainable as such only from the illicit traffic for 33 years. Therefore, a heroin user is per se a law violator, and is actually supporting and contributing to the Sicilian-Mafia, French-Corsican or Red Chinese gangsters who supply the drug to this country.

Some of our States through citizens committees have taken action to eliminate the destructive drug traffic from their jurisdiction. The outstanding example of such a State is Ohio. The citizens and legislature, led by the then State Attorney General C. William O'Neill, now Governor of the State, enacted legislation providing minimum mandatory sentences of 20 to 40 years for convicted sellers of narcotics. The law became effective September 16, 1955. During the next 7 months, only 19 traffickers were convicted and sentenced under this law, but the deterrent effect of the law was such that the narcotic traffic dropped more than 80 percent. There had been 328 addicts reported in 1955. In 1956 there were only 94 and none of the latter was under 21 years of age, indicating the people of Ohio have found the answer to the rather extensive narcotic problem which existed in that State prior to the enactment of the 20-year minimum mandatory penalty law. Police in Cincinnati and Cleveland have reported that associated crimes also took a sharp drop, illustrating the close connection between the narcotic traffic and other types of crime.

Texas is a source of supply State in that heroin and marihuana are brought into this country from and through Mexico by way of Texas where the cities of San Antonio, Austin, Houston, Fort Worth, and Dallas have felt the full impact of the narcotic traffic in addition to being transit points supplying other parts of the United States. Addiction is now a felony in the State of Texas and there is a likelihood of high minimum mandatory penalties against narcotic traffickers being enacted. Governor Daniel has remarked that narcotic violators will receive no clemency in that State.

Another source of supply State, California, has a low penalty law for traffickers, and a 90-day to 1-year penalty for addition with the minimum rather than the maximum being invoked generally. The result is that traffickers, addicts and nonaddicts alike, are in and out of jail, and only minimal progress has been made by the State in eliminating the narcotic problem. A pilot project in Alameda County (Oakland) has offered some hope of reducing the traffic through working toward a form of permanent confinement for addicts. Release would be possible but only under long-term probation further restricted by the courts requiring periodic determination of relapse or nonrelapse. Upon relapse quick recommitment is provided without further procedure. This project has the support of the University of California medical authorities, who have assisted in the rehabilitation of addicts during long-term confinement in a county jail-farm type of minimal security institution whereby the addicts are assigned responsibilities within the institution along with other inmates after a brief period of convalescence following withdrawal of the drug.

In Chicago, Ill., where there is one of the greatest concentrations of narcotic traffic in this country, litle progress has been made in solving the addition problem. Sentences in Federal courts have averaged near the minimum permitted under the law. In Chicago, sellers of pure heroin in volume quantities supply the interstate traffic to Indianapolis, St. Louis, Kansas City, Dallas, Houston, and New Orleans. Sentences in State courts remain at even a lower level under laws which permit penalties ranging from 2 years to life. Sentences hinge on the minimum with numerous continuances, cheap bail, suspended sentences and probation adding to the favorable conditions for narcotic trafficking. There is a constant recruitment of young addicts in the city and recidivism has reached the highest point of any place in the country, ranging from 67 to 80 percent. Upward of 1,000 young people each year are coming into the section of the underworld ravaged by heroin. This situation has continued even though for the past several years three followup projects with liberal budgets have been in operation to provide help and supervision to addicts released from confinement. Senate hearings in Chicago showed that the Sicilian-Mafia element in the underworld has joined with distributors on the South Side to supply not only Chicago traffic but interstate traffic as well. Under the present climate in Chicago, even with thousands of arrests annually, it is not possible to keep either traffickers or addicts off the streets for a sufficient period of time to reduce the two addiction-spreading factors, availability and association. However, a narcotic commission and other authorities are presently considering remedial legislation. The situation calls for, and it is hoped the result will be, high minimum mandatory laws that will make it as unprofitable and as unpalatable for narcotic traffickers and addicts in the State of Illinois as it is under the minimum 20-year mandatory law in the State of Ohio.

In New York State the narcotic traffic is concentrated in New York City which is a source of supply for the entire United States. Through this port heroin is brought in from Europe, the Middle East, and even the Far East through the machinations of Sicilian-Mafia traffickers and French-Corsican gangsters operating in this country, Europe, Mexico, and Canada.

New York has reported 15,019 addicts during the past 4 years which is almost half the entire number reported in the United States. It is one of the few areas in which the number of addicts has showed little decrease. Although there are notable exceptions, in this area narcotic traffic and narcotic addiction generally are not classified as a serious type crime and minimum rather than maximum sentences are the vogue. It is here the expression "revolving door," as applied to the narcotic traffic, originated since narcotic violators are in and out of confinement so rapidly. During the Senate hearings in 1955 it was revealed that some authorities and other witnesses in a sense actually encourage the narcotic traffic by recommending some fancy treatment of a fine-feather variety for narcotic violators. This has led some top smuggler-dealers to claim they are merely supplying the demand for the drug, and the addicts expect to be gingerly handled and coddled.

New York surely demonstrates the havoc which can be brought about by not classifying narcotic traffickers and addicts in the most serious categories of law violators, and by not dealing with them in a manner commensurate with the gravity of the crime. In New Jersey, just across the Hudson, there is little addiction trouble, illustrating the vast difference the approach to the problem makes. Under New Jersey State law, any person who uses a narcotic drug for any purpose other than the treatment of sickness or injury as prescribed or administered by a person duly authorized by law to treat sick and injured human beings is a disorderly person. The law also provides that such a person, an addict, may be sentenced to a year in the county workhouse, penitentiary or jail.

A 20-year minimum mandatory penalty law for illegal sellers of narcotics would dry the traffic up in New York City, a city which reported 3,468 new addicts during the first 10 months of 1956. It would also be a

mortal blow to the heroin traffic throughout the United States.

Medical experts of the United States Public Health Service who have made a life study of narcotic addicts agree that compulsory commitment of addicts for sufficiently long periods of time to effect their rehabilitation, followed by a realistically supervised period of probation and swift recommitment upon relapse, offer the best hope of taking and keeping addicts off the streets of our cities, thereby preventing the contamination of others. They are in agreement that addiction is curable, and believe the most humane treatment of an addict is to free him from drugs quickly, then offer him all the therapeutic assistance available to prepare him to stay free of drugs when the compulsory commitment is ended.

Of all the difficulties which face the addict upon his release from confinement, the greatest is staying clear of the underworld, finding his place in legitimate society. As one authority has emphasized, the average citizen has no contact with either drug addicts or their sources of supply, and normal human beings living within the law are not likely to become addicts. For this reason, among others, public opinion scorns addicts, and looks with horror and distrust upon a former addict.

Prospective employers are reluctant to hire former addicts, rating them as unreliable and undependable workers. Their reluctance is usually justified. During 1956 the sociology department of New York University, in studying a group of addicts, found that two-thirds of them had never held jobs for longer than 6 months even though the average age was 30 years.

Addicts are changeable, immature persons who require careful guidance to attain emotional maturity. The difficulty of providing this sort of guidance to addicts is quite obvious. A more realistic approach is to prevent the acquiring of addiction, to stop the evil at its source. It is certain the evil cannot be stopped with sympathy and remonstrating with either the traffickers or the depraved addict victims who spread addiction and contaminate all with whom they come in contact. Steps taken to meet the menace of drugs must be aimed to deter, must be equal in gravity with the known consequences of the traffic.

Reports of mild-mannered addicts are misleading. Recently in the Midwest 3 hoodlums, 2 of whom were addicts each with an ounce of heroin, robbed, bound, gagged, beat, and kidnapped a family of three. A few years ago in the same area a district supervisor of the Bureau of Narcotics was shot down by an addict who had just finished smoking a pipe of opium. A few months ago an addict hoodlum from Dallas was arrested in Little Rock, Ark., and made a play for the officer's weapon. This same hoodlum was wanted on a charge of gasoline-bomb throwing in Dallas.

To ferret out the traffickers in every part of the United States, the Bureau of Narcotics, under the authority of the 1956 Federal legislation, is augmenting the work of its 250 agents, who concentrate on wholesalers, interstate and international traffickers, by conducting a National Narcotic Training School for local and State officers specializing in narcotic enforcement. The school is held in Washington, D. C. The officers trained at the school are providing a strong force to cope with local and State narcotic traffic and addiction. The results of the school have been monumental in the coordinated drive of Federal, State, and local enforcement agencies to beat down the narcotic traffic in the United States.

There is strong evidence in the United States today that the narcotic traffic can be driven from this country by the no-compromise position taken by the Congress in affording us the best tools to date with which to combat the traffic. The high minimum mandatory penalty with no probation, suspension of sentence, or parole is by far the most potent of these weapons.

The position of the Federal enforcement arm is gradually being strengthened by actions in the States to outlaw addiction, to take addicts out of society for long periods of time for complete rehabilitation to prevent contamination, and to set up high minimum mandatory penalties as circumstances indicate necessary.

With the development of this firm wedge against the narcotic traffic, and, with the support afforded through all the years by the medical profession and other registrants in this country to prevent diversions of medicinal narcotics, the Bureau of Narcotics in cooperation with local and State agencies will drive out the traffic, which even now is losing its appeal and profit for those calloused, unmoral scavengers who heretofore have profited through the sale of illegal narcotics, through the destruction of the individual.

Appellate Jurisdiction of the Supreme Court

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, May 8, 1958

Mr. THURMOND. Mr. President, in the public discussion concerning the Jenner bill to limit the appellate jurisdiction of the Supreme Court, the principal point made by the opponents of this bill is the argument that this bill somehow would have the effect of injuring the Court.

The fallacy of this argument is neatly exposed in an editorial entitled "Cave Cant," which appears in the National Review for May 3, 1958.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAVE CANT

It is heartening news that the Judiciary Committee has voted favorably on three of the numerous proposals that lie before it (a) to clarify the law, (b) to affirm the 10th amendment, and (c) otherwise to protect the people against perverse textual interpretations, and preemption of authority, by the Supreme Court of the United States. Specifically, the Judiciary Committee has voted by a 9 to 6 majority in favor of legislation that would (a) remove from the Supreme Court jurisdiction over standards set down by the individual States governing qualification for the practice of law (i. e., undo Konigsberg), and (b) assert the right of Congress exclusively to determine whether a question asked of a witness is relevant to the congressional purpose that committee was set up to serve (i. e., undo Watkins).

Several additional proposals that go into making up the Butler bill and the Jenner bill will be voted on next week. It appears clear, at this moment, that, at long last, the entire Senate will be given the opportunity to take up, some time during this session, the problem of how to cope with the Warren Court. A national debate is sure to follow—and the liberals have got themselves a tuning fork.

Last week, participating in a symposium on the Court at Notre Dame University, David F. Maxwell of Philadelphia, immediate past president of the American Bar Association, urging opposition to the Jenner and Butler bills, recalled that the Nation's lawyers rose "almost to a man" to fight the 1937 Court-packing plan. "Now that the pendulum has swung in the other direction, it is equally essential that they unite in defending the Court as an institution."

That will be, we predict, the line most often played in the ensuing weeks: The fight against the Jenner and Butler proposals is a fight for principle. We urge our readers to bear in mind that the principle at stake is constitutional government. Mr. Roosevelt, in lashing out at a recalcitrant Court, wanted men who would constitutionalize New Deal ideology. Mr. BUTLER and Mr. JENNER want to do whatever is necessary to prevent the Court from (a) misinterpreting Congress' will, and (b) arrogating authority unconstitutionally. In some cases it is merely necessary to make plain what Congress intends, to clarify the law. Thus, when the Supreme Court rules that the Smith Act in effect intended to set aside State antisubversion laws, Congress must, taking stock of the decision, pass a law saying such is not Congress' intention, and that is that. In other cases, Congress, protecting what the venerable Prof. Edward Corwin describes as its "primal right of investigation," must, either by declaratory legislation, or by legislation limiting the jurisdiction of the Supreme Court, affirm its plenary investigative rights.

So beware the cant: Beware the oversimplification that asks us, in the name of judicial integrity, to "protect" the Court from Congress. Congress, in Burke's classic phrase, is merely moving in the name of the Constitution to correct a peccant part of the Constitution. It can do no other.

American Camp Week

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. BRAY. Mr. Speaker, it is a great pleasure for me to join with the senior Senator from Indiana, the Honorable HOMER E. CAPEHART, in calling attention to the fact that from May 1 through today, May 8, American Camp Week was celebrated. I know that those of you who remember with nostalgia your own camping experiences will be delighted to learn that the organized camping movement now has more vitality than ever.

The American Camping Association, which sponsors Camp Week and which has its headquarters near Martinsville, Ind., which is in my congressional district, reports that more than 5 million boys and girls will attend organized camps this year.

Through the work of the association important strides have been made in recent years in developing a strict standards program for camps.

It is also a pleasure to report that, in helping to launch American Camp Week, Secretary of the Interior Fred A. Seaton stressed the fact that opportunities are

now greater than ever for American children, regardless of economic or social background, to enjoy the experience of organized camping. In a meeting on April 30 with Mr. T. R. Alexander, president of the American Camping Association, the Secretary made an excellent statement which, under unanimous consent, I insert in the RECORD.

STATEMENT BY SECRETARY OF THE INTERIOR FRED A. SEATON TO OPEN AMERICAN CAMP WEEK

It is a pleasure to participate in the opening of American Camp Week, sponsored by the American Camping Association. I am happy to learn that nearly 5 million children, of varied economic and social backgrounds, are expected to attend the 13,000 camps throughout the country this summer.

Through the thousands of camps sponsored by such agencies as the Boy Scouts, Girl Scouts, Camp Fire Girls, 4-H Clubs, YMCA, YWCA, churches, schools, and other organizations, public and private, opportunities are greater than ever for American children to participate in organized camping.

In observing American Camp Week I would like to emphasize the extraordinary educational and wholesome recreational values provided by our National Park System. In virtually all park areas camping facilities are being expanded and new sites are being developed by the National Park Service through the Mission 66 program to accommodate the ever-increasing number of campers.

Camping serves to strengthen the character and develop the fitness of our children, our country's most important resource for the future.

I urge all parents to explore camping opportunities to avail their children of the benefits of this pleasant and significant experience.

Postal Employees Adopt the "You Auto" Slogan

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mrs. SULLIVAN. Mr. Speaker, we are all familiar with the campaign now underway by the automobile manufacturers and dealers to persuade people to buy automobiles, using the "You auto buy now" slogan.

Following is a telegram which I have received from Mr. Cornelius J. Venneman, secretary-treasurer of the Allied Postal Employees of St. Louis and vicinity, who has a different "auto suggestion":

You auto get us a long overdue pay raise. Once again we urgently request that you exert all the power of your elected high office by leaving the Senate-House conferees know that a pay increase is long overdue. You auto do this so we can purchase the necessities of life and later an auto.

Thanking you for past consideration of postal legislation.

CORNELIUS J. VENNEMAN,
Secretary-Treasurer, Allied Postal Workers of St. Louis and Vicinity.

Mr. Speaker, I think Mr. Venneman is right. We "auto" speed up the pay bill. I urge the conferees to act as promptly as possible.

Reciprocity and Customs Simplification

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, most of the items the United States imports from Brazil are on the free list. Hence, the extension of the Trade Agreements Act is not essential in any way to the stabilization of the Brazilian economy.

The trade agreements program has been presented to the Congress as a reciprocal program. We have taken this same approach in connection with our legislation to simplify customs procedures. The lack of true reciprocity is clearly indicated by a recent order from the customs revenue department of the Brazilian Government. This is circular No. 17 of February 20, 1958, which instructs all customs inspectors to assess the ad valorem import tariffs on the basis of the invoiced list price or, if warranted, on the internal wholesale price of the respective merchandise. The order specifically states that quantity or cash discounts are not to be taken into consideration for tariff assessment purposes.

According to a recent dispatch from the American Embassy in Rio de Janeiro, there have been considerable protests by local trade associations against Brazilian customs' policy of computing the tariffs on the basis of list prices rather than on the net prices. The dispatch indicates that Brazilian importers are now instructing their suppliers abroad to show net prices only on commercial invoices. Recently importers have been encountering difficulties with the customs authorities with respect to value declarations on imported merchandise under the new tariff.

Mr. Speaker, under unanimous consent, I include at this point the translation of circular No. 17 of the Brazilian Government Director of Customs Revenue dated February 20, 1958:

The Director of Customs Revenue, acting under orden of the General Director who approved decision passed by this office on Dossier No. 17726/58 informs the Customs Inspectors and other Customs officials of the country for their information and guidance, that for purposes of assessment of ad valorem import tariffs referred to in law No. 3244 of August 14, 1957, the value of the merchandise is that which prevails on the internal wholesale market in the exporting country without any deductions except those referring to reduction of taxes granted to merchandise intended for export.

In consequence thereof and in view of said law, the collection of the ad valorem tariff is not computed on the invoice price of the merchandise but on its normal value or quotation in the foreign market (country of origin). For this reason any special discounts given for quantity purchases as cash or advance payments will not be taken into consideration.

It is recommended to Customs Inspectors and other officials that where there is a doubt concerning the real value of the merchandise intended for clearance, the following norms should be followed:

(a) If the Customs Inspector has sufficient reason to contest the importer's value declaration, he will do so by means of signed statement in accordance with article 6, paragraph 1 of law No. 3244–57;

(b) If the official does not have sufficient evidence to prove the real value but can show fundamentally that the declared value is prejudicial to the National Revenue, he will apply the norms of article 7 of said law, calculating the tax on basis of the internal market value;

(c) In any case, there shall not be considered as infringement of exchange regulations any difference of more or less 10 percent of the invoiced price (art. 60, par. 2); however, the difference in tax shall be collected and the exemption of penalties for the difference not exceeding 5 percent (art. 83, sole paragraph) shall be observed.

Fair Trade

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement before the House Committee on Interstate and Foreign Commerce on May 7, 1958, by George J. Burger, vice president, National Federation of Independent Business, on H. R. 10527:

FAIR TRADE

I am George Burger, vice president, National Federation of Independent Business, 740 Washington Building, Washington, D. C.

We are the largest business organization in the Nation. Our membership is exclusively among small, independent business, and professional people. These people who are your independent enterprise constituents, and they alone, set our stand on bills and issues by direct signed votes which they send to you, in our mandate polls. In that sense, when I speak here, I speak only with their collective voice, as though they were here before you to speak for themselves.

First, let me make one point clear: We haven't been able to poll our members on the particular bill before your committee, H. R. 10527. For that reason the federation cannot take a stand on that bill. But I can tell you definitely that it is the sense of a majority of our members, founded in their repeated votes, that Congress should write and maintain the strongest possible fair-trade legislation. For that reason I want to compliment you on the action you are taking to study this proposal.

The need for this action is plain. As far as we are concerned, the fair trade law seeks only one thing: the protection of the small-business man against unfair price competition that in and of itself promotes monopoly. There are other benefits, but I do not intend to discuss them here.

Now the present fair trade law, the McGuire Act, is on the ropes. It is groggy from repeated pastings in the State courts. It's head is spinning from the recent court decision which clears the way for mail-order cut-raters to sell freely into fair traded areas, pulling the rug out from under antimonopoly protection.

Now, why do we want the strongest possible fair trade law? Our reasoning is simply this:

I think we are agreed that our American business system, which has helped give us one of the highest standards of living ever

known in the world, is rooted in a policy of free and fair opportunities for all, to make it possible for and to encourage more and more people to strike out on their own, making their contributions to progress, and to compete for success on the basis of their efficiency. I think we are agreed, too, that this policy is one of the underpinnings of our unrivaled social and political liberties.

Now, if our economy were working freely the way it should, if all suppliers were voluntarily following equitable pricing policies to both large and small customers, providing fair opportunities for all, then there'd be no need for fair trade laws. But you know from your own observation, from the studies by House and Senate Small Business Committees, and from reports by the Federal antitrust agencies, that small-business men are increasingly being whiplashed by merciless cut-price competition founded largely on unfair price preferences granted to their giant competitors. This puts independents in the position of fighters sent into the ring with both hands tied behind their backs.

Such being the case, these small-business men have come to Government as the guarantor of their freedoms, as the agency with the power and duty to insure the presence of right order in our society, and asked it to use the antitrust laws which Congress has enacted to restore and preserve freedom and fairness in the marketplace. But the record shows that while they asked for what to them is the bread of life in an economic sense, all they have gotten, largely, is a stone.

Let me tell you a story: Shortly after the courts killed the Miller-Tydings fair trade act, and while price wars were bleeding many independents to death, I went to Federal Trade Commission with a request for action. I asked them to get busy with section 5 of the Federal Trade Commission Act which prohibits sales below the seller's cost where the purpose or effect is to create monopoly, and with a broad-scale program on section 2 (a) of the Robinson-Patman Act, which prohibits unfair price discriminations between customers of a supplier. I got absolutely nowhere on this, despite the fact it might have been of much help to suffering independents.

Now please don't think that I'm trying to brand these antitrust people as "dead-end kids." Nothing can be further from the truth. They have made good progress, in the past few years, with antitrust enforcement. There is increasing promise in their work.

This, then, being the situation: (1) That our national policy is one of fair and free opportunities for all; (2) but that the pricing policies of some giant suppliers are running contrary to this policy, with damaging effects on independents; (3) and that Government has failed in its duty to remedy this situation through the antitrust laws. Then I say that small businessmen have a claim on you gentlemen for action toward the strongest possible fair trade protection. Failure to secure this for them amounts, under the circumstances, to denying them the right to fair and free opportunity.

But there are pitfalls you must be careful of. For instance, there's been much talk—and sound talk I think—about a need for industry to reduce prices to restore some momentum to business and employment. Some people may try to convince you that a strong fair trade law is "high price" legislation. But this simply isn't so. Manufacturers who must remain in competition with one another have it clearly within their power to reduce their costs to their customers, and in this way they can establish fair traded prices that are at once reasonable for independents and promotive of greater business activity.

One final thought: we have all been reading the warnings by the Gaither, the Rockefeller, and other groups that Soviet Russian armed might threatens our security and our liberties. You are taking action to close the door on these threats by appropriating the funds needed to give the arms and equipment needed to our military, to cope with this threat.

But just a few weeks ago, my daughter-in-law out in California met a group of Hungarian escapees, Benedictine priest-educators, who have set up one of those tough schools you've been reading about, out at Portola Valley. During conversation she mentioned that I am in the small business movement. And here is what they told her, these men who had been there, who saw the Red Communist terror develop in their nation, and who lived for years under a system which a midnight ring on the doorbell meant years in a slave labor camp:

"Dear lady, that is most important work. We must have many, healthy small businesses. For if they are bankrupted, the middle class goes with them, and the few take over. Then the way is open for the Reds to walk in without firing a shot."

So I say that unless you enact the strongest possible fair trade law to secure for small business a last ditch defense against unbridled monopoly competition that can surely bankrupt them, by appropriating funds for greater military strength you are only bolting the front door against communism, while leaving the back door wide open.

Thank you.

A New Geriatric Research Program

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. MULTER. Mr. Speaker, on April 30 our Government reached a new high in public service with the announcement of an award for research on the medical and biological aspects of the aging. I am particularly proud that the grant was made to the Albert Einstein College of Medicine of Yeshiva University because of my long and pleasant association with both the college and the university.

The new grant to the College of Medicine was recommended by the National Advisory Heart, Mental Health, and Arthritis and Metabolic Diseases Councils, and will be supported by funds from the National Heart Institute, the National Institute of Mental Health, and the National Institue of Arthritis and Metabolic Diseases.

The grant, covering a 5-year period, provides for the employment of 12 senior investigators in such fields as biophysics, metabolism, physiology, endocrinology, neurology, radio-biology, and psychophysiology, and 12 other personnel. Plans also call for the conversion and equipment for laboratory use of 4,500 square feet of space in Van Etten Hospital made available by the city of New York. Renovation of the laboratory area will begin in a few weeks; the program is scheduled to get underway in September.

Although the Albert Einstein College of Medicine now has a research program on aging, the new grant will not duplicate the existing work; but will be a distinct program in itself. It will be supervised by the college's committee on gerontology, whose members are: Dr. Irving London, chairman, professor and chairman of the department of medicine; Dr. Arthur Abramson, professor and chairman of the department of rehabilitation medicine; Dr. Howard A. Eder, associate professor of medicine and radiology; Dr. Henry B. Makover, professor of preventive medicine; and Dr. Abraham White, associate dean and professor and chairman of the department of biochemistry.

Speakers at today's ceremony, in addition to Dr. Burney, were Dr. Samuel Belkin, president of Yeshiva University, Dr. London, Dr. Morris A. Jacobs, commissioner of hospitals of the city of New York; and Dr. Hollis S. Ingraham, deputy commissioner of health of the State of New York. Dr. Marcus D. Kogel, dean of the College of Medicine, presided.

The grant to the Albert Einstein College of Medicine is the second in the Public Health Service's new program to encourage comprehensive efforts in the field of aging. The program is under the Center for Aging Research, established in October 1956 at the National Institutes of Health, Bethesda, Md., under the direction of Dr. G. Halsey Hunt. The first grant was awarded to Duke University, Durham, N. C.

The new program of research on aging at the Albert Einstein Medical College is the first of its kind to be established in a large urban center. It represents a unique collaborative venture of a privately supported medical school, the Federal Government through the United States Public Health Service, the Municipal Government through its Department of Hospitals, and the State government through its public home and infirm care program. The project is of particular importance to New York because, according to Dr. Kogel, there are now a million people over 60 years of age in the city, which has a voting population of two and a half million.

I am pleased to direct the attention of our colleagues to the remarks made on that occasion by our distinguished Surgeon General, Dr. Leroy E. Burney, as follows:

A PROBLEM OF SOCIETY: COMPREHENSIVE RESEARCH IN AGING

(Address of L. E. Burney, M. D., Surgeon General, Public Health Service, U. S. Department of Health, Education, and Welfare, at meeting inaugurating new geriatrics research program at the Albert Einstein College of Medicine of Yeshiva University, Wednesday, April 30, 1958)

First, let me express my pleasure in being with you on this occasion. It marks an event that may be as historic as the foundation of Yeshiva University and of Albert Einstein College of Medicine. For the need to know more about aging has never been more apparent than today. And we meet for the practical purpose of launching a new, concerted research attack on the problems of aging.

UNIVERSITY OF MICHIGAN LIBRARIES

It is a distinct satisfaction for me to announce financial support, by the Public Health Service, of this broad new program through a research grant to the Albert Einstein College of Medicine. The plan is the result of many deliberations: First on the part of your committee on gerontology and other members of the faculty; then between representatives of the college and the National Institutes of Health; and finally, by three of our National Advisory Councils in their first meetings of this year.

Each of the three Councils—Heart, Mental Health, and Arthritis and Metabolic Diseases—gave its approval. I know that the distinguished citizens who serve on these Councils were gratified by their study of your plan. Otherwise they would not have recommended to me the award of this type of research grant which, in itself, represents a growing awareness that the interrelated, complex problems of aging must be examined in their entirety and in dynamic relation to the social environment in which they occur. Many leaders in medical research believe that a comprehensive approach to the study of aging is an essential supplement to research on the particular diseases which chiefly affect older people.

The Councils have recommended, and I have approved, a grant of slightly more than $300,000 for the first full year, beginning on September 1, 1958. The Councils have also recommended that continuing support of this project be assured at essentially the same level for a period of at least 5 years. An additional grant of somewhat over $100,000 is being made, effective immediately, to provide for the conversion of space in the Nathan Van Etten Hospital into research laboratories for this project.

In this connection, I am particularly happy that the city of New York, through its department of hospitals, is participating in this joint research program. Not only is it making space available for necessary laboratories, but it has also promised to make available, and to support, 90 ward beds in the Nathan Van Etten Hospital which will be used for the clinical aspects of this research program in aging.

The broad support which underwrites this new research program is, in fact, a point of importance. The private resources of this university, the public resources of your city, your State, and of the Federal Government are here combined to give concrete recognition of the serious nature and wide scope of the problems you propose to study.

In a word, society supports your plan. I might add, it's high time that our society should support additional comprehensive research on aging.

The old patterns which once gave older people respected status and participation in family and community life have been largely disrupted and discarded in industrial societies of the 20th century. In the United States especially, the old values, the old ties that bind, have yielded to the impact of industrial, economic, and social change. Only in a few individual families that remain stable and in a few cultural groups within our midst, do we find the three-generation family living under the same roof or in the same neighborhood. Yet at the turn of the century, it was the common way of life.

The high speed of technological change and the extraordinary mobility of our population are the two most potent forces creating stresses that affect all ages, but that are particularly disturbing to the very young and the very old. Even a casual view of our deteriorating central cities, our waning small towns, and our swollen suburbs shows that our society is undergoing a painful birth of new patterns of family and community life. What they will be like we do not know. That we have taken so little thought and done so little to assist in this birth is a social lapse which will cost us dealy in the years to come.

For the transformation already made has not occurred without human cost. Older persons in particular have had to make difficult adjustments to the new ways. Happily, many of them have been able to do so. Significant numbers—increasing numbers—have been grievously hurt by circumstances which, although unintentional, are part and parcel of our neglect of the social impact of the tremendous changes we are undergoing.

The new patterns of family and community life which our society is producing must fulfill two seemingly contradictory obligations. They must permit full exploration of the mysteries of nature and the full development of our material resources for human welfare. At the same time, they must foster and bring to a new and richer flowering the intellectual powers of our people, and our love for our fellow men—in the family, the community, and the world at large. For our material exploits, our vaulting ambitions to conquer time and space are utterly vain if they do not help us to live in concord with all sorts and conditions of men—the old and the young; the wise and the foolish. And we are in peril if we allow our material exploits to cut us off from the thousands of years of human experience and intelligence, and from our very own kith and kin.

Perhaps this is what many of our older people are trying to tell us in their rejection of some of the new ways of life. This is what we are beginning to realize dimly as we thrash about to find better ways of educating our children, of dealing with behavior that knows neither love nor law, and of caring for the aged.

It cannot be expected that solutions of the problems affecting one segment of society, one generation, will produce the ideal patterns of living. But society will have made a more constructive move in this direction when it increasingly takes a comprehensive approach to the problems of aging, such as this university has planned in its research program.

It is not possible to acquire full comprehension of the physiological processes of aging without simultaneous efforts to comprehend the psychological processes. No more is it possible to achieve full understanding of the older person without gaining at the same time new perceptions of the other age groups around him. Adjustments and solutions of the social and economic problems in the later years are being sought by both public and private agencies. But we don't yet know the full dimensions of the total problem, let alone what its impact may be in the future.

There is, I am happy to say, a considerable stirring among National, State, and local organizations toward a joining of forces for more action in the field of aging. This month, in fact, a joint council to improve the health care of the aged was established by the American Medical Association, the American Hospital Association, the American Nursing Home Association, and the American Dental Association. The National Committee on Aging of the National Social Welfare Assembly, one of the pioneers for better care of older people, has recently extended its excellent consultation services and social studies with financial support from the Ford Foundation.

The Federal Council on Aging, formed 2 years ago with representation of all agencies having interests or functions related to the problem, has improved the coordination of the Government's activities for older citizens. Thirty-one States have councils or committees on aging, including the Desmond committee of the New York State Legislature, long active in the field.

At the Federal and State levels, we have made some important advances in such broad areas as income maintenance, employment, and retirement. Many local organizations have established pace-setting programs in such fields as housing, health maintenance, recreation, and education for older people.

The health and medical aspects of aging, however, remain the core of the problem. And we are far, very far, from first base in dealing with the personal, family, and community burdens imposed by ill health in older people. The so-called chronic diseases and mental illness stand out as their major health problems. But we know a good deal more about the diseases than we do about the people who acquire them. Meantime, the United States population acquires a net gain of some 350,000 persons in the age groups 65 years and over every year.

The urgent need now is for increased research effort in the medical and biological sciences, not only to clarify further our understanding of aging, but also to discover scientific means for leveling upwards the health status of all age groups and both sexes. That is why the Public Health Service is so much interested in the research plan of this college and of other institutions concerned with comprehensive studies of aging.

In general, the health and medical aspects of old age have received less intensive study than the economic and social aspects. Granted that all aspects are interdependent; granted that the biological status and disease problems of the older person cannot be untwined from his social and physical environment. Nevertheless, society cannot adopt sound policies and develop practical programs for coping with the social and economic disasters of old age without much more scientific information than we now possess concerning the medical and biological aspects.

Will the "four generation" family become a widespread problem, as our young marry early and their parents and grandparents live into the later years? Since women are living longer than men, will industries of the future have to accommodate larger numbers of women workers? Will male breadwinners be able to build up sufficient insurance benefits to sustain their widows over very long periods? What sort of housing is really safe and acceptable for very old and frail persons—sick or well? These are social and economic questions. Medicine and biology must give us the basic answers.

Clearly, the medical and biological answers cannot be obtained exclusively in the experimental laboratory or in the study of clinical cases. The individual and the entire environment in which he is conceived and born, grown, matures, and ages must be examined. And this must be done in a research environment that focuses upon the problems the full range of pertinent scientific disciplines.

The Public Health Service has been giving more and more thought to such comprehensive research, and to the ways in which we might help augment it. We have long conducted medical and public health research on problems of fundamental importance to the Nation. For the past 13 years, we have been privileged to administer a broad program of increasing scope in support of medical and biological research, through our National Institutes of Health. Each of the seven Institutes conducts research and administers an aid-to-research program, largely in the form of grants to individual scientists.

Much of our own research and many of the projects we are supporting are concerned with one or more aspects of aging. It may interest you to know, for example, that we are currently supporting about 120 research projects specifically concerned with

gerontology, at a current annual cost of over $2 million. Many other research grants support studies indirectly related to aging.

To encourage new research activity, especially comprehensive research, and to coordinate our own efforts, we established a Center for Aging Research at the National Institutes of Health in 1956. At the same time we began to examine our grant-awarding function to see how it could be adapted to meet the need for broadly conceived projects involving many disciplines and several departments of the institutions sponsoring such experiments. A satisfactory procedure has been developed and approved by the Congress, so that two or more of our Institutes may now jointly support activities related to their specific missions.

This procedure was successfully applied for the first time 1 year ago by the National Heart Institute and the National Institute of Mental Health in jointly supporting a regional Center for the Study of Aging at Duke University. We were highly gratified, therefore, when the National Institute of Arthritis and Metabolic Diseases and its advisory council joined with the other two Institutes in supporting a similar plan for Albert Einstein College of Medicine.

The differences in populations and environments under study give unique importance to each of these trail-blazing programs. At Duke University, the problems of aging are being explored in a large and varied geographic area, and in a predominantly rural and small-town population of relative stability, whose members pursue a leisurely pattern of living. At Albert Einstein College, the same problems will be explored in a small, highly industrialized area, and in a population of very high density and mobility, whose members—some say—maintain the fastest pace anywhere in the world today.

Society cannot fail to learn much of the greatest importance from these comprehensive studies of aging by outstanding scientists with excellent laboratory, clinical, and community facilities—in strikingly different settings. I am confident, too, that all our Advisory Councils and Institutes, as well as many other research groups throughout the country, will follow these programs with intense interest. What you accomplish here in New York City and your colleagues accomplish in North Carolina will undoubtedly influence the direction of research on aging in other parts of the country.

The Albert Einstein College of Medicine, under the aegis of your fine university, has every advantage that insures success in this great adventure. The competence and high motivation of your staff are known to all of us. The adjacent hospital facilities and the active support of your community provide an admirable setting in which to launch your research program.

But more than these tangible advantages, I like to think that the spirit of Albert Einstein will give potent inspiration to your efforts. For it was he, above all other scientists of our times, who taught us that truth is not to be found in the obvious, but must be sought by sweeping away familiar axioms and substituting others which may seem absurd, until we see that they are new truths. If we are to solve the problems of aging in our society—no more difficult, no more certain of solution than the problems of time and space—we must do so in the spirit of the man whose name this college bears.

Again, let me express my pleasure that the Public Health Service is to have a share in your exploration of this vitally important sector of the great unknown. As you embark upon your voyage, our best wishes go with you—as does the anxious hope of millions of aging men and women.

Holding Back the Handout Boys

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. ABBITT. Mr. Speaker, last Thursday, the House of Representatives passed an amendment to the Unemployment Compensation Act. For some reason, many of the news releases that went over the wires and appeared in the papers failed, in my opinion, to properly explain the situation as well as the legislation. The passage of the legislation was hailed as a victory for the present administration. Actually the measure as passed was not the administration's proposal nor was it the committee's proposal. The bill as passed could properly be termed a States rights proposal. It would provide some help on the part of the Federal Government to the States but purely on a voluntary basis.

The best analysis of the situation that I have seen in the press, on television, or heard over the radio appeared in an editorial in the Richmond News Leader on Wednesday, May 7. It is a concise statement of the true situation.

In the hopes that it will bring enlightment to a confused situation, I desire to include it with my remarks so that the people who subscribe to the RECORD may know the true facts. The editorial is as follows:

HOLDING BACK THE HANDOUT BOYS

The role of the conservative in today's society seldom has been demonstrated more effectively than in the current debates over Federal supplements to unemployment compensation payments. It now seems likely that because of this conservative force, and only because of it, the people will be spared the heavy expense and the grave consequences of proposals that 2 months ago appeared to have much support behind them.

Under present law, States individually fix a tax upon employers, the proceeds of which go into unemployment compensation trust funds that are State-administered. Out of these funds, benefits are paid according to State law. From their inception 20 years ago, these programs have been regarded as insurance programs, maintained on an actuarial basis, with benefits predicated upon an unemployed person's earnings.

The proposals brought forth by the Eisenhower administration would have made a shambles of the principle of State responsibility; under Mr. Eisenhower's plan, the States would have been compelled to accept Federal supplements, to be paid to workers whose regular benefits were exhausted. The proposals advanced by liberal Democrats would have wrecked the whole concept of an insurance program; their bill called for an outright dole to the unemployed.

For a few panicky days, it appeared probable that the House Ways and Means Committee would adopt every misguided feature of both proposals, and add a few of its own. Then congressional conservatives, led by Virginia's HOWARD W. SMITH, began to mobilize some counter arguments; they discussed, debated, delayed, brought up amendments and substitute bills. And when the House adopted a bill last week, it adopted a measure sponsored chiefly by Virginia's own BURR HARRISON. His bill does not compel any State to take anything from the Federal treasury; it merely authorizes the States to borrow from the Federal Government sums sufficient to supplement their present benefit schedules. Behind conservative leadership, the House overwhelmingly defeated all schemes for a Federal dole.

On the Senate side, Mr. BYRD has not even scheduled hearings on the House bill until May 13. He has announced that his Finance Committee intends to inquire into the adequacy of existing reserves in State hands. At the last report, State unemployment compensation funds had some $8 billion already available; and Mr. Byrd reasonably wants to know why a substantial part of this backlog could not be utilized first. He also commented upon the fact that many States are not now taxing employers as much as their own laws permit employers to be taxed. He wonders why not.

This week brought announcements that Mr. Eisenhower is willing to settle for the House version. So, too, is the Majority Leader, Senator LYNDON JOHNSON. A score of Senate liberals, still wedded to the idea of a handout, now face almost certain defeat. It is not often that conservatives win a battle as decisively as they have won this significant little clash; their lot ordinarily is to fight and fall back. This time they carried the field, and it was a remarkably gratifying sight.

Tobacco

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. DORN of South Carolina. Mr. Speaker, Eric Johnston, Charlie Taft and company do not quote from the record. They claim that the present administration of the Reciprocal Trade Act helps the tobacco farmer. The reciprocal trade program, as administered, is sacrificing the American tobacco farmer in favor of the foreign tobacco grower.

Now is the time for this Congress to adopt a trade bill similar to mine or the gentleman from Pennsylvania [Mr. SIMPSON]. We could then export more tobacco through bilateral trade agreements. Our tobacco farmer should be consulted. He should not be placed in competition with low-wage foreign producers of tobacco as the State Department is presently doing.

The following report is from the Department of Agriculture:

FOREIGN MARKETS FOR UNITED STATES TOBACCO

The United States exports unmanufactured tobacco to about 100 countries and territories, but in recent years about 75 percent has gone to West Europe. Approximately 45 percent of United States exports are taken by the United Kingdom and West Germany.

WEST EUROPE

Since the war, there has been a loss of about 60 million pounds annually of United States tobacco exports to the United Kingdom and France. This has been more than offset by gains of 75 to 80 million pounds in exports to West Germany, Netherlands, Belgium, Switzerland, Ireland, Denmark,

UNIVERSITY OF MICHIGAN LIBRARIES

Austria, Spain, Italy and Finland. However, the use of United States tobacco remains at the 1950–51 levels, while imports from other areas have expanded by 110 million pounds, or 30 percent.

In 1956, the level of factory use of United States leaf was about the same as in 1950 (360 million pounds) despite an over-all increase of nearly 200 million pounds in the use of foreign tobaccos during this period. This has been met by increased production in the area and greater imports from non-United States sources. The United States share declined from 37 percent in 1950 to 30 percent in 1956.

The drive toward self-sufficiency has been augmented by production incentives, protective tariffs and other measures. Increased consumption of non-United States imported leaf has been encouraged by expanding bilateral trade arrangements, purchase agreements and colonial preferences.

Compulsory Unionism Versus Compulsory Open Shop

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 7, 1958

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following pungent remarks of Finley Peter Dunne's Mr. Dooley on right to work, which the Washington (D. C.) Trades Unionist recently published as an editorial. Although Mr. Dooley spoke at the turn of the century, the relevancy of what he had to say endures. The truth of his little dissertation is just as apt as it was then, but his wit these days is rare.

The editorial follows:

Right to work, voluntary unionism, open-shop advocates (that's what these proposals really are) proclaim their concern for every worker—or his right to a better way of life to freedom of choice.

No better explanation of the open shop and what it means to the man or woman who works for wages is to be found than the famous item by Finley Peter Dunne in which he tells what Mr. Dooley thought about it. Dunne's famous character, whose views were published in a Chicago paper 50 years ago or so, had this to say:

"What's all this talk that's in the papers about the open shop?" asked Mr. Hennessey.

"Why, don't yer know?" said Mr. Dooley. "Really, I'm surprised at yer ignorance, Hinnissey. What is th' open shop? Sure 'tis a shop where they kape th' door open t' accommodate th' constant shtream of min comin' in t' take jobs cheaper thin th' min what has th' jobs.

" 'Tis like this, Hinnissey. Suppose wan av these freeborn Amerycan citizens is wurkin' in an open shop fer th' princely wage of wan large iron dollar a day of tin hours. Along comes anither freeborn son-of-a-gun, and he sez t' th' boss, 'I think I could handle th' job for 90 cints.' 'Sure,' sez the boss, an' the wan dollar man gets th' merry, jingling can, an' goes out into th' crool wurrld t' exercise his inalienable roights as a freeborn Amerycan citizen an' scab on some other poor divil.

"An' so it goes on, Hinnissey. An' who gets the bennyfit? Thrue, it saves th' boss money, but he don't care no more fer money than he does for his roight eye. It's all principle wid him. He hates t' see min robbed of their indepindince. They must have their indepindince, regardless of anything else."

"But," says Hennessey, "these open-shop min yet minshun say they are fer th' unions, if properly conducted."

"Shure," said Mr. Dooley, "if properly conducted. An' there ye are. An' how would they have thim conducted? No shtrikes, no rules, no conthracts, no scales, hardly iny wages, an' dam' few mimbers."

Statement on Lead-Zinc Tariff Report

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. DAWSON of Utah. Mr. Speaker, the United States Tariff Commission has sent to the President its report on an escape clause investigation into the plight of the domestic lead and zinc industry.

To no one's surprise, the Commission found unanimously that imports of these strategic metals have increased in such quantity as to cause serious injury to the domestic industry. I say that this was to no one's surprise, because it is inconceivable to anyone at all familiar with the situation that any other finding could have been made.

Unfortunately, the recommendation for relief was not unanimous. It split right down the middle. Three of the Commissioners found that to save domestic production of these strategic metals, maximum permissible tariffs as well as quotas would be necessary.

This, too, was not unexpected to anyone familiar with the seriousness of the lead and zinc mining industry within the United States.

What is surprising is that the balance of the commission, while finding injury, recommend that duties be increased only to the 1930 rates, and that no quotas be imposed. This is actually less help—substantially less help—than the Tariff Commission recommended for this industry in 1954. How anyone can imply that the American lead-zinc industry is in better shape today than it was 4 years ago is beyond me.

Which of these recommendations, if either, is to prevail is now up to the President. If the stronger recommendation is followed, the lead-zinc industry will get the kind of relief it must have to survive. But the alternative recommendation, which amounts only to increasing present tariffs by a fractional part of a cent per pound when market prices are several cents below the break-even point for American producers, would be of no real help.

If the latter course is taken, this Congress will be faced with a clear-cut decision: whether to step in with a legislative remedy, or standby and watch the United States become dependent upon foreign sources of supply for lead and zinc.

Getting at the Big Shots

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. KEATING. Mr. Speaker, this morning's Washington Post pinpoints one of the strongest parts of the current Federal Government drive against organized crime; namely, that it is to be a coordinated, comprehensive campaign to round up the kingpins behind the scenes who really pull the strings.

As Attorney General Rogers has correctly pointed out, in the past such efforts to curb the big-money crooks have failed because they have been sporadic and have lacked overall cohesive direction. These shortcomings have been corrected in the present drive and prospects are bright for its success.

However, if the Government is to make this plan really effective, new laws are needed to enable the weeding out of the big shots in these nefarious interstate operations. Several bills I have already introduced, and several I now have in the drafting stage can help open the doors to the inner sanctums of the elite of the criminal world. They will provide the means whereby underlings and small-fry can be brought before grand juries and encouraged to reveal the higher ups in the operations of organized crime organizations. They deserve speedy approval by Congress if we are to do our part in helping to wipe out the power of bigtime crime in America.

Under leave previously granted, I insert at this point the editorial from the Washington Post of May 8, 1958:

PRIORITY ON RACKETEERS

Attorney General Rogers' long-range plan for uprooting major criminal elements operating in the United States holds a good deal of promise. Unlike the usual sporadic drive against criminals when public sentiment is aroused by a few sensational depredations, this movement will proceed slowly but with sustained and well-organized force. Instead of picking off the little fellows on the fringe of criminal operations, it will be aimed at the masterminds at the top. For this purpose all the information and resources available to the various Federal law-enforcement agencies are to be brought together in a sustained and intensive effort.

In many instances, Mr. Rogers points out, it is possible to identify the top racketeers who are directing lucrative criminal activities, but difficult to find evidence that would lead to their indictment. This is where the special group recently added to the Criminal Division of the Department of Justice comes into the picture. Its expert investigators will assemble all possible information on the big-money hoodlums who have carefully shielded their operations. And if the evidence does not permit their prosecution for dealing in narcotics, for theft or extortion, the investigation may show that some of them have violated the tax laws, the immigration laws, or other statutes.

The value of this procedure is that it is aimed at major sources of crime rather than its lesser instruments and victims. To assure a concentration of effort, the Attorney General has directed that priority be given to prosecuting 100 top racketeers—with due re-

gard, of course, for constitutional procedures. These leeches on our economic and social life are wisely not identified. If they can be brought to book and their rackets broken up, a substantial dent will be made in the $20 billion annual crime bill.

The Urban Renewal Program

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a study of the urban renewal program:

THE URBAN RENEWAL PROGRAM, MAY 2, 1958

Admittedly Dallas has need for improvement of some homes and other buildings, and perhaps whole areas. Most cities throughout the Nation have such problems. Urban renewal, the improvement of homes and neighborhoods, is approved and applauded by everyone. Many cities are now engaged in slum clearance and rehabilitation through local private and public initiative without Federal aid. The lessons to be learned from these urban renewal programs and the others, using Federal funds, are quite clear. From these lessons all can benefit.

Since Congress acts as the city council for Washington, D. C., for 3 years I have been, in effect, a councilman studying an urban renewal program in progress in Washington. In addition, we study other projects throughout the Nation as part of the housing bills.

Even earlier, I was a realtor, land developer, and builder, working in conjunction with the city, conforming to city restrictions on building and developing. I am interested in urban renewal by natural inclination and as a Member of Congress. A Member must study the effects and size of Federal expenditures to fulfill his oath to uphold the Constitution. I seriously doubt (1) the constitutionality of this law, and (2) that the Federal Government can afford urban renewal expenditure.

In Congress I observe, vote on, and report to the citizens of Dallas County the legislation considered, the Federal encroachment upon, and the violation of personal and States rights, the boondoggle and political tradeouts, the hasty and wasteful spending. My interest in Federal assistance programs was sharpened by the attack upon Dallas by a California Representative who accused Dallasites of grabbing greedily for Federal money for the fifth district. This erroneous attack was answered and laid to rest on only one test—the facts.

The facts and documentary evidence on urban renewal are here presented in several parts:

1. The Federal and State urban renewal laws.
2. Eminent domain—of the right and use.
3. The relocation problem (of people affected by urban renewal).
4. Cost and time factors.
5. A constructive plan—how to do it locally.

The question is how best to do the job. Do it we can, I am confident, in the spirit of Texas and Dallas. As our mayor said:

"Dallas' greatest resource is its people. Dallas will remain bright because of its people."

My hope is to see that job done, and done well, for our own community, even to set an example for others who face the same grave problem. Everyone in Dallas has a part, if only as taxpayer.

Those who doubt the job can be done locally might listen to Representative CHARLES VURSELL of Illinois, a member of the subcommittee responsible for urban renewal:

"Mr. Chairman, * * * what I'm questioning is the necessity of forcing the Federal Government to continue this program (urban renewal) that, in my judgment, and I believe in the judgment of most of those who understand it, never should have been started in the first instance.

"It is my judgment that the average small cities or the larger cities of the Nation generally are more able to build their own improvements than is the Federal Government, which has had to undergo the expense of financing the recent World War II, the Korean War, and now has to maintain the most expensive military force we have ever had to have in peacetime, because of world conditions, and the Russian threat of communism.

"It is unfair to extort taxes, so to speak, from millions of people who are housing themselves, and financing their own places of business, and force them to contribute to cities all over the land, hundreds of miles distant from the taxpayer.

"It is the responsibility, so to speak, of the officials in the city halls throughout the Nation, the mayors, the aldermen, the city commissioners, and the taxpayers to take care of their own community and housing needs. All cities, with the cooperation of their citizens, should take care of their own needs, and in the end will make the most progress. The citizens and public officials who turn to the Government deaden their own morale and the morale of the citizens of the community."

For those who say we must competitively get all the money back from Uncle Sam that we can, I quote President Eisenhower:

"The completely spurious argument is frequently advanced that because the Federal Government skims off so much of the valuable tax revenue, it must, as a consequence, bear more of the local expenditure. This is putting the cart before the horse. If local communities do their job, then there will be no need for additional centralized revenues for nationwide subsidies of an essentially local character; and we will avoid the certain pitfalls of extreme centralization.

"Very frankly, I firmly believe that the army of persons who urge greater and greater centralization of authority and greater and greater dependence upon the Federal Treasury are really more dangerous to our form of government than any external threat that can possibly be arrayed against us. I realize that many of the people urging such practice attempt to surround their particular proposal with fancied safeguards to protect the future freedom of the individual. My own conviction is that the very fact that they feel the need to surround their proposal with legal safeguards is in itself a cogent argument for the defeat of the proposal."

Before any referendum, I hope these matters will be carefully studied by all Dallas residents. This material is intended to be of some help.

THE LAW

The pamphlet, Federal Laws Authorizing Assistance to Slum Clearance and Urban Renewal (exhibit 2) contains the major pertinent Federal Statutes involved, including public housing (pp. 74–76) and FHA mortgage insurance for rehabilitation and construction of privately owned homes (pp. 64–73). A helpful summary is contained on the page following the table of contents. The Federal loan and capital grant program for land clearance operations (title I of the Housing Act of 1949 as amended) which would be applicable to the project under discussion in Dallas, is contained on pages 2–25.

The mechanics under the Federal law are:

1. The Federal Urban Renewal Administration, bypassing the appropriations process of Congress, lends money (currently at 3½ percent interest) to a local authority authorized to accept Federal aid to make preliminary studies (sec. 109 Federal law).

2. The URA similarly lends additional money for detailed planning of a project.

3. The URA lends large sums, to acquire by condemnation under power of eminent domain and otherwise, land and buildings now belonging to private citizens and used for their homes and businesses.

4. The local authority generally demolishes and clears all the structures from the project area.

5. The cleared land is then offered for sale, generally at tremendous loss, for reuse by other private citizens for sites for their businesses and homes.

6. The loss (the difference between what the cleared land will bring when resold, and the cost of acquisition, demolition, preparation for reuse, plus all project overhead) is made up by the taxpayers. One-third of the loss is paid by taxpayers in their local taxes, as a so-called local grant in aid (sec. 104 Federal law). The other two-thirds is paid by taxpayers in their Federal taxes.

That Federal control and dictation follow Federal aid is abundantly clear. For example, section 109 on pages 15 and 16, details instructions for wage payments according to the United States Secretary of Labor in Washington under the Davis-Bacon Act, by which local officials must abide, and from which wage setting there is no appeal, no court protection. The Secretary of Labor is prosecutor, jury, and judge.

Aids to Your Community (exhibit 3) lists the programs of the Housing and Home Finance Agency (HHFA), an attractive presentation, and explains the program more readily. The problem, planning, financing, housing for displaced families (public housing and FHA assisted private housing) and community facilities help (streets, sewers, schools, etc.) are presented. Lots of Federal aid is offered.

An HHFA News Release (exhibit 4) outlining the 7-point workable program and the Dallas Little Mexico project, gives credit to Dallas for having the Nation's first nonfederally assisted urban-renewal project. Dallas already has a tradition to maintain.

The Texas Urban Renewal Law (ch. 298, General and Special Laws of Texas, 55th Legislature, exhibit 5) is the act enabling Texas communities to participate under the Federal urban renewal law. The law became effective August 22, 1957. The eminent domain sections are quite significant (see especially sec. 10 on p. 11 of the Texas law and sec. 2 of this statement).

EMINENT DOMAIN

Private ownership of property is a basic right to be jealously guarded, as we do personal freedom. We are most aware of this when confronted with the power of eminent domain, by which law, property can be condemned and taken (see exhibit 5 sec. 10, p. 11). Basic protection is given individuals by the fifth amendment to the Constitution which says (1) "No person shall * * * be deprived of * * * property without due process of law; (2) Nor shall private property be taken for public use, without just compensation." The Constitution thus assures protection of individuals and minorities from majority rule.

The Supreme Coure upset this protection in 1954 in reinterpreting the traditional application of eminent domain. In this case, in a district court, the owner of a department store (see exhibits 6 and 7) challenged

UNIVERSITY OF MICHIGAN LIBRARIES

the validity of the act which gives the local redevelopment authority the right to condemn property which is not substandard or slum property merely because the property is part of an overall redevelopment plan. The Supreme Court then upheld this right to take property because in its concept of public welfare "the values it represents are spiritual as well as physical, esthetic as well as monetary. It is within the power of the legislature to determine that the community should be beautiful as well as healthy, spacious as well as clean, well-balanced as well as carefully patrolled." Losing your property through eminent domain because of someone else's judgment of these values seems quite contrary to the fifth amendment. Further, this decision means that the courts, generally the final respository of the peoples' rights against arbitrary action of the legislature, are not available to those whose property is taken and destroyed for redevelopment purposes. The remedy is in the legislature which may impose whatever restrictions on redevelopment authorities it may deem necessary (see exhibit 8). So the Court seems to switch the historic roles of legislature and judiciary.

As the district court said: "We are of opinion that the Congress, in legislating for the District of Columbia, has no power to authorize the seizure by eminent domain of property for the sole purpose of redeveloping the area according to its, or its agents', judgment of what a well-developed, well-balanced neighborhood would be. This amounts to a claim on the part of the authorities for unreviewable power to seize and sell whole sections of the city."

A congressional committee then commented about the inequities and injustices involved (see exhibit 9).

The Urban Land Institute editorialized on this new Supreme Court application of eminent domain, police power, public welfare, and public purpose rather sagely, summarizing the scope of legislative determination (see exhibit 10).

Later the Richmond News Leader took A Hard Look at Redevelopment (exhibit 11) declaring: private property is losing its importance.

Very significant are the decisions of the supreme courts of Florida and Georgia, both of which declared eminent domain in urban renewal to be unconstitutional according to their respective State constitutions (exhibits 12 and 13). While George modified its constitution, the basic reasoning of the Supreme Court decision was not altogether set aside.

Finally, the statements of Marshall Heights residents demonstrate the unfairness and inequity of this application of eminent domain (see exhibit 14).

Another example which illustrates the inequities of eminent domain is provided by the Washington renewal agency which took property from one private business (Standard Oil) and transferred it to another (an auto parts dealer).

The major danger, therefore, is the taking of private property for private use.

RELOCATION AND PUBLIC HOUSING

Relocation housing is a basic requirement of the urban renewal law (exhibits 2, 3, 4). The seven part workable program (exhibit 4) requests "the city's plans for relocating families to be displaced by slum clearance." (Also see 15a.)

There are two basic types of housing available (1) private construction through FHA insured mortgages; (2) public housing, existing or new units, constructed with Federal money. The FHA help (sec. 220) is specifically designed for help whenever urban renewal is involved (see exhibit 2, pp. 64-73) or whenever any Government action results in displacing families (FHA sec. 221, see exhibits 15 and 16).

Public housing, the other alternative, may be used to relocate families, either in existing or in new housing units. The housing law of 1949 (see exhibit 2) established urban renewal as title I and public housing as title III. In practice the two are closely linked as the congressional hearings show, almost by definition.

Dallas now has 6,372 public housing units. At the national average of 30 percent yearly turnover. Dallas would have 1,900 units available per year for dislocated families as new occupants. Further, there is a remarkable connection between urban renewal and more new public housing units. The attached list shows some urban renewal projects by location and date and the new public housing units which were contracted for shortly thereafter (see exhibit 17). That this may be more than coincidental is documented by the Chattanooga case (see exhibit 18). The mayor was given assurance from insurance, banking, and real estate leaders that private enterprise stood ready to supply the necessary housing. Yet the field man of the HHFA stated that they first must file an application for 1,000 public housing units before they could qualify for urban renewal funds. (See p. 1002, congressional hearings, Appropriations Committee.) This has been variously called the entering wedge, the shoehorn, the blackjack, or the trap, whereby urban renewal is used as the entry for public housing.

Texas law prohibits the use of the redeveloped land for public housing, but this does not prevent the construction of public housing on other sites. The net result could be Dallas being forced into the position of reluctantly accepting more public housing in order to get the Federal money for urban renewal. Federal aid means Federal control. This is the lesson taught by experience. Welfare programs by Federal Government are replete with administrative determinations or decisions.

Why not have public housing? The lessons learned from approximately one-half million units do not make a pretty picture. The inherent weaknesses of public housing are sociological, economic, and political. The attached exhibits clearly state the case (19 through 31).

The Dallas public-housing figures are rather interesting (exhibit 32). The unused subsidy of $568,000 raises the question, are these units presently housing the families in direst need, for whom the projects were intended?

Some communities have already decided against public housing. Attached are the articles recounting these expressions of disapproval of public housing in other localities (see exhibits 33-39). Shreveport, La., slum property owners promised to clean up their properties (exhibit 33), a Natchez, Miss. alderman applauded the rejection of the direct dole from Government (exhibit 34), a Rockford, Ill., alderman pointed out the public housing cost more to construct than private and the newspaper declares Federal money shouldn't be taken just because it's available (exhibit 35), the High Point Enterprise editorial on Federal housing says "socialism is socialism" and Federal housing does more harm than good (exhibit 36), the South Haven, Mich., Tribune editorializes that the city commission rescued the city from a welfare project of great expense and entanglement in rejecting public housing (exhibit 37). These arguments are doubly applicable to public housing and to urban renewal with or without public housing.

There are inherent dangers in public housing unthought of by the average citizen. This is brought out by a former chairman of a housing authority himself (see exhibit 30). Further proof is seen in the fact that a number of former executive directors of public-housing authorities are now in prison, including the former directors of Houston, Galveston, Los Angeles, Contra Costa County, Calif., and others.

COST AND TIME FACTORS

Cost and time factors are most revealing in the study of urban renewal. The cost is truly fantastic, almost without limit. Practically every community throughout the Nation has older buildings. Every building ages, and some have the built-in weaknesses of faulty construction. Inspection, repair, and rehabilitation are needed.

No matter who foots the bill the cost of complete and immediate urban renewal would be prohibitive, so redevelopment and rehabilitation must be accomplished gradually. The cost must be spread equitably. And this costly program is added to a long list of existing programs of all kinds at all levels of government demanding heavy expenditures of the taxpayers' money.

The Treasury isn't just broke; it has one-fourth trillion dollars less than nothing. It is a tricky job in fiscal management just to pay current operating expenses of Government. Only the borrowing power of Government makes possible the continuation of the deadly overspending spree. Federal bills are to be paid from future revenue, gambling on the continued high income of taxpayers. Simultaneously Congress adds to the Federal spending to help the financially drained taxpayers from whom the money is taken. Any sign of local financial trouble is the signal for more Federal spending with little thought that the aid distributed must first be taken from the same people in taxes. So the burden increases. (Tax cuts could be substituted for Federal spending.)

The cost of urban renewal authorized to date approaches $2 billion (see exhibit 38). The administrative expenses are running approximately $5,730,000 a year and increasing. The public housing bonds as of March 1957 total $2,268,723,000. The yearly cost to taxpayers who must pay the principal and interest on these bonds is $193,446,405. This means that the taxpayers over the 40-year program will pay $7,737,856,200 for projects which originally cost $2.2 billion.

The Federal grant contribution to urban renewal will be two-thirds of "write-down" or loss, the difference between the resale or reuse price and the expenses of acquisition, demolition and clearing. This "write down" of two-thirds will be paid by the citizens of Dallas as Federal taxpayers and one-third by citizens of Dallas as local taxpayers. Also almost no one escapes being a taxpayer.

This slum clearance or land preparation is just the start of heavy expenses for the local community. True, if the job must be done, the cost must be borne. Yet the very costliness is all the more reason for trying to cut every corner, to exercise judgment and discrimination in how best to do the job. Other costs include the relocation housing that will be added, either privately or publicly through public housing, the latter approach again on the taxpayer. Some of the folly of governmental invasion of private enterprise may be seen in Castles in the Air (exhibit 39) applicable to public housing and urban renewal.

The fiscal danger can be shown by the fact that if communities sought all the Federal money available under existing law, there wouldn't be enough to go around, not with printing presses running ceaselessly. The competitive inducement to States and communities to seek and bid for this money postpones realistic appraisal of the facts, and heightens the potental danger of complete socialism (see exhibit 2).

The write-down or shrinkage of value which occasions the Federal loan and grant is subject to serious question in itself (exhibit 40). Why the excessive drop in value when raw land, stategically located, is cleared and ready for use. Generally, the

availability for a higher use should enhance the land values sufficiently to offset the cost. At the least, an appreciable write-down suggests some question of judgment on the part of the urban renewal authority's setting a reuse value not in conformity with the highest and best use of the land. Misuse of land is always reflected in lower value.

Another financial danger is the windfall, the heavy profit which might be made by individuals in the private development after purchase of the land. Profit in free enterprise is one thing but profit off the taxpayer is another. Existing cases (see eminent domain sec. 2) show the inequities already occurring. Would it not be possible under this law to buy up older areas, as older downtown sections, sell them under eminent domain valuations with the possibility of tidy profit, then buy them back from the urban renewal authority at a written down price, to redevelop and make a handsome profit?

The time factor of Federal urban renewal is another drawback which is unlike the Texas and Dallas spirit of performance. Even if the people of Dallas were to overlook the unconstitutional, financial, and Government administration aspects, there would be the same old story of redtape and delay. For example, local initiative built a Dallas-Fort Worth Highway in the time that Federal Government would have been preparing and signing forms. In Washington it took 7 years to get an urban renewal project underway (exhibit 41). Admittedly, this may be longer than some but the pattern is there. It just isn't the Dallas pattern of doing business. In fact, it's worth a chuckle just to think of our first citizen, Mayor Thornton, trying to put up with Federal forms, endless consultations, and bureaucratic determination from Washington. No, the Texas spirit, seen in Bob Thornton and the cut of all Dallas citizens is in performance, in get the job done—now. It's one thing for the scope of the job to slow us down; it's entirely another to be delayed by redtape.

CONSTRUCTIVE PLAN AND SUMMARY

The job of urban renewal in Dallas can be done locally, even the most skeptical must agree. The proof—the accomplishments of the people of other cities who have met and overcome terrific slum problems—without Federal aid. What other communities can do, Dallas can do. Indeed Dallas already is the pioneer, gaining nationwide recognition for the Little Mexico project, the first of its kind accomplished without Federal funds. Let's not abandon our leadership. Even without this success in our background Dallas can match or outdo the efforts of those cities listed in the Blueprint for Neighborhood Conservation (exhibit 42) as the Tale of 7 Cities, which are New Orleans, Los Angeles, Charlotte, Chicago, Cincinnati, Newark, and Kansas City. These projects here mentioned were without Federal money.

Take Charlotte, N. C., for example (exhibit 42, pp. 25–25, exhibits 43–44). As of today 12,000 residences have been rehabilitated (10,000 bathrooms were added). Two thousand buildings could not be saved and were demolished, at the owner's expense. Meanwhile the city did its part by paving 65 miles of streets, adding street lights and providing playgrounds, parks, and other needed improvements. Two thousand families were relocated in privately owned homes, rehabilitated or new. Two thousand new private housing units were built—all of this without Federal aid. Note also the financial impact with increased revenue to the city. There are expenses but urban renewal also generates revenue.

The New Orleans story is much the same, so is the Los Angeles story and the others—each without Federal aid. In fact, the cases where there was no Federal aid involved suggest that the other areas getting Federal aid could have done it on their own.

The case of Memphis, Tenn (exhibit 45), is another example of the local people—bankers, insurance men, builders, realtors, and citizens doing the job—without Federal aid, and without eminent domain. The power of eminent domain, the taking of private property, does not necessarily have to be used in urban renewal, where owners are given a chance to participate. True, they must be told to clean up, sell, or have the city clean it up at the owners' expense. The result is greatly increased property value so the owner can hardly object. Even in cases where property does not conform to the zoning requirements, the owner can be given a chance to abate the nonconformance through remodeling or removal of the building, still retaining the land ownership. The property is not taken away without his having a chance to participate.

In Gadsden, Ala., it is my understanding that no right of eminent domain was used in redeveloping a rundown area. Neither did this city have a proper housing code or proper enforcement (compared to Dallas). City teams talked to owners about rehabilitation. When the owners refused to clean up the slumlike property, the city teams went directly to the property tenants. Each tenant was asked if he wanted a new home in a nearby residential development to be built with FHA financing under section 221. When most tenants signed up the realtors, builders, mortgage men, and bankers went to work. A lovely new development was completed. The tenants moved into the new homes. The old shacks were left vacant. The owners then agreed to cooperate.

The definition of bad housing and what can be done about it is meaningful to property owners, as outlined in the pamphlet The Real Estate Man and Housing Reform (exhibit 46). Another good summary of a positive program without Federal aid is described in the Washington Star article entitled 'Realtors have a plan for better housing" (exhibit 47). Their way is neighborhood conservation carried out by private enterprise. It requires areawide, community-wide planning embracing a good housing code, proper zoning, a suitable assessment and tax structure, health and safety code with the necessary enforcement inspection. This is simply good city operation, something understood by Dallas people and their officials.

Two pamphlets put out by the chamber of commerce entitled "Urban Development Guidebook" (exhibit 48) and "City Planning and Urban Development" (exhibit 49) further outline the necessary program to accomplish urban renewal—and without Federal aid, although such aid is recognized as available. The need for private enterprise and local initiative has been rediscovered by the residents of Gary, Ind., who have offered for sale Duneland Village, a complete public housing development of 165 units (exhibit 50). Upon the sale of public housing these advantages would accrue (1) revenue from the sale would be realized, (2) stop further Federal subsidy using the taxpayers' money, (3) the property would start to pay its full share of local taxes, (4) the morale of occupants would be greatly boosted, no longer ashamed over others helping to pay the rent, (5) and no political worry over being evicted if their salary is increased.

Section 406 of the Housing Act of 1954 permits a resolution or ordinance by the city council or a referendum by the citizens to call for the liquidation of a project (see exhibit 50–51). The city would then negotiate with the Federal Government and the project will be sold by the public-housing authority to the highest bidder after public advertisement. The bonds supporting the project would be repaid and any receipts above the indebtedness would be paid to the city and Federal Treasuries.

CONCLUSION

Urban renewal is a local problem, concerning local property, and local property owners. The local citizens, as property owners and taxpayers, also foot the bill in every instance. "That government is best that is closest to the people" is no empty axiom. Our mayor and city council backed by local judgment can better solve our local problems than the distant Federal Government. Further, Federal aid weakens local government, costs more to do the same job, and violates the individuals and States rights guaranteed by the Constitution.

We shouldn't try to transfer our problems to the Federal Government for solution. The Federal Government will accept them always and try to do the job; this is the politically expedient thing to do.

In our conscientious recognition of the need for slum elimination, a view we all share, we must beware of dubious means to a very justifiable end.

The matter of Federal regulation following the use of Federal funds will no doubt continue to be misunderstood by some in Dallas, just as in Washington. So let me point out examples of controls we must accept (1) forced integration is part of public housing, so the Court has ruled, (2) the wage rates on urban renewal land clearance will be set by the Secretary of Labor, not by local people or the local economy, and there is no legal recourse from such wage predetermination. These are just two examples of imposed control.

I believe the acceptance of Federal money for purely local projects to be wrong. So I oppose this use of Federal money. Can I take any other course than to oppose what I think wrong? If, in fact, Federal aid is wrong, and those who think it is wrong fail to oppose it, what is our Nation's future?

As I see it, the truth is the job will be done locally. It is just a question of recognizing responsibility and properly labeling what must be done, and then doing it. This will require responsible property owners (and responsibility accompanies ownership); it will require a courageous mayor and city council; it will require an understanding and willing citizenry.

All these ingredients of success Dallas has, no less than any other city. We can do the job locally without Federal aid.

Hon. Emanuel Celler

SPEECH

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. KEOGH. Mr. Speaker, I am most happy to add my voice to that of the other Members in congratulations to the dean of the New York Democratic delegation, Hon. EMANUEL CELLER, on his 70th birthday.

I have been privileged to know MANNIE CELLER for more than a quarter of a century and have observed him in action in the Committee of the Judiciary and on the floor of the House, as well as in his native Brooklyn. Chairman CELLER combines many rare qualities and today at 70 is a vigorous as many men half his age.

He is known far and wide both here and abroad for his stanch support of minority groups. He has achieved an enviable reputation for his zeal in pro-

UNIVERSITY OF MICHIGAN LIBRARIES

tecting these groups. His support of small business and his implacable stand against monopolies has made him famous through the United States.

May I extend to my colleague and friend, MANNIE CELLER, my fondest wishes for many more years of service to the people of Brooklyn and of the United States, and join with the other Members in wishing him well in all that he does.

Detroit

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. DINGELL. Mr. Speaker, we in Detroit give full credit to the people in the other areas of Michigan for their great contribution to the welfare of the State and of all the people. We share their pride as citizens of the State of Michigan. However, this does not detract one bit from the pride we feel in our city and in our part of the State, and in what Detroit itself stands for in the country and in the world.

More than that, Detroit is so varied in its activities and in the origins and interests of our people, that to understand Detroit is to understand many of the essential characteristics of our time and of the world we live in. Whether one thinks in terms of industry, commerce, or the people for whom this all goes on, Detroit is like a mirror that highlights the world around us and brings out clearly and sharply the lessons that need to be learned for the good of all.

For example, industry in Detroit highlights sharply the lesson that whatever helps or hurts an important industry anywhere in the country helps or hurts the total economy and affects what goes on in the far corners of the earth. In the minds of many people, Detroit is automobiles, and, truly, half of what is manufactured in the Detroit area has to do with automobiles. But the car that comes off the assembly lines in a Detroit automobile plant is also steel from nearby and distant mills, and ore from nearby and distant countries. Backtrack the tires on that car and you reach rubber plants in other States of the United States and rubber plantations in remote countries. And the same kind of thing is true of the millions of square feet of glass, the millions of yards of textiles and leather, and of the paint and plastics and everything else that goes into the cars that Detroit made famous.

When Detroit prospers, these places—close by and far off—prosper, too, and depression in Detroit is shared by people in these places as well. Today, the lesson of Detroit is that the productive plant of America is one plant, and neither prosperity nor depression can be isolated or quarantined.

When you follow what Detroit makes away from the factory gates, you get the same lesson in interrelatedness—both domestic and international. The drugs and chemicals produced in Detroit, like the cars, machinery and other products manufactured there, turn up in countries all over the world. They help to increase the living standards in those countries as well as to pay for what America imports from them. Put your finger on Detroit on a map of the world, and in any direction that your eye may travel, goods made in Detroit have already gone; they have become part of the complicated international trade on which America depends for many of its comforts and even for many of the essential natural resources of the world.

Detroit reminds us that economics and trade are today worldwide, and no country gets along well today without the rest of the world to help it.

But it is the people of Detroit who themselves provide the best evidence that Detroit and the world are one. Nearly every country of the world, no matter how strange its name may first have sounded to American ears, has been the old country for some group of Detroiters. Detroit has always been a kind of United Nations, with the diplomats rubbing shoulders in the factories and stores of the city instead of in conference halls and committee chambers. In Detroit, people from all over the world have learned to live and work together, trusting to their common humanity, and providing a lesson in neighborliness that all the world might copy.

The lessons which Detroit can teach sometimes make headlines, but often they do not. Often, they are common, homely lessons which may however be even more important than headlines for the long pull and for the daily lives of the people. But for those who want to learn, the lessons are clear. Detroit teaches us that the country we live in is one country and that we are prosperous and depressed together. As we trade goods with the countless cities and towns of America and of the world itself, we also trade prosperity and—unhappily—depression, too, when that is the order of the day.

As one of the Members of Congress privileged to represent the people of Detroit, I am pledged to work for that legislation which will increase the well-being of the people of Detroit, knowing that the result for America and for the rest of the world will be the same increase in well-being and in the kind of prosperity on which peace itself can be built.

Just Tell 'Em "Nyet"

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. BOSCH. Mr. Speaker, we must ever be on our guard against Communist deception and treachery. Red China seeks to have United Nations troops withdrawn from South Korea. It is our solemn duty to see that the Communists do not take over this area—our boys who died in the Korean conflict must be backed up—we cannot let future generations say that they died in vain.

Under leave to extend my remarks, I include an editorial on this subject from the New York Daily News. The editorial follows:

JUST TELL 'EM "NYET"

Red China is giving another spin to an old phonograph record—the one about how the United Nations should pull all its forces (chiefly United States) out of South Korea, after which unification of the peninsula could be discussed.

This is only the latest attempt by the Peiping bandits and murderers to kid us into exposing South Korea to Red conquest, followed by unification of Korea as a Communist country. Such a retreat on our part would round out the infamy of President Truman's and Dean Acheson's refusal to let Gen. Douglas MacArthur win the Korean war, and would take another big package out of our prestige in the Far East.

Instead of answering this proposition with a mess of high-flown State Department wordage, let's just tell Peiping "Nyet"—a word which we can be sure the Kremlin's Peiping puppets will understand.

The Biggest Mistake We Could Make

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. MERROW. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in the Somersworth Free Press on April 17, 1958. The editorial follows:

THE BIGGEST MISTAKE WE COULD MAKE

As Congress debates the question of President Eisenhower's mutual aid program in the weeks just ahead, we suspect that the cry will increase to cut from that program any aid to the populous Asian land of India.

The reason ostensibly will be the failure of that country to chart its course in world politics directly on a path with that of the western allies.

If, because of this display of independence by India, the meager aid to which it is now entitled from the United States is cut back, then Russia will be achieving one of her greatest victories of the cold war.

In a section of the world in which totalitarianism runs rampant, India has cast its lot with the forces of freedom. It has provided for democratic institutions and is attempting to remain free from entangling alliances with the East or West. That it continues in this position is important to the cause of freedom. The largest non-Communist nation in the world, India is rich in resources. It is in the midst of a region which is ablaze with strife and into which Russian influence has been fast moving.

A stirring, restless Asia and Africa are watching the democratic experiment in India and waiting to compare the results with those produced by the coersive forces loose in Communist China.

Should Congress cut into the comparatively nominal amount of foreign aid intended for India under the President's program, then we leave that country no recourse but to turn to Russia to accept the

financial credit its leaders are now offering. The resulting economic dependence will be a severe blow to the forces of freedom and a victory for the forces of Russian tyranny.

Mississippian Would Fight Yankee Slump With Dixie Dollars

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the March 28, 1958, edition of the Jackson (Miss.) Daily News:

HE'D FIGHT SLUMP WITH DIXIE DOLLARS—NO RECESSION IN MISSISSIPPI, SAYS MAN WHO'S MADE STUDY

(By Robert Harper)

Keep down the recession talk, Yanks; southern money will put you back in business.

That's what Bill Gupton, Hinds County farmer and regional director of a periodical circulation service seems to think. Just to prove his point, Gupton went on a buying spree through one of Jackson's largest shopping centers and spent more than $25 on items that he could use but didn't need just to help recession-ridden Yankee industries.

"The Yankees may be suffering, but we are living high on the hog so to speak," said Gupton.

Gupton's circulation service has a Chicago office. He is in charge of some 37 States, most of them in the South. He says there is no sign of recession in the places he has visited in Mississippi, Texas, Alabama, Georgia, South Carolina and Florida. Especially is he impressed with the rapid growth of industries and the amount of money being spent on the Mississippi gulf coast around Pascagoula and in the Hattiesburg area where the new Pontiac Eastern oil refinery is located.

Mobile, Ala., and Pensacola, Fla., are other areas where industry is booming and housing is a problem. "The house trailer manufacturers can't meet the supply demand along the gulf coast," Gupton said.

GOOD WILL BUYING

Gupton's idea is for each person in the South to buy at least $5 worth of northern merchandise each week that may not be needed at the present, but can be used in the future.

His venture through the shopping center left him with a garbage can, antiseptic, aspirin, pliers, car wax, square rule, electrical supplies, chisel, shirt, shoes, dog meal, cosmetics, and something he probably won't get around to using for a long time, a caulking gun and weatherstripping.

Gupton said, "I always wanted a caulking gun, so I decided now was a good time to buy one."

He tried to choose something from each of the Yankee States that is suffering from a recession. Represented among the suppliers were the States of Illinois, Ohio, Pennsylvania, Indiana, New York, New Jersey, Wisconsin, Missouri, and Massachusetts. For good measure he added some imported goods from Canada and Western Germany that are received through New York customs.

Gupton, who has lived in New York, Chicago and other northern cities as well as on the west coast, says he still has friends and relatives in the North and maybe his purchases will help their business.

It may, however, cost him more than he expected. When his wife saw what he had bought, she decided to aid the Yankees, too, and now she plans to go on a shopping tour. She wants a few new clothes.

Boston Has Much To See, Much To Do

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article on Boston, which is to be the host convention city for the National Federation of Post Office Clerks beginning August 25, 1958.

The article appeared in the official publication of the NFPOC, entitled "The Union Postal Clerk" for May 1958.

BOSTON, OUR HOST CONVENTION CITY, HAS MUCH TO SEE, MUCH TO DO

Boston is a city with a past. Down the cobblestone streets in the old section of the city, you can almost hear the clatter of hooves as Paul Revere begins his midnight ride. You look up to the tower of the Old North Church and you remember the lantern swinging there. From across the Charles River you hear the echoing roll of Redcoat drums as the military flanks form at Bunker Hill.

But Boston is a modern city, too—a city with the stimulating scents of clam chowder, lobster, and brown bread. The rattle of the subway and the sounds of business activity on Tremont Street mingle with the flutter of pigeons off the Common.

The city on the bay is a bustling city today just as it was more than 300 years ago, when it became the center of the New England colonies.

Delegates to our 30th national convention, who assemble in Boston, August 25–30, will find much to see and much to do in the host city. They can journey down the Freedom Trail, which begins on Boston Common and goes through many old historic shrines, finally ending at the river wharves and the site of the famous Boston Tea Party.

Shopping for the wives is simple and easy, as the big department stores and specialty shops are conveniently grouped on downtown Washington and Tremont Streets, not far from the headquarters hotel.

Boston's famous for seafood. First, as the country's largest fish-shipping port, it can choose the best of the catch that the cold, flavor-heightened North Atlantic waters yield. By making use of the old-fashioned Yankee cooking and handed-down recipes, Boston restaurants have developed many distinctive and taste-thrilling ways of preparing lobster, shellfish, and saltwater fish dishes.

Boston has been called the hub of New England's great vacationland. It's within easy reach of some of the country's finest winter and summer resorts. Cape Cod, for example, is only a few hours drive away. There's fresh and saltwater fishing and sailing. There's swimming at both fresh and saltwater beaches.

As for spectator sports, there's horse and dog racing, big-league baseball, major-league hockey, and basketball. In addition, the athletic teams of a dozen colleges and a hundred preparatory schools number among them several familiar to followers of the postseason football bowl games and basketball tournaments.

The city is the traditional tryout town for Broadway plays, with five legitimate theaters. There's an opera and ballet season and the famous Boston Symphony, with its outdoor Esplanade concerts along the banks of the Charles in summer. Also, local theatrical productions, summer stock theaters and countless movie theaters add to the number of places to visit. There's dancing and afterhours entertainment at many hotels and clubs.

Delegates will find the city very compact, travelwise. You can do much of your sightseeing on foot. And a single fare takes you anywhere on the MTA's surface, subway, and rapid transit lines. In addition, you'll find plenty of cabs, sightseeing bus tours, and a wide selection of cars which you can rent and drive yourself.

Travel connections with the convention city are good, no matter how you come.

By air: No major airport is nearer the business section it serves than Logan International Airport. It's only 1½ miles from downtown Boston and is easily reached via MTA or Sumner Tunnel and a super highway system. Nine airlines offer local air service and direct or connecting service to all major cities in North America.

By train: The city has direct rail connections with all other major cities in the country via three major lines.

By bus: Nationwide and regional bus routes lead to convenient terminals in the Park Square area.

By car: For those delegates who want to drive their own automobiles, Massachusetts offers many scenic attractions in the summer. Fine roads connect the city to all parts of New England.

Boston is a city of many firsts, including one significant to our own service. The first contract by the Federal Government to carry mail went to a Bostonian, Levi Pease, in 1786.

Among the other firsts are the following:

The first public school in the world supported by direct taxation was established in what is now Dorchester in 1630.

The first meeting house, with mud walls and thatched roof, was built in 1632 at what is now 27 State Street. Across the way the first stagecoach took off in 1772.

America's first industrial landmark—the Saugus Iron Works—which produced cast and wrought iron 310 years ago has been authentically recreated on the original site.

The first patent in North America for a mechanical device was granted by the General Court of Massachusetts in 1646 for a sawmill.

If you dip underground for a ride, you will be in the oldest subway in the world, except possibly the one in Budapest, Hungary. There is a longstanding dispute between the two cities over the honor. The Boston subway was opened in September 1897.

There are many surprises for visitors to the city. Delegates to the convention will find things to see and do during recesses between business sessions. It's only a few minutes from the hotel each evening to some outstanding eating or entertainment spot.

Now Is the Time To Act for the Good of Retired Federal Employees

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. SIKES. Mr. Speaker, the two bills—S. 72 and H. R. 607—to provide

UNIVERSITY OF MICHIGAN LIBRARIES

additional benefits for retired civil-service employees have passed their respective bodies of Congress. A conference has been requested and a committee appointed. It is my sincere hope that the conferees can speedily reach an agreement on which we can act and which the President will approve.

I am one of the introducers of legislation intended to help these deserving people. I feel that liberal legislation is deserved in this case and I believe the provisions of my bill H. R. 943 would have been of great assistance to those it was intended to benefit. The important thing, however, is to complete the enactment of legislation so that a uniform program based on modern costs of living will be in effect.

All of this legislation was designed, in large measure, to provide additional retirement benefits to meet the increased cost of living for those who retired prior to October 1956. Those who retire on and after October 1, 1956, receive substantially greater annuities than those who retired prior to October 1956. Such discrimination should be corrected.

I trust that the bill will be reported out soon; that it will retain, to a substantial degree, the provisions of S. 72, so richly deserved and sorely needed by many of our faithful former Federal civil service employees. They are now existing on a fixed income which, in many cases, is wholly inadequate.

The Growth in Management Science and Its Impact on Management-Worker Relations

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a speech made by Louis Hollander, president of the New York State CIO Council, and vice president of the Amalgamated Clothing Workers of America, before the American Management Association on April 30, 1958, at Saranac Lake, N. Y.

His remarks follow:

THE GROWTH IN MANAGEMENT SCIENCE AND ITS IMPACT ON MANAGEMENT-WORKER RELATIONS

It is rather unique for a trade union leader to be invited before a managerial gathering such as this, and I wish to pay a tribute to the sponsors for their enterprise and courage. Labor and management have not always seen eye to eye, and regrettably, there are large areas still in American industry where the American labor unions are not accepted as part of the community, nor as a full-fledged participant in industrial democracy.

Those of you who have not yet dealt with organized labor or labor leaders probably regard us as strange creatures wearing horns or breathing fire. I have to destroy this image, because I know these men, and speaking modestly, consider myself one of them. I have had the occasion to meet with various representatives of labor every day of my adult life, and have found them to be on the whole reasonable men concerned with the welfare of their neighbors and their friends and their families, as patriotic as the next man, and concerned with the welfare and security of the thousands and millions of men and women whose interests they are sworn to protect.

ART OF HUMAN RELATIONS

My subject today is not the responsibility of trade unions. I could speak on that subject at considerable length without a single note, but you have been good enough to invite me to speak on the growth in management science and its impact on management-worker relations. I think this is an important subject. I wish you had added to the words "management science" the words "management responsibility." I shall therefore, in discussing this subject, refer with your permission, to management responsibility and management-worker relations, as well as to management science.

There is no easy short cut in these relations. There are simple rules that will automatically insure labor-management peace, or a greater concern between the two parties at the collective bargaining table for each other's rights and equities. But there are certain fundamental principles that we might profitably examine here today.

UNIONS ARE HERE TO STAY

A first basis for good industrial relations is a full recognition by management of the existence, the validity and the positive values that are inherent in trade unionism. Management must accept trade unions as an essential and desirable part of the basic economic and social structure of our free society.

And it must also accept the fact that the clock cannot be turned back to the time of the first industrial revolution in the 19th century, when the new technology came into being and when enormous progress in the production of wealth marched side by side with widespread poverty, insecurity, unrest, and hardship.

We fought our way out of the dark jungle. From an unorganized and helpless segment of our population, labor became a built-in guaranty of security for America, and one of the basic foundations of democracy. We are today stronger than ever in our history in terms of membership, in benefits won through collective bargaining, in solidarity in our ranks, and in the contributions we have made and still make to the progress and welfare of the whole Nation. In short, labor unions are here to stay.

NEW DIMENSIONS OF RESPONSIBILITY

Management must recognize the changes that have taken place in the social and economic life of America. In fact, it has been part of the change itself. Consider how management's role in our society has changed since the early history of corporate life, since the early days of the Hills, the Harrimans, the Morgans, the Vanderbilts. All that was expected of the management of a corporation then was that it should do a good job for the stockholders. Free enterprise was an end in itself, one that justified every kind of means.

Industry was merely an instrument of exclusive and unique self-advantage. This still remains the responsibility of corporate management, but a new dimension has been added. It might be called the social dimension. Management has had to assume social and economic responsibilities to the workers, to the consumers, and to the community. Business can no longer act as it pleases. It has to conduct its affairs so that it conforms to the public interest. It has to realize that it has become a full-fledged citizen of the community, with responsibility toward the welfare of the community.

But has business responded fully to these demands of modern industrial society? Has it fully recognized its new community citizenship? Has the new management philosophy found its way into the actual operations of much of American business? I am afraid that there are huge areas where the answer to these questions will be in the negative. I am referring, of course, first of all to the disturbing problem of the growing concentration of economic power in our national economy, and the significance of this development for those involved in managerial functions.

IN THE GRIP OF GIANT MONOPOLIES

The giant corporations have become private governments. They are already in the moppingup stage throughout the country wiping out small businesses by the tens of thousands.

Their decisions influence the size and distribution of the national product, and the levels of employment and purchasing power of the workers. In effect, in fixing prices, they levy taxes on the consumer. In addition, they squeeze out competitors, divide the market, keep profits high, and determine production volume. There is a definite divorce of ownership and control, and it is difficult to know where to place corporate responsibility at all.

As the editors of Fortune put it, the control of the typical big corporation is now in the hands of managers who do not own it, and its ownership is in the hands of stockholders who do not influence its behavior.

Nobody knows any more who hires whom, whether it is ownership that hires management, or management that hires capital. And nobody knows to whom the manager is responsible. But he manages just the same. He manages not only production and distribution, but also the owners themselves—in most cases the stockholders—who have nothing to say as to how the corporation shall be run, nor how it shall handle its labor-management relations.

The classic Berle-Means study on this subject shows that only in 5 percent of the largest corporations is the control in the hands of the stockholders who held a majority of the stock, while for the other 95 percent, the control is in the hands of a small group of men representing either a management group, holding company, or a bloc of minority stockholders.

This trend toward a monster type of business, and the development of the present-day managerial system make for totalitarianism in industry and threaten the extinction of the private enterprise system in the sense in which it was known less than half a century ago. Absentee ownership characterizes this profound development in American industry.

Corporate wealth is so concentrated that half of all American manufacturing is controlled outright by about 150 corporations. About two-thirds of the productive assets of the United States, excluding agriculture, are owned by not more than 500 corporations. Mind you, 500 out of 325,000 manufacturing companies. To only one-half of 1 percent of the manufacturing corporations of the United States went 57 percent of the sales, in dollar value, of all manufacturing corporations, leaving only 43 percent for all the rest—large, small, or medium in size. As Professor Berle points out in his most recent study of the Fund for the Republic, these 500 corporations represent a concentration of power over our economy which makes the medieval feudal system look like a Sunday school picnic.

The tendency toward concentration in industry contains within it the seeds of great danger. We are confronted with economic forces at work in our country today, which

I fear are setting up within the framework of democratic government an invisible government which I am inclined to call the corporate state, or even the monopolistic state. I think you will admit that whenever we get into such a situation that monopoly has its hands around the economic throat of America, then we will have economic totalitarianism controlling our economic life. And if economic totalitarianism should ever control the economic life of our country, we would discover that it also controls the Government, because after all our political and economic life are inseparable.

There must be economic democracy as well as political democracy if the people are to have economic and political freedom. I think history—and very recent history at that—will show that loss of political freedom follows loss of economic freedom as certainly as night follows day. We have seen this in Communist Russia and its satellites. And now we see it extending to the Middle East and Far East. And don't say that it could not happen in the United States.

The impact of giant business on management-labor relations can never be overemphasized. Big business became the major employer of millions of production workers who process, handle, and haul the commodities produced by big business. Sixty percent of the total labor force employed in manufacturing and mining is on the payrolls of 500 largest United States industrial corporations. Roughly 1 person in every 7 gainfully employed in our country depends upon the automobile industry, directly or indirectly, for a livelihood—and mind you, this is the same automobile industry that shows the heaviest monopoly concentration. These scores of millions of workers and their families feel the whole impact of the corporate ideology, and it is expressed today by modern managerial bureaucracy.

I think the problems posed by the economic giants in our country, and by the growing concentration of economic power in a few hands, must be frankly confronted and resolved. One of the great Communist propaganda arguments is that corporate concentrations in our private enterprise system become ripe plums for the Communist bureaucrats to shake off the tree. Obviously American industry has the same stake in democracy as its employees. Long ago the American trade unions taught that freedom without bread is a mockery—and bread without freedom is slavery. American corporate enterprise must understand that democracy, a decent standard of living, security and a hope for the future are indivisible. Their employees share these aspirations. They are not robots, not just so and so many units of production. They are not hands, as they were regarded before the advent of trade unions. They are whole human beings, with pride in their skills, with a lively concern for their children and for their future.

Collective bargaining is the only way devised by the mind of man in our industrial system for protecting, safeguarding, and cherishing these imperishable dreams of American men and women who work for a living. Collective bargaining may not be perfect, but a better system has not yet been devised. Industry for years tried paternalism, benevolent feudalism, and worse, in an attempt to solve employer-employee problems. These outmoded methods failed, because they did not recognize the essential human dignity of the worker.

THE THREE-LEGGED STOOL OF AMERICAN INDUSTRY

The growth of management responsibility can be gaged only by a commensurate growth in labor-management relations. Only full recognition of this new dimension of management's responsibility can bring proper balance into labor-management relations. You are all probably familiar with a favorite device of conservative economists. They picture American industry as a 3-legged stool, with management as 1 leg, the machine another, and the third leg, labor.

Fair enough, but all too often in the collective bargaining process, some men of management act as though the management and machine legs were twice as high as that of labor, and that the leg that represents labor must be cut down. Needless to say, we do not like such a view of the elements that make up industry. Machinery is not more important than labor. There is, in fact, a partnership between the worker and the machine.

Together they produce all of this world's goods. Without the worker the machine would be a monster uncontrolled. Without the machine, the worker would be chained to backbreaking manual labor of primitive times.

I have asked management to understand and appreciate this partnership between the workers and the machine. When machines were first introduced on a large scale in industrial England a little over 100 years ago, the workers revolted and smashed the machines. In their desperation they felt that the machine would replace them, and that it would undermine still further their already low wages and living standards.

The modern worker, protected by his labor union and the safeguards of collective bargaining, does not fear the machine. He does not fear automation. He says, and I think quite properly, that he wishes to share in the benefits of the new machine of automation. If with his help and his supervision the machine produces more, he would like a fair share of this increased product. He is a consumer as well as a worker. Most usually his only source of income is wages. He would like to buy back, for himself and his family, an important part of the product he produces, whether it is an automobile or a home, a television set or a refrigerator, or anything else. He would like to share in the medical care and the health benefits which his work makes possible for others. He would like his children to share in education opportunities—yes; including higher education in the colleges and universities of this land.

We think all of this is quite reasonable. We think, as a matter of fact, that should industry help meet these objectives of its employees, it will make for a prosperous and peaceful land. Communism would not have the slightest appeal to the lowliest of these workers. And capitalism would be more certain of survival under such an economy of abundance, than under an economy of scarcity. An economy of abundance makes for more and bigger profits as well as for more wages and a higher standard of living.

I am not an economist; I am a trade unionist with no formal professional education. But I do know that the most prosperous eras we enjoyed in this country were those in which wages were comparatively high, prices moderate and our industrial workers as well as our farmers had substantial purchasing power.

AUTOMATION

Automation is very much in the news, and some of the unions operating in those industries where it is being rapidly introduced on a large scale are showing a proper concern about its effects. Automation can reduce the hours of labor as well as its back-breaking toil. It can and does increase our productive wealth. It ought to be able to develop true leisure for workers everywhere, so they can devote more time to their families, their children, to education and recreation. Certainly automation is not to be used just to reduce the labor force. Remember, machines may produce, but they cannot purchase or consume.

What we in the trade unions say is this: Throw proper safeguards around automation the way you would around the moving parts of a machine, that if exposed would threaten the life or limb of the operator. We say that if a worker is displaced by a machine, retrain him or relocate him, so that he can continue to earn a living for himself and his family. Whether he is displaced by a machine or not, he and his family still remain part of the American consuming public. They must continue to eat, wear clothes, live under a roof, and meet other necessities of life from their only source of income, which is wages. Industry objects to the so-called welfare state, and labor objects to it, too—if by welfare you mean charity, handouts, breadlines, or staggering relief rolls.

It is part of the managerial responsibility especially if it prides itself on its scientific growth, to see to it that whatever progress it makes in terms of increased efficiency, the development of new machines, the discovery of new processes and so forth, are reflected in terms of the health and security of the labor force.

STATESMANSHIP IN PROFIT AND PRICE POLICY

Profit and price policy is another area where more responsibility and more statesmanship on the side of management is necessary. The profit motive in business is essential. It is natural and certainly not harmful. Any man who puts his money into a business certainly has a right to a reasonable return on it. But he has a duty, also, not to place his profit above the common good of the community, or at the expense of the life of someone else. What is to determine an honest profit? That is hard to say, but there are a few negative norms that can be applied to gage the justice of profit. Profits accrued through manipulation of the market, or by a conspiracy with competitors to cheat the consumer by unfair prices, by adulterated products or deceptive advertising, by unwarranted executive salaries and and bonuses that deprive the workers of their just wages—all these and similar gimmicks in common use nowadays cannot be considered legitimate means of profitmaking. And these are certainly not just theoretical examples of business misbehavior, but harsh facts of life.

It is a fact that the United States is already dangerously far gone into recession. Every day newspapers report an ever-increasing number of basic industries that are cutting back production with resulting increases in unemployment. For instance, the steel industry was reported operating at 53 percent of capacity, and the great automotive industry at 60 percent. One-third of the major industrial centers have been designated as areas of substantial unemployment. According to official statistics, unemployment has already reached 5,200,000. We in the labor movement say unemployment has reached more than 6 million.

It has been obvious to many for a long time that the kind of inflation we are experiencing is rather unique, in the sense that prices have gone higher in a period of falling production and demand. The concentration of power in the hands of supercolossal corporations has permitted them to ignore the usual operations of supply and demand and achieve fantastic profits by gouging the buying public through round after round of excessive and even needless price increases. They raised prices without regard as to whether production was high or low, whether supply exceeded demand or the demand exceeded supply, whether costs went up or down. In fact, they raised prices at any and all times, motivated by one reason only, that is, to maximize profits at the highest possible level. At the same time a calculated attempt was made to obscure the issue and place before the public a scapegoat, organized labor, as the factor responsible for price increases.

But the truth, as it has been so clearly demonstrated in one study after another, in

UNIVERSITY OF MICHIGAN LIBRARIES

one congressional report after another, is that it is management's price policies and its greed for bigger and bigger profits that have caused sky-high prices, rather than the efforts of workers to catch up with zooming cost of living.

In the 2 years between 1954 and 1956, profits went up 36 percent for manufacturing industries, while manufacturing wages went up only 7 percent in the same period.

Industry could thus have easily absorbed the wage increase, cut prices substantially, and could still have received a high return on its investment. As Prof. Paul Craig, of Ohio University, points out in his most recent study of wages, prices and productivity for the years 1947–56, labor costs per unit of output rose 5.2 percent, while prices rose 28.2 percent. His study also showed that more than two-thirds of the price increases took place in a period when labor costs were declining. In summarizing his study, Dr. Craig wrote: "The rise in real labor costs accounts for less than one-fifth of the price rise for the decade. It is quite clear that prices are related much more closely to what the traffic will bear than to labor costs."

Saying that prices are related more closely to what the traffic will bear is a nice polite way of saying that industry charges whatever it thinks it can get away with. But how can management get away with billions of dollars worth of plant and equipment lying idle and unproductive, while so many people, because of today's inflated prices, lack the purchasing power to buy the goods already produced? How will management make good for the 6-million-member army of the unemployed denied the means of providing for themselves and their families? And how can it reconcile with the public interest the practice of fabulous bonuses to company executives, ranging from the poorest $249,800 at Chrysler to $575,000 at General Motors, paid to single individuals even in years when hundreds of thousands of workers suffered weeks and months of layoffs, layoffs that brought hardship and suffering to workers' families, and imposed heavy burdens of welfare costs on communities. Should perhaps this price and bonus policy be an example of good corporate citizenship about which we read so much and so often in business magazines?

INDUSTRIAL DEMOCRACY—ULTIMATE GOAL

I think this monopoly control which giant business has exercised, and which has affected to such a terrifying extent employment and prices, places a much greater obligation on management to provide jobs by maximum production than is ordinarily realized. Full employment wherever possible has become a necessity of present-day society. It is the common and mutual obligation weighing on the conscience of each of us. Management has the duty to cooperate with labor for as complete and correct a solution of this basic problem of full employment as possible.

Only through the awakening of the corporate conscience, with full cooperation between management and labor, and an expanded collective bargaining process, can we build a form of American industrial democracy that will be a credit to our traditional concepts of fair play and decency.

If there is one lesson I can leave with you, and I do not talk like a professor but like a trade unionist, it is that the managerial corps of America must preserve the most precious thing in our life—democracy—and especially in the domain in which they are called upon to operate—democracy in industry. By encouraging and preserving democracy, management will preserve itself.

Management will thereby make its contribution to a way of life unequalled since the dawn of history. The future can be boundless. They, together with their workers, will be able to explore the furthest reaches of nature's bounty, coupled with man's inventions and his skills. There will be no limit to what we could do jointly.

In conclusion, let me leave this message with you. Respect your workers, and recognize their rights. Whether you are in a plant with 100 or 100,000 workers, remember they help to make up our communities; therefore when they prosper, the community prospers. The community reflects the well-being of its people. We cannot preach democracy the world over, unless we practice democracy ourselves.

I thank you for this opportunity of talking to you today.

Proof Germany Financed Lenin

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. HOLTZMAN. Mr. Speaker, at the specific request of one of my constituents, Mr. Julius Epstein, of 92–40 Queens Boulevard, Rego Park, Long Island, N. Y., I am inserting, herewith, an article by Mr. Epstein, which appeared in the April issue of the National Republic:

PROOF GERMANY FINANCED LENIN

(By Julius Epstein)

It was early in 1945, when the British troops, stationed in Germany, discovered the greatest wealth of top secret German documents ever to be found. The documents found by the British in five different castles in the Harz, belonged to the archives of the German Foreign Office, the "Auswaertiges Amt" or simply "Wilhelmstrausse." They covered the period of German foreign policy from 1867 to 1920. This half century includes the Bismarck era, the Hohenzollern Reich and the first 3 years of the Weimar Republic. Never in history has one nation got access to the innermost secrets of a defeated enemy on such a scale.

The fact that the German Foreign Office documents fell into the hands of the British instead of the Soviets, who were the first to occupy Berlin, is primarily due to Dr. Johannes Ulirich, who was archivist in von Ribbentrop's Foreign Office. It was Dr. Ulirich's antinazism, imagination, and initiative which let him plan the excavation of the Foreign Office documents as early as 1943. To suggest evacuation of the documents at that time was enough to be looked at by the top Nazis as a defeatist who had obviously lost faith in a Nazi victory. Realizing that danger, Dr. Ulirich had to proceed with greatest care and secrecy. One day, the drama of the rescue of the greatest treasure ever to fall into the hands of future historians will be written with all its innumerable progress, retrogression and agonies, and its ultimate triumph. For the purpose of this article, suffice it just to notice the unprecedented deed of Dr. Ulirich who is today still legation councilor—the rank he held 20 years ago—in the Bonn Foreign Office. Whenever a German Foreign Office official recommended himself to promotion and a high decoration for an action of greatest importance, it is Dr. Johannes Ulirich who paid for his courage with 10 years in Siberian slave labor camps; he was arrested in Berlin by the Russians who knew very well that he was responsible for the rescue of the German state papers from Soviet hands.

I had the privilege to meet Dr. Ulirich in Bonn in his capacity as director of the political archives of the Foreign Office. Through his courtesy I was able to study hundreds of original documents, now being returned by the British. Before that, I had studied thousands of microfilmed German "Wilhelmstrasse" documents in the National Archives in Washington as well as originals in the British Foreign Office in London.

The following documents—most of them herewith published for the first time—deal with two historical aspects of great importance: With the role of the Austrian Foreign Minister Count Berchtold as instigator of World War I and with the financial support the Imperial German Government gave to Lenin in the years of 1917 and 1918. Without exaggeration it can be said that it is hardly thinkable that Lenin would ever have succeeded without the Kaiser's millions. While this has been known for a long time—in fact since 1917—only now it can be proved beyond the shadow of any doubt by official German Government documents. The Bolshevists from Lenin to Khrushchev have, of course, always most energentically denied what now evolves as a historical fact completely documented by the German state papers.

The following three telegrams signed by von Tschirschky, who was the German Ambassador in Vienna in 1914 and by the Legation Councilior Stollberg, prove once and for all the mala fide shown by the Austrian Government in 1914. These telegrams—published for the first time—are documentary proof that the Austrian Foreign Minister, Count Berchtold wanted war and not peace; he wanted the war against Serbia although he knew perfectly well that such a war could not have been restricted to the Austrian-Serbian frontier or even to the Balkans, but would spread into a world war.

The text of the three telegrams follows:

1

VIENNA, *July 8, 1914.*

The IMPERIAL AMBASSADOR TO THE AUSWAERTIGES AMT.:

Count Berchtold expressed the opinion that if the Kaiser (Franz Joseph I) should approve the idea of claims against Serbia, he (Berchtold) would advise his Majesty that the demands should be of such character that their acceptance would appear impossible.

Count Berchtold also remarked in strictest secrecy that according to Frh. Conrad von Hoetzendorf (the Austrian Chief of the General Staff of the Army) 16 days would be needed for the completion of the mobilization.

TSCHIRSCHKY.

2

VIENNA, *July 11, 1914.*

The IMPERIAL AMBASSADOR TO THE AUSWAERTIGES AMT.:

Count Berchtold just related the following concerning his audience with His Majesty, Emperor Franz Joseph in Ischl: The deadline for the response (to the Austrian ultimatum) should be the shortest possible, certainly not more than 48 hours. However, even such a short time would be enough for Belgrade to receive instructions from Petersburg. Should the Serbs accept all demands made of them, Berchtold would not like it. Therefore, he is still pondering what kind of demands could be made, demands which would make acceptance by the Serbs a complete impossibility.

TSCHIRSCHKY.

3

IMPERIAL GERMAN EMBASSY,
Vienna, July 17, 1914.

To the AUSWAERTIGES AMT.:

Count Berchtold let it be understood that he was hoping that Serbia would not accept the demands of Austria-Hungary, since a mere diplomatic success would only create

again a weak mood in this country, a mood which one could not use at all.

STOLLBERG.

To Bethman-Hollweg (Imperial Chancellor of the German Reich).

* * * * * *

The next eight documents prove that the Germans did not only lavishly support Lenin in his struggle for power, that they did not just want a separate peace which they got at Brest-Litovsk, in order to throw their 70 divisions from the east to the west, but that they wanted more: a real alliance, a friendship pact with the Bolshevists.

1

HEADQUARTERS OF THE ARMY,
November 29, 1917.

To the SECRETARY OF STATE (KUEHLMANN):

His Majesty (Kaiser Wilhelm II) requests your Excellency—in case we should have in the foreseeable future peace negotiations with Russia—to try if we could not conclude some kind of alliance or friendship pact. Perhaps that would be easier to achieve than we think, just as it was after the Russian-Japanese war. His Majesty has already convinced the Supreme Command of the Army of the necessity to start the operation of the Russian railroads and to put for that purpose the railroad experts of the General Staff at the disposal of the administration. The Emperor also expressed his hope that we will establish later on commercial relations with Russia.

LERSNER.

2

(The following document is by far the most important one as far as the great German financial contributions to Lenin are concerned. It is a memorandum written by Baron von Kuehlmann, German Foreign Minister in 1917. The memorandum is addressed to the Kaiser. The Kuehlmann memorandum—herewith published for the first time in the United States—is, of course, a historical source of the first order. Not only because this document is the ultimate proof for the imperial Government's assistance to Lenin, but also because it so clearly outlines the later German attitude toward the Soviets.

(The implementation of Kuehlmann's policy in regard to Russia was carried out not only by the Kaiser's government when it still was hoping to be victorious in World War I, but also by its successors after Germany's crushing defeat, the governments of the Wiemar Republic.

(The statesmen who carried out that policy of raprochement to the Soviets were then the German Chancellor Dr. Joseph Wirth, his Foreign Minister Dr. Walter Rathenau, and the creator of the Weimar Republic's Reichswehr, Gen. Hans von Seeckt. How successfully they circumvented the Treaty of Versailles is a matter of history. The same policy resulted 20 years later in the Stalin-Hitler pact. The Kuehlmann memorandum proves to the hilt that this policy of a German-Russian alliance, irrespective of the political and social regime prevailing in Russia, was a most popular one, at least since Tauroggen. Tauroggen is the Prussian town where on December 30, 1812, Count York von Wartenburg and General Clausewitz, the genius of German strategy, concluded the convention of Tauroggen, whereby Prussia declared its neutrality in the French-Russian war and the Czarist forces were allowed to occupy unopposed East Prussia. As a result of Tauroggen, Prussia declared war on Napoleon on March 17, 1813. The specter of Tauroggen may well again become a menace to the free world, if the present Chancellor of the Bonn Republic, Dr. Adenauer, should ever be defeated by his Social-Democrat opponents.)

The complete text of Kuehlmann's memorandum as well as of the German Emperor's answer read as follows:

BERLIN, *December 3, 1917.*

The disruption of the Entente and the subsequent creation of political combinations agreeable to us constitute the most important war aim of our diplomacy. Russia appeared to me to be the weakest link in the enemy's chain. The task therefore was gradually to loosen it and, when possible to remove it. This was the purpose of the subversive activity we caused to be carried out in Russia behind the front—in the first place vigorous promotion of separatist tendencies and support of the Bolsheviki. It was not until the Bolsheviki had received from us a steady flow of funds through various channels and under varying labels that they were in a position to be able to build up their main organ, Pravda, to conduct energetic propaganda and appreciably to extend the originally narrow basis of their party. The Bolsheviki have now come into power; how long they will retain power cannot yet be foreseen. They need peace in order to strengthen their own position; on the other hand it is entirely in our own interest that we should exploit the period while they are in power, which may be a short one, in order to attain, firstly, an armistice and then, if possible, peace. The conclusion of a separate peace would mean the achievement of the desired war aim, namely, a breach between Russia and her allies. The amount of tension necessarily caused by such a breach would determine the degree of Russia's dependence on Germany and her future relations with us. Once cast out and cast off by her former allies, abandoned financially, Russia will be forced to seek our support. We shall be able to provide help for Russia in various ways; firstly, in the rehabilitation of the railroads (I have in mind a German-Russian commission—under our control—which would undertake the rational and coordinated exploitation of the railroad lines so as to insure speedy resumption of freight movement) then the provision of a substantial loan, which Russia requires to maintain her state machine. This could take the form of an advance on the security of grain, raw materials, etc., etc., to be provided by Russia and shipped under the control of the abovementioned commission. Aid on such a basis—the scope to be increased as and when necessary—would in my opinion bring about a growing rapprochement between the two countries.

Austria-Hungary will regard the rapprochement with distrust and not without apprehension. I would interpret the excessive eagerness of Count Czernin to come to terms with the Russians as a desire to forestall us and to prevent Germany and Russia arriving at an intimate relationship inconvenient to the Danube monarchy. There is no need for us to compete for Russia's good will. We are strong enough to wait with equanimity; we are in a far better position than Austria-Hungary to offer Russia what she needs for the reconstruction of her State. I view future developments in the east with confidence but I think it expedient for the time being to maintain a certain reserve in our attitude to the Austro-Hungarian Government in all matters including the Polish question which concern both monarchies so as to preserve a free hand for all eventualities.

The above-mentioned considerations lie, I venture to believe, within the framework of the directives given me by His Majesty. I request you to report to His Majesty accordingly and to transmit to me by telegram the all-highest instructions.

St. S. (STATE SECRETARY).
K. (KUEHLMANN).

3

Emperor Wilhelm's response to Kuehlmann's memorandum arrived the very next day. It was signed by Baron Van Gruenau, the liaison officer at General Headquarters. It is the following document (A. S. 4607):

GENERAL HEADQUARTERS,
December 4, 1917.

THE IMPERIAL LEGATION COUNCILLOR AT THE FOREIGN OFFICE:

(Decypher)

With reference to your telegram No. 1925 A. S. 4486. His Majesty the Kaiser has expressed his agreement with your Excellency's exposé concerning a possible rapprochement with Russia.

GRUNEAU.

4

Moscow, *June 3, 1918.*

THE IMPERIAL AMBASSADOR TO THE AUSWAERTIGES AMT.:

In view of strong competition by the Entente about 3 million marks per month necessary. In case of perhaps unavoidable change of our political line, we'll have to reckon with an increased requirement.

MIRBACH.

(Count Mirbach was at that time German ambassador in Moscow; he was later assassinated.)

5

June 5, 1918: Notes for the Secretary of State's conference with Count Roedern.

During the latest attempts of the Entente in Russia to persuade the Soviet of the workers' delegates to adopt the demands of the Entente, demands which would certainly result in Russia's pro-Entente orientation, Count Mirbach was compelled to spend large amounts in order to prevent such resolutions.

He succeeded for the time being in preventing the Bolsheviki from switching to the side of the Entente. However, every day may well bring new surprises.

As Count Mirbach has reported, he now needs each month 3 million marks for expenses in that connection. But it must be anticipated that in the case of any change the double amount would be necessary.

6

Plan for the support of the Russian (Bolshevik) press.

Moscow, *June 17, 1918.*

To the Auswaertiges Amt.:

The whole operation (the financial support of the Russian Bolshevist press) can be carried out with a capital of 200 million marks.

7

THE SECRETARY OF THE TREASURY,
Berlin, June 17, 1918.

Under chapter 6, section II, concerning the expenses of the extraordinary budget, 40 million marks are being appropriated.

JAAN.

8

The Imperial Ambassador in Moscow to the Auswaertiges Amt, August 2, 1918:

In accordance with the secret degree 205 of June 29.

I beg to pay 6 million marks (3 for July and 3 for August) to the Reichsbank which should empower Mr. Deluerant in Petersburg to deposit the countervalue at my disposal on the banking accounts of the Consulates General in Petersburg and Moscow. Mr. Deleurant has been informed.

HELFFERICH.

(Mr. Helfferich was the successor to Count Mirbach as German Ambassador in Moscow.)

Picasso's Latest

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. DORN of South Carolina. Mr. Speaker, it is utterly amazing, fantastic,

UNIVERSITY OF MICHIGAN LIBRARIES

and unbelievable when we see what some people call art. The Washington Evening Star in the following editorial expresses concern over the painting by Picasso on the walls of UNESCO headquarters in Paris. Since no one seems to know what Picasso is trying to portray, maybe it is his political philosophy and political affiliations which, too, is difficult to understand. The Congress should examine more closely some of the activities of international organizations before supporting them with American money:

PICASSO'S LATEST

[From the Washington Evening Star of May 7, 1958]

Although the avant garde may be outraged, there will be a vast and overwhelming amount of agreement with Sir Charles Wheeler's blunt criticism of the big fresco Pablo Picasso has painted for the Paris headquarters of the United Nations Educational, Scientific, and Cultural Organization. Sir Charles, a noted sculptor and head of the British Royal Academy of Arts, has looked closely at photographs of the work, and he has concluded that it amounts to "nonsense—800 square feet of absurdity." This may seem to be a harsh commentary on so massive an effort, but we ourselves have seen some news pictures of the thing, and we must say that it baffles and repels us. According to those who profess to understand it, it is a splendid composition made up of a butterfly skeleton, a woman in white, and a few other unrecognizable figures, and it depicts the dark forces of evil being vanquished by the forces of light. As for Picasso himself, he is reported to have said that it actually has no meaning that can be expressed in words. That's certainly unclear enough. The most unintelligible thing about this business, however, is why UNESCO couldn't have thought up something better to spend its money on.

Polish Constitution Day

SPEECH

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mrs. DWYER. Mr. Speaker, on Sunday, May 4, 1958, the Federation of Polish Organizations, of Elizabeth, N. J., sponsored and arranged a most impressive celebration of Polish Constitution Day.

More than 400 people attended the interesting and colorful affair at Polish Falcons Hall in Elizabeth. I believe that a detailed summary of the commemoration would be of interest to many of our colleagues.

The color guard for the program included: The Legion of Polish-American Veterans, Post No. 91, and the Ladies' Auxiliary; Polish Army Veterans, Post No. 57, and the Ladies' Auxiliary; Polish-American Army Veterans Club of Joseph Pilsudski; and the Polish Combatants, Circle No. 6, of Elizabeth.

Commissioner of Health Jacob W. Krowicki, president of the Elizabeth Federation of Polish Organizations, delivered the opening address.

Master of ceremonies for the day was Mr. Stanley Pelkowski, chairman of the Polish Constitution Day Committee.

Mrs. Amilia Wozniak sang the national anthems of Poland and the United States.

The Reverend John Pietrzykowski delivered the invocation, substituting for the Reverend Joseph Smolen, pastor of St. Adalbert's Church and chaplain of the federation.

Members of the Polish Immigration Club, under the direction of Mr. Stanley Nimczyk, president, performed Post-War Portrayal, depicting Miss Theresa Pluta as Poland with chains on her hands and Adam Jodlowski at her feet as a fallen soldier.

The Honorable Steven J. Bercik, mayor of Elizabeth, delivered an address.

Several Polish songs were sung by St. Cecilia's Choir of St. Adalbert's Church under the direction of Prof. Albert Wozniak.

A recitation, entitled "Jankiel's Concert," was given by members of the Polish Youth Circle, and the champagne music of Mr. Mikolajczak's orchestra was enjoyed.

Attorney Leo B. Wojcik, past president of the federation, also addressed the gathering.

Garland No. 408, of St. Elizabeth's Society, Group No. 793, Polish Women's Alliance, presented Polish dances entitled "Polka Belongs to Me" and "The Mountaineers," under the direction of Mrs. Antoinette Bialkowska. Miss Michelle Zielasko danced a ballet.

Mr. Walter Zachariasiewicz, executive secretary of the Polish Immigration Committee of New York, and vice president of the Polonia Congress, address the celebration.

Boy and Girl Scouts recited The Marriage of the Flags, American and Polish.

The benediction was offered by the Reverend Joseph Sapeta, of St. Hedwig's Church. The closing was marked by the singing of the Polish National Hymn, Nie Rzucim Ziemi, by the entire group.

In addition to Mr. Pelkowski, chairman of the Constitution Day Committee, other members included: Mrs. Mary Machos, vice chairman; Mrs. Marion Wedzilowicz, secretary; and Mr. Jacob Krowicki, Mr. Karl Lenard, Mr. Adam Zbikowski, Mr. Bronislaus Slowinski, Mr. Thaddeus Trzcinski, Mr. Stanley Niemczyk, Mr. Walter Kaczmarski, Mr. Joseph Hoynowski, Mr. Albert Sieratowicz, Mr. Thaddeus Gora, Mr. Victor Davidowicz, Attorney John T. Soja, Mrs. Jean Krok, Mrs. Stella Zajack, Mrs. Grace Sniezek, Mrs. Caroline Kielbasa, Mrs. Antoinette Bialkowska, Mrs. Helen Pomykalo, Mrs. Kiczek, Mrs. Clara Jablonska, Mrs. Ludmila Raczynska, and Mrs. Helen Dudek.

Honorary chairmen of the committee were: Rev. Joseph Smolen, pastor of St. Adalbert's Church; Rev. Joseph Amlicki, pastor of St. Hedwig's Church; and Rev. Edward Kozlowski, pastor of St. Theresa's Church.

The text of the address which I was privileged to give follows:

REMARKS OF REPRESENTATIVE FLORENCE P. DWYER, REPUBLICAN, SIXTH DISTRICT OF NEW JERSEY, AT THE ANNUAL OBSERVANCE BY THE FEDERATION OF POLISH ORGANIZATIONS OF POLISH CONSTITUTION DAY AT THE POLISH FALCON HALL, ELIZABETH, N. J., MAY 4

Thank you very much for inviting me to join with all of you today to celebrate an occasion which means a great deal in the never-ending history of man's fight for freedom.

Polish Constitution Day marks a high point in the life of one great nation. Only a few short years after an infant United States was born, thousands of miles away, the people of Poland—several of whom played leading roles in securing American freedom—succeeded in establishing their own constitutional system which guaranteed their rights and secured their liberties as free people.

Since that time, many more men and women and children have come to this new land, bringing with them the memories and traditions of a freedom that was worth fighting for, and by their devotion to that freedom adding new strength and vigor to the freedom they searched for here.

It has long been recognized that the American people are a composite, so to speak, of all the nations of the world—probably to a greater degree than any other people in history.

An average American citizen in 1958 may well have ancestors whose birthplaces number 2 or 3 or even more different countries, principally in Europe but also throughout the rest of the world. Beyond that, however, we have all been deeply influenced in our beliefs and our attitudes by the fact that we have as neighbors and friends people whose roots go back to many nations and participate in many traditions.

The dynamic quality of American life, the ever-opening opportunity and the growing fronties have often been credited to this wonderfully varied and diverse national inheritance of ours.

We who live in Elizabeth and in Union County have known at first hand the truth of this fact. We have watched and been a part of an impressive period of growth and development just in the last 10 years. New opportunities have opened up, new jobs created, new public and private facilities have been provided which have helped make our lives richer and better in many ways.

The responsibility for this progress must go to the people who live here. And no city in America can claim a greater or more varied population of the sons and daughters of the foreign-born than Elizabeth. We number among our people many from Italy and Lithuania, from Germany and Greece, Ireland and England, from too many countries to mention here.

But no nation has contributed more to Elizabeth and to its progress and prosperity and to its fine civic spirit than has that great Eastern European nation of Poland—whose Constitution Day we celebrate here.

Indeed, among our city's many claims to fame is the fact that more people of Polish ancestry live among us than in any other city of comparable size in the United States.

All we need do is look around us to appreciate what Poland, through her sons and daughters, has meant to the city of Elizabeth. Our politics, our schools, our business, industrial, and sports activities, and our religious and cultural life have all been enriched and strengthened because so many people from that great country chose to make their new homes here.

For me, who have been privileged to represent in the Congress of the United States this city and this county and all its people, the experience has been greatly rewarding. I have learned to appreciate more than ever the contributions you have made, your sense

of personal and civic responsibility, your loyalty and patriotism, your concern for your neighbor and his welfare.

I am deeply grateful for the opportunity to join you here today and to add my voice to the many others proclaiming once again the greatness of Poland and the heritage of freedom and liberty which still struggles for life in these difficult days.

It has been said that the history of Poland as a nation has been dominated by its geography. It would be more accurate, I believe, to recognize that the truly dominant factor in Polish history has been the spirit of its people.

Nevertheless, her geographical location has greatly influenced the events which themselves have shaped the map of Poland and of all Eastern Europe down through the centuries.

Early in history, the Polish people accepted Christianity from Rome. With it, they developed in Eastern Europe a deep and prevading western culture. As the stronghold in the East of western civilization, Poland withstood for centuries the onslaught of barbaric hordes from the East. Tested under fire almost continuously, Poland grew strong and by the 16th century was the largest state in all Europe.

Throughout the succeeding centuries, the influence of Poland spread. Her advanced political development, her impressive cultural achievements, and the aristocratic sense of good taste that has come to be associated with all her people, whether princes or peasants, came to influence deeply the developing standards of Europe.

During these same centuries, however, Poland's neighbors were growing in size and in strength—and with their new strength came aggressiveness against Poland. Prussia, the militaristic heart of a future Germany, bordered on the west, Austria pressed in from the south, and the giant Russia loomed up in the east.

Russia in particular was the mortal enemy of Polish freedom. With religious differences embittering the many other differences, Russia constantly violated Polish frontiers and invaded Polish territory. On all sides, the story was repeated and Poland found herself pressed far beyond her strength. Thus, the tragic story of Poland's partition was begun.

Caught within the huge jaws of her aggressive neighbors, Poland was gradually removed off the map of Europe. For more than a hundred years after 1815, Poland was not to appear in European history as a political or geographical unit.

But Poland was not dead. In 1791, her people's spirit of freedom had brought forth a great constitution. In many respects like the Constitution of the United States, the Polish Constitution was a living document of freedom and democracy. Its strong idealism weathered the utmost misfortunes of the Polish people and its memory helped sustain the Polish spirit.

So strong was that spirit of freedom—for which its people everywhere are justly famed—that Poland rose again as an independent nation after World War I.

Tragically, Poland's independence was doomed to be short lived. The ruthless dictators of Communist Russia and Nazi Germany overran that proud nation during World War II. And since that time, Russian armies have imposed upon the Polish people a form of government repugnant to all their traditions.

The spirit of Polish resistance has not and will not die. We have watched with awesome pride the raw courage of the Poznan riots, and we have applauded as Poles have won, bit by painful bit, each new concession from their Moscow-imposed and Communist-directed government.

The courage and fortitude and love of freedom displayed by the Polish people under the most difficult conditions deserves the encouragement and support of the American people. Our own Government, I am sure, will do everything possible to help strengthen those forces in Poland now at work toward further liberalization and ultimate freedom. These efforts deserve all our patient, understanding support.

Meanwhile, however, Poland continues to influence the rest of the world—through her culture, her traditions of freedom, and most of all through the people she has sent into every corner of the world. They are a gallant and courageous people, a gifted people whose intellectual, artistic, political, and cultural contributions have been honored everywhere and which continue to inspire others by a universal beauty and genius.

Clearly, the despots and dictators of the world will never dominate the Polish soul.

Centennial of Temple B'Rith Sholom

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

Wednesday, May 7, 1958

Mr. MACK of Illinois. Mr. Speaker, the congregation of Temple B'rith Sholom in Springfield, Ill., this year is celebrating the 100th anniversary of its founding. In tribute to the temple's valuable spiritural and cultural work down through the years, I include here a history of this pioneer Jewish congregation of the Midwest. This history was abridged and compiled by Mrs. Clyde Meiers and Mrs. Joseph Hammerslough, Sr.:

TEMPLE B'RITH SHOLOM, 1858–1958

It is the year 1858. The place, Springfield, Ill.—just 18 years after Springfield was chartered as a city, and 40 years after Illinois was admitted to the Union. The coming of Jewish settlers had begun at a somewhat earlier date, and arriving in the United States, made their way to Springfield and nearby surrounding towns, a family at a time, from their early homes in the Old World. Most of them came from Germany. They came to the New World seeking the freedom which it offered.

With only 19 members, the first Jewish congregation was organized under the name of the Springfield Hebrew Congregation on Sunday, April 2, 1858. The young congregation could not afford a house of worship of its own, and therefore held services every Sabbath morning in a room on the third floor of a building at 216 South Sixth Street, later moving to somewhat better quarters in what was known as Hart's Hall at 221 South Fifth Street. Services were conducted in accordance with Minhag Ashkenaz (German ritual), and were semi-orthodox. Since the congregation at that time was not in good financial circumstances to engage a rabbi, one of its members, a Mr. Schaffner read the services without compensation, until 1866 when the congregation engaged as its rabbi, Mr. Bernhard Deutsch, newly arrived from Bohemia. The first president was Mr. Julius Hammerslough, a friend of Abraham Lincoln, and the secretary was Mr. David Goslin.

In this same year, 1866, a plot of ground was purchased in Oak Ridge Cemetery as a burial place for members of the congregation, and two additions were procured by 1884.

A charter for the newly organized congregation had been sought, but was not granted until February 25, 1867. The incorporators were: Louis Benjamin, David Gottlieb, Silas Leon, Morris Myers, William Myers, Benjamin Nusbaum, Samuel Rosenwald, Elias Salzenstein, Daniel Seligman, and Solomon Stern.

As the years passed there was a growing desire for permanent quarters. The main obstacle was the division of the congregation over one of Jewry's oldest question, the mode of worship. Many of the immigrants had brought reform ideas with them, as here there did not exist the old framework of strong community traditions and an established way of life. The spirit of the New World, too, was one of change, freedom, and pioneering. About this time, Mr. Gustave Ensel of St. Louis came to Springfield, and through his efforts the members of the congregation were persuaded to change their form of worship to Reform Judaism. He also started the first Sunday school with a membership of 12 children.

It is now 1874, and a plot of ground for a temple at 426 North Fifth Street "one of the finest streets in the city" had been purchased. The ladies of the congregation accumulated $450 for a building fund, and the temple is underway. The erection of the modest brick structure went along rapidly and was completed at a cost of $7,500, a stupendous sum for those days, and for so small a membership which now numbered 30 persons. On September 10, 1876, just before the high holy days, the first Jewish house of worship in Springfield was dedicated, and at the same time the decision on the mode of worship was made. The die was cast when the congregation became affiliated with the Union of American Hebrew Congregations and became dedicated to Reform Judaism. Rabbi Isaac Mayer Wise, the founder of American Reform Judaism headed the Union, and was the inspiration to congregations all over the country during these days of change. The union was 3 years old, having been organized in 1873.

The North Fifth Street Temple served its congregation for 40 years. During these times, there is litle of factual record available, but we do know that the congregation followed the trend of development of reform groups everywhere. We learn that in the early years after the dedication of the old temple, services were conducted in German and Hebrew every other Sabbath as a concession to those who were not yet conversant with English. The first prayerbooks to be used were one written and compiled by Dr. Jastrow with English translation, and one in the German language, written by Dr. Szold. Later the more well-known Einhorn prayerbook became the established form for worship, and many years later was replaced by the union prayerbook.

Confirmation and Bar Mitzvah services were conducted, and an organ and a mixed choir were used. The men and women worshipped together. The Religious School became an even more important part of the congregation's life and interest.

It is interesting to note here that the President, Sigmund Benjamin, who was elected to that office at the time of the dedication of the first temple served in that capacity for 41 years, that the secretary, Simon Hammerslough, served for 25 years, and the treasurer, B. A. Lange, served for 52 years, and at the time of his retirement about 1928 was elected honorary president of the congregation for life.

During these early years, the women of the congregation played an important role in Jewish life. There was an active group who called themselves the Ladies Hebrew Benevolent Society. They gave assistance to the newcomers to Springfield, and helped them establish themselves in the community. As well, they worked to aid the temple, and raised the funds to purchase the first

UNIVERSITY OF MICHIGAN LIBRARIES

organ. The Mite Society was an outgrowth of the earlier organization, and there, too, the women banded together to aid the congregation by providing the social hub for temple life. There were a variety of entertainments such as dances, dinners, picnics, euchre parties all held in the temple vestry rooms. There was no kitchen in the old temple so that everything had to be brought in ready to serve.

The membership grew steadily from 30 families in 1876 to more than twice its original number, and about the year 1914 or 1915 it became apparent that the temple and its facilities had become inadequate. Plans were made and the building of the new temple began in 1916. The cornerstone was laid with an appropriate ceremony on May 18, 1916, and many of those who were founders of the congregation were present. For 40 years, the congregation had been known as Brith Sholom Congregation though its charter was in the name of Springfield Hebrew Congregation. On January 27, 1916 a new charter was procured and the change of name became official.

The building on the present site, Fourth and Scarritt Streets, was completed in 1917, and the temple was dedicated September 9, 1917. The newspaper account of this ceremony lists an impressive program which included the participation of five Rabbis, and again many of the founders of the congregation. It is interesting to note that at this dedication, children were not permitted to attend. What a contrast to today's thinking.

At this same time, the members of the Mite Society became interested in affiliating with the National Federation of Temple Sisterhoods, and in 1915 became a part of the vast group of Jewish women all over the country who are dedicated to the service of their temples. Officers of the sisterhood at the time of its organization were: President, Mrs. Louis Myers; vice president, Mrs. W. L. Ensel; second vice president, Mrs. D. Seligman; secretary, Mrs. Michael Eckstein; and treasurer, Mrs. L. J. Samuels. The sisterhood has now certainly earned the name "right arm of the temple." Its membership numbering 162 is an integral part of the temple, and its energy and enthusiasm as a cultural and financial support is immeasurable.

By 1922, the membership had grown to 92 families with 77 children in the religious school. The system, much as it is today, was instituted and rather than the 4 classes and 4 classrooms used for so many years, classes numbered 7 plus a kindergarten and confirmation class.

In 1928, the last note on the mortgage of the temple was paid, and in 1930 negotiations were begun to buy the property south of the temple to be used as a center and meeting place for the group of young people who had organized just 2 years earlier.

The years following the financial crisis of 1929 were difficult ones for B'rith Sholom congregation. The minutes of the board of trustees meetings reflect the serious problems of finance. The membership was reduced to 70 members, but the religious school increased to 93 children. Many members, though devoted to the temple, were forced to resign, and others were greatly in arrears. But, as the economic conditions of the country improved, so did the affairs of the congregation. As soon as was practical, repairs and remodeling were begun on the center house, which then served for many years as a social hall.

About 1945, plans were begun to establish a building fund for the purpose of increasing the facilities of the congregation. Considerable moneys were subscribed and pledged at that time, and put into trust for use at a later date.

During World War II, the members of the congregation joined in an all-out drive to help in the war effort. Many members served in the Armed Forces. Several gave their lives for their country. Those at home worked actively in the USO, sent supplies to Jewish chaplains serving overseas, and worked voluntarily in war industry. Following the end of the war Springfield Jewry was honored for having sent more than 55,000 pounds of food and clothing to the survivors of Hitler's persecution in Europe.

World War II had interrupted any hope for immediate building, and the Center House was converted into a religious school building, which in a matter of a very few years was overcrowded. In 1954 plans were made to conduct the religious school in a public school building, and to replace the small Center House building with adequate facilities for all temple activities. The membership today numbers 242 families and 204 children in the religious school. On November 24, 1957, the cornerstone of the Memorial Building was dedicated with appropriate ceremonies. Placed in the cornerstone were the day's newspaper, a Union Prayerbook, a brief history of the congregation with a description of its various affiliated activities, and membership lists of all of the participating organizations of the temple.

In addition to the sisterhood, a strong and active men's club is in the process of being formed under the able guidance of our much beloved Rabbi Meyer M. Abramowitz who came to our congregation only in November 1957. The young people of the congregation now have two groups, the Temple Youth, a high school group, and the Tabs who are seventh- and eighth-grade children. These groups play an important part in the development of leadership for the future, and they are of prime interest and importance to the congregation.

During the flow of years, the roots of the congregation have gone ever deeper into the community. A hundred years in the life of a congregation merely marks the beginning and is a prelude, through the grace of God, to a larger and more glorious history to come. May we serve our God in such a way that our temple will continue to be a center of spiritual power for its membership, and a source of blessing in the community. This is not a conclusion of the story of our congregation. Passing years and changing times bring new anniversaries, new leaders and new ideas. As the spiritual and cultural leadership of our temple continues into the next century, we must be strong in the faith and hope that the building of a "house for the name of the Lord, the God of Israel" will never cease.

Good News From the Midwest

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1958

Mr. CURTIS of Missouri. Mr. Speaker, there has come to my attention an excellent editorial written by Roy A. Roberts, president of the Kansas City Star Co. This editorial is entitled "This Is the Second Ad I Ever Wrote." I commend this advertisement to the attention of every thoughtful citizen and especially to every Member of the Congress.

One phase of this advertisement covers the tremendously improved agricultural situation in the Midwest.

In the current legislative discussions regarding agricultural policy there has been a good deal of smokescreen spreading and misstatements of the factual situation. It should be noted that the agricultural price and income situation has improved greatly in recent months.

The April 15 index of prices received by farmers was 266 percent of the 1910–14 average, an increase of 14 points (5 percent) in 2 months. Nearly all commodities have joined in the rise but most important were the continued higher prices for meat animals. Higher prices for potatoes, fruits, and eggs also contributed substantially to the increase. The April index was 10 percent above a year earlier and was equal to or higher than any month since January of 1953. It is just about the same as the January 1953 level.

With prices received by farmers running substantially higher than a year ago, it now seems likely that a substantial gain in farm income will occur this year. Cash receipts in the first quarter of 1958 totaled close to 6 percent more than in the same quarter of 1957. Although part of this increase reflects delayed marketings last fall and the accumulations of crop inventories at the end of last year, the higher prices are being reflected in higher farm income.

The Department of Agriculture preliminary estimate of realized net income in the first quarter of 1958 is about 13 billion dollars compared with 11.7 billion in the same quarter of 1957. The data follow:

Quarterly rates	1st quarter	
	1957	1958
Cash receipts from farm marketings	30.3	32.0
Nonmoney income and Government payments	4.2	4.5
Realized gross farm income	34.5	36.5
Farm production expenses	22.8	23.5
Farmers' realized net income	11.7	13.0

Prices received by farmers in the first quarter of 1958 averaged more than 7 percent above the first quarter of 1957, in mid-April they were at the highest level in almost 5 years.

These figures show that as the policies of this administration could be made effective, farm prices have recovered. During the last 18 months, the price policies advocated by this administration have had limited application and farm prices have gone up. Today we are enjoying substantially higher prices. This is gratifying.

Sales at retail food stores are showing substantial increases over a year earlier—8 percent in February. While retail food prices are up about 5 percent; prices received by farmers in mid-April were 10 percent higher than a year earlier.

To date the demand for agricultural products has not been significantly affected by the current business recession. The favorable figures shown above makes extremely questionable the statement made by some people that the recession is "farm fed and farm led."

As a matter of fact, the agricultural segment has been an outstanding source of strength in the current business recession.

This administration's primary task is to further improve farm income on a sound basis, not with short-term panaceas which disregard sound economics and basic facts. The facts of recent history speak for themselves.

Under unanimous consent, I include the above-mentioned advertisement in the CONGRESSIONAL RECORD, as follows:

THIS IS THE SECOND AD I EVER WROTE

(By Roy A. Roberts, president, the Kansas City Star Co.)

This is my second attempt at ad writing. My first effort was in 1951 following the historic flood that damaged a section of Kansas City's industrial area. The purpose of that ad was to assure the Nation that adversities were not new to Kansas City and that it would triumph over this one as it had over those of the past.

The heading on that first ad was "You Can't Lick Kansas City." How superbly Kansas City has fulfilled that challenge is well known to everybody.

Now, 7 years later, I am writing my second advertisement. This one, too, is addressed to the Nation.

If you admit that the first requisite of our national well-being is a prosperous agriculture, then it is a matter of vital importance to everybody of whatever rank or station that the farming industry in the heart of America is now enjoying one of the greatest revivals in its history.

To regard this as simply a local incident is to miss its true significance. Rather, it is a resurgence of economic health of such far-reaching effect that it may well be the national turning point from fear and hesitation to a program of confidence and constructive accomplishment.

THE IMPORTANCE OF AGRICULTURAL PROSPERITY

The entire Midwest and all our great range territory have made an amazing recovery. From drought and every form of disaster, including low farm prices, the pendulum has swung spectacularly. The great Midwest is green again. Pastures and ranges are filling with cattle. Hog prices have soared. Our whole economy is definitely on the upgrade.

This comeback of the farm is cushioning the industrial recession. Our people have faith and confidence. They are going ahead.

WHAT'S HAPPENED ON THE FARM

It may be premature to say our Midwestern and Southwestern farmers and ranchers are out of the woods. We still have a farm problem. We'll probably have one for years. But right now our farmers are doing splendidly and everyone out here knows it—everyone, apparently, except the politicians.

It's an amazing story. After a drought cycle of years, millions of once parched acres are lush and verdant. Ponds are full; creeks are running; the all important subsoil is saturated. Great crops are in prospect. Livestock prices are climbing toward the peaks of war years.

You know what a wretched, cold, rainy, snowy, blizzardy winter we had. Well, it was uncomfortable, but we needed the moisture, and the rains have continued.

FARM INCOME UP IN KANSAS

Farm income in Kansas in 1957 was 12 percent greater than in 1956. Income per farm was highest in 5 years. Inventory of livestock and poultry on the farms in Kansas alone was $333,497,000 in January 1957. On January 1, 1958, that same inventory stood at $530 million, an increase of 59 percent. It's still going up.

Seldom have we had such wheat prospects. In Oklahoma and Kansas alone the past winter, pastured wheat returned as much as $30 an acre, and now the grain crop is coming through in great shape. The Government estimates Kansas alone will produce more than 200 million bushels of wheat.

A year ago we wondered if much of the range country wasn't permanently drought damaged. Even Ike was out here on a drought tour. Somehow, someway, ranchmen and cattlemen, rugged individualists all, tightened their belts and hung on. Now their herds are being restored. With $30 cattle and $20 hogs, they're making money again.

All this means farm buying is rapidly on the increase. Merchants and farm machinery dealers in our smaller towns are enjoying big gains in sales. This channels money into Kansas City, trade capital of the Midwest.

TRACTOR AND IMPLEMENT SALES BOOMING

Farm implement and farm tractor sales are highest in years. Nearly all major companies reported their best March and April in a long time. Kansas City, home of big branch houses and distributing agents, as well as one of the largest combine factories, is experiencing the best farm business in years. As one workman in an implement house remarked to his boss: "I hope we have a recession like this every year."

That's what I mean when I say the farm comeback is cushioning the readjustment or depression.

THE INDUSTRIAL PICTURE BRIGHTENS

Of course, Kansas City and its market have felt the recession, as has the rest of the country. But Kansas City never reached the heights of the boom and it won't reach the recession depths, either. Closing of 5 or 6 big war plants here left us with a labor surplus. We were beginning to absorb it in peacetime industrial expansion when the current readjustment set in. We have major assembly plants for General Motors; a large, separate plant for Chevrolet; a big Fisher body works; and one of the larger Ford assembly plants outside Detroit. These plants have had to cut back, along with the rest of the motor industry. The start of farm buying should see quicker sales improvement here than elsewhere.

Are you thinking of expansion? Don't laugh; we're serious. This country isn't through growing. Kansas City's pivotal position, marvelous distribution facilities and surplus of fine, skilled workers make it one of the most inviting market situations in the country.

BIG KANSAS CITY GAINS

Kansas City has just received a national award from Look magazine for achievement in coordinating Federal, State, and local government and private capital efforts in a great urban redevelopment program. The job done here has been widely cited as a model for other cities in solving the problem of declining downtown districts and in converting slum and blighted areas to modern uses. But, despite the recession, Kansas City is not slowing up or stopping, because the job isn't finished. We're steadily moving ahead.

Within the past 10 days a new $17 million project was announced for Kansas City. Included are apartment, motel, and parking project buildings on old Quality Hill, where the Lewis and Clark expedition started for the Northwest. Ground will be broken this month for the first units. These projects are financed by private capital; and under special redevelopment provisions of State, city, and Federal laws.

On the north side, in the heart of the redevelopment area, a big structure to house the long distance lines of A. T. & T. is rising. Privately financed, it will cost more than $5 million.

Two blocks north, construction of a million dollar downtown motel will get underway by early summer.

EXTENSIVE URBAN RENEWAL

On the Kansas side, another big gateway urban renewal project is emerging from planning to construction stage. This project of 15 square blocks, costing more than $7 million, has been approved and financed.

In Kansas City, Mo., construction will begin on a $5 million public library this very month.

On the Kansas City south side, a huge new junior high school is set for summer construction. Our educational facilities are keeping pace with the city's growing needs.

The seventh annual Greater Kansas City Science Fair attracted 1,855 student exhibits and an attendance of 38,906, both new records. Kansas City is keenly aware of the tremendous implications of atomic energy, for peacetime use as well as for national safety in war. Our young people in astonishing numbers are preparing to participate in science's search for a better future.

Montgomery Ward & Co. has just announced a multi-million-dollar warehouse and distributing center serving six Midwestern States. Construction is to begin this month. Planned to serve more than 135 retail and catalog stores, it will be 1 of 4 such Montgomery Ward establishments over the Nation. It encompasses nearly a half-million square feet of floor space.

In the 6-county Kansas City area, permits for home building are up more than 10 percent over last year. Within recent weeks, subdivisions totaling more than 1,200 units were announced and are scheduled for development starting in early summer.

MILLIONS FOR NEW TRAFFICWAYS

As part of the big accelerated road program in the metropolitan area, trafficway projects costing many millions are in full swing in Kansas City, Mo., Johnson and Wyandotte Counties. Between Johnson and Wyandotte Counties on the Kansas side, two major projects have been started. One, a toll road—the 18th Street Expressway, will carry the teeming population of Johnson County to the recently completed Kansas Turnpike. This expressway will cost $19 million. A multimillion dollar freeway link to the Kansas City expressway system also has been started.

In Kansas City, Mo., demolition is in progress for a great southeast trafficway, to link the downtown with outstate Missouri. This project, costing more than $39 million, is part of a 5-year, $48½ million expressway program which the Missouri Highway Commission approved last year.

NO HALT IN INDUSTRIAL EXPANSION

In eastern Jackson County, the Missouri Public Service Co. is erecting a new, multimillion dollar steam powerplant to serve the rapidly expanding population in that area.

Over the whole Greater Kansas City area, scores of smaller commercial and industrial projects, ranging in cost from $100,000 to more than $1 million, are proceeding. Several huge new shopping centers have passed the planning stage. For instance, ground was broken just this week for a new insurance office building costing more than a million dollars.

TWA, with home offices in Kansas City, and some of the railroads here have started or completed developments which enhance Kansas City's status as a travel and distribution hub. We have a new airport building designed for the jet age.

We in Kansas City look to the future with confidence. Timidity, retrenchment, sitting tight, have no place in our philosophy. That sort of attitude would cost more later.

THE STAR EXPANDS TOO

To keep abreast of the tremendous business expansion in Kansas City, the Star has completely modernized its plant at a cost of millions. New presses have been installed and new machinery added in every mechanical department. We are just completing a big addition to our newsprint warehouse across the street from our main building, bringing storage capacity to nearly 10,000

UNIVERSITY OF MICHIGAN LIBRARIES

tons, an increase of almost 100 percent. The Star has faith in its country, its community, and the great Midwest of which Kansas City is the trade and finance capital and, above all, in its own product—Star advertising.

We have turned the corner in local advertising lineage, with a nice gain in April this year compared with April 1957. In classified, we virtually broken even, while in national we took the same shellacking other metropolitan papers are suffering. This showing reflects the go-ahead spirit of advertisers who are here on the ground. It also indicates that the good news of Midwest revival has not percolated more distant areas.

A MARKET OF RICH PROMISE

Savings in Kansas City saving and loan companies and commercial banks have jumped nearly $20 million since the first of the year.

This money is waiting to be tapped by manufacturers and companies with products that appeal. The Star offers an efficient, economical sales tool to do it.

We are used to adversity in the Midwest. In fact, we thrive on it—and learn from it. Our folks don't panic. There's plenty of rugged, pioneering, frontier spirit still in us.

Business is good in Kansas City—and getting better. That's the purpose of this ad—to tell national advertisers they're missing a bet if they overlook the Kansas City market.

The Truth About Russia's Weakness

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following article from the April 11, 1958, edition of U. S. News & World Report. This article was recommended to me by our former colleague, Hon. John E. Rankin, who distinguished himself in this body as a relentless and effective defender of Americanism and an unyielding foe of communism and subversion:

THE TRUTH ABOUT RUSSIA'S WEAKNESS

What is the truth about today's Soviet Russia? Is the Soviet Union a colossus among nations, inhabited by men 10 feet high? Or is Soviet Russia actually an ailing giant, living in fear?

The Soviet Union launched the first earth satellite, and immediately much of the world thought it saw a new leader in science, thought and industry. Now, a business setback in United States has intensified the propaganda picture of a Soviet Russia that holds all the answers.

Yet, look at the facts, and you find another picture of Soviet Russia. It is a picture of a troubled nation, not as secure in her position or as confident of the future as Communist propaganda would suggest.

GOVERNMENT OF FEAR

The world, for example, is impressed by the fact that Soviet science and industry apparently produced the first intercontinental ballistic missile, with a hydrogen warhead—a feat not yet matched by United States.

What is not referred to is this added fact:

The government that possesses this newest weapon lives in fear of the scientists and workers who built it. Secret police are maintained to spy upon those workers. The right to strike, or even freely to change jobs, is denied them. No worker or individual in the Soviet Union today can read anything—or hear anything—not approved by the government without risking punishment.

Every individual in Soviet Russia is registered with the police. Siberia looms for any who dare to differ openly with those in power.

The reason for all this: fear of the people on the part of a government that is imposed upon those people, not chosen by them.

BAN ON TRAVEL

Or take another Soviet first—one that is impressing the world. The Russians converted a jet bomber to a passenger plane and today operate the first turbojet transport service.

What almost never is mentioned, however, is this set of added facts:

No ordinary citizen of the Soviet Union can even hope for permission to board a Russian jet to travel to other lands where he can see life as it is lived in the outside world.

No one from the outside world, except under the most rigid conditions, can board a Soviet jet, or even a railroad train, and travel freely to and within the Soviet Union.

Within Soviet Russia there is no freedom to travel without restraint, either for Soviet citizens or for persons from abroad.

The meaning: The Soviet Government that impresses so many in the non-Communist world is afraid to permit its own people to move freely about, even within their homeland. It fears any large-scale contact between the people of the Soviet Union and those from the outside world.

Why? Because of fear of comparison.

RUSH TO GET OUT

Rulers of the Soviet Union note this: In all Communist countries, when the opportunity offers, there is a scramble on the part of the people to get out. More than three million have fled Communist-ruled East Germany. When the chance came, there was a rush to escape from Communist-ruled Hungary. Refugees make their way out of Tito's Yugoslavia in a steady flow.

In Soviet Russia's case, the Government fears a mass flight of its citizens if ever the bars should be lowered. This is true in the Soviet Union after 40 years of communism, and in spite of sputniks and intercontinental missiles and jet transports.

Then glance at some other facts that often impress people:

Soviet Russia covers one-sixth of the land area of the earth. Within its borders are 200 million people. Add Communist China and the captive countries of Eastern Europe, and the area becomes one-fourth of the earth, containing 900 million people, or one-third of the earth's population.

Soviet Russia uses that figure to awe people. Intelligence agencies of western nations, however, now break it down and are less impressed.

WEAKNESS IN NUMBERS

As these western officials see it: Red China's vast population is a problem, a growing disadvantage for the Soviet Union as well as for Red China, not an advantage. The vast population of Red China, pressing upon resources that cannot support the people above a bare subsistence level, is interpreted as a guaranty of endless trouble.

Soviet Russia, with great open spaces in Siberia, must look upon Red China as a potential enemy, coveting that space for her spawning populace.

Then look at this empire from its western borders.

Here Soviet Russia holds captive nearly 100 million people—almost all of them possessing a fierce nationalism and living for the day when they can throw off their colonial rule. In these captive countries, ruled by puppet regimes and held in check by armed forces of the Soviet Union, are 17.5 million East Germans, 27 million Poles, 10 million Hungarians, 12 million Czechoslovaks, 16 million Rumanians, 7 million Bulgarians, 6 million Latvians, Estonians and Lithuanians.

WHEN WILL EXPLOSION COME?

The imperialism of the Soviet Union, exploiting these captive people, is described as the last great imperialism of the modern world.

Explains an official intimately acquainted with Soviet Russia's European colonies:

"If you think that you can measure today's troubles of France in Algeria, then multiply that by five and you get some idea of the present and potential trouble that faces Khrushchev's Soviet Russia in Eastern Europe. Khrushchev is committed to subjugation of peoples with a history of independence and a fighting ability that has many times been proved. The task of maintaining those people in a colonial status will grow with passing time."

Resistance, sabotage and an eventual explosion—all are regarded by this appraiser as inevitable.

PRESSURE FROM INSIDE

And what of the Soviet Union's 200 million people? Do they make up one big, happy family of well-integrated groups?

Here again, the facts reveal a situation far different than the outside world usually is aware of.

Of the 200 million people in the Soviet Union, 110 million are persons of Russian nationality. The 90 million others represent 50 nationalities, speaking 80 different languages. Most of these minority groups were incorporated by force into the Soviet Union, and many continue to harbor a desire for independence.

Stalin was 1 of 2.4 million Georgians within the Soviet Union. Khrushchev is 1 of the 36 million Ukrainians. Khrushchev's Ukrainians, in World War II, hailed the German invaders as liberators until the Germans betrayed them. In 1955, Stalin's Georgians rose up against the Moscow regime. And all through the vast expanse of Asiatic Russia there is unrest and trouble.

The picture that the world has of a great, unified Soviet Russia, with Khrushchev as dictator over a happy people, is not one that is justified by the facts.

PRIORITY FOR MILITARY

How then to explain the great accomplishments of the Soviet Union? What accounts for the fact that Soviet Russia was first to get a satellite into space, first to come up with an intercontinental ballistic missile, and now has a jet transport in service? How to explain Russia's progress in output of steel and electricity and many other products of modern industry?

The answer to these questions is one that gives concern to those who shape policy in non-Communist countries.

In Soviet Russia, informed officials explain, the dominant energy of the country is channeled into industries that supply the Red military establishment. The effort of science, of industry and of Government is directed primarily into the development and production of modern weapons. Hitler, with far fewer people, much smaller natural resources and with less drain on the civilian economy, created an Air Force and tank corps that came within a hair's breadth of conquering all of Europe, including Soviet Russia.

REDS STRAIN, UNITED STATES SLACK

It is pointed out that, if the United States devoted to the output of modern weapons a proportion of its national energy and its resources comparable to that devoted by the Soviet Union, the result soon would be an overwhelming American superiority.

Soviet Russia strains every muscle to catch up and keep up with United States in the creation and production of modern weapons. The United States, until recently, strained its muscles turning out new cars, new homes, new gadgets for the enjoyment of its people—producing modern weapons as a sideline.

While Soviet Russia still strains, the United States today has a great slack in her industry. America is pushing ahead of the Soviet Union in space conquest, while surfeiting her people with goods.

HUGE FARM FORCE, POOR DIET

But back to the story of the weaknesses in the Soviet Russia that Khrushchev rules as its third Communist dictator—

Soviet Russia has a labor force of 110 million persons. This appears to be an imposing figure when compared with the 69 million in the United States labor force.

Then note this: Of the 110 million in the Soviet labor force, 52 million are workers on farms—just about half. Even so, these 52 million, farming 480 million acres of land, are able to provide the Russian people with no more than a low-standard diet.

Something wrong? Now look at the situation in the United States. Instead of 52 million workers on farms there are 6 million, or 1 out of 11 instead of 1 out of 2 in the working population. Those 6 million workers farm 260 million acres, and do it so efficiently that the American people—fed and clothed better than any people in the world—still are not able to consume all that the farmers produce. The problem is one of surplus, not scarcity.

WASTE OF LABOR

Or, look at it another way: In Soviet Russia, with 52 million workers engaged in agriculture, there are 58 million people available for all other work. In the United States, by contrast, with only 6 million engaged in agriculture, there are 63 million available for other work. The United States, with a smaller total population, actually has 5 million more persons available for nonfarm work than has the Soviet Union.

Against that background, read the comment from one of a team of Americans—Richard Scammon, of the Governmental Affairs Institute—who observed the recent elections in the Soviet Union. In those elections 99.9 percent of the voters cast their ballots for Communist candidates.

Said Mr. Scammon: "One impression that struck me was what we would regard as a great waste of manpower. For instance, pencils are all sharpened laboriously by hand. Evidently, there ar eno pencil sharpeners in the Soviet Union. Hordes of people work in wardrobes and cloakrooms as checkers. There must be hundreds of thousands of persons who make their living this way.

"Another impression is the low standard of living of the people. A blouse that might cost $1.90 in a Washington store goes for $30. A can of salmon that might cost you 75 cents in a chainstore is a $5 item. And, until you actually see them doing it, it is hard to picture a crew of women shoveling snow off the streets when it's 10 below zero."

SHORTAGE AND SURPLUS

In Soviet Russia, with one of the world's lowest standards of living for the average man, there is an acute shortage of labor. In United States, with the world's highest standard of living, there is a surplus of labor, measured by more than 5 million unemployed. Put those millions to work, and the margin of American superiority becomes that much greater.

Nikita Khrushchev, ruling as absolute dictator in a land of many people and vast inefficiency, has his problems, too.

Remarked one of the American team of election observers who visited with Khrushchev recently:

"We had an hour and a half with him. He's older, more tired and softer than I had expected. His pictures make him look too good. He's tired and only occasionally would he trot out with enthusiasm some propaganda pitch designed to impress foreigners. His intellectual powers may be in question, but you get the impression that he believes thoroughly what he says. He doesn't kid about things he regards as important."

WHY KHRUSHCHEV WORRIES

Yet, when Khrushchev brags about pushing Soviet Russia ahead of nations of the West in evidences of industrial strength, the facts reveal that he is taking on quite a job. That may be one of his worries.

In a modern nation, transport and travel networks, as well as communication networks, are basic.

The Soviet Union covers a land area nearly three times as great as that of the United States. Within that vast Soviet area are 75,000 miles of railroads. Within the United States are 220,000 miles of railroads. The Soviet rail system is run down, powered largely by old-fashioned steam locomotives.

Or take another tack. In the whole of the Soviet Union are 131,000 miles of improved roads. Surfaced roads are largely in cities and in areas around cities. There is no superhighway system in the Soviet Union. By comparison, the United States—with one third of the area—has 2.3 million miles of hardsurfaced roads. Using the United States roads are 56 million passenger cars and 10.9 million trucks. Using the Soviet highway system are 700,000 passenger cars—half of them Government vehicles—and 2.8 million trucks.

Intercity highway travel in Russia is almost nonexistent.

WEAKNESS IN TRANSPORTATION

How about air travel? Maybe it's the answer. Actually, travel by air in the Soviet Union is estimated at about 10 percent of the travel volume in this country.

The picture up to this point is not one of great strength in transportation. What then of communications—a high-class telephone system?

With a population of 200 million to serve, the Soviet Union is reported to have 1 to 2 million telephones. In this country, people use 63 million telephones, in the United States, 127 million radios are in use, compared with 8 million receivers in the Soviet Union, plus 23 million wired speakers that insure against listening to unauthorized programs. The 2 million TV sets in the Soviet Union compare with 45 million in this country.

In the field of communications as in the field of transportation, the picture in the Soviet Union is one of great weakness, not one of strength.

STRENGTH IN STEEL

But what about those basic industries—steel and oil and power? Isn't the Soviet Union pushing ahead there?

The answer is that the Soviet Union is developing formidable strength in these fields. Steel production now is about half of the United States output. Oil production has risen to one-third the level of the United States. Electric-power production now is up to about one-third of the American level.

WHERE THE STEEL GOES

Again, those who assess Soviet strength note these points:

In the Soviet Union, a large proportion of steel and oil resources go for military purposes or for military-supporting purposes. Very little is left over for the civilian population. The Soviet Union, too, has very little steel built into its economy, because steel production has been substantial only in recent years.

In the United States, by contrast, only a small fraction of the steel and oil and power output goes for military or military-supporting purposes. The great bulk goes into the civilian economy. America, leading the world in steel production for a great many years, has a vast quantity of steel built into its cities and highways and industries. It will be generations before the economy of the Soviet Union can match that of the United States.

The strength of Soviet Russia, whatever it is, is built into a military machine, not into an economy designed to satisfy the wants of the people.

The Soviet Union's great weakness, as American appraisers see it, is in its inability to provide its people with a standard of living that will bear comparison with any other modern nation. The Soviet Union is strictly a police state, organized to exploit a captive people in order to build a military machine. The announced Soviet goal is domination of the world.

GRIPPED BY FROST

Glance again at Soviet Russia and you can understand why the outside world has attractions for this poverty-stricken nation.

Almost all of the settled areas of Russia lie north of Quebec in latitude. Moscow is at the same latitude as the lower part of Hudson Bay, Leningrad is at the same latitude as the south of Alaska. In Moscow, the capital, the number of days in the average year that are free of frost total 130, with frost on the remaining 235 days.

Of the Soviet Union's vast area, barely one-sixth is classified as arable—suitable for farming. Forests cover one-third of the expanse. There are immense areas of desert and icy wastes. Rainfall, in most areas, is inadequate.

Almost nowhere in the Soviet Union do you find all together in one place the three basic requirements for successful farming—soil fertility, enough rain, and enough warm weather. There is no area in the whole Soviet Union that can be compared in size or productivity with the fertile Corn Belt in the United States.

As a result, supplying enough food is a problem that remains unsolved in Soviet Russia today.

PRIMITIVE AGRICULTURE

It's not only nature that causes a food problem in Soviet Russia. Look at the Soviet farming methods and you see other reasons. Life on a Soviet farm is almost primitive, compared with that on an American farm. In Soviet Russia, there are only 1 million tractors, compared with 4.6 million in the United States. Much of the farm work is still done by hand—chiefly by women's hands. The life of a Russian farmer is one of backbreaking toil.

Few Soviet farms have electricity or running water. Farm families live in wooden cabins, even mud huts. They seldom get to town. Horsedrawn carts are their means of transportation.

For such hardships, there is virtually no reward. Russian farmers do not—cannot—own the land they farm. They work on collective farms or state farms. They are paid for their work, like factory hands—only less. There is little incentive to spur the peasants to more-efficient work or greater production.

It was the landowning peasant who stood in the way of those trying to communize Russia 40 years ago. Millions of peasants were liquidated before the Communists could fasten their yoke on the Soviet people. And, today, the Soviet farmer is still a foe of communism—a source of constant fear to the rulers in the Kremlin.

HOUSING: SCARCE AND CROWDED

Life in the city, for the average Russian worker, is but little better than life on the farm.

There is a serious shortage of housing in cities. People live jammed up in massive,

UNIVERSITY OF MICHIGAN LIBRARIES

but decrepit, apartment buildings. The average dwelling space allotted to a Russian is 52 square feet per person. This is less than half the area of an average living-room rug—and only about one-seventh of the 344 square feet of living space enjoyed by an average American. A Russian family is lucky if it does not have a share its 1 or 2 rooms with another family. Where bathrooms are available, they are shared by many families. Most Russians use outdoor toilets, draw their water from courtyard pumps.

The Russian diet is monotonous, at best. The average worker eats mostly coarse bread, cabbage soup, and potatoes. He may get about a pound of meat in a week. For this pound of meat—if he can get it—he must give up all the money he can earn in an hour and a half.

Here are some other revealing food prices, measured in hours of work: A pound of butter costs more than 3 hours' pay, a dozen eggs more than 2 hours' pay, a quart of milk more than half an hour's pay.

FOR SHOES, 80 HOURS' WORK

Clothing in Russia is shoddy and expensive. An average worker must work more than 300 hours—7 weeks—to earn the price of a suit. It takes more than 18 hours of work to pay for a shirt, more than 14 hours for a simple dress, and more than 80 hours for a pair of shoes. This is at average wages. For one-sixth of all Soviet workers, who get only the minimum wage fixed by law, a pair of shoes represents almost an entire month's wages.

You may get the idea, from the Soviet Union's vast size, that it is a land where people have plenty of elbow room. True, there are wide open spaces. But actually, where most of the people live, the Soviet Union is as crowded as Western Europe. This is because the bulk of the Soviet population is concentrated in the western part of the country—the only area that is fit to maintain a large population. In this area, there is no elbow room.

HOW SCHOOLING COMPARES

Now take a look at Soviet education. Here, if you would believe a lot of recent claims, is where the Soviet Union is supposed to be way out in front of the United States. Much stress is laid on statistics which show that Soviet schools are graduating more scientists and engineers than American schools, that Soviet pupils are taught more mathematics and science than American youngsters.

Yet, a closer look reveals this: The United States, with a smaller population than that of the Soviet Union, has more pupils in elementary and secondary schools—33.5 million in the United States, to 30 million in Soviet Russia. In colleges and universities, Americans outnumber Russians by 3.5 million to 2 million. This country has more than twice as many institutions of higher learning as the Soviet Union—1,886 to 767.

You also find that Soviet education, like so many other aspects of Soviet life, is pointed toward military and heavy industrial uses. The United States has more college-trained people in the fields of health, agricultural sciences, and biological sciences than Russia. Where the Soviet Union's college-trained people outnumber Americans is in engineering and physical scientists—the technicians who produce nuclear weapons, missiles, and big engineering or industrial projects.

The Kremlin claims to have more physicians than the United States, by 329,000 to 230,000. Examine the standards of medical training required, however, and you find that many physicians in the Soviet Union would not qualify to practice in this country. And the Soviet Union has only about 24,500 dentists—or about one-fourth as many as the United States.

LAG IN PRODUCTION

Productivity is the key to a nation's strength. And here, the Soviet Union, despite its huge size, is lagging far behind the United States.

The total value, estimated in current United States dollars, of all the goods and services produced in the United States in 1 year is about $433 billion. The Soviet Union's total is estimated at only about $100 billion.

Here are some contrasts: Steel, United States, 113 million tons a year; the Soviet Union, 56 million tons. Pig iron, United States, 79 million tons; Russia, 41 million tons. Coal, United States, 513 million tons; Russia, 509 million. Oil, United States, 389 million tons; Russia, 108 million tons. Electric power, United States, 716 billion kilowatt-hours; Russia, 209 billion.

Those figures are for heavy industry, which the Soviet Union pushes, and in which Khrushchev boasts that the Kremlin is overtaking the United States. The figures show that the U. S. S. R. has a long way to go.

GUNS BEFORE BUTTER

Look at consumer goods—the things that make life more pleasant—and you find the contrast between Khrushchev's Russia and the United States is even greater. Last year, the United States turned out 3.3 million refrigerators; Russia, 309,000. The United States made 3.8 million washing machines; Russia, 277,000. United States produced 15.4 million radios; Russia, 3.6 million. United States production of television sets was 6.4 million; Russia's 700,000.

These figures, once again, demonstrate how Russia plows the bulk of its wealth and energy into warmaking power at the expense of the happiness of its people.

AN AILING COLOSSUS

Add up all these facts about today's Soviet Russia, as many western officials now are doing, and the realization grows that the Soviet Union is far from the colossus among nations that it is pictured by Red propagandists.

The picture you get, instead, is one of an ailing giant, living in fear—and concentrating its national efforts on preparing for war.

Maintenance Increase for Rural Carriers

SPEECH

OF

HON. KATHRYN E. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mrs. GRANAHAN. Mr. Speaker, on Monday of this week the House of Representatives passed S. 3050 with committee amendment to provide an increase in the equipment maintenance allowance paid to rural letter carriers. The Senate accepted the amended bill on Tuesday. It should become law within the next several days.

It was my privilege to serve as chairman of the subcommittee which originally considered this legislation. Hearings were opened on June 25, 1957. On that date the National Rural Letter Carriers' Association appeared and presented a well-drawn, sound, factual case which clearly demonstrated that the legislation was merited and fully justified. This association is to be commended for its valuable testimony at that time, which through the presentation of actual cost cases permitted the subcommittee to recognize the urgent need for an increased allowance. The bill introduced by Mr. PORTER, of Oregon, H. R. 6371, was unanimously approved by the subcommittee despite the opposition of the Post Office Department. It was referred to the Committee on Post Office and Civil Service and subsequently unanimously reported.

H. R. 6371 provided for 10 cents per mile with a daily minimum allowance of $4, plus additional allowances, which could be authorized by administrative action for carriers serving heavily patronized routes. Unfortunately the legislation was not considered during the first session despite the recognized need for an upward adjustment in these mileage allowances, and despite the interested efforts of myself and many others to expedite consideration. The Senate therefore acted before the House and passed S. 3050 providing for 11 cents per mile and a $3.50 daily minimum.

I feel that the 11 cents per mile was unquestionably justified on some routes, just as the higher daily minimum in the House bill was justified. The administration, however, would not support enactment of a higher rate and a compromise became necessary if this deserved group of employees should not longer be denied a more realistic reimbursement for the costs of delivering United States mail.

The major costs borne by rural carriers have increased on an average as follows: automobiles, 30 percent; gas and oil, 18 percent; tires, 30 percent; repairs, 75 percent; license and taxes, 42 percent; and insurance, 27 percent. These increased costs clearly demonstrated that the present 9 cents per mile allowance set in 1951 is inadequate.

The legislation which has cleared the Congress will provide a considerable measure of relief to these carriers. It will especially aid those carriers on routes of short mileage whose fixed costs such as depreciation and insurance are closely the same as those carriers on routes of long mileage. This will be possible through a new feature in law to provide a daily minimum of $3.50 for all routes. The subcommittee and the full committee supported this feature of a daily minimum in recognition of the fact that a minimum was necessary, and we did so even though any daily minimum was originally objected to by the Post Office Department.

I know the problems of rural carriers. I know the value of the great service they render. More than 1,500 rural carriers in the Commonwealth of Pennsylvania daily render a complete postal service to almost one and one-half million of our citizens. Civil servants who daily perform such an important task should not be expected to bear a portion of the cost from their salaries. That is exactly what the situation has been.

The total cost of this legislation for the fiscal year of 1959 is estimated to be $5.9 million. In these days when increased expenditures must be carefully considered and weighed, it is my pleasure to inform the House that the bill passed to increase these mileage allowances is amply justified.

The compromise on the amounts provided in the various bills was a realistic approach. I am pleased that S. 3050 was accepted by the Senate and trust that it will be speedily approved. I sin-

cerely believe that in approving this legislation we have rendered a real service to the rural carriers who are so faithfully serving their Government and the public.

Rochester, N. Y.: Citadel of World Brotherhood

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. KEATING. Mr. Speaker, it is my extreme pleasure to announce to the House that my home city of Rochester, N. Y., has been selected as the winner of the first world brotherhood award for communitywide service to the cause of international understanding. This recognition follows a national survey of community programs of international action in such fields as student exchange, hospitality for foreign visitors, foreign affairs education, and various areas of international human relations. In addition to Rochester, the following cities were cited for outstanding achievement: Worthington, Minn., San Jose, Calif., Montclair, N. J., and Hagerstown, Md.

The awarding organization, World Brotherhood, is an outstanding group devoted to promoting and improving international human relations. Distinguished citizens make up its international directorate, and the judging board for its world brotherhood award.

None can doubt Rochester's worthiness for this recognition. From the tenor of the mail which I receive daily and from my contacts in the Rochester area, I can testify strongly to the city's great interest in and desire to foster international brotherhood. I am constantly amazed at the depth of understanding of the letters I receive from Rochesterians of all national origins and all faiths, expressing a genuine concern with the state of the world and with the need for greater cooperation among all the peoples of the world.

In many specific aspects the city has done much to foster the concept of brotherhood which holds such promise for the peace of the world. For example, numerous local business firms have sponsored programs involving the exchange of personnel, information, and know-how with overseas organizations. Many have far-flung plants abroad, with constant interchanges of ideas and personnel. Local educational institutions and civic groups have been particularly vigorous in promoting student exchanges. The teen-age diplomats plan has attracted wide attention in other communities.

The Rochester Association for the United Nations—4,000 members strong—has provided an unending source of information and stimulation and inspiration.

The University of Rochester has pioneered in various world study projects and courses and has maintained vigorous exchanges with overseas institutions.

Various church groups have contributed much.

Particularly outstanding has been the work of a fine citizens group working through the chamber of commerce to help those in Rochester with immigration problems. Under the patient, canny, and wise guidance of James A. Tipping, the department of citizenship provides counseling, advice, and aid to all who have any kind of questions involving our immigration or citizenship laws. As far as I know, this type of aid is a unique attribute of the city. By means of close cooperation between Mr. Tipping, the area Congressmen, and the Immigration Service, we are able to effectively help all people with these problems.

Rochester is blessed with residents of some fifty-odd foreign extractions, and it is a tribute to the community that these people from so many scattered lands have so readily and without friction been assimilated into the populace. Their rich cultural and spiritual contributions to the community are many, varied, and plentiful. We are a better city because so many fine people from so many lands have chosen Rochester as their home.

From my contacts with other Members of Congress from all over the country, I can say unhesitatingly that there is no city in the United States in which more people from more different lands live more peacefully and happily together. Rochester, in a real sense, is a melting pot—and in the finest sense that no longer is a man's nationality or religion any kind of a bar to his success and progress.

By giving and receiving personnel and material from other lands—both in educational and business exchanges—and by promoting the welfare of newcomers to its midst, as well as by widespread programs of international understanding and education, Rochester is playing its part to the hilt in the area of human relations and world brotherhood. It is fitting, therefore, that the city has been singled out to receive this award.

I want to take this opportunity to salute all those who worked so hard to make this award possible. First, of course, commendation must go to those in the churches, schools, and many organizations, locally, which have contributed mightily to building Rochester's effective programs in this area. Commendation should go also to the thousands of citizens of the city, who by word and deed have participated in Rochester's warm response to all who have chosen the community as their home or visiting place.

Special recognition should go to Mrs. Bernice Barnett Connorton, executive director of the Rochester Association for the United Nations, who has worked unceasingly to promote international understanding in the city and worked particularly on this project, and to Miss Faith Wright, whose outstanding report led directly to the award.

At this point in the RECORD, I include descriptive articles and an editorial from the Rochester Times-Union:

ROCHESTER NAMED FIRST WINNER OF WORLD BROTHERHOOD AWARD

(By Bill Pulsifer)

Because its community effort at world understanding "has few parallels in the history of peacetime international action," Rochester today was named winner of the first World Brotherhood award.

The announcement was made by Philippines Ambassador Carlos P. Romulo and educator-Nobel prize winner, Arthur H. Compton, cochairmen of the World Brotherhood organization.

The award was made for communitywide activities for promoting international understanding and friendship with communities overseas.

Two awards were made—one to a city over 100,000 population and one to a smaller city. The other winner is Worthington, Minn., which has less than 10,000 people. It was chosen for a 10-year-old program of affiliation with Crailsheim, Germany, and for its unique program of hospitality for foreign visitors.

Mayor Peter Barry will name a committee to choose a representative to receive the award from General Romulo in ceremonies June 3 in New York.

At the ceremonies, Rochester and Worthington will receive a Pan American World Airways community friendship grant enabling each city to send a community affairs leader to visit a selected overseas city, and a reciprocal visit by a community leader from abroad. A city behind the Iron Curtain or in an underdeveloped area is suggested.

World Brotherhood is a nonprofit organization devoted to human relations. Its directors include Dr. Compton; General Romulo; Paul-Henri Spaak, NATO Secretary General; Madame Vijaya Lakshmi Pandit of India, and West German Chancellor Konrad Adenauer.

Judges in the competition were Mrs. Ogden Reid of the New York Herald Tribune; Edward W. Barrett, dean of the Columbia School of Journalism; John L. Loeb, banker and broker, and A. L. Cole, business manager of Reader's Digest.

Among the runnersup, San Jose, Calif. was cited for its Pacific neighbors program which includes a citywide exchange with Okayama, Japan; Hagerstown, Md., for its program with Wesel, Germany, and the work of its public schools; and Montclair, N. J., for its overseas neighbors program with Graz, Austria.

After this year the award will be given annually and will include consideration of communities in other countries.

WHY ROCHESTER WON BROTHERHOOD HONOR

This is why Rochester won the World Brotherhood Award for promoting international friendship and understanding.

According to some of the information considered by the judges, the city's:

United Nations group (Rochester Association for the United Nations) with 3,800 members is the largest in the Nation outside of metropolitan New York.

Protestant churchgoers lead the Nation, outside of New York City, in giving to the World Council of Churches.

Catholic Diocese outstrips any other diocese in numbers, per capita, of refugees resettled here.

High energy nuclear physics conferences have attracted leading East-West scientists to the University of Rochester.

Teen-age diplomats program is one of the most active American field service programs in the Nation.

Local support for the UNESCO-sponsored "Asia Month" at Rochester Museum is unmatched in any other community.

Rotaly Club's overseas student program was endorsed last year for adoption by worldwide Rotary clubs.

UNIVERSITY OF MICHIGAN LIBRARIES

New International Friendship Council supplies a "home away from home" with local families for over 400 foreign students and trainees in Rochester.

City Club continues for the 48th year to bring leading international speakers here.

Plans for twin city affiliation with Rennes, France, are underway.

University of Rochester pioneered with its "World Awareness" study programs of non-Western civilizations.

Chamber of commerce sponsors an unusual citizenship department to assist immigrants.

Business community boasts an exceptional number of international companies which send Rochester businessmen and products around the world.

Public schools attract national attention for its foreign language programs.

Also included in the city's entry were descriptions of the work of its natives such as Dr. Dexter Perkins and the Salzburg (Austria) Seminar, a kind of cultural Marshall plan to which Rochesterians contributed; Bruce M. Lansdale and the American Farm School which he helps operate in Greece and to which Rochesterians have contributed, and Mrs. Harper Sibley, for whom a graduate residence at the International Christian University in Japan is dedicated.

In considering the entry the judges paid tribute to the Rochester newspapers for coverage of the international scene.

How the Report on the City Was Prepared

This is how the city won the award:

It began with a visit last May of a representative of the World Brotherhood organization. He met with representatives of local organizations and industry.

On the basis of his recommendations, Rochester was selected as 1 of 7 cities to be considered as finalists.

World Brotherhood asked the Rochester Association for the United Nations last December 1 to furnish supporting information.

Believing that the task would require the full-time services of at least one person, RAUN hired Miss Faith Wright on December 10 to prepare Rochester's entry.

Miss Wright is a 1954 graduate of the University of Rochester, the daughter of Mr. and Mrs. John W. Wright of 7 Green Hill Lane, Pittsford, who had spent a year in 1956–57 studying in Geneva, Switzerland, as a recipient of a Rotary fellowship. She now works for Reader's Digest in New York.

Miss Wright was paid $270 by RAUN for 5 weeks and 2 days of work on the project.

She got information from more than 100 local individuals involved in businesses, institutions, and clubs which were involved in international projects.

The report was submitted January 26 in 2 parts—a colorful, 52-page presentation which served as a summary outline to acquaint the viewer unfamiliar with Rochester with the city's activities, and a binder more than 2 inches thick with documentary material supporting the summary. The list above is only partial; Miss Wright pointed out in reporting on her work that it would be impossible to list every group that promoted friendship and understanding.

Those outside the city who supplied supporting statements included Eleanor Roosevelt and Dr. Robert Oppenheimer.

Representative Kenneth B. Keating, of Rochester, also was asked to support the application. In announcing that Rochester won the award the judges wrote:

"We would like to give hearty endorsement to the words of (Keating) who wrote: 'The city by promoting brotherhood on a local level and through its cognizance of the need for the worldwide extension of this concept, is making a substantial and effective contribution to world peace'."

World Interest Award Causes No Surprise Here

Rochester has had a suspicion for a long while that it is a unique city in the matter of interest in world affairs. With 4,000 members in a local association for the United Nations, an extensive teen-age diplomat program, pathfinding fields of world study at the university and a score of other such activities, its preeminence in that particular was known locally very well.

So when World Brotherhood chose Rochester as winner of its first World Brotherhood Award for cities with more than 100,000 population it came less as a matter of surprise than as satisfaction in recognition.

World Brotherhood is an organization established in 1950 "by men and women who believe in a spiritual and moral interpretation of the universe to promote understanding, justice and cooperation among peoples differing in religion, race, nation, social status or culture."

The announcement of the award was made by the Philippines' Ambassador, Carlos P. Romulo and Dr. Arthur H. Compton, cochairmen.

Rochester was credited with a "community effort which in the opinion of the judges has few parallels in the history of peacetime international action." But while all the organized activities that give Rochester distinction in awareness of world affairs were reviewed in the award it was not for these that it was given.

It was because these, in the judges' opinion, only reflected the communitywide "sense of international responsibility which permeates the Rochester scene," and the "individual citizen response to the challenges of the world outside."

Among the outward manifestations of those qualities were listed the Rochester Association for the United Nations, the university's world awareness" study program, support for the World Council of Churches which, the judges said, "is matched only by that of New York City," the Rochester Museum's "Asian Month," the Industrial Management Council's foreign visitors hospitality program, the chamber of commerce work with new citizens, the Teen-Age Diplomat program, Rotary U. N. fellowships and support given to worthy international causes by corporations doing business here.

None of these, of course, is news to Rochesterians. But it's nice to be singled out as an outstanding city in the top concern of the age.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily Record at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

Appendix

Address by Hon. William F. Knowland, of California, Before Southern California United Press Editors

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. KNOWLAND. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD the address I delivered before the Southern California United Press Association Editors at Ojai, Calif., on Saturday evening.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. WILLIAM F. KNOWLAND BEFORE THE SOUTHERN CALIFORNIA UNITED PRESS EDITORS, OJAI, CALIF., MAY 10, 1958

Fellow members of the fourth estate and fellow Californians, it is a great privilege to be with you here tonight at Ojai for this meeting of the Southern California United Press Association Editors.

The world we live in continues to grow smaller and smaller and our vision and perspective becomes larger and larger. As members of a proud profession that seeks to mirror these changing times, our responsibility in reporting and interpreting local, State, national, and international events of public concern and interest grows correspondingly greater.

This afternoon I participated in the dedication ceremonies of the National Pacific Missile Range at Point Arguello.

Looking out over the broad expanses of the Pacific Ocean, where in the near future our expectations in the critical field of missile development will run the cycle of temporary setbacks and success, it brought back to mind the history of our golden State when admitted into the American Union with 95,000 people in 1850 and what has since developed here.

We have always sought new horizons. Our State and its people have never been wedded to the status quo or ruled by the dead hand of the past.

Each generation of Californians has desired to leave to their children an even better land than they themselves found.

This is still our challenge and our opportunity.

Californians must never lose the pioneering spirit of the Argonauts, if our State is to remain the land of opportunity and become the leading State among the 48 in the Nation.

In 5 years we will have 18 million people living and working inside our State borders. By 1970, only 12 years from now, we will have far over 20 million residents as citizens of California. And to prepare for a harmonious integration of this influx, we cannot postpone or delay our decisions indefinitely.

One statistic of growth in which Californians will not take pride is the fact that California led the Nation in major crimes last year—a total of 299,864.

The increase in crime rate from 1950 to 1957 was 77 percent. Our population during that same period increased 32 percent.

During this period the attorney general has in the Nation.

The State narcotic bureau is also under his supervision and administrative responsibility.

In the critical controversy of water development, in the field of a solvent fiscal structure, in the need for our expanding educational facilities, in business development, in sound labor conditions, in welfare programs, in highway, hospital and recreational expansion, in government efficiency and economy, in crime and narcotics control, the responsibility of the next Governor of this State is great and the people must be told that the decisions will not be easy nor will the burdens be light.

There is certainly no pat panacea for the complex, troublesome, and arduous problems that face our growing State.

During my service in the State assembly and State senate, in my experience as a newspaperman, during my 13 years in the United States Senate, and as either majority or minority leader in the 83d, 84th, and 85th Congresses, I have been intimately involved in working out programs and solutions in the areas comparable to those to which I have just referred.

I have worked with Republicans and Democrats in both the legislative and executive branches of our Government during two administrations.

California has a vital interest in national and international affairs which, to a considerable extent, affect the future of our industry, our agriculture, and our commerce.

The broad experience I have gained can be of great value to our State. It can bring to the Governor's office a broader understanding of the problems of California which is an important and integral part of the entire Union.

This understanding will contribute to the maximum development of many opportunities contributing to advancement of our State's vital interests.

As a member of the State legislature, I played an active part in preserving our constitutional guaranties for the financial support of our elementary and secondary school system, and in providing the funds that have made them effective.

In 1933, when I went to the State legislature, the State had an unbalanced budget. As a member of the economy bloc we made substantial reductions in governmental costs. As a member of the joint tax committee we recommended a revised revenue system which was approved by the people of California and met our basic requirements for the next quarter of a century.

As a member of the State senate, I was chairman of the subcommittee which drafted, and I subsequently handled on the floor, the first unemployment-insurance legislation enacted in this State.

I supported, in the State legislature and in the United States Senate, social-security legislation for old-age assistance, vocational rehabilitation, aid to the blind, and child-care assistance.

During my service in Sacramento I supported legislation which assured every worker the right to join a union of his choice. The legislation made illegal the so-called yellow-dog contract which had prevented a worker from having that free choice.

As a State assemblyman, I cosponsored the antilynching legislation now on the statute books of this State.

As Republican leader of the United States Senate, I moved to bring the civil-rights legislation before the Senate and took a lead in securing the passage of the first such bill in over 80 years.

As a member of the Senate Appropriations Committee, I have cooperated with my Senate colleagues and House Members, without regard to partisanship, to help advance sound and constructive flood control and reclamation projects.

A partial list includes the Central Valley development, the Los Angeles flood-control projects, the Sacramento deep-water channel, Folsom Dam, the Solano project, the Corning Canal, the San Diego aqueduct, Crescent City Harbor, Cachuma Dam, Richmond Harbor, the Ventura project, San Diego Harbor and Mission Bay, Whittier Narrows Dam, the Cherry Valley Reservoir, flood control along the Sacramento and San Joaquin Rivers and the Coachella extension to the All-American Canal.

As a Member of the Senate, I took an active part in the fight to restore to this and other coastal States the tidelands which had been taken from us under the New Deal doctrine of Federal inherent powers overriding the right of the States.

Both as a State legislator and as a Member of the United States Senate, I have been interested in the conservation of our water resources so vital to our future growth and development.

I have consistently taken the position that the Federal Government must respect the water laws of the several States and should not, contrary to the letter and spirit of the reclamation law, attempt to put itself above the laws of California.

There are a multitude of problems that will face the Governor of this State as he takes the oath of office next January.

Among the most pressing will be:

The fiscal condition of the State treasury and the budget problems for the future.

Our State budget is approximately $2 billion, the largest of any State in the Union.

The reserve funds will have been exhausted before the budget of the next governor becomes operative.

Our tax structure is one of the highest in the Nation both on a rate and per capita basis.

Any major upward movement in State taxes would discourage new capital investment in California and cause prospective industries to look elsewhere.

The executive branch of the State government is in need of reorganization. Today we have a cumbersome structure of 8 constitutional offices, 24 departments, 128 boards and commissions, and 46 independent agencies.

There is costly duplication and there is not the coordination and the effective structure our dynamic state needs to meet the problems of our time. As Governor I shall make recommendations to the legislature relative to such reorganization.

I shall give my study and consideration to tax studies of the legislature prior to recommending revisions in our State revenue system.

UNIVERSITY OF MICHIGAN LIBRARIES

My efforts shall be directed to balancing our State budget and preserving the solvency of our State so that we may meet our governmental, educational, and welfare needs within the capabilities of our people to support the same.

Yet our revenue now falls $110 million short of meeting expenditures. By 1959–60 the revenue deficiency may run to more than $200 million.

This is before we face up the priority problems of water and schools.

If the sales-income tax initiative should be approved it would cause annually a net loss of approximately $36 million to be added to the deficit.

This revenue loss would increase over the years. I was the first gubernatorial candidate to take a public position in opposition to this proposal.

While we would be justified in bonding ourselves for needed capital investment in the State water and school construction programs we could not safely go on spending more than we receive without damaging the credit of our State and the solvency of our governmental institutions.

In my judgment, no such State water bond issue will be approved without the prior approval of a State constitutional amendment guaranteeing the southern part of our State (which would assume approximately 60 percent of the obligation) that they would have a continuity of water supply comparable to their continuity of financial obligation.

In addition the counties of origin will need constitutional assurance that their own present and future water needs for agricultural, industrial, and residential purposes will be equitably provided for.

As President Grover Cleveland said: "A condition and not a theory confronts us."

I shall use my experience of 20 years as a legislator, who has worked with men of both parties, to end the stalemate and find areas of agreement between men of good will, North and South. We must press forward to the financing and building of our necessary State water projects.

We just cannot afford another legislative session of deadlock, bitterness between sections of the State, and acrimony between the executive and legislative arms of the Government.

Educational problems will be with us for the years ahead in this growing State.

The State government is spending over $575 million a year in the primary and secondary fields.

Our public school enrollment has grown from 1 million in 1940 to 2,815,000 in 1958.

By 1965 it has been estimated that it will approximate 4 million.

School district bonded indebtedness has gone from $300 million in 1947 to $1,300 million in 1956.

Since 1947 the State has authorized $635 million in school bonds. Additional State credit will be needed to assist local districts of our classroom shortage is to be overcome.

Last year 138,000 youngsters in grades 1 through 8 were on double sessions, down from 150,000 the year previous. However, there were more children in grades 1, 6, and 7 on double sessions. In 1957 22 counties reported no double sessions, 17 counties reported a decrease in the number of youngsters involved, and 19 counties reported an increase. One county eliminated double sessions but six counties reported double sessions where they had none the previous year. Last year in 4 counties there were 25,000 on double sessions in the junior high schools and high schools a drop from 31,000 in 7 counties last year.

The efforts of the local districts to finance the needed expansion in the operation and maintenance of their schools is evidenced by the fact that 750 of the approximate 1,800 districts in the State have voted to exceed their legal maximum tax rates, and 780 are at their legal maximum tax rates. The 295 districts operating at less than their legal maximum tax rates enroll less than 250,000 of the near 3 million students this year.

I believe in, and unqualifiedly support, the right of every American worker to join a union. Any attempt to restrict the opportunity of an employee to participate voluntarily in a union, or to prevent a duly elected union organization from representing such employees in collective bargaining, will be vigorously opposed by me.

I believe in the right of every union member to have a free voice in the administration and activities of his or her union, and if the union does not act in their best interests, I believe in the right to withdraw from the union without losing employment.

Legislation has been introduced by me in the Senate, and I support similar legislation in California, which will guarantee democratic control by union members over the officers and activities of their respective unions. This legislation does the following:

1. Guarantees the election of union officials by secret ballot.

2. Provides for the recall of union officials who misuse their positions of trust and responsibility.

3. Prevents conspiracies between management and union officials that work against the welfare of union members.

4. Protects union members' welfare and pension programs.

5. Requires that where unions are permitted, under law, to represent all employees in an industry or plant, all employees must be admitted into the union if they should desire union membership.

6. Provides that union members shall have a voice in the conditions, terms, and duration of strikes.

7. Prevents arbitrary control over local unions of trustees appointed by national or international unions.

8. Provides for regulation by union members of the actions of their unions on questions of excessive union fees, assessments, or arbitrary actions.

Because of the fight I made on the floor of the Senate 2 weeks ago, Congress will get an opportunity to pass some effective legislation this session.

I believe that unions, in order to grow, prosper, and function effectively, must induce employees to become members of their organizations voluntarily and not by compulsion.

No permanent progress has been achieved in our society, or in any other civilized nation, where people are compelled to belong to particular organizations in order to exist. The strength and contribution of our churches, parent-teachers associations, and fraternal, charitable, and civic organizations has been due to the free and willing participation of our citizens. I believe in the right of an individual to decide, without coercion, his intention to become a member of a union. I also believe that if an individual decides not to support a responsible union which is working for his benefit, the union would continue to advance without his membership.

In voluntary organizations, there will always be some individuals who will not participate in the activities of institutions working in their behalf. But that is the price we must willingly pay for liberty. Its alternative is compulsion without cooperation.

I therefore support the initiative proposal which will permit the people of California to vote on voluntary versus compulsory unionism.

In my studies of the application of the partnership principle to the Trinity River project, careful consideration has been given to, (a) the staggering level of the public debt; (b) the priority of expanding national security needs; (c) present and future water needs of California; and (d) the economic analysis of Federal against partnership development of the Trinity power facilities.

Development of the power facilities on other than a partnership basis would add to, not reduce, the construction and operating costs of the Trinity project. To be sure, a limited number of power consumers and Federal agencies would benefit, but the monetary advantage to them would not offset the monetary advantages provided under the partnership plan.

Partnership development would benefit the taxpayers of California and the Nation as follows: (a) $56 million in construction costs; (b) at least $165 million additional net revenue to the Central Valley project; (c) $83 million in tax revenues: Total, an estimated $304 million. Partnership development would also contribute to State, county, and local governments another $62 million in tax revenue.

Benefits of the Trinity project, whether computed on a water rate, electric rate, or on a tax revenue basis, would be enjoyed by countless more Californians under partnership development of the power facilities rather than Federal development.

There is ample precedent in California and elsewhere for private enterprise participation in the construction of power facilities at Federal projects at no cost to the Government, whereby the purchase of the use of falling water in these joint operations assists in reducing Federal expenditures.

I support the partnership plan for joint development of the Trinity project's power facilities. I shall also support an amendment which will provide for periodic review by the Federal Power Commission of the provisions regulating rate payments to the Government for use of falling water.

Government alone cannot solve the economic problems of the Nation. Our free-enterprise system is still providing over 60 million Americans with employment.

We can best get our unemployed back to work by policies that will encourage the investment of capital in industry, commerce, and agriculture.

The road to rigid economic controls or to the Federal or State government getting into business will discourage, rather than improve, the economic climate.

Detroit's Celebration of Israel's 10th Anniversary

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, May 12, 1958

Mr. McNAMARA. Mr. President, in recent days, many Members of the Senate have joined in commemorating the 10th anniversary of the founding of the State of Israel.

This is, indeed, a significant occasion. In 1948, there were many who were certain that the fledgling nation would not survive to receive honors on its 10th birthday.

There were many times during this decade when the existence of Israel was threatened, and even today there are those who would like to banish Israel from the map.

But the people of that valient country have demonstrated that determination and the desire for freedom can overcome any obstacles.

Recently Hon. Philip A. Hart, Lieutenant Governor of Michigan, spoke at Detroit's celebration of Israel's 10th anniversary. His remarks were given in his capacity as acting Governor.

I ask unanimous consent that the text of his remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY THE HONORABLE PHILIP A. HART, ACTING GOVERNOR, STATE OF MICHIGAN, AT DETROIT'S CELEBRATION OF ISRAEL'S 10TH ANNIVERSARY, APRIL 27, 1958

There are many reasons for the warm interest and affinity which millions of Americans feel for the democratic State of Israel. There are, of course, thousands of Americans who have close relatives in Israel, and millions of Jews and Christians who feel a strong religious tie with the Holy Land. But even beyond those obvious and strong links, Americans and their Israeli friends have many added sound reasons for their friendship and for the cooperation which we all hope will continue to grow between Israel and America.

(a) Both Israel and America are melting pots drawing upon the strengths of many nationalities. Like the United States, Israel has drawn the largest group of its immigrants from Europe, but others have come from throughout Asia, Africa, and the Western Hemisphere. So the internationalism which characterizes the outlook of both Israelis and Americans has its roots in personal experience with people from the far corners of the world.

(b) Both Israel and the United States were born in battle—and having fought hard for freedom and self-government, value them highly. Our common political ideals have a religious basis—the Judeo-Christian conviction that human personality is the supreme value. The Mideast conflict is between those who believe in the power of freedom and prophesy and those who don't.

(c) Third, I would mention the spirit of neighborliness and of cooperation toward great goals, which has characterized the people of Israel and the people of our own country. The present-day cooperative farms in Israel—the kibbutzim and the others—have their parallel in the barn raisings and the corn huskings and the town halls of our American tradition. I think we Americans share with the Israelis a youthful spirit, a kind of divine discontent—an impatience to move on to better things. This spirit of progress is nowhere better exemplified than in the trade-union movements of our two countries—among the most democratic and the most effective in the world, and forever seeking ways of improving the lot of the working people who have made our two countries what they are.

For all these reasons, them and many more, Americans applaud the great strides Israel has made in these first 10 years. I won't make any attempt to summarize that progress, for I know our able speaker, Yohanan Meroz will get the facts right. I simply want to say that for a country about one-seventh the size of Michigan, I think Israel's progress is—to use a misused word—amazing. More than doubling its population in a decade was certainly unprecedented, but nearly doubling the per capita income during those 10 years is an achievement of utmost significance in this 20th century of worldwide rising expectations.

All too often, I think when we Americans think or speak of our relations with other countries, we tend to concentrate on what we think we can do for them. That's necessary, of course, but in the case of Israel there's an imperative lesson we can learn. Despite the fact that Israel is in constant, immediate danger from without, the whole range of educational and social welfare programs in Israel have been receiving the unstinting support of the Israeli Government. The success of those programs contributes importantly to the willingness of the people of Israel to defend their country. Yet here in this country we hear suggestions that despite our country's unequalled wealth we somehow can't afford both an adequate defense and scientific effort and a realistic program to deal with our educational, health, and welfare needs. We should learn from Israel that what's spent on education, health, and welfare strengthens a democratic society every bit as much as what's spent on missiles and munitions.

And finally, I hope that we Americans will have the good sense to develop a working partnership with Israel in promoting rising standards of living throughout Asia and Africa. Israel is in a potentially effective position to serve as a bridge between the highly complex and developed economies of the West and the underdeveloped economies of the Asian and African countries. When Asian and African leaders visit the United States and other western nations, they're apt to find our economies too advanced and complex to have much immediate bearing on their own problems. Western progress needs translating into terms which will be meaningful in Asia and Africa, and Israel can help us do the job. It's encouraging to read that Israel is already expanding its trade and diplomatic ties with other newly independent nations in Asia and Africa, and is now running of its own point 4 program of technical aid to Burma and to Ghana, in west Africa.

Specifically, in the Middle East, I believe the United States and Israel should advocate a Middle Eastern Development Authority which might build up the possibilities of peace by combatting poverty and hopelessness. When the Israeli Foreign Minister, Mrs. Golda Meir, spoke in the United Nations last year, on the Sinai withdrawal, she turned to the Arab delegates present and asked:

"Can we, from now on—all of us—turn a new leaf, and instead of fighting with each other, can we all, united, fight poverty and disease and illiteracy? Is it possible for us to put all our efforts and all our energy into one single purpose, the betterment and progress and development of all our lands and all our peoples?"

Let us pray that Mrs. Meir's question will yet be answered in the affirmative—and let us do all we can to make it so.

Labeling of Shoes Produced in the United States

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Repairman Starts Move for Labels in Shoes," published in the Medford (Oreg.) Mail Tribune of December 29, 1957. The article relates to the one-man campaign of Shoe Repairman Wilbur Gardner, who has a point of view very much in harmony with that expressed in the resolution of Phoenix Grange, No. 779, Jackson County Oreg., which appears in the body of the RECORD today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Medford (Oreg.) Mail Tribune of December 29, 1957]

REPAIRMAN STARTS MOVE FOR LABELS IN SHOES—GARDNER RECEIVES SUPPORT OF MANY OFFICIALS IN MOVE

(By Bob Vroman)

Wilbur Gardner, who operates Gardner's Repair Shop at 612 East Main Street, Medford, is not by nature a troublemaker. For 27 years he has been content to work in his little shop, hammering, sewing away at the job of repairing shoes for Medford's citizens.

While he has known for some time that people were not always getting their money's worth when they bought a pair of shoes, he never figured he could do anything about it—at least not until one day about 6 months ago when he suddenly got "fed up" and decided to take matters in his own hands.

Pair after pair of children's shoes that were being brought into his shop didn't have enough solid leather anywhere to make a repair. They were paper from one end to the other, which was all covered up with a veneer of leather and probably cost the buyer from $8 to $10.

PUBLIC DUPED

Gardner reasoned that if clothing, bedding, foodstuffs, and other commodities had to be labeled as to their contents or construction, why not shoes? He figured that the public is being duped by not having laws to compel manufacturers to label shoes as to what materials are used in their construction.

The first thing Gardner did was to correspond with Congressmen in Washington, D. C., to stir up interest in getting shoe label laws and to find out what he could do to help get them. Gardner has written to Government heads of other countries to find out what laws are in existence on the labeling of shoes and he has had several articles published in trade journals on the subject.

He recently received a reply from Prime Minister Robert G. Menzies of Australia, along with a copy of the laws that control shoe labeling in that country. Although the laws are not as comprehensive as Gardner would have them, Australia's regulations are the best of any country in the world, and may serve as a pattern for setting up such laws here.

MORE EXPENSIVE

Not only are they more expensive in the long run, but cheaply made shoes do not give proper support to the wearer's feet, Gardner said, and that after they have been wet once they are apt to loose their shape completely. He said this is particularly harmful to children's feet and he added that foot doctors claim that 65 percent of the shoes on the market today cannot be rebuilt for foot correction purposes because of the cheap materials used in their manufacture. He also said that one-third of the children's shoes today are not even repairable.

Paper is the most common of the cheap materials used in shoe construction and lately it is being found in even the better grades of shoes. Gardner said that 75 percent of the children's shoes made today have wooden shanks instead of steel, or else no shanks at all.

In some women's shoes, he said, a manufacturer will import expensive leather and do a fine job in styling to make a handsome shoe, but inside there will be found paper insoles, heel counters and toe caps. The customer pays a high price for the shoes, which may actually fall apart if they get wet. This is particularly true of summer shoes, Gardner said.

UNIVERSITY OF MICHIGAN LIBRARIES

Gardner's complaint isn't so much the fact that paper fiber is used in shoe manufacture, but that if it is used the shoe buyer should know what he is getting for his money.

SENDS PETITIONS

Right now Gardner is in the process of sending out hundreds of petitions to cities all over the United States to aid in getting legislation passed. This was suggested by Senator WAYNE MORSE, along with other information, in a 3-page reply to Gardner's inquiry. Gardner has picked 12 cities in each State to send the petitions, which he is doing entirely on his own.

On the petition in his own shop Gardner has about 200 signatures, a good many of which are Medford doctors and shoe retailers, who recognize the trouble caused from poorly made footwear.

The petitions read: "National petition to label shoes: To state on a label what shoes are made of for your protection, due to the use of paper fiber and imitation leather in their manufacture. I believe I could buy better shoes if they were labeled. I believe I could buy better shoes by label and better foot health would result. I believe a great savings in money would result if I could buy shoes by label."

Also, at the suggestion of Senator MORSE, Gardner is collecting specific evidence of the use of paper fiber in particular brands of shoes, and on his counter for the public to see are cut-away samples of shoes made with paper that could not be repaired.

ATTACHED TO SHOES

He believes that the label should be attached to the shoes themselves and if they contain paper fiber, wood, or plastics, or any other product besides genuine leather, the label should say so in plain language and not call the material by some high-sounding name.

In this way Gardner feels that buyers will be able to judge better for themselves whether or not a particular shoe is worth the price.

Shoe retailers seem to be in accord with Gardner's ideas, too, because they often get "kickbacks" from customers who find that a pair of expensive shoes is cheaply made.

Almost every shoe repairman in the Nation is aware of the problem, Gardner said, and it's about time something was done about it.

RECEIVES COMMENDATION

Gardner has already received commendation from Parent's magazine for his investigations and he has received endorsement from various organizations locally. He also received a letter from Gino Prato, the Brooklyn shoe repairman who became known nationally after his appearance on $64,000 Question, commending him on what he has done. Prato said he would visit Gardner in Medford soon to see if he can do anything to help get a shoe label law passed.

Gardner now has the ball rolling on a nationwide scale and the time may not be far off when a person can go into a store and buy a pair of shoes and at least get what he pays for, putting an end to what Gardner calls the deceptive practice of our shoe industries.

Proposed Arctic Inspection Zone

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Decisive Propaganda Victory For Our Side," published in the Glendive, Mont., Daily Ranger of May 4, 1958. The editorial is a well-thought-out and understandable analysis of the proposal made by the United States Government to establish an Arctic inspection zone, a proposal which, unfortunately, the Soviet Union has seen fit to reject.

In my opinion, and I think in the opinion of many other Americans, the most important area, in many respects, is the Arctic area. It is not a continent but a floating ice mass. It is quite different from the continent of Antarctica which has a solid land base.

So far as potential aggression is concerned, I would point out that any danger to this country would most likely, come from over the Arctic ice cap. Therefore, one can understand why this particular area can be considered as perhaps the most important in the world.

Furthermore, insofar as my own State of Montana is concerned for a good many years the residents of Montana have had some concern about this particular area. During the Second World War, 7,000 combat planes of all types were flown north from Great Falls, Mont., to Alaska, and thence to Siberia. What then was a one-way street could at a future time become a two-way street.

So, Mr. President, I express the hope that this sound proposal advanced by the Government of the United States will be reconsidered by the Soviet Union, and that it will agree to an Arctic inspection zone under rules and regulations which would be equally applicable to both sides.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Glendive (Mont.) Daily Ranger of May 4, 1958]

A DECISIVE PROPAGANDA VICTORY FOR OUR SIDE

The United States proposal to establish an Arctic inspection zone through the United Nations has demonstrated America's earnest desire for an easing of tensions at a time when it was sorely needed. Though the plan already has been rejected by the Soviet Union without good reason, the sound logic of the plan will help us for some time.

A chorus of shouts, our voice among them, has begged our leaders for some display of initiative in foreign policy. With our international reputation shaken by sputniks, summit fever and Communist abeyance of nuclear tests, and only our eternal smugness to fall back on, the United States needed a boost. President Eisenhower provided it. We pray that the administration can keep and add to this advantage.

This Arctic inspection proposal was no gimmick. It was a sound plan which if accepted by world powers might have provided the key for peaceful coexistence of the United States and Russia. The area to be inspected covered the vast Arctic wilderness across which H-bomb-armed missiles and bombers would be likely to fly in case of war. The plan included mutual radar monitoring of all flights across the area, a secure method of protection without disclosure of military secrets. It would have stopped scramble flights by both American and Russian planes when meteorites and geese give false indications of approaching danger. It would have eased the cold war on at least the northern front. It would have been a first step in a welcome direction.

That the plan was no propaganda gimmick was best proved by the unusual endorsement of United Nations Secretary-General Dag Hammarskjold. This quiet man who has studiously avoided entering into the day-to-day issues before the U. N. in order to gain the confidence of all nations, gambled his reputation and job by asking for Russian acceptance of the proposal. It was as if he had worked many years to acquire the stature for this one moment. The repercussions of his gamble still are uncertain.

At this stage, the rejected inspection plan stands only as a decisive propaganda victory for the United States. The crisp Russian "no" is certain to shatter partially the tissue paper tower the Communists have built for themselves in the minds of many of the uncommitted peoples of the world. The United States must now concentrate on keeping the Russian tension factories exposed to the view of the world.

Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. PROXMIRE. Mr. President, the brilliant address by the junior Senator from Idaho [Mr. CHURCH] last Monday, May 5, in which he gave the definitive argument for statehood for Alaska now, has attracted nationwide attention.

The Milwaukee Journal, a distinguished newspaper in my State of Wisconsin, summarized the analysis of the Senator from Idaho in an editorial entitled "Westward March Is Not Over." The editorial emphasizes his argument that the Nation stands unfinished so long as hundreds of thousands of our citizens are denied the full rights which go with living within a State in the Union.

I ask unanimous consent that the editorial entitled "Westward March Is Not Over," which appeared in the Milwaukee Journal on May 7, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WESTWARD MARCH IS NOT OVER

One argument used against Alaskan and Hawaiian statehood is that "the Union is complete." Not so, Senator CHURCH, Democrat, of Idaho, told the Senate, Monday.

"Our westward march is not over, ours is not a finished country," he said, "as long as hundreds of thousands of American citizens, in our two incorporated Territories of Alaska and Hawaii, are barred entry and wait upon the doorstep of our Union for the rights which are their legacy."

CHURCH also criticized those who argue that statehood would bring new Senators who would affect the party alinement and further dilute the voting strength of the more populous States.

"Such arguments," the Idahoan declared, "have been with us from the time of our national origin. Had we heeded them in the past, the United States would still be comprised of the thin tier of 13 States that

stretch along the Atlantic coastline of our mighty continent."

Speaking particularly of statehood for Alaska, which could come up for action shortly, CHURCH warned that "continued failure to grant it can only be regarded as a deliberate flouting of the popular will." Various polls, many newspaper editorials and action of Democratic and Republican national conventions of 1956 evidence that this is true.

Oil Imports Danger Strikes Home

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. CARLSON. Mr. President, I want to invite the attention of the Senate to an interesting editorial which appeared in the El Dorado Times of April 25 in regard to the effect of increasing oil imports on our domestic economy.

While the editorial deals principally with the operations in the State of Kansas, which have been seriously curtailed as a result of these imports, I think it is well to remember that the United States as a whole has trimmed crude production to about 87 percent, using the base period of January to June 1956, on which to estimate the percentages.

The entire United States has made a cut of 876,000 barrels daily between the base period and March of this year.

In Kansas it can be definitely stated that this curtailment in the production of oil is effecting practically every section of the State and is one of the major factors in holding back a growing and expanding economy in our State.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OIL IMPORTS DANGER STRIKES HOME

The continuing swollen flood of foreign oil imports into the United States finally has brought the domestic oil industry close to a state of disaster.

The problem presented is an old one. It has been going on for the past 30 years. Much has been said about the matter in that time—and little done. Arrogant importers, sitting under the protection of a business-Government understanding and cabal, have paid no heed to cries of distress from the American oilfields. Successive administrations of Federal Government have been apprised of the existing condition time and again. But none of these has ever sponsored an effective remedy.

Today the volume of imports has arrived at a figure which seriously menaces the welfare of the domestic industry. All oil operators in the numerous oil States of the Union are feeling the severe pinch which it exerts. That pinch comes at a time when the industry is suffering from other causes as well. Here in Kansas the establishment of the severance tax as a revenue-raising principle, plus rigid and oversevere regulation in anti-pollution measures, has dealt Kansas oil producers the hardest blows they have yet sustained. Leasing and drilling development—the entire brisk pace of the industry in this State has been slowed.

When the oil tempo slows down in Kansas, the welfare of almost every other business and industry in the State is harmed. With oil money flowing in smaller streams through Kansas channels of commerce, those businesses receive less than their normal share from such source. The shortage cuts in a thousand ways.

That is what Gene Moriarty and Bob Ramsey, of Wichita, as well as others, told a large group of El Dorado business and professional people here Wednesday. They made their point clear: Any help now extended to relieve the plight of the oil industry may not be regarded simply as aiding a friend in distress, but represents a help to one's own individual enterprise.

This is an oil town—and has been in that category for 43 years. Business folk here understand and appreciate the importance of the oil industry to their personal welfare. They listened intently to what was said Wednesday. Moreover, they will act.

Within the next few days many letters will go forth from this town to Kansas Senators and Congressmen, urging support of the Ikard bill, House bill 11781, which is now before the House Ways and Means Committee in the National Congress. This bill, termed the "Mineral Resources Security Act," is designed to curb foreign imports of oil and oil products in a proper and effective manner. It needs to be passed—and that passage should take place at the present session of Congress.

The enactment of legislation of this sort will not be easy. Oil imports are governed and controlled by a group of large companies which have heavy importing interests along with their domestic activities. They work hand in hand with key politicians of both parties. Here exists an unholy combine of business and politics, intended to sacrifice the welfare of the domestic industry at large for the benefit of the few. The subject is further complicated by obligations of the Federal Government in the field of good-neighbor relationships.

Congress should hear from the grassroots. The grassroots represents those of us locally who are suffering along with our oilmen friends. Letters going now to Congressmen should be sharp and to the point. Congressmen are sensitive to sentiment back home. Moreover, none need forget that this is also an election year.

United Negro College Fund

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. WILEY. Mr. President, one of the many very fine educational-fund campaigns is that conducted each year on behalf of the United Negro Colleges.

I was interested to read in last Friday's Milwaukee Journal an editorial urging adequate contributions to this important fund. While the people of Wisconsin are generous, as are the people of the United States as a whole, it is a fact that unfortunately we have not contributed nearly as much as all of us should have given to the growth of higher education for our Negro citizens.

America is strong and enlightened to the extent that all groups in her population—I emphasize, all groups—are enabled to grow to their fullest potentialities.

Who is to know how many potential George Washington Carvers there are among the Negro youngsters of this land who might never grow to their fullest stature, who might be wasted as that great scientist was almost wasted, and and would have been but for his own courage and the kind intervention of fate?

Who is to know how much this country loses in economic values alone, in economic wealth which is not created, because Negro youngsters are not able to pursue higher education in the same manner white youngsters are?

Fortunately, the United Negro College Fund has enlisted some of the finest of our American citizens in this splendid cause.

They are splendid citizens of the North and South; citizens who may disagree, incidentally, on some of the most controversial issues which confront the South. But these citizens are united on this one point, that all youngsters, regardless of race, should have adequate opportunity to grow to their fullest potentiality.

I do not refer merely to the young scientists—the future George Washington Carvers. I refer to the youngsters who can contribute to America—if they are given the right chance—in the liberal arts, in the humanities, in religion, in any area to which they feel a calling.

So I send to the desk the text of this Milwaukee Journal editorial which appeals to the generosity of the people of my State. I hope it will strike a responsive chord in arousing the wise philanthropic spirit of Americans beyond Wisconsin's borders.

Let no man anywhere think that this is just a southern problem. This is a problem of the 48 States. The South has made great progress, but we of the North must look to our own responsibilities, as well.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNITED NEGRO COLLEGE FUND

A few thousand dollars have been raised each year in the Wisconsin campaign for the United Negro College Fund. Last year it was about $13,000. That's a pittance considering that the joint campaign is for the support of 33 leading Negro institutions, with enrollments totaling around 24,000.

Wisconsin would be far more generous to this cause, we believe, if more of us understood what great good our dollars would do for these Negro colleges and their students and the Negro minority generally, nationwide. It is hard for us to realize that where most of these colleges operate, opportunities for the Negro boy or girl to go to college are terribly circumscribed both by economic status and "the color line."

For practical as well as altruistic reasons more Wisconsin people should wish to contribute what they can. For in failing to give Negroes equality of opportunity to train to their full capacity we not only discriminate, we are wasting great human resources which could contribute to national prosperity, security, and cultural advancement.

UNIVERSITY OF MICHIGAN LIBRARIES

Only through education can Negroes generally attain the position we say they should occupy as fellow Americans. And more than half of UNCF college graduates go into teaching.

Milwaukee benefits directly from the UNCF colleges. A large number of leading Negro residents here with college degrees trained in those institutions. They are the Negroes to whom we must look for help in making difficult adjustments as more Negroes stream in from the deep south, mostly poorly educated and poorly prepared for northern city life.

The United Negro College Fund campaign in Wisconsin is now underway. The address of the Wisconsin headquarters is room 1007, 626 East Wisconsin Avenue, Milwaukee.

Exemption of Certain Agricultural Commodities From Interstate Commerce Commission Regulation

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent letter I have received from Mr. Edwin N. Yeary, president of the Yeary Transfer Co., of Lexington, Ky., concerning S. 3778.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

YEARY TRANSFER CO., INC.,
Lexington, Ky., May 9, 1958.

Senator THRUSTON B. MORTON,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MORTON: The Senate Subcommittee on Surface Transportation, of which Senator SMATHERS is chairman, filed its report on April 30, 1958, with the Senate Committee on Interstate and Foreign Commerce in which it recommends the freezing of the agricultural exemption at its present level with a slight rollback. The slight rollback would bring under economic regulation frozen fruits and vegetables and imported agricultural commodities.

The United States Department of Agriculture has been engaged during the past year in making a study of the effect of the agricultural exemption upon transportation costs of frozen fruits and vegetables, which study has not yet been completed, but I am informed will be available before too long. This study should contain information of great value to Congress in determining whether or not to place these commodities under economic regulation.

It would appear that to single out this agricultural commodity for regulation is rather discriminating, particularly in the light of the studies now being conducted.

Insofar as the regulation of imported agricultural commodities I believe Congress should take into consideration the fact that ICC has consistently ruled that a truck transporting both exempt and regulated commodities must be a regulated carrier. In the light of this ruling it is important to note that a great number of imported agricultural commodities, such as bananas, pineapples, and coffee, move in mixed loads with domestic agricultural commodities such as tomatoes and peaches. It follows that the effect of placing imported agricultural commodities under economic regulation would bring a portion of the domestic agricultural commodities under regulation when moving in mixed loads.

I believe it is beyond reasonable argument that regulation increases the cost of transportation with the result that the producer receives less for his commodity and the consumer pays a higher price for the commodity. There is also the result that there will be less consumption of any article upon which the price is increased.

Since the passage of the Motor Carrier Act, section 203 (b) (6), which provides for the agricultural exemption, has been the subject of much litigation and the courts have now clearly and well defined the meaning of the words in this section. To amend this section and change the words will result in another series of expensive litigations to determine just what was the congressional intent.

At the hearing before the House Subcommittee on Transportation and Communications when that committee was considering H. R. 5823, it was suggested that a resolution freezing the agricultural exemption at its present level be considered by Congress. Such a resolution would adopt ruling 107, of the ICC Bureau of Motor Carriers. This ruling designates the agricultural commodities which are exempt and those which are not exempt. This ruling was issued March 19, 1958. It would appear to me that a resolution of this character would result in freezing the exemption so that it could not be expanded from its present level and would not disturb the language of the statute and would thereby avoid extensive and expensive litigation.

I will appreciate your serious consideration of these matters.

Sincerely,

EDWIN N. YEARY,
President.

Civil Service Retirement Annuity Increases

SPEECH
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 31, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 607) to provide for increases in the annuities of annuitants under the Civil Service Retirement Act of May 29, 1930, as amended.

Mr. BREEDING. Mr. Chairman, I should like to record at this time my fullest support of the bill H. R. 607, which upon enactment will provide for an increase of 10 percent in the retirement annuity benefits of civil service retirees who were on the annuity rolls on or before October 1, 1956.

This modest cost-of-living increase in the civil service retirement benefits of annuitants and survivors is urgently needed by some 250,000 retired Federal employees and 80,000 survivors who will be beneficially affected by this legislation.

These people are forced by circumstances to live on a rigid, fixed income. They, therefore, cannot adjust by any other means their economic status to meet the increases in our present-day cost of living.

It is with genuine pleasure, Mr. Chairman, that I lend my endorsement and support to this measure which seeks, as a matter of justice, to ease the financial burdens of retired senior civil service employees.

The Debtor Has Assets, Too

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. PROXMIRE. Mr. President, one of the great difficulties in thinking about the financial problems of the Federal Government is that there is no exact parallel to it.

If we try to reason from the analogy of the private householder we run into trouble, because the wealth of the United States is the whole dynamic productive power of its people now and in the future. If we compare it with a private business we go astray because the Government is not operated to make a profit.

Sometimes, though, it would be helpful to take into account some factors which are always part of the thinking of individuals and private concerns. When we talk about what the Government owes and whether the budget is going to balance, we ought to remember the enormously valuable physical assets that are the property of the whole people.

This is done very well in a perceptive editorial in the Madison Capital Times which appeared on May 7. The editorial points out the fallacy of talking about the liabilities of the Federal Government with never a word about its assets.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the Capital Times entitled "Shouldn't the Government List Its Assets With Its Liabilities?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHOULDN'T THE GOVERNMENT LIST ITS ASSETS WITH LIABILITIES?

When a private business makes a financial report it lists its assets along with its liabilities. But one never hears of the assets of a government in the caterwauling that goes on about the debt.

The national debt of $275 billion is not a pleasant thing to contemplate, we'll admit. But our chief objection to it is that the cost of financing it is adding further wealth to those who deplore it the most.

But while the tears are being shed about the national debt, why not take a look at the brighter side—the assets of the Government. The House Government Operations Committee recently reported that the Federal Government holds some $250 billion in assets.

That's not peanuts.

Actually, the assets are far more valuable than they appear on the Government's books. For example, the 18-acre White House grounds in the most valuable real estate section of Washington is carried on the books at a value of only $1,000.

It is estimated that the San Francisco Presidio is worth $50 million, but the Gov-

ernment lists it at $1. The same value is listed for Governor's Island in New York. The Little Rock Air Force base, consisting of 6,100 acres, which was given to the Government in 1952, is recorded as being of "no value."

Much of the property owned by the Government is listed at its original cost.

In the event that we wanted to give up the idea of keeping a Government, the whole thing could split up with each citizen receiving $1,450, assuming that it was sold at the deflated values listed.

If these assets were listed at their real value, it might well show that our assets exceeded our liabilities. That's not such a gloomy picture.

Address by Hon. William F. Knowland, of California, at Dedication Ceremonies, Point Arguello Naval Missile Facility

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. KNOWLAND. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD the dedication speech I made at ceremonies at Point Arguello Naval Missile Facility on Saturday last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. WILLIAM F. KNOWLAND AT DEDICATION CEREMONIES, POINT ARGUELLO NAVAL MISSILE FACILITY, MAY 10, 1958

Today we are here to commission the Point Arguello Naval Missile Facility as a major part of our National Pacific Missile Range. This dedication, therefore, is a symbol of this Nation's progressive and forward-looking programs to strengthen our position in the military and in the peaceful applications of missilry and space technology.

The development and employment of missiles and rockets is an extremely volatile and rapid-moving field. I am told that the draftsman's ink was hardly dry on the first master plan layout for the development of this site when new and radically advanced vehicles were assigned here causing early modification of initial plans.

But this came easy and this is one of the great virtues of this site. That is, great flexibility and vast acreage to accommodate the most advanced vehicles our scientists can envision.

But why do we need these great missile ranges? We need them for operational sites, for development firings, for training bases. Point Arguello will serve all 3 of these objectives and will serve all 3 military services.

In fact, though such agency is yet to be established, it is expected that this Pacific Missile Range would accommodate any civilian agency interested in rocketry and space flight such as the National Advisory Committee for Aeronautics or other organization that the Congress might establish.

This range is being established to fill the ever-increasing need for launching sites for the missile program.

The Pacific Missile Range is in no way a replacement for the Atlantic Missile Range at Cape Canaveral, Fla., or for the White Sands Proving Ground in New Mexico. On the contrary, those ranges will continue to grow and continue to fill the ever-increasing role that missiles and rockets play in our military defenses and civilian lives.

Each range has special capabilities—special features. For testing short-range missiles, your Government can utilize or acquire land ranges for firing trials. However, for longer range missiles and rockets, it is essential to use the vastness of the oceans, where maximum safety to human life can be achieved. This fact will become increasingly important as the state of the missile art advances to the point where the very large and very powerful rockets associated with space exploration come into use. In these cases, major land bases such as this site on the California coast must be provided as launching points, but our range is the thousands of miles of ocean ahead of us.

The skills and techniques and scientific capabilities associated with the establishment and employment of a missile-launch base of this character are of the highest order. As we plan for the next decade we must call upon and take steps to encourage the growth of our scientific and technological resources. We must keep in mind that in this field of activity, perhaps more than any other, what is new today may be obsolete tomorrow.

Neither in our more conventional defenses nor in this relatively new field must we allow our Nation to become second best. The stakes are high, for our very survival as free men is involved. The problems associated with designing a test and training center like the Pacific missile range is doubly difficult. For the range itself must be established and operating before the missiles assigned to the range can be tested.

This is to say the range designers must look far beyond today's fantastic missiles to insure that this major development tool—the range—has all the necessary capabilities the future will demand, and to provide these facilities on a timely basis.

And this points out another key factor of this operation—urgency. The pace of invention and discovery and adaptation of this knowledge to weaponry and space technology, coupled with the requirement of maintaining world leadership, requires that no major avenue of advancement go unexploited.

We are confident that the officers and scientists charged with this responsibility here at the Pacific missile range will continue to meet this challenge as their already outstanding progress has demonstrated.

The establishment of these major facilities here in California, the Pacific missile range and the closely integrated Cooke Air Force Base operational site adjoining it to the north, will have considerable impact on the California economy. The Defense Department has estimated that within the immediately foreseeable future some 5,000 to 10,000 new jobs will be provided in the area serving these activities. Though this growth, of necessity, is rapid, it will be permanent, for the goal is long term and tied to both military and civilian economy.

Likewise, the introduction and development of highly technical skills should be welcomed by the community and the area. Speaking as a Californian, we welcome this new activity to our State. The local and State authorities, industry, labor, and our general public will cooperate in this endeavor which means so much to the future of all mankind.

It was mentioned that these facilities will serve all services. This is of especial note. The President has recommended and the Congress is considering a new plan for the organization of the Defense Department. The keynote of this reorganiaztion is increased unity and economy. The operation here at Point Arguello, though basically managed by the Navy, is directed toward being a true national facility for unified use by all services. This is a proud example of service unity.

I have described the nature of this new facility. I have pointed out factors regarding its importance. But of the true long-term goals, there remains one last key point.

As our Nation grew to be the greatest world power, we—and particularly our Navy—lived under a concept the world strength depended upon "control of the seas." During this century, technological progress required us to revise and expand this concept to become "control of seas and control of the air." We are now embarking on the space age, and most assuredly we must take the next step—to make sure that the "control of space" is within the capabilities of those who would be devoted to human freedom and not to the enslavement of mankind.

We want to insure that free men can enjoy and benefit by unexplored potential of the heavens. We must continue to press back our horizons. Man's insatiable quest for knowledge and his compelling urge to explore the unknown are forces which will insure that full advantage is taken of all the potentials of space and that the opportunities for scientific exploration, observation, and experiment are cultivated so that our knowledge of the universe is constantly expanded.

Thus, this base, the Naval Missile Facility, Point Arguello, Calif., as part of the Pacific missile range, commences its journey into the future.

Each generation of Americans has measured up to the challenges confronting it. We in this atomic, missile, and space age can do no less, and we will face the future with confidence in the firm belief that we will continue to have divine guidance which has made and preserved us as a nation.

Annual Legislative Questionnaire Results

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. HOLT. Mr. Speaker, each year I send my annual legislative questionnaire to the people of the 22d Congressional District, consisting of Hollywood and the San Fernando Valley. This year's was my sixth questionnaire. The response to this questionnaire is always gratifying in that it shows the continuing interest of our citizens in legislation pending before Congress. This year more than 50,000 returns have been received and many of them included additional comments and letters. Insasmuch as there are thousands of citizens who have moved to this district from every State of the Union in recent years, I believe the results of the questionnaire represent a national cross-section to a large degree and would be of interest to all Members of the House.

Tabulation of the answers was done by International Business Machines Corp. and the results are as follows:

UNIVERSITY OF MICHIGAN LIBRARIES

	Percent		
	Yes	No	No opinion
NATIONAL DEFENSE			
1. Do you feel that our military program has been materially harmed by the Air Force, Army, and Navy engaging in wasteful intraservice competition and unnecessary propaganda directed against a sister service?	79.8	14.0	6.2
Do you favor—			
2. The United States sharing information on atomic weapons and other nuclear material with our allies?	55.5	36.9	7.6
3. A multi-billion-dollar public defense shelter program financed by the Federal Government?	24.3	64.1	11.6
4. Meeting additional defense costs, if more money is needed, by the following actions:			
(a) Reduce expenditures on domestic projects, such as our own Los Angeles river flood control project, Federal Welfare programs, non-military power development	38.4	50.9	10.7
(b) Increase income and other taxes	16.7	73.7	9.6
(c) Eliminate nonmilitary aid to friendly foreign allies	54.5	36.1	9.4
(d) Permit an increase in the national debt	37.0	50.1	12.9
EDUCATION			
5. Do you believe the main support for education in the future still must come from State, local, and private sources?	78.7	17.1	4.2
6. Should the Federal Government, as recommended by the President, grant scholarships in mathematics, chemistry, physics, and other sciences to qualified students?	72.6	23.8	3.6
7. Should the Federal Government, as recommended by the President, grant scholarships and fellowships to qualified teachers as a practical reward?	65.5	28.6	5.9
8. Do you believe that Federal payment of all or part of our public-school teachers' salaries might lead to Federal control of our public-school system?	65.7	26.7	7.6
9. Do you think more emphasis on teaching science and mathematics in high schools would be a bigger factor in improving the education of United States youth than a Federal general education program?	72.5	19.9	7.6
FOREIGN POLICY			
10. Would you trust the present Russian Government to live up to any treaty or agreement (such as disarmament without inspection) we might make with them?	4.6	90.3	5.1
Do you favor—			
11. Postponing another summit meeting until Russia shows greater evidence of good faith toward permanent peace?	68.2	25.9	5.9
12. Recognition of Red China by the United States?	19.0	73.4	7.6
13. Foreign aid assistance to Yugoslavia?	13.4	73.5	13.1
14. Foreign aid assistance to Poland?	23.2	62.8	14.0
15. Continuation of our mutual security foreign assistance program to the following countries or areas:			
(a) Friendly Middle East countries	64.5	23.9	11.6
(b) India	46.8	38.7	14.5
(c) Other Asian countries	46.1	34.1	19.8
(d) France	44.6	41.0	14.4
(e) Other European countries	46.1	33.3	19.8
16. Extension of our policy of reciprocal trade for 5 years even though certain industries might be hurt by foreign competition (e. g., textiles, pottery, tuna, etc.)	55.5	32.7	11
17. Strengthening Israel militarily and economically, based on the argument that it is definitely allied with the United States and the West in the troubled and unpredictable Middle East?	44.8	41.3	13
LABOR			
Do you favor—			
18. Legislation requiring unions to conform to antitrust laws now applicable to private corporations and other business enterprises?	84.8	9.2	6.0
19. Federal supervision and regulation which guarantees union democracy, protecting voting rights of members, and reporting of all financial transactions made by union leaders?	91.5	5.4	3.1
20. Enactment of a State law along the lines of the right-to-work (also called voluntary unionism) amendment currently being discussed in California?	66.7	23.7	9.6
TAXATION			
Do you favor—			
21. Legislation which I have introduced, relieving individuals of certain tax inequities:			
(a) Deduction of all medical and drug expenses	86.3	10.3	3.4
(b) Deduction for working mothers up to 50 percent of income for child care expense (maximum $2,500)	89.3	23.4	7.3
(c) Credit for travel expenses to and from job (limit $300)	62.9	31.5	5.6
(d) Credit to parents for college tuition	67.5	27.0	5.5
(e) Allowing depreciation on taxpayer's residence?	73.9	21.0	5.1
22. A legal limit being placed on the amount of personal income tax the Federal Government can collect from an individual?	55.9	34.7	9.4
GENERAL SUBJECTS			
Do you favor—			
23. The granting of licenses by the Federal Communications Commission for "pay television"?	30.8	57.4	11.8
24. Increasing the rate for 1st-class mail, along with bulk mail, and other postal rates to help reduce the huge deficit in the Post Office Department?	78.5	18.1	3.4
25. Granting the postal workers a salary increase this year?	63.6	25.2	11.2
26. Granting military personnel a salary increase this year?	47.8	38.6	13.6
27. Granting Federal civil-service employees a salary increase this year?	34.1	49.7	16.2
28. Legislation liberalizing our immigration laws (allowing more people from foreign countries to enter)?	27.1	63.3	9.6
29. Returning to the States as many Federal Government activities as possible together with specific revenue sources?	72.3	15.7	12.0
30. The present Federal program of assistance, supervision, and general treatment of the American Indian?	40.8	31.5	27.7
31. Legislation presently before Congress terminating Federal supervision of American Indian Affairs in the State of California?	34.5	28.1	37.4
QUESTIONS OF LOCAL INTEREST			
(The following subjects do not require Federal action, but as a homeowner and taxpayer in our community, I am vitally interested in them and hope you will be too.)			
Do you believe—			
32. The Los Angeles Dodgers baseball team should be allowed to go ahead under the present agreement with the city of Los Angeles to build their own baseball park and other facilities in Chavez Ravine?	43.3	44.7	12.0
33. There should be a merger of the city and county governments to avoid wasteful duplication?	88.9	6.2	4.9

Hon. Emanuel Celler

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1958

Mrs. KELLY of New York. Mr. Speaker, on May 6 my colleagues paid tribute in the House to the dean of the New York Democratic delegation, the Honorable EMANUEL CELLER, on the occasion of his 70th birthday. It was not possible for me to be on the floor at the time, but I want to add my tribute to the man who for 35 years has represented the people of the 11th Congressional District of New York.

Mr. Milton Kronheim, of Washington, D. C., was host for the birthday celebration to Mr. CELLER; and among the guests were the New York delegation, and their wives, and Mr. CELLER's official staff. It was a memorable evening with all the guests paying glowing tribute to the guest of honor, but the highlight was the tribute paid by Mrs. Celler. She related the trials of being the wife of a man in public life and how she handled these problems. In acknowledging the tributes paid to him, MANNIE explained his philosophy. He learned that long hours of work were necessary and that all problems must be approached with patience.

In concluding his remarks, MANNIE left with us several quotations which I want to share with the readers of the RECORD.

We find these words in Job: "Thou shalt forget thy misery, and remember it as waters that pass away."

Count your garden by the flowers,
Never by the leaves that fall,
Count your days by golden hours,
Don't remember clouds at all.

Count your nights by stars—not shadows,
Count your life by smiles—not tears,
And with joy on this, your birthday,
Count your age by friends, not years.

Long ago, an eastern monarch plagued with misfortunes and harrassments called his wise men together. He asked them to invent a motto containing a few magic words that could help him in his time of trial. He wanted a motto small enough to be engraved on a ring. He wanted it to be endlessly enduring. The wise men thought and thought and finally came to him with the magic words "This too shall pass away." The motto has survived century after century. These words are rare wisdom and they have proved very precious to countless numbers of people.

High Quality of Oregon State Highway Department

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 12, 1958

Mr. NEUBERGER. Mr. President, the Nation has been provided an effective antirecession tool as the result of passage by Congress of an accelerated program for construction of the Federal Interstate Highway System. This was a major objective sought by myself and other Members of the Senate Public Works Committee when the bill was before us for consideration.

However, the speed with which this crash program of roadbuilding can be put to use will depend on the readiness of States to put men and machinery on the job. I am pleased to report to the Senate that the Oregon State Highway Department was ready for the challenge as soon as the Highway Act of 1958 became law. The State of Oregon will be able to meet the deadlines for putting the work under contract. This will have a salutary effect on the economy of my home State, which has been adversely affected because of declines in lumber production, because many new job opportunities will be created as the construction program progresses.

Oregon is ready to participate fully in the accelerated highway program because of the efficiency and advance planning which it has accomplished. Passage of the new law found Oregon State Highway Engineer W. C. Williams and his staff ready with a stockpile of projects, surveyed and ready to go. I might add that this type of foresight and planning in road matters is not unusual for my home State. It is the rule, rather than the exception. The efficient operation of the Oregon Highway Department is a tribute to the many persons who have given years of service in management of the Oregon road system. It is because of this dedicated public service that Oregon enjoys one of the Nation's finest highway systems. This accomplishment has been due to the work of many men, persons like R. H. Baldock, the predecessor of Mr. Williams; Tom Edwards, construction engineer; and Forrest Cooper, deputy State highway engineer.

Readiness of Oregon to take on its share of the antirecession road program is also a tribute to the effectiveness of members of the Oregon Highway Commission, the group of able private citizens who direct the activities of the professional engineering staff. The work of the Oregon State Highway Department was the subject of an article in the May 4, 1958, issue of the Oregonian. I ask consent to have printed in the Appendix of the RECORD an article entitled, "Highway Department Rates High With United States," which was written by Mr. Herman Edwards, a capable staff writer of the Oregonian.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Oregonian of May 4, 1958]

HIGHWAY DEPARTMENT RATES HIGH WITH UNITED STATES

(By Herman Edwards)

The Federal Government's antirecession crash program which made an additional $600 million available to the estates for highway construction when it was signed last month by President Eisenhower, created some problems for many State highway departments.

The law sets two deadlines which the States must meet if they qualify for the money. One provides that all projects must be under contract by December 1, 1958. The other requires that all must be completed by December 1, 1959.

How could the States qualify within such a short period? Some projects take 2 and 3 years for the surveying and location of routes. Acquisition of right-of-way also is time consuming.

It is typical of the Oregon State Highway Department that it was ready for this challenge. State Highway Engineer W. C. Williams promptly told his bosses, the three members of the Oregon State Highway Commission, that Oregon should be able to realize to the full amount the approximately $10½ million which the crash program will add to the highway construction program in Oregon this year.

OREGON FAVORED

Oregon is in a better position to meet the challenge than many States. Currently, it stands about eighth in the list of those which meet Federal requirements and provides matching money as it becomes available. There are good reasons why Oregon is in this favorable position.

The State highway department not only is an efficient business, but big business—the biggest of the State agencies by far. During this calendar year it will spend approximately $95 million in the construction of highways and bridges, the purchase of right-of-way, the maintenance of its highways and properties and the administration and operation of an establishment that numbers some 3,600 persons.

As for the details of getting projects ready to qualify under the new crash program, the department already has enough of them "on ice" to insure that Oregon will be able to participate to the limit, said Frank Hall, chief highway designer.

Hall dramatically opened his "ice box," a treasure chest of projects ready to be submitted to the commission for go-ahead. Some of them have been in the making over a number of years, their start delayed only because of lack of funds. Most of them are of the type on which the commission has ordered surveys and preliminary cost estimates but has been forced to tell visiting delegations they must wait until more money is available.

PROJECTS DUE

Some of these projects will be laid before the State Highway Commission at its May meeting Thursday and Friday in the Imperial Hotel.

The duties of highway department employes are divided among five major operating divisions. Traffic engineering is responsible for route determination and traffic control and other functions. Construction engineering is responsible for construction on all highways except bridges and structures. Bridge engineering constructs all structures.

Most numerous in personnel is the maintenance division, which employs approximately 1,700 people. The office engineering division is responsible for finances and statistics, for road designing and many other functions.

Oregon designs its own bridges, does all of its engineering. Some States contract these functions and also that of right-of-way purchases. Some States also contract their maintenance. Oregon does most of its maintenance work. Oregon extends farther into all fields of highway construction than most States.

Headquarters of the department is in its own handsome building on the Capitol Mall in Salem. Its big maintenance and repaid shop for the care and rebuilding of some 4,400 pieces of equipment is on Salem's East State Street, where also is located the engineering laboratories unit of the materials division. Maintenance shops also are located at La Grande, Bend, Klamath Falls, and Coquille.

Department personnel are located in every county of the State on geographical or project basis. The State is divided into five divisions, with a division engineer at Salem, Portland, Roseburg, Bend, and La Grande. The department's teletype system and its wave-radio network, which is shared by the State police, provide fast and efficient communications throughout the entire highway department's family.

ENGINEERS SET

Each of the 5 division engineers has 3 keymen, a resident engineer who is in immediate charge of highway construction, a resident bridge engineer who directs the building of structures, and a district maintenance superintendent. Resident construction and bridge engineers are assigned on a project basis, the district maintenance superintendent on a geographical basis.

There are a total of 19 maintenance districts over the State. In a still broader delegation of responsibilities there are 132 section foremen who are responsible for maintenance in their individual areas.

The department's activities are in many fields, some of them little publicized. One of the most spectacular but little known is the engineering laboratories unit of the materials division. Last year some 29,000 items were submitted to the laboratories for testing, some of them requiring many tests each. Since 1919 the division has conducted approximately 450,000 tests and has records of every single one to prove the claim.

The staff of approximately 35 engineers, technicians, and assistants, normally augmented by 10 or more during the summer,

UNIVERSITY OF MICHIGAN LIBRARIES

works under the direction of G. W. Harra, engineer of materials.

"We trust no one, not even ourselves," said Harra of the laboratory tests which determine whether materials that go into highways, structures, everything used by the department, are all they are claimed to be, and that they will give the State full value and service.

Sand, gravel, chemicals, paint, and many other items are tested for quality and proper proportions of ingredients. Lubricating oils are tested from 120° Fahrenheit to a point below zero where they no longer will flow. Brake fluid is subjected to temperatures 60° below zero.

Steel rods used in reinforcing concrete are pulled apart, concrete is crushed by a machine capable of exerting 300,000 pounds of pressure. These are not samples supplied by manufacturers. They are taken from the project by inspectors or engineers. To prove that their tests have been accurate and their decisions proper, laboratory technicians go back to construction projects and test materials after they have been in use for years.

TESTS VARY

The laboratory also conducts tests for other State and Federal agencies, such as the analysis of materials for the new State prison building. A test made by exerting pressure on a sample of soil will indicate its ability to withstand the weight of tons of rock fill for months or years to come.

Use of contour maps made by the photogrammetric process from aerial photographs is one of the greatest timesavers in selecting routes for new highways. On one section of the Oregon Coast highway the survey of the route was completed and it was ready for contracting within a year. The old ground survey methods would have delayed start of construction a year or 2 years.

Another timesaver which has saved money and man-hours as well as time is the data processing department's electronic computer. In estimating how much earth had to be cut and filled on a project it came up with the right answer 80 times faster than the pen and pencil method.

The computer, after engineer data had been fed into it, took 5 minutes to produce the design for a bridge. Approximate time for an engineer to produce the same answer with pencil and paper would be 40 hours.

Use of modern methods is 1 of the reasons why the Oregon Highway Department is among the top 10 in meeting Federal requirements—and it is necessary to meet such requirements on almost all projects of size. The United States Government participates in approximately 95 percent of all highway construction projects in Oregon.

BALDOCK PRAISED

Probably a more important reason why Oregon got the jump over many States in highway building is the long-range planning done by Chief Engineer Williams and his predecessor, R. H. Baldock. At a time when most States were being forced to curtail highway building, with a consequent loss of trained personnel, the Oregon department was building up a large and competent engineering staff.

This buildup was necessary to meet the impact of a gigantic construction program made possible by legislative authorization in 1951 of a $40 million bond issue and of a second authorization of a $32 million bond issue in 1953. The Federal Aid Highway Act of 1956 came along at just the right time to keep the Oregon department in high gear.

Oregon enjoys numerous other advantages by reason of having a competent highway department. Bridges have been largely standardized, which reduces the time and cost of designing and construction. The department maintains a cost analysis section, one purpose of which is to determine a fair contract price which will allow the contractor to make a reasonable profit.

On each project the cost analysis section comes up with an estimate of what the proper cost should be. After the job is completed cost analysis determines what was the contractor's total cost and whether he made or lost money.

Oregon has another advantage over some States in meeting Federal requirements that right-of-way must either have been purchased or be under condemnation at the time the construction contract is awarded. Oregon is able to hurry this phase of preparation by filing condemnation suits.

The business of preparing a project for its final approval by the State Highway Commission, which then orders the advertising for bids, is one which involves the concurrence of many key engineers. Because of the way the department is organized this process moves smoothly, although the finished product may incorporate many changes.

SIGNERS ADDED

A sample is the project for the Sunset interchange with the Baldock freeway. Submitted by the resident engineer, with his signature, it then acquired the signatures of the division, the traffic, and the bridge engineers. Then came the approval of the department's construction engineer, Tom Edwards. There followed those of Deputy State Highway Engineer Forrest Cooper, State Highway Engineer Williams, and C. J. Polk, division engineer for the United States Bureau of Public Roads.

Costs of highway construction in Oregon, contrary to what may be popular belief and actual experience in some States, are on the downgrade. The cost index for the first 3 months of 1958 was 157 as compared with the cost index of 100 established for the base year of 1940. This was approximately the same cost figure (157) recorded for the last quarter of 1948.

About a year ago the cost index climbed as high as 180. Other States at about the same time reported much greater acceleration in costs and much higher cost figures compared with those in Oregon.

For the Lack of a Shoe, a Horse Was Lost

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. PROXMIRE. Mr. President, when we talk about the recession, or any other human tragedy, in terms of statistics in the aggregate, it is hard to grasp the snowballing effect that the troubles of one man or one company can have.

A good example is suggested by a news story in the financial section of the New York Times for May 9. The story states that the quarterly dividend of the Allis-Chalmers Manufacturing Co. for the second quarter this year will be half the usual amount. This is the kind of story that is common these days. It attracts little attention.

But trouble for Allis-Chalmers is trouble for thousands of workers in the Milwaukee area, where Allis-Chalmers has a great plant. It is trouble for stockholders in Wisconsin. This in turn means trouble for many businessmen who depend on those workers and stockholders as customers. And it means real trouble next year for the State of Wisconsin, which relies heavily on the personal and corporate income tax for revenue. This trouble will be sharp and immediate, because the State is forbidden to borrow by its constitution.

This is what a single news story means—and there are scores like it these days. This is why waiting for something to turn up is no way to respond to a recession.

I ask unanimous consent that the news story headed "Allis-Chalmers Halves Dividend," from the New York Times for May 9, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALLIS-CHALMERS HALVES DIVIDEND—CUTS QUARTERLY FROM 50 CENTS TO 25 CENTS—STOCK FALLS 1½ POINTS TO 23

The quarterly dividend on the common stock of the Allis-Chalmers Manufacturing Co., was cut yesterday to 25 cents from 50 cents. It will be distributed to shareholders on June 30.

The stock opened on the big board yesterday at 23¼ with a trade of 5,000 shares. Later it fell to 22¾, just short of the year's low of 22⅝. The final quotation of 23 was at a loss of 1½ points on the day.

The company explained that the board's action was considered prudent in the light of current business conditions and reflected no pessimism over the company's outlook.

Recently Allis-Chalmers reported its first-quarter net income at $2,307,199, or 27 cents a share. This was in sharp contrast to the $5,100,158, or 61 cents a share, earned in the initial 3 months last year. Net sales declined to $119,668,223 from $137,950,459.

Winona, Minn., Has Compiled an Enviable Record

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. QUIE. Mr. Speaker, I would like to call the attention of the House to a splendid record of accomplishment which has been compiled by the people of Winona, Minn.

The city of Winona has been singled out in a report, issued by Mr. J. Edgar Hoover, director of the FBI, as being 1 of only 6 cities in the Nation in the over 25,000 population class which had no instance of outbreak in 5 areas of major crime in 1957.

Winona had no crimes committed in the classifications of murder, manslaughter, robbery, rape, or aggravated assault.

In addition, Winona's crime rate in other classifications—such as burglary, larceny, and auto theft—is substantially lower than the national average.

The five other cities which join with Winona in this enviable record are, Bristol, Conn.; Amsterdam, N. Y.; Melrose, Mass.; Warwick, R. I.; and Sheboygan, Wis.

This record is all the more impressive when it is pointed out that it was achieved in spite of a nationwide rise in crime. FBI statistics on national crime, reported in a well-documented news story in the Winona Daily News, shows that there has been a 9.1 percent increase in crimes in 1957 over 1956.

In all crime categories except murder, national figures show that the number of cases in 1957 have risen when compared to the previous year.

I believe this is truly a significant accomplishment in these days when crime has been making the headlines of our newspapers with ever-increasing frequency.

This record is a personal tribute to all the people of Winona who have banded together in a progressive community to create a climate of religious and civic stability which has made such a record possible.

The record of Winona springs from other causes in addition to those I have named.

I am sure the program of law enforcement in Winona has contributed in large measure to the decrease in crime.

I am certain that the educational facilities have played a major part.

I believe that the recreational leadership has exercised a great influence.

When a city establishes a record such as this, it should be studied by national law enforcement authorities for possible corporation of programs and projects into the pattern of other communities.

I am sure, Mr. Speaker, that the people of Winona would like to share their programs of law enforcement with national authorities and therefore I urge that such a study be made.

At this time, I would like to insert into the RECORD the complete news story from the Winona Daily News which lists comparable statistics.

WINONA 1 OF 6 CITIES WITHOUT MAJOR CRIME

The attention of police administrators and social scientists throughout the Nation has been focused on Winona following publication of an FBI report showing that this city is 1 of only 6 in the United States in which no murders, manslaughter, robberies, or aggravated assault were reported during 1957.

The annual Uniform Crime Report issued by FBI Director J. Edgar Hoover revealed that Winona reported a crime rate considerably lower than the national average in each of the eight major crime categories analyzed in the report.

There were indications in Washington that intensive studies will be undertaken in Winona and the other five cities heading the listing to determine factors contributing to the low crime rate.

The other 5 cities—among 557 in the over-25,000 population classification—in which there were no murders, robbery, manslaughter, or aggravated assault during the year are Bristol, Conn., population 35,961; Amsterdam, N. Y., 32,240; Melrose, Mass., 26,988; Warwick, R. I., 43,028; and Sheboygan, Wis., 42,365.

No city in the Nation filed crime-free reports in all seven major categories listed in the survey.

Winona in 1957 reported 42 burglaries, 24 cases of larceny involving amounts over $50, 106 larceny cases under $50, and 9 auto thefts.

This is the way Winona compares with the national crime rate in eight categories. (The national average is computed on a 100,000-population basis and the Winona figures were arrived at by multiplying individual totals by 4 inasmuch as the population here is near 25,000:)

	National	Winona
Murder	5.1	0
Manslaughter	3.5	0
Rape	15.1	0
Robbery	64.3	0
Aggravated assault	90.2	0
Burglary	502.9	163
Larceny	1,317.8	520
Auto theft	254.7	36

The FBI report shows that nationwide there was a 9.1 percent increase in crimes in 1957 over the previous year.

A breakdown of the 2,796,400 crimes reported last year reveals that in the 8 major categories there were increases in all but 1 of the classifications—that, murder, in which a 0.7 percent decrease was noted.

The number of cases, with percentage changes in parentheses, follows:

Murder	6,920	(−.7)
Negligent manslaughter	5,740	(+1.6)
Rape	21,080	(+3.8)
Robbery	61,410	(+8.2)
Aggravated assault	100,110	(+3.8)
Burglary	590,020	(+12.2)
Larceny	1,721,170	(+8.4)
Auto theft	289,950	(+9.9)

The report notes that between 1950 and 1957 crime in the United States increased by 56.2, rising 4 times as fast as the total population which is up only 13 percent.

The value of stolen automobiles during 1957 was $249 million but recoveries represented a valuation of $232 million.

Winona reported recovery of all cars stolen here during the year. In addition three automobiles stolen elsewhere were recovered in Winona.

Of all arrests in 1957 in 1,473 cities of over 2,500 population, 29.8 percent were of Negroes who represent only 10 percent of the total population.

In his analysis of the crime report Hoover listed seven factors which generally influence a city's crime rate. They are:

Population. Larger cities generally have higher crime rates.

Composition of population. Crime rates usually are higher in cities with younger population groups.

Economic stability.

Religious facilities.

Recreation areas.

Educational systems.

Quality of police force and the attitude of the community toward law enforcement.

Business Is Good

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. RAY. Mr. Speaker, I am glad to place in the Appendix a thoughtful and encouraging letter which I received last Friday from an automobile dealer in my district. I hope other Members are getting similar good reports from business in their districts. The letter speaks for itself and is as follows:

PALMA MOTOR SALES & SERVICE CORP.,
STATEN ISLAND, N. Y., *May 6, 1958.*

Hon. JOHN H. RAY,
319 House Office Building,
Washington, D. C.

DEAR MR. CONGRESSMAN: As you know, on April 26, 1958, the Richmond County automobile dealers, in cooperation with the Staten Island Chamber of Commerce, the Staten Island Advance and local city, State, and government officials, launched a you-auto-buy-now promotion.

Speaking for my own company, I am pleased to report that during the first 6 days of this promotion we sold as many new units as we had the previous 6 weeks. I am sure you will find just as good results among the other dealers on Staten Island.

The indications are that this trend is continuing and I am convinced that there is nothing wrong with our economy that plenty of good old-fashioned American salesmanship can't correct.

For the first time in many months I can truthfully say business is good.

With kindest personal regards, I remain,

Very truly yours,

DAVID F. PALMA.

The Need for Social Science Research

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. PORTER. Mr. Speaker, on March 27 of this year I proposed amending legislation to double the sum that the National Science Foundation earmarked for social science research. The amendment would not have increased the total sum proposed in the NSF budget by the Appropriations Subcommittee on Independent Offices. It would have decreased the biological and medical sciences budget and the mathematical, physical, and engineering sciences budget.

It would have doubled the proposed $850,000 figure.

My proposal, though not adopted, drew favorable comment in this House and elsewhere. I am greatly encouraged to know that there is a growing feeling throughout this country that the most promising road to a solution to this matter of survival in today's world lies in basic research in human behavior.

The Senate Appropriations Subcommittee on Independent Offices currently is considering legislation in this field. Strong reasons for increasing the budget figure for social science research have come from Senator WAYNE MORSE and others.

At this time, Mr. Speaker, I should like to include in the RECORD the statement of Leonard S. Cottrell, Jr., editor, Sociometry, made before the Senate subcommittee on May 9, 1958, relative to this vital topic:

STATEMENT BY LEONARD S. COTTRELL, JR., EDITOR, SOCIOMETRY, BEFORE SENATE SUBCOMMITTEE ON INDEPENDENT OFFICES APPROPRIATION BILL, 1959, MAY 9, 1958

Mr. Chairman and members of the Senate committee: First, permit me to express my

UNIVERSITY OF MICHIGAN LIBRARIES

appreciation for your kindness in providing me this opportunity to testify in behalf of the 1959 appropriation of the National Science Foundation, and, in particular, in behalf of its appropriation for research and training in the social sciences. I am appearing in my personal and professional capacity as a social scientist and not as a representative of any of the organizations and Government agencies with which I have the honor of being associated.

I have had the privilege of observing the social science programs of several Government agencies at firsthand. In addition to my membership on the advisory panel for the psychological and social sciences in the office of the Assistant Secretary of Defense, Research, and Engineering, I am currently serving as a member of the National Mental Health Council and the advisory panel for social science research of the National Science Foundation. Let me assure you, Mr. Chairman, that it has been quite painful for me to observe directly the large number of extremely significant projects in the social sciences which Government agencies have had to decline because of lack of funds. In the National Science Foundation we have received in the past year over $3 million in requests for social science projects, and have had only $600,000 to spend. The budget under consideration, as approved by the House, includes $850,000 for the social sciences next year. I am thoroughly convinced that the Foundation could well spend twice that amount. Representative CHARLES O. PORTER of Oregon quite eloquently presented this viewpoint on the floor of the House on March 27, and was advised by Representative ALBERT THOMAS of Texas, chairman of the House subcommittee which considered the National Science Foundation appropriation, that his general purpose was an admirable one.

Here are some interesting figures set forth by Congressman PORTER:

The National Science Foundation presents its summaries of obligations among the 3 major scientific areas as follows:

Biological and medical sciences. From $7.8 million in 1958 to $19.5 million in 1959, an increase of $11.7 million.

Mathematical, physical, and engineering sciences. From $7.8 million in 1958 to $19.5 million in 1959, an increase of $11.7 million.

Social sciences. From $600,000 in 1958 to $850,000, an increase of $250,000.

In short, as Mr. PORTER points out, the sciences having to do with how to improve our physical well-being and prolong life and the sciences dealing with the physical universe were increased almost three times, but the sciences having to do with the problems of human behavior were increased only about 40 percent.

If the amount available for social science research were increased to $1.7 million, and the total for research support maintained at $40 million, the result would be that all programs would be increased almost 3 times, although social science basic research would still be less than one-tenth as much in dollars as either of the other 2 programs alone, less than one-twentieth of both of the other programs together.

In his plea for additional funds for more basic research in psychology, sociology, economics, and other disciplines relating to human social behavior, Congressman PORTER points out that in 7 years the National Science Foundation has spent $27.4 million on mathematical, physical, and engineering sciences; $26.6 million on biological and medical sciences; but in this same period only $1.2 million on social sciences, its program beginning in 1954 with $57,000.

I was also very much impressed with the cogency of the arguments presented last year by Senator HUBERT HUMPHREY of Minnesota in support of a greater effort by the National Science Foundation in the area of the social sciences. With your permission, Mr. Chairman, I should like to present for the subcommittee's consideration Senator HUMPHREY's remarks as they appeared in the RECORD of July 9, 1957:

"I was one of the original sponsors of the National Science Foundation's program. I have always watched over it in every session of Congress, working for increased appropriations in order that its activities could be properly developed and expanded. I have paid particular attention to the Foundation's expanding social-science program and have looked forward to the time that an adequate amount of its funds would be allocated to support research grants and fellowships in the social sciences.

"I was therefore gratified to learn from the statement inserted in the RECORD on June 12, 1957, by the senior Senator from Oregon [Mr. MORSE] that he and the distinguished Senator from Washington [Mr. MAGNUSON], are agreed that it would be appropriate and desirable for the National Science Foundation to spend $1 million of the $40 million appropriated for fiscal year 1958, or only 2½ percent, for research grants and fellowships in the social sciences.

"I should like to express my unqualified endorsement of the views of my able colleagues and to add my own voice to theirs in support of expanding the social science programs of the National Science Foundation. There can be no question of the importance and urgency of the matter. I assume that the Director of the Foundation and the National Science Board will proceed immediately and directly to the implementation of the suggestion of my colleagues, with respect to both research grants and fellowships, and that they will prepare the groundwork for an even more extensive social science program in the years to come.

"My recent experience in the Middle East has impressed upon me more than ever the urgency of getting on in the social sciences. There is immediate and crying need for trained and knowledgable personnel to deal intelligently and rationally with a variety of social science problems. For example, the question of equitable distribution of agricultural surpluses, the need for better understanding of the obstacles and impediments to reasonable interpersonal and intergovernmental relations in the area, and insight into the mentalities and personalities of the individuals and masses with whom we have to deal. The effectiveness of our various assistance programs depends in large measure upon having reliable information about, and understanding of, the hopes, aspirations, motivations, and expectations of the peoples involved. In so many different ways there was impressed upon me the tremendous benefits which would accrue to us as a nation from having available a well-trained corps of social science technicians and experts.

"I deem it essential, therefore, that the National Science Foundation set about with dispatch to broaden its research and fellowship programs in the social sciences. The needs are considerable, but the program levels recommended by my colleagues from Oregon and Washington provide at least a reasonable minimum effort upon which a stronger and broader program can be developed in the future. As stated in the RECORD of June 3, 1957:

" 'The imperative necessities of the current social crisis suggest that excessive timidity is a luxury we cannot afford.'

"My distinguished colleague from Oregon has remarked that curtailment of funds in this area will prove not to represent economy but a very expensive reduction. I agree with him and trust that the Foundation will overcome its unwarranted reluctance to move forward in the social sciences.

"It is gratifying to note the increasing evidence of a general recognition of the importance of basic scientific studies of human social behavior. The unequivocal position of the Senate's Subcommittee on Juvenile Delinquency of the Committee on the Judiciary is a case in point. On several occasions the subcommittee urged the National Science Foundation to expand its work in the social sciences and in its final report the subcommittee stated:

" 'The subcommittee strongly recommends that ample funds be made available for the next fiscal year to permit the National Science Foundation to embark upon a program of social science support on a reasonable scale. The Foundation already possesses legislative authority to undertake programs in the social-science fields. The subcommittee believes that such a program would clearly be in the national interest and would provide for meeting an important national need.'

"It is inconceivable to me that the National Science Board and the staff of the Foundation will fail to give proper attention to this serious recommendation of an able group of Senators. I am confident that the Director of the Foundation and the Board, by virtue of their concern with promoting the national interest and national welfare, will not long delay in adopting and carrying out the wise suggestions of Senators MORSE and MAGNUSON, and of the members of the Subcommittee on Juvenile Delinquency, regarding the development of an expanded program of research grants and fellowships in the social sciences. It seems to me that the suggested allocation of $1 million for this purpose is the very least we can spend for this important national program."

Senator HUMPHREY, it should be noted, is referring to $1 million out of a total budget for the Foundation of $40 million. The Foundation's request before you is for $140 million.

Last year, Mr. Chairman, you very graciously included in the subcommittee's record a communication I had addressed to President Eisenhower, Senator WAYNE MORSE, and others. In that statement I quoted one of the conclusions of the report on private foundations issued by the House committee headed by the late Representative Cox of Georgia. Permit me to repeat that quotation now since it presents succintly and forcefully a significant point of view:

"It is entirely possible that in a time when man's mastery over the physical sciences threatens him with possible extermination the eventual reward from the pursuit of the social sciences may prove even more important than the accomplishments in the phsical sciences."

In addition to more research funds there is an imperative urgency to train more qualified people in the social sciences. Consequently, there must be a broader and more intensive program of social science fellowships in the foundation. I understand that some $500,000 are included in the foundation's fellowship request for selected social science areas. I believe this figure should be doubled. All social scientists with whom I have consulted are agreed that the major bottleneck in the progress of the social sciences is precisely in the area of specialized and expertly trained manpower capable of performing the important tasks of research and teaching in the social sciences.

Finally, Mr. Chairman, I should like to express my strong endorsement of the recommendations proposed by my fellow social scientist, Dr. Harry Alpert, vice-president-elect of the American Sociological Society. Dr. Alpert concludes an important article on the social science program of the National Science Foundation in the February 1, 1958, issue of the Saturday Review as follows:

"Next steps, in my judgment, should include, for the short range, (1) broadening of the NSF graduate and faculty fellowship programs to include the social sciences as

such; (2) inclusion of the social sciences on an equal status with other scientific disciplines in the education, register, facility support, and related programs of the Foundation; and (3) establishment, after a period of experience with present programs, of a division of the social sciences, as envisaged originally in the Magnuson-Kilgore bill 13 years ago.

"For the long run, steps must be initiated to develop among natural scientists and social scientists a sense of mutual respect and understanding and a community of interest. Today's invidious hierarchical distinctions among specialists of the various disciplines must disappear. An institutional environment must be created to encourage all scientists in intimate association to cooperate effectively toward achievement of the common goal of better understanding of the ways of nature, man, and society. Man's mastery of space, it has been appropriately said, must quickly be matched by man's mastery of himself. This is a fundamental condition of survival."

Statement by Ohio Catholic Welfare Conference on Right-To-Work Laws

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. PROXMIRE. Mr. President, I have been furnished by one of my constituents with the text of a statement released by the Ohio Catholic Welfare Conference which expresses opposition on moral grounds to a right-to-work amendment to the Ohio constitution. I believe this statement is extremely well-worded and expresses a very logical and rational point of view about this very important current issue.

The statement points out that the right to work is a general one which cannot be denied to men; but the right to work in a specified industrial plant or business can be subject to special conditions. The statement expresses opposition to State intervention either in favor or in opposition to right-to-work laws.

Mr. President, this statement was signed by the bishops of the Six Sees in Ohio. It deserves wide attention, both because it comes from such an honorable and noteworthy source, and because it expresses a detached, convincing, and wise point of view. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT RELEASED BY CATHOLIC WELFARE CONFERENCE OF OHIO

On previous occasions attention has been called to the necessary distinction which must be made between the wisdom of enacting a law and the moral right to do so. Laws at times have been morally valid in themselves but inept and mischievous in their results. Right-to-work laws seem to fall into this category where a distinction is necessary.

Man has a right and duty to work for his livelihood. This right cannot be circumscribed to the extent that a man losses his liberty of choice of a vocation, nor to the extent that he is deprived of an opportunity to support himself and his family. It does not follow that a man has the unconditional right to work in any and every industry or business at will.

For reasons of social justice it may be desirable and often advantageous to the common good that man's right be restricted by certain specified conditions. One of these imposed conditions may require that he belong to a labor union or at least be obliged to join the union subsequently, so as to share responsibility with his fellow workmen in support of the union.

Just as a citizen of the United States is free to live in Ohio, Kentucky, or Pennsylvania, yet is obliged to observe the laws of the particular State as a condition of citizenship, so also in respect to his right to work; he is free to work in any industry of his choice, but only on condition that he abides by the rules adopted by that particular industry as a condition of employment. In other words, the right to work is a general right and cannot be denied to men in the aggregate; but the right to work in a specific industrial plant or business can be subject to special conditions.

If State statutes were to make such a condition of union maintenance mandatory, we would oppose them as unwise, if not unjust. If State statutes however were to forbid the enforcement of such a condition, when mutually accepted by management and labor through collective bargaining, then we would be equally opposed. We believe it is unwise to encourage State intervention in this matter, whether it be in favor of right-to-work laws or against them.

There are certain abuses which sometimes creep into the labor movement, but we are convinced that right-to-work laws are not the proper means to correct them. Corruption of certain labor leaders has been one of these current abuses. The denial of the democratic processes and the denial thereby of responsibility to the rank and file of union membership, whether in election to office or in the determination of union policy, are prolific causes of these abuses.

The right to strike, for instance, cannot be denied under certain definite conditions; but it is a right which must be carefully circumscribed and limited by ethical or moral considerations. It cannot be exercised willfully, that is, without just and adequate cause, and even then only in matters of grave importance, with a favorable issue reasonably secure, and, lastly but most importantly, after all other peaceful means have failed.

The right to picket is a concomitant right if a justified strike is called, but violence against persons and property is absolutely wrong and indefensible in conscience. Even the right of mass picketing is a very questionable procedure because of the physical intimidation involved and the proximate danger of overt acts of violence ensuing.

There have been other issues which cause public concern, such as jurisdictional disputes where innocent third parties are made the victims. There are questions also of secondary boycott which involve serious moral questions. All of these should be solved by an increased sense of social responsibility on the part of labor; and, if that procedure fails to correct the evils, then recourse would be had to regulatory legislation.

If we have pointed out certain abuses in the labor movement, we do so not because we think their leaders alone are at fault. There have been serious abuses also on the part of management, such as unreasonable and unjust opposition to the right of union organization, monopoly prices and profits, misrepresentation of products, and bribery and corruption not infrequently. Two wrongs, however, do not make a right; and the two evils do not cancel each other but intensify the damage done to the common good.

Much progress has been made in creating mutually satisfactory conditions in recent years in our labor-management relations. It would be socially undesirable to jeopardize the gains achieved by precipitating new causes of strife and ill will.

We think it is high time to introduce sound ethical standards into all phases of our economy. The present preoccupation with right-to-work laws may be a good occasion for all our leaders in the field of labor and in the field of management to examine their consciences as to their honest motivation, their ideals, and their practices.

As to the present issue before the electorate in Ohio, we are convinced that a right-to-work amendment would not solve our problems, but might lead to a more intensified struggle for domination and thus postpone an era of peaceful cooperation.

Nonsense on Plywood

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. PORTER. Mr. Speaker, on Thursday, April 24, 1958, I discussed the plywood problem in the Pacific Northwest in this House. At the close of my prepared remarks I said that as long as I have the honor to represent the Fourth Congressional District of Oregon I shall continue to be deeply concerned about the welfare of the plywood industry in the Pacific Northwest. But such concern, if it is to have useful results, must be based on hard facts, facts such as those I set forth at that time.

On May 9, 1958, the responsible Washington Post and Times Herald found in its editorial Nonsense on Plywood that plywood imports seem to be this year's whipping boy for the protectionists.

And in Boston, Mass., the same day, the renowned Christian Science Monitor editorially noted that a self-imposed reduction of hardwood plywood exports by Japan had idled workers in the Pacific Northwest because producers of decorative panels and doors report they have had to curtail operations because they cannot obtain enough suitable material.

This is—

Says the Monitor—

a good example of how an effort to protect one group of American producers from foreign competition damages other American producers.

Another pertinent factor cited in the Monitor is the fact that softwood ply-

UNIVERSITY OF MICHIGAN LIBRARIES

wood is used for different purposes than hardwood plywood imports.

Mr. Speaker, the full text of both editorials follows:

PROTECTIONISM RUN WILD

Workers are idle in the Pacific Northwest because Japan has reduced its exports of hardwood plywood to the United States. Producers of decorative panels and doors report they have had to curtail operations because they cannot obtain enough suitable material. At the same time Congress has before it bills seeking to cut supplies of this material—imported hardwood plywood—by imposing import quotas.

This is a good example of how an effort to protect one group of American producers from foreign competition damages other American producers. Japan reduced its exports to forestall a possible increase of the American tariff, now set at 20 percent. Such an increase was denied by the Tariff Commission after thorough investigation. But agitation for cutting imports has continued.

It is also an example of familiar protectionist tactics. For the impression is conveyed that the whole American plywood industry is in peril. Actually it has been expanding at a rapid rate. Moreover, the great part of it—softwood plywood—is used for entirely different purposes and is not touched by hardwood imports. Imports are competitive with a small fraction of the American business—domestic hardwood plywood—but in the sense that Volkswagens compete with Cadillacs.

Another too familiar feature of this protectionist drive has been scare stories. One had it that 28 plywood plants had been shut down following failure to get Tariff Commission help. A careful check showed 9 still operating, 3 destroyed by fire, 3 never existed, 4 had been consolidated with other operations and production increased; others had closed because timber supplies were depleted or because of labor trouble or lack of capital.

Yet the facts have not yet caught up with some people taken in by such stories. The plywood case may be an extreme one. But Congressmen who tend to be stampeded into opposition to the reciprocal trade program would do well to examine other protectionist pleas for similar fallacies.

NONSENSE ON PLYWOOD

Opponents of the pending renewal of the Reciprocal Trade Agreements Act have resorted to almost unbelievable falsification and misrepresentation in their misguided protectionist zeal. Explanations and denials never seem quite to overtake a "big lie," but when the lie is calculated to destroy a cornerstone of American and free world strength it cannot be ignored.

One of the fictions recently circulated was that imports of hardwood plywood, principally from Japan, have resulted in the closing of some 28 American plants. Investigators for the importers ran this one down and found that 9 of the 28 had not shut down, 3 had been demolished by fire, 3 had never existed, 2 were named twice on the list, at least 1 had produced container plywood (none of which is imported), 1 was closed before there were any significant imports, 4 were consolidated with parent firms resulting in greater production, 2 failed because of under-capitalization and the other 3 were closed for such reasons as labor trouble and depletion of timber stands.

Not discouraged, the advocates of import quotas for plywood then claimed that softwood plywood plants in the Pacific Northwest had suffered from imports of hardwood plywood. As the Tariff Commission found, in unanimously rejecting escape clause relief for domestic plywood producers in 1955, the two types are not competitive. The Portland Oregonian agrees, and further declares:

"There is danger in Congress' imposing quotas on any item. Plywood quotas might be followed by similar restrictions on any number of products which could result in retaliation against American exports and the loss of jobs dependent upon exports."

The facts seem to be that the recent boom in sale of imported Japanese hardwood plywoods, used mainly for flush doors, has encouraged consumption of all types of plywood, including domestic. Yet, fearful of congressional reaction, Japan has limited her exports to this country and now American flush door plants have been closed, in some cases, or been unable to meet orders because of the lack of imported doorskins.

Plywood imports seem to be this year's whipping boy for the protectionists, and an unhappy choice they were. If the present situation of the industry discloses anything at all about trade policy, it is that imports of this kind complement and sustain the marketing of similar domestic products and, in the process, create more jobs and more business for Americans. If Congress unwisely chose to load the extension of the Trade Agreements Act with new exceptions and escape procedures, it might well end up stifling the economy it seeks to protect at a time when there is a premium on promoting new growth.

Address by Doris Fleeson Before Twin Cities Chapter of American Newspaper Guild

---

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 12, 1958

Mr. NEUBERGER. Mr. President, one of the most gifted women commenting on the foibles and frailties of those of us in public life is Miss Doris Fleeson, political columnist for the United Feature Syndicate. Her astute observations are highly perceptive.

On October 24, 1957, Miss Fleeson delivered a most thoughtful and provocative address as the 11th annual memorial lecture sponsored by the Twin Cities chapter of the American Newspaper Guild on the campus of the University of Minnesota, at the school of journalism of that great educational institution, in Minneapolis.

Title of Doris Fleeson's address was An Art To Be Practiced, meaning, namely, the great art of politics, by which government is selected and operated in our country. After all, such illustrious Americans as Abraham Lincoln and Franklin D. Roosevelt were lifelong politicians.

Previous participants in the memorial lecture series of the Twin Cities Guild have been such noted writers and teachers as Thomas L. Stokes, Marquis W. Childs, Herbert L. Block, Henry Steele Commager, Alan Barth, and Elmer Davis. I believe Miss Fleeson's address is a worthy addition to this star-studded galaxy, and I ask unanimous consent, that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN ART TO BE PRACTICED

(By Doris Fleeson)

All of life is, of course, an art to be practiced. But as I am only an amateur philosopher and indeed often find it difficult these days to be philosophical at all, I shall speak here of that particular area where I have claims to competence. It is politics.

My own happy breed of men and women are political reporters and the special flavor of their work arises from the fact that their identity with their subject becomes with the passage of time absolutely total.

It is fortunately possible for reporters to cover crime without acquiring the criminal mentality. They are able to make the trial of a spicy suit for divorce or a spectacular case of larceny live in deathless prose and at the same time lead blameless lives, at ease alike with their bankers and with Dorothy Dix. Not so the political reporter.

If his political coverage is to have any depth—and no other kind is worth writing or publishing—he must become saturated with his subject and intimately acquainted with the true nature of the politicians he deals with.

He must know them and the political imperatives they are bound to obey. These political imperatives take many forms, and they are different for each politician. They include geographical considerations, social and economic forces and the interests of his party, both local and national.

Such knowledge is vital because the political reporter on occasion comes very close to being judge, jury and lord high executioner of the politician. To undertake this assignment without proper information is worse than unfair, it is base.

Eventually reporter and politician grow into that relationship which is such a cross to every President and the bureaucrats around him; that is, they have no secrets from one another. Possessing as they do, a complete mutual understanding of political situations and the forces creating and operating upon them, how could it be otherwise?

I consider this relationship one of the great bulwarks of the Republic quite apart from my personal stake in it. My one real complaint about it is that reporters—and their publishers—tend to become too kind to their favorite politicians and presidents. Too often they find it difficult to maintain that detachment which combines in correct proportions understanding with critical analysis.

The pampering by the press of politicians, no matter how exalted their status; is a crime so heinous it should be forbidden by law.

When I was younger and more sanguine, I used to make certain suggestions for remedying any such bent on the part of my colleagues. I proposed, for example, that Washington correspondents should be returned to their home offices at stated intervals and made to cover police and the department of sanitation, both excellent experience for political coverage. I argued that this would reacquaint them with reality, shake them loose from connections which had grown too comfortable and generally restore their perspective.

I was fond also of quoting Parnell to the effect that the greatest enemy of Irish freedom was the English dinner napkin.

I soon learned that I was not destined to win any popularity contests at the National Press Club. I have settled long since for a column of my own, where my efforts to practice what I preach have earned me a few figs—with thistles.

I am indebted to that notable phrasemaker, Adlai Stevenson, for the title I have attached to my remarks. Mr. Stevenson's favorite definition of the difference between the two major parties of the United States is this: "For Republicans, politics is a status to be

maintained; for Democrats, it is an art to be practiced."

Mr. Stevenson, of course, gave his own party the best of it since it is always more interesting to watch a man trying to walk the length of a tight rope than to see him immobilized in the center of it.

Reporters generally will agree that the arts of politics seem to come more naturally to Democrats than to Republicans. The reasons suggested are many.

One is that throughout its long history—and it is the oldest political party in the Western World—the Democratic Party has tended to identify itself with causes affecting people. People arouse a greater and more bewildering variety of emotions than property and they do not stand still. People's causes attract reformers who are often wrong but rarely unpicturesque.

Again, Democrats make good stories because they tend to be rather more romantic about the party of their choice. Harry S. Truman actually believes that it is better to be a Democrat than a Republican; he is willing to give a Republican his civil rights, but in his view the party that will make your teeth white, your eyes shine, and you hair curl is Miss Democracy. Former Secretary of the Treasury Humphrey would probably agree with him on that last point but for different reasons.

When the late Veep, Alben Barkley, described the golden thread which ran through his party from Thomas Jefferson to Andrew Jackson to Grover Cleveland, et cetera, he almost talked poetry—for the first hour, that is, I could never seem to interest Dear Alben in my constitutional amendment forbidding speeches longer than 20 minutes.

For some curious reason Democrats also are more impervious than Republicans to the patina imparted by worldly success. I have had this put to me in various ways. My favorite comes from a disgruntled Republican who pointed to some indubitably rich Democrats, including a shirt-sleeved Averell Harriman, and said disgustedly: "Look at 'em. No matter how rich a Democrat gets he still sweats."

Will Rogers expressed the fun of watching Democrats many times. He explained that he was not a member of any organized party, he was a Democrat. A Democrat, he said, will shoot at Republicans only when he can't find another Democrat around to work on with his knife.

Republicans rather wistfully complain that their array of sterling qualities does not command the same memorable descriptions. They quite genuinely deplore the Democratic Party and with some justification regard it as the Auntie Mame of politics. What seems to baffle them is that she can be a best seller. They are quite touchingly sensitive, too, about their presumed devotion to private property, and can tell you in some detail how much of it remains in Democratic hands.

Certainly no one can take it away from Republicans that they too have had their moments—as with the Bull Moose and the sons of the wild jackass. But unquestionably theirs is a superior talent for hiding the family skeletons in the closet. It is no accident that the team emerged in January 1953, as a hallmark of the new management at the White House.

In all seriousness, and leaving the partisans to their fun and games, the objective observer descries in Mr. Stevenson's definition the dividing line between successful politicians and those whom history delights to forget. The difference is not a party matter.

Men who have come alive for the voters, including Republicans and Democrats—Theodore Roosevelt and Franklin D. Roosevelt, Al Smith and Fiorello LaGuardia—have all treated their trade as a creative art. They practiced it untiringly and they got results largely commensurate with their efforts.

Every corner of the governmental machine and the programs which these politicians directed and controlled felt what Walter Lippmann has so well described as "the brooding presence of impatient men." They were impatient because they recognized the scope of their responsibilities and knew how much depended upon them personally.

Such men communicate a sense of urgency and excitement to politics. Their creative energies release in turn the creative energies of those around them and of the Nation. Suddenly people cease to feel that to muddle through is the best that can be hoped for. It not only seems important to act; it appears possible that good will flow from it.

The command to practice politics as one of the highest arts and noblest sciences has been laid down by writers, philosophers, and rulers since recorded time. They have pronounced it necessary to the happiness of mankind and they have admitted to no limitations on its importance.

The Oxford English Dictionary defines politics as the science and art dealing with the form, organization, and administration of a state and with the regulation of its relations with other states. Note the inclusion of "the regulation of its relations with other states." Disraeli called it the art of governing mankind. Webster typically brought it down to earth. Politics, he wrote, is the theory and practice of managing or directing the affairs of public policy. The key words are "managing or directing."

To Gouverneur Morris politics was "the sublime science which embraces for its object the happiness of mankind." Morris had a right to speak, being associated with that immortal band—politicians all—who wrote the American Constitution and founded this Republic.

De Tocqueville speaks of "the agitation of mind" common at that period. It is past time for a fresh outbreak of that valuable disease.

People who denigrate politics are perverting its meaning and failing to understand its purpose. For it is through politics that man by the exercise of his will can dominate his public fate. Politics uses all the knowledge that can be assembled for man's most important function, which is to get along with other men—both within his own nation and outside its borders. It is a function noble and almost divine in its suggestion of loving fraternity.

We can elect to choose our national destiny by way of the art of politics or we can sit down and let fate overwhelm us. If we merely cling to status we shall only put ourselves at the mercy of the leaders of other states who are resolutely managing and directing their public affairs for the benefit of themselves or their nations.

The most formidable of such leaders are acting from motives we hate and for purposes we abhor. They have cynically created the problems we now are facing. We can expect them to go on creating more problems within the limits of their ability to confuse, to harass, and eventually to destroy us.

But these men are not 10 feet tall. The Russians, the Red Chinese, the Syrians, are not bigger, brighter, fiercer, or smarter than we are. They are merely men in a world of men. Contrary to a popular misconception, their police state governments are not more efficient than our democracies. What is in truth really frightening about their operations is that they are so inefficient; it is possible that the stupidities of a few men, or even of one man, may bring total destruction on us all. The Last Days of Hitler, by Trevor Roper, is recommended to anyone who doubts this—and there are companion volumes to drive the lesson home.

What is lacking here is the determined will to manage and direct the overwhelming forces at our disposal. Somwhere along the line we have been overtaken by a perverted definition of politics. We have ceased to expect the best from our politicians; we have sometimes seemed to demand the worst. We are tolerant when they abdicate their true functions and when they cater to our national faults. We have driven our best minds from politics because of the low esteem in which we hold it. We have ridiculed the intellectuals who sought to guide us by the light of reason and we have allowed them to be accused freely of treasonable purpose. Happily, the swinish climate of anti-intellectualism has moderated; but we are by no means rid of its legacies of conformity, inertia and timidity.

In our commitment to materialism which puts comfort ahead of all other considerations we have allowed our young people to forget the rewards of public service. It is an attitude which infects American life at all levels.

At the same time, the multiplicity of our society has led to the proliferation of the experts. Two kinds in particular now hold high place: The professional manager and the scientist. Yet both of these, because of their enforced specialization, have in large part removed themselves from the ordinary hopes and fear of mankind and are no longer qualified for the ultimate leadership. The worlds of science and technology are making great contributions to our well-being, but they rarely yield men capable of managing and directing mankind's affairs.

What are our principal problems today? In human terms our greatest is race relations. Inflation is a growing cancer in our economic life. The rapid growth of the population of the United States and its flight to the cities are drastically changing the whole face of the Nation. These changes have brought in their wake a whole train of enormous difficulties of which a crisis in education and the proper use of land, water, and resources are outstanding.

The avoidance of war in the face of a determined, implacable, and evangelistic enemy is and must remain the heart of our foreign policy. The task grows more difficult by the day. It bristles with such thorns as the maintenance of friendly relations among our allies and the search for an approach to colonialism in new nations which by a sad irony of fate demand freedom from outside influences while committed to feudal or authoritarian social systems.

One has only to state the problems to show that they lie in the realm of politics. The alternative to our slow destruction is to recognize this and put the national will to work.

I have not heard it suggested anywhere that this country could not have put a satellite into outer space as soon as or before the Russians did. The failure to do so was a political failure, it was the lack of vision to see what it would mean to our world leadership to be surpassed in so striking an endeavor.

The Russians used their dictatorial power over their subjects to win that triumph. Our victories must be voluntary. They always have been and they will be again when the American people are made acquainted with the facts.

The cruel embarrassment of Little Rock was well within the capabilities of wise men to foresee and to avoid. Politicians practicing their art could have mobilized forces within and without the South. The real troublemakers have never at any time represented more than 1 percent of the people—but that 1 percent had leaders.

The iron truth of today's dynamic world is that nobody can maintain status by standing still. This is a hard lesson not always learned in high places.

There will be decisions in the world—political decisions—and they will determine our fate. Whether those decisions are made

UNIVERSITY OF MICHIGAN LIBRARIES

by us or by the Russians depends upon our ability to make our politics achieve the ends we seek.

I wish I had some magic formula to suggest. There is none. There are no wonder men or wonder women. There are only you and I and others who believe in freedom. There is only what we are able to get out of ourselves for our children, our country, and our God.

Union Racketeering: The Responsibility of the Bar

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, May 12, 1958

Mr. CHURCH. Mr. President, the American Bar Association Journal's current issue—May 1958—carries an article written by the junior Senator from Massachusetts [Mr. KENNEDY], entitled "Union Racketeering: The Responsibility of the Bar." Some lawyers have lent their professional talents in aid of certain racketeering elements in the trade union movement, in ways that raise serious questions involving professional ethics, and the integrity of the bar. The bar has a grave responsibility with respect to the unethical activities of its members, and Senator KENNEDY's reminder of this responsibility in connection with union racketeering is timely and pointed.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNION RACKETEERING: THE RESPONSIBILITY OF THE BAR

(By JOHN F. KENNEDY, United States Senator from Massachusetts)

Almost a quarter of a century ago, Supreme Court Justice Harlan Fiske Stone, speaking at the dedication of the University of Michigan Law Quadrangle, delivered one of the most important addresses ever made in this country to a company of lawyers. His subject was the professional responsibility of the bar, and needless to say, he did not consider the topic exhausted by a few well-chosen words on the evils of ambulance-chasing. His thrust was more far-reaching and basic—in essence an indictment of two generations of corporation lawyers.

The bar, said Justice Stone, had been the servant of the country's mushrooming corporate growth in the gaudy twenties. It had placed the skills and technical proficiency of centuries of professional development at the command of the financial community. Some of these corporate and financial operators, not unsurprisingly, some of these clients of a generation ago were unscrupulous, dishonest, operating around the fringes of the law or seeking to bend it to fit their improper objectives. A large minority of these entrepreneurs and brokers were simply unaware of the duties and responsibilities that necessarily bind those dealing in other people's money—men who were not so much dishonest as they were misguided, imprudent, ineffective, reckless or irresponsible.

Whether the businessman client knew better or not, his lawyer always did or should have. Too often, Justice Stone thought, these lawyers forgot that they were members of a profession and all that that implies. Too many of them had surrendered the function of independent and critical judgment which has been the historic pride of the legal profession—a judgment that never spared and often guided the clients to be served. And as a result, said Stone, the Nation's lawyers had to bear a large share of the responsibility for the chaos these harmful corporate activities had created by the beginning of the 1930's and for the always unwelcome effort to impose governmental regulation where private self-regulation had failed.

I have often thought of Justice Stone's appeal to the bar as I sat during the past year through the grim and sometimes shocking hearings before the Senate Committee on Improper Practices in the Labor or Management Field, the McClellan committee. Watching that parade of witnesses from the irresponsible fringe of the labor movement—some unscrupulous, some only misguided—and watching or hearing about their attorneys as well, it has seemed to me to present a striking parallel to the situation of which Justice Stone complained some 24 years ago.

For during the past 2 decades, organized labor has grown enormously in wealth, in strength, and in numbers. It has been fostered and encouraged by Federal and State laws. Its votes and support have been prizes eagerly sought by both political parties. We count on it to perform indispensable functions in the operation of our economy—to help spread the benefits of increased production among workers and their families by hard bargaining for wage increases and other benefits, to help keep the economy on an even keel by acting as a counterweight to big business.

The development of such economic power and the organization of such collective effort could not have been achieved—and was not achieved—without the active assistance of wise and skillful lawyers. In fact, since the period of major union growth coincided with large-scale Federal regulation of labor relations under the Wagner Act and the Taft-Hartley Act, high-grade legal advice and legal services were needed at every step of the way.

The legal profession as a whole has never been as thoroughly committed to the service of labor as, a generation ago, it was to business. Nevertheless, in the thirties and after, an increasing number of able law graduates were drawn to the growing labor movement by a sense of adventure and service. There was, I think, idealism and dedication in the election of many young men to go into the field of labor law—and properly so. It meant service to the many and not the few, to the cause of economic justice and a better way of life. For the overwhelming majority of those who have pursued distinguished careers in this field, this idealism has remained bright and untarnished to this day. Our committee has been greatly aided, for example, by the helpful cooperation and expert advice of the AFL–CIO's wise and honorable general counsel, Arthur Goldberg, who deserves much of the credit for that group's precedent-shattering set of ethical practices codes.

But there are others, I am afraid—too many others—to whom Justice Stone's strictures of almost a generation ago apply in full force today. "I venture to assert," he said, "that when the history of the financial era" (and for this we must substitute "era of union growth") "which has just drawn to a close comes to be written, most of its major mistakes and its major faults will be ascribed to the failure to observe the fiduciary principle, the precept as old as Holy Writ, that 'a man cannot serve two masters.' • • • There is little to suggest that the bar has yet recognized that it must bear some of the responsibility for these evils. But when we know and face the facts, we should have to acknowledge that such departures from the fiduciary principle do not usually occur without the active assistance of some member of our profession; and that their increasing recurrence would have been impossible but for the complaisance of a bar, too absorbed in the workaday care of private interests to take account of these events of profound import—or to sound the warning that the profession looks askance on these as things that 'are not done.'"

UNION RACKETEERS—A LONG LIST

In the past year, our committee has held up to public and congressional view a long list of malpractices currently characterizing the small racketeering element in our trade union movement—practices which have again been in most instances the result of serving two masters, one's union and one's self; and practices which have again been made possible by the active assistance of some members of the bar. As this sorry story unfolds, many of the lawyers appearing before our committee—as counsel or as witnesses—or whose names have otherwise been involved in the testimony, have brought shame to the name of an honorable profession.

Their ranks—those who engage in what might well be called legal racketeering—include the following:

1. Lawyers who, working for a union official, arrange, conceal, and worst of all share in the illicit profits of a variety of improper transactions that use union funds or power for private gain.

2. Lawyers paid from union funds, to which all of the union's members have contributed, who appear before our committee or a court to advise the union's suspect officers against revealing the purposes for which those members' dues have been used, or otherwise to defend those officers against charges of stealing from or defrauding these same members that pay the lawyer's salary.

3. Lawyers who represent management in the morning and so-called unions or union leaders in the afternoon, who draw up the "sweetheart" contracts and keep respectable unions out, keep wages low, and keep the profits to both the employers and the fake union leaders very high indeed.

4. Lawyers who organize paper locals, sham employer associations, so-called independent unions, and fake health and welfare plans in order to promote the kind of collusion that costs responsible management and labor—as well as the general public—dearly.

5. Lawyers who use their position with the union to promote their own financial interests, using union funds or union power to accomplish transactions and investments of benefit only to themselves.

These are but some of the examples that disturb me today—not because they reveal wrongdoing on the part of any more than a tiny minority of this honorable profession—but because of the bar's apparent indifference to these revelations. Outside of New York City, where I understand a special committee of the bar is examining the matter, I know of no bar association reorienting its codes and canons of ethics to stamp out these practices, as the AFL–CIO itself has done to stamp out labor racketeering. Where are the members of the bar who will prove their title to professional leadership by taking the lead in seeking to remove this stain on the name of their calling? Where is the Justice Stone of today who will rise up to indict this corruption and complaisance, this deceit and dishonor?

There should be no delay because the wrongfulness of any of these tactics is in doubt. The Canons of Professional Ethics promulgated by the American Bar Association, as I understand them, make it unprofessional for a lawyer to "represent conflicting interests, except by express consent of all concerned, given after a full disclosure of all the facts" (canon 6). Nor may an attorney forward his client's interest by unethical or illegal means. "The office of attorney does not permit, much less does it demand of him for any client, violation of law or any manner of fraud or chicane" (canon 15). Moreover he has an express duty to attempt to restrain and prevent his clients' improprieties, including "doing those things which the lawyer himself ought not to do" (canon 16).

A lawyer who is retained by a labor union is the union's representative. His client is not the union president or the officers or the members of the executive committee—his client is the union. He is paid with union funds, dues collected from the members, and it is to them as an organization that his true professional responsibility runs. That organization is something bigger and more important than the persons who temporarily hold office in it.

The officers, like the officers of a corporation, are themselves only the servants of the broader membership. They, too, are subject to fiduciary principles. They hold the funds of the union in trust, and must manage its affairs to serve not their private ends but the larger interests of the organization. How, then, can the union's lawyer take fees from the union treasury to defend its officers against the charge of embezzling from that same treasury?

CORPORATE LAWYERS—ANOTHER ANALOGY

The parallel here to corporate field is again perfectly plain. Officers and directors of companies are often called to account, by their shareholders, public officials or others, to defend their stewardship of the corporate funds in court. In such cases it is firmly established that the director or officer must pay for his own defense and that the same attorney that represents the company cannot, with propriety, represent the defending official. The few statutes which permit the official to reimburse himself out of corporate funds, if the suit against him proves groundless, regulate this right stringently. Certainly no less stringent conception of propriety should prevail in the union field.

I think it is thus demonstrable that the lawyer-client relationship revealed by our committee and which I have enumerated above violate the generally accepted ethical standards of the legal profession.

The question is why. What is in these two situations—involving corporate attorneys on one hand and union attorneys on the other—which demoralized these professional men, blunted their critical judgments and put them in conflict with the true interests they are supposed to represent? Watching them before the committee, I have concluded their fall from grace was not a sudden one but the result of a gradual erosion of their guidelines. I have come, I hope, to a better understand of the problems, and the temptations and the relentless pressures which peculiarly beset the legal profession.

Unlike the doctor, engineer or architect, the lawyer always appears in a representative capacity. He takes on a kind of dual personality, and the undesirable characteristics of one may be merged in the other if firm resistance is not present. The lawyer is subject, moreover, to a constant and wearing pressure which does not afflict the other professions. He operates in a field of contention. In most instances, there is an adversary, striving to defeat or neutralize his every effort. Ever present is the demoralizing influence of the client, who is interested only in results, who scoffs at a first-rate professional effort unless it is completely successful, who is often more interested in whom you know than in what you know.

Unless the lawyer is continuously mindful of the proprieties, there is always danger that the stress of the situation will blur and make indistinguishable the ground rules. There is always the inducement of the disreputable practioner who, because of alleged connections, claims he can guarantee a favorable result. This peddling of the names of reputable judges and public officials destroys public confidence in the entire judicial and executive systems and is an especially vicious form of character assassination.

There is another form of insidious infection which is peculiar to the legal profession. The lawyer exerting his best efforts on behalf of his client finds it easy to justify conduct which he would immediately recognize as improper if he were acting merely in his own behalf. This philosophy is particularly virulent because it can be made to appear as professional service and sacrifice beyond the call of duty.

There is, too, the bond of sympathy which often comes into existence between the lawyer and his client during their relationship. I suppose this is particularly true in the field of criminal law. While espousing and defending the criminal, a lawyer may unconsciously lower or lessen his abhorrence of the crime because of mitigating circumstances in the particular case.

The public also conceives of the law as a sporting proposition and extends sympathy to the unfortunate, the underdog, the man trapped in the toils of the law. This strange but disturbing reality is manifested in a number of ways. This doctrine appears to provide most criminal-case defendants with a license to perjure themselves in the effort to win acquittal. No wonder so many lawers, young and old, dream of dramatically extricating some malefactor from the death house. Few of them envision the glory of increasing the prison population.

I do not maintain, however, that the labor racketeer lawyers to whom I have referred engaged in these kinds of practices because they were not aware of the unethical character of their acts. Nonetheless, I should hope for an effort parallel to that of the AFL–CIO in drafting ethical practices codes, whereby members of the bar would turn their attention to this particular area and try to develop more specific regulations governing the practice of their profession within it. This effort to formulate more specific codes of conduct is not useful because it results in any new discoveries of what is right and wrong, but because it focuses professional attenion on the policing of the bar, properly and traditionally the bar's own professional responsibility.

The problem is not now, and it never has been, that all, or a majority, or even a very large minority, of labor lawyers have engaged in improper practices. But the fact that one has not personally profited from impropriety does not absolve him of responsibility for impropriety. For if the act of belonging to a profession is to have any special significance at all, it is at least in part that you become your brother's keeper on matters of professional conduct. The strength of our professions and, particularly the bar, has been their ability to impose high standards of conduct not on their best elements because that would be easy but on their worst.

In the final analysis, this discipline is obtained not by grievance committees and disbarment proceedings, but by the weight of professional opinion—informed, organized, focused upon the areas in which departures from fiduciary principles are becoming "increasingly recurrent" on the part of both clients and their lawyers. Such a mobilization of professional opinion cannot prevent every instance of wrongdoing on the part of members of the bar—be they labor lawyers or tax lawyers or corporation lawyers. There will always be some to whom the material rewards of wrongdoing will seem more attractive than their public reputation or the esteem of their colleagues. But professional opinion can prevent individual instances of impropriety from turning into an epidemic, the kind that Justice Stone saw in the corporate bar 25 years ago, and the kind that must be eradicated before it spreads in the labor bar today.

I leave that challenge in the hands of the legal profession to whom this article is addressed, trusting that it will never be necessary for the Congress or any other legislative body to police the ethics of the legal profession. And when the profession cleanses its ranks and restores itself to its true position of leadership in our society, then once again lawyers and nonlawyers alike will recall the eternal wisdom of Justice Stone's reminder that "the great figures of the law stir the imagination and inspire our reverence according as they have used their special training and gifts for the advancement of the public interest."

Profit by Example

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article dealing with the career of Teddy Roosevelt, written by W. L. Hudson and published in the April 1958 issue of Partners.

As a member of the Theodore Roosevelt Memorial Commission, I take this opportunity to call the article to the attention of Members of Congress and of the country at large.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROFIT BY EXAMPLE
(By W. L. Hudson)

Hero worship is as natural as breathing. It begins with children when little boys imagine themselves soldiers, policemen, cowboys, and Indians—and when little girls, with dolls, imitate their mothers. The tendency continues as we grow older, except that we then begin to select individuals often in the public eye. When we reach maturity, our selections are likely to be famous men of history.

All this is helpful in building character—provided our heroes are wholesome—as consciously or unconsciously we try to emulate them.

This brings us to a great American, the centenary of whose birth the Nation this year is celebrating.

Theodore Roosevelt, born October 27, 1858, was admired and loved by many of the country's adult population and by almost every young person during his busy lifetime—and after. And indeed there is much that we of today, as well, can learn from Teddy's career that is worthwhile in character building.

UNIVERSITY OF MICHIGAN LIBRARIES

The first Roosevelt was an amazingly versatile man, having won his spurs as naturalist, sportsman, rancher, executive, orator, soldier, author, politician in the best sense of the word, and, most distinguished of all, statesman. Because of the variety of his achievements, individuals can make selections that conform to personal desires, but some are common to all.

Teddy's ability and determination to overcome handicaps must appeal to every one of us. Delicate as a child and for that reason deprived of the privilege of attending schools where he could freely mingle with other children and thereby gain an early education in democracy, Theodore Roosevelt nevertheless overcame this handicap. Through reading, thinking, and adult experience, he became a great democrat.

As is rarely the case, he decided upon his career soon after graduating from the university and stuck to his guns. Having chosen politics as his life work, he realized that his weak body would not withstand the rigors of that vocation and did something about it. He purchased a ranch in the old West, lived a rugged life there for several years and not only built a strong physique for himself but also remained throughout the balance of his career an example and advocate of what he called "the strenuous life."

Teddy held many important public offices. He had been a member of the New York State Legislature, police commissioner of the city of New York, Assistant Secretary of the Navy, colonel in the United States Army, Governor of New York, Vice President of the United States, and, finally, Chief Executive. He served with outstanding honesty, courage, and distinction in every assignment.

Here are some things we can learn from this forceful American:

1. That the cultivation of a wide variety of interests adds to the zest of life and broadens general knowledge.

2. That to appreciate the wonders and beauty of nature in her many forms, tiny insect to mammoth whale, a blade of grass to a giant tree, relaxes the tensions of prosaic life.

3. That good books provide contact with the best thinkers the world has known throughout the ages and from whom we can learn much.

4. That strict honesty of thought, purpose, and actions in the long run pays handsome dividends.

5. That we can convert timidity into courage by always doing the thing we are afraid to do.

6. That clean, wholesome, family life is the basis of true happiness.

You take it from here.

MATS: Pentagon's Air Transport Monster

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article which appears in the May 5, 1958, issue of the magazine American Aviation:

MATS: PENTAGON'S AIR TRANSPORT MONSTER

(By Robert Burkhardt)

Cancerous is a strong word, an emotionally-charged word. But it is a most apt word to describe MATS—the Defense Department's gargantuan Military Air Transport Service.

Cancer is defined by Webster as "a malignant evil that corrodes slowly and fatally." It can also be said that two important symptoms of malignant cancer are a general loss of health caused by acute anemia, and a numbing fear of what is to come. Often there is a denial that the cancerous growth even exists, with both the victims and their friends insisting that this is no more than benign and healthy bulge.

Such is the case with MATS, whose victims are this country's common air carriers of freight and passengers. Some of these are already dead. Others are aroused and fighting back, clinging to life with every shred of their corporate being. And there are still a few remaining airlines who are trying to ignore the terrible threat of what has been publicly branded as the "world's largest free airline."

Before considering the plight of its victims, one should examine MATS itself. This organization was formed in 1948 as a merger of the Air Transport Command and the Naval ATS, and embraced a number of weather, air rescue and ground operations of the Air Force, Army, and Navy. Originally it was planned that MATS be a training organization, nucleus of a vast air fleet to supply logistical support—high-speed movement of men and materials to global battlefronts—in time of war or other national emergency.

This idea was endorsed with enthusiasm by Congress and the entire airline industry. Optimistic Congressmen hoped that a centralized MATS would be a way to eliminate costly duplication of the armed services' efforts in the air transport field, and at the same time would materially improve what was then called the United States defense posture.

At the same time, the United States air transport industry, growing by leaps and bounds as new routes were opened and larger and faster planes came into service, saw in MATS a chance to work in partnership with the armed services. Out of this, it was hoped, might come a vigorous and healthy civilian air transport industry, backed by an existing system of overseas MATS bases—including weather reporting, air traffic control, air rescue service and other support functions—all operating in conjunction with a nucleus fleet of late-model MATS aircraft.

MATS—Indexes of growth

	1954	1955	1956	1957	1958 estimates
Ton-miles flown (millions)	384	645	769	770	1,034
Cost of operations (millions of dollars)	$153	$187	$206	$224	
Aircraft assigned	1,379	1,456	1,454	1,393	
Freight tonnage	75,173	120,517	150,125	149,531	250,000
Passengers carried	440,359	617,100	700,250	748,841	800,000

Not too much is known about early MATS equipment and schedules and, for that matter, information about present operations and equipment is hard to come by even now. All told, 279 transports were taken over from Air Transport Command and the Naval ATS, mostly twin-engine Douglas-built C–47's and 4-engine C–54's. Early schedules listed few and irregular flights.

This humble beginning was no drawback to MATS planners. Right from the start MATS set out to become the biggest airline in the world by the simple expedient of offering free rides and free freight. And the number of takers has increased by leaps and bounds; today MATS traffic includes the majority of all United States military personnel moving to and from stations overseas, plus officers of NATO and other allied forces, employees of the State Department and other Government agencies, servicemen's wives and families, and everyone else who can qualify as a guest of the Government. Freight shipments and Government mail follow the same pattern.

It wasn't intended this way. To make certain that MATS was in fact a military operation, geared for a manyfold expansion in time of war, a clear policy line was laid down by the Secretary of Defense, and reemphasized by the Secretary of the Air Force: as many military passengers and as much military freight as possible was to be shipped by regular commercial aircraft.

Service to out-of-the-way points, such as Thule and Ascension Island, was the job of MATS, since no commercial airline could take this traffic. And in time of peak loads, when the regular scheduled common carriers by air were jammed up and delays expected, MATS could fly the goods and carry the GI's.

Good idea, said Congress. Sound defense policy, said the commercial airlines. And they were right, except for one small detail: MATS has never paid any attention to these policies, although repeatedly reminded of them by responsible committees of Congress.

Thus it is no wonder that MATS has grown so fast it has today become larger than all United States overseas commercial air carriers put together. The table shown here is actually an understatement of the situation, since official MATS schedules are the minimum to be flown.

MATS' Atlantic and northern schedules (March 1958 and March 1957)

	Passengers		Cargo		Total	
	1958	1957	1958	1957	1958	1957
Europe	[1] 470	[1] 294	194	384	664	678
North Africa	80	36	166	124	246	160
Iceland	32	40	28	28	60	68
Greenland	72	62	100	96	172	158
Newfoundland			16	24	16	24
Labrador	22	18	36	50	58	68
Azores	14	14	26	14	40	28
Bermuda	12	24		10	12	34
Ascension Island	[2] 30	[2] 8			30	8
Churchill	[2] 6	[2] 4			6	4
Total	740	500	566	730	1,306	1,230

[1] Combination passenger/cargo.
[2] Some passenger/air evacuation.

NOTE.—This is an exclusive compilation by American Aviation. It is based on official MATS schedules, which understate the actual traffic movement in 2 particulars: (1) much new and larger equipment has been put into service during the past year so that freight and passenger capacity has increased more than the actual increase in schedules would indicate, and, (2) scheduled operations are on the average only half of MATS' operations, since a large number of irregular or "training" flights that also carry passengers and cargo are also flown each month.

By actual count, there are usually about twice as many flights actually flown as are scheduled. In addition, the increase in scheduled traffic is understated, since new and much larger equipment is constantly being put into service.

How have Congress and the airlines reacted to this? Repeatedly, Congress has tried to slow down the unchecked growth of MATS, only to be airily ignored. Not all congressmen are opposed to the burgeoning civilian role of MATS: Representative L. Mendel Rivers is a strong supporter of bigger and better Government air lines. And why not? He just happens to have a major MATS base located in his home district in South Carolina.

Thoughtful airline spokesmen are quick to emphasize the fact that the growth of MATS need not be malignant. MATS is a key weapon in the United States, anti-Soviet arsenal; perhaps it should be even bigger. Nobody—repeat, nobody—takes issue with the military job that is the primary responsibility of MATS.

But what is being viewed with increased fear by taxpayers, congressmen and airline officials alike, is the twisted concept now dominating the thinking of MATS' high command. This concept has now resulted in establishment of the largest State-owned airline in the world; one whose no-charge or nominal-charge policies are isolating and threatening to bankrupt its commercial competitors, and will continue to do so until either Congress or some other higher authority takes firm and corrective surgical action.

Schoeppel's Answer

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 12, 1958

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "SCHOEPPEL's Answer," published in the Wichita Eagle of May 8, 1958.

The editorial comments upon and quotes a telegram sent by the Senator from Kansas [Mr. SCHOEPPEL] to a Wichita labor leader, in connection with the recent proposed labor legislation which the Senate considered. It gives his reasons for supporting the Knowland amendments. I believe it to be very useful and informative editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wichita Eagle of May 8, 1958]

SCHOEPPEL'S ANSWER

An amazing phenomenon even to the friends of organized labor is the way labor leaders are fighting all attempts to pass Federal laws to curb the excesses and downright thievery and corruption amply documented in investigations of certain labor unions.

Our own United States Senator ANDREW SCHOEPPEL obviously felt this way when he wired a reply to a Wichita labor leader who had protested amendments to labor legislation offered by Senator WILLIAM KNOWLAND, of California.

"Frankly, I am at a loss to understand why you suggest such action," Senator SCHOEPPEL telegraphed. "Not a single amendment offered by Senator KNOWLAND could in the slightest be labeled as a damaging amendment insofar as duel-paying union members are concerned. Every amendment seeks to protect the rights of the laboring man against abuses in labor relations exposed by the McClellan committee. * * *

"Are you opposed to giving every member of a labor organization the right to vote? Are you opposed to the use of secret ballots properly supervised where every member may vote without fear of reprisal? * * * What is so damaging with legislation which provides that the funds of the local union are to be used exclusively in connection with the affairs of the local union when a trusteeship has been established?"

These are the questions that not only Senator SCHOEPPEL but ordinary citizens are asking. For it is obvious that something has to be done to correct the situation.

And if honest labor leaders continue to say no to reasonable suggestions, then they only open the door to extremist enemies of labor to secure laws that would really cripple them.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my newsletter of May 10, 1958:

WASHINGTON REPORT BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS

MAY 10, 1958.

Major legislation took a back seat to political primaries in several States, the House deferring action. The fourth urgent deficiency appropriation bill ($28.7 million), and the bill increasing the lending authority of the Export-Import Bank (from $5 billion to $7 billion), plus noncontrovefsial private and public bills comprised the bulk of House floor action. Surprisingly, no opposition was expressed on a bill reducing to 60 percent of parity the long-staple cotton price support. Usually, agriculture matters end in a rhubarb.

The recession, as a political motivation, may be fizzling out. The facts are just too contrary to the political gloom peddlers' analyses. News accounts of economic statistics (Delta Airlines' analysis of the southeastern United States business increases) full-page editorial ads from scattered areas throughout the Nation (such as Kansas City Star saying Midwest is booming), CONGRESSIONAL RECORD insertions (agricultural boom, Representative ST. GEORGE; Minnesota withstanding recession, Senator MUNDT; Muskegon, hard hit but fighting back, Representative GRIFFIN) parallel the spirit of Dallas' prosperity campaign and W. A. Green ads.

However, the expensive aftermath of politically motivated antirecession legislative measures remain. The tests of constitutionality, proper parliamentary procedure, and cost to the taxpayers condemn these hastily contrived economic palliatives (most reported earlier in newsletters):

(1) Housing bill: Costs $1.8 billion, so hastily considered there was not even a printed bill.

(2) Highways: No one questions their need, but we further set aside States rights.

(3) Civil and military accelerated spending bills: A grandstand play which Government agencies can now use to justify any waste-in-haste spending.

(4) Farm price freeze: Calculated to control further the farmer and prevent his return to the workings of a free market place.

(5) Community Facilities Act: $1 billion or more to subsidize strictly local projects—"rob Peter to pay Paul, with heavy go-between deduction by Uncle Sam."

(6) Public works bill: $1.7 billion in rivers, harbors, reclamation, and other projects, including pork barrel and in no event antirecessionary in effect.

(7) Jobless benefits: $1 billion up to sky's the limit, a socialized dole, this bill substituted by Democrat leadership (without hearings or committee study) in place of President's suggestions.

The boxscore of this antirecession legislative flurry of several months is a blot on the record of Congress, an amazing conglomeration of wrong solutions following wrong interpretations of the Nation's economic facts and figures. The reason? Politics, is it not? The price we pay for this spending is (1) no tax cut; (2) inflation of the value of our money; the dollar will buy less (now 49 cents compared to 1939 $1).

The pitfalls of inflation are recognizable. It could be said that wrong antirecession measures could pave the road to ruin. Let's recall some of the component parts of antirecession legislation during early 1958:

(1) Unemployment: Far lower percent of labor force unemployed than at any time during New Deal tinkering with economy up to World War II. Also forgotten is fact there is always some unemployment;

(2) Purchasing power: Giving money away federally isn't the answer; rather, better values in merchandise will produce sales—savings are high;

(3) Tax reform: Taxes are too high and of the wrong kind, but can't be corrected for fear of lost revenue to Uncle Sam until Government slows down on spending;

(4) Labor monopoly: Increasing wages and other demands, without corresponding productivity, not within framework of market conditions (supply, demand, profit, loss) is sewing seeds of collapse. Inflexible wages and union demands are contradictory to a flexible economy.

These inflationary factors all add up to the same legislative aims—the aims of the labor leaders, the liberals, and the ADA, and when so identified, understood, and listed, spell out socialism, United States style. The dangers are clear, the remedies less clear. With reference to my earlier remarks about labor's influence in Congress, an additional study accompanies this newsletter entitled "Socialism, United States Style," a brief analysis of the ADA (Americans for Democratic Action) according to its own spokesmen.

Free enterprise stories, to contradict the politician's gloom presented this week in Congress include: (1) Stan Musial batting 509 is in a slump, since he's receded from 553; (2) the fireman (politician?) who hurries to each fire, fearful it will go out before he has a hand in it; (3) the bobby's answer to critic of soapbox speechmaker's attack on the Queen, "Wot he's sayin' ain't 'urtin 'er any and it may be doin' 'im a lot of good." (Politicians, however, can hurt our economy); (4) the deep-sea diver gets "bends" if he comes up too soon, also, business economic excesses in boom expansions can have problems of overs (overexpansion, etc.) which in free economy will correct themselves (unless prevented by Federal intervention).

UNIVERSITY OF MICHIGAN LIBRARIES

Hébert Reply to Dechert

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include a letter written by the Honorable F. EDWARD HÉBERT in reply to a letter by Robert Dechert, General Counsel of the Department of Defense:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 9, 1958.

Mr. ROBERT DECHERT,
General Counsel, Department of Defense, Washington, D. C.

DEAR MR. DECHERT: Thank you very much for sending me the copy of your letter to PAUL CUNNINGHAM in connection with the remarks which I had inserted in the RECORD following our debate on last Sunday.

I did not intend to continue the debate on a unilateral basis, but I thought it only fair to point out the difficulty confronting those of us who disagree with the dangerous language of the President's reorganization plan, as well as the gag rule on at the Pentagon for those who disagree with the proposal.

I am rather amazed at your letter, however, but I am glad you wrote as you did because it points out most vividly exactly what I have been trying to say. The language which I refer to as most inappropriate and shocking was not the language which you used on the show Sunday, but the language which you used before the Reserve Officers Association on the previous night, the text of which I note you did not include in your letter to Mr. CUNNINGHAM. Don't you think it would have been only fair to quote the article to which I had referred, and which I read on the show? In my remarks in the CONGRESSIONAL RECORD I attempted to correct what I understood you to accept as an unfair newspaper report in that you were quoted out of context. Now I have your letter complaining about my statement, in which you quote me out of context.

Your comments to Mr. CUNNINGHAM are adroitly phrased so as to indicate that I was describing your language on the show as "most inappropriate and shocking," when you know as a matter of fact I was referring to what you admitted you had said to the Reserve Officers Association. I have reread my remarks in the RECORD and by the farthest stretch of the imagination no other conclusion can be drawn that I considered most inappropriate and shocking your remarks about the Marines and Navy before the Reserve Officers Association. I do not appreciate but I do understand your desire to explain away your most inappropriate and shocking language against two branches of the armed services who are prohibited from defending themselves against your attack.

I note with interest you make no comment in your letter to Mr. CUNNINGHAM about these paragraphs in my statement:

"In one instance I pointed out to him that the Defense Department, through the technique of withholding appropriated funds, had reduced the fighting combat strength of the Marines from 200,000 to 188,000. He replied that the Navy Department had made the reduction. I insisted that it was the Defense Department and not the Navy.

"Following the debate I checked with the proper authorities and was informed that it was the Defense Department and not the Navy Department which had reduced the combat strength of the Marines."

Apparently it was not convenient to your purpose to admit that you had made a misstatement of fact in this instance.

Of course I do not desire to continue any debate on this subject, but I do intend to keep the record straight as consistently and as positively as I can. In this connection I have written Mr. Joseph McCaffrey asking him for a full transcript of the debate which I shall insert in the RECORD. In the event he does not have the transcript to which you refer I respectfully request that you give me the full transcript and I will put it in the RECORD without comment, and let everybody read what the facts are and what was actually said and not said.

I am, of course, sending copy of this letter to PAUL CUNNINGHAM.

With kindest personal regards.

Cordially yours,

F. EDW. HÉBERT.

The Decline of Our Domestic Fishing Industry

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. MACDONALD. Mr. Speaker, those of us who are vitally interested in the fishing industry in the United States have become very alarmed at the recent decline and the difficulties experienced by our domestic fishing industry. The industry as a whole is declining fast. It is losing economic stature, with some segments already facing ruin because of the importation of foreign-caught fish. Likewise, our fishing fleets are being forced out of business by this kind of competition.

To give you an example of what our fishing industry faces I would like to point out that Russian fishing vessels are moving into waters off New England with a modern seagoing fleet. In fact, the United States Bureau of Commercial Fisheries has stated that Russian vessels are working an area along the eastern edge of the Grand Banks about 800 miles from Boston.

There is also evidence that the Soviets are building huge ocean trawlers, completely fitted for long journeys while the United States fishing fleet is gradually deteriorating. I understand that last year a shipyard in East Germany delivered a reported 112 smaller fishing vessels to the Soviets with 320 more scheduled for delivery in 1959 and 1960. Also a shipyard in Poland has just launched a 515-foot trawler tender especially equipped for Arctic operations.

Along this same line I should point out that Russia launched an atomic icebreaker, named the *Lenin*, last year and it is currently operating in and around the Antarctic. That is one reason why I introduced a bill calling for the construction of a nuclear-powered icebreaker for the United States Coast Guard to keep pace with Russian operations.

Mr. Speaker, the Russians want to penetrate our fishing waters for two reasons: First, they want to defeat us through peaceful economic competition. This is, of course, a part of their cold war strategy; and, second, they want to use their fishing vessels for soundings for their large submarine fleet. I realize that there is no legal means to prevent the Russians from prowling in fishing waters outside our own 3-mile coastal jurisdiction. In any event, we must remember that under no conditions can we afford to allow the Soviet Union to outdistance us, particularly in the economic field and the field of modern warfare.

While the Russian fishing fleet has grown tremendously in the last 18 years, the United States fishing fleet has declined steadily. There is no doubt that the fishing industry in this country and especially in the New England area has been fighting a losing battle against unfair competition for many years. For example, New England's trawler fleet has declined by half in the past 10 years. In 1947 there were 59 large trawlers in the region. By 1957 this number had dropped to 30. I am sure you agree with me when I say that every assistance possible is needed both in and out of Congress to prevent the collapse of this most essential industry.

As you know, some of the economic assistance we extend to our allies is used to assist their fishing industries to the detriment of ours. We must have protection for our fishing industry and see that this segment of our economy is not sold down the river in a futile attempt to buy friends abroad. Likewise, our foreign competitors like Russia are heavily subsidized by their Government, undermining the competitive position of our fishing industry even within the United States market itself.

With these facts in mind the Congress must make every effort to promote the welfare of our fishing industry. We must conserve our fishing grounds, increase production, and help our fishermen avoid the disaster that faces them.

Mr. Speaker, fishing, the oldest industry in the United States, is now threatened with extinction. This great industry must be revived before it is completely inundated by the Russian economic penetration. By reviving this industry they in turn will make an important and material contribution to our food supply, and our national defense, and well-being of our citizens.

Aid and Comfort to the Enemy

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. SCHERER. Mr. Speaker, the left-wing Fund for the Republic, for whose

tax-exempt status there is no justification, continued its assault upon pro-American agencies and institutions when it sponsored and paid for industrialist Cyrus Eaton's appearance on a nationwide television hookup a week ago Sunday night.

Canadian-born Eaton again made a tremendous contribution to the Soviet cause when he viciously attacked the Federal Bureau of Investigation and the security systems of this Nation.

Eaton is part of an epidemic of color-blindness which has affected certain segments of America. The victim cannot see the gory Red record of mass murder and subversion which the international Communist apparatus is writing daily. Eaton's scurrilous attack on the FBI and our security system climaxes a series of his public utterances which are being beamed by the Soviet propaganda machine to the four corners of the earth.

Do not think that the Fund for the Republic did not put him on this program by design. It knew of Eaton's previous pro-Russian positions.

It is more than coincidence that in December of 1955 the official Russian governmental organ Izvestia hailed Cyrus S. Eaton for his expressions on peaceful coexistence; that another organ of the Communist international apparatus, New Times, in October 1957 contained an article by Eaton in which he rapturously extols the virtues of the Soviet Union and states that he "has achieved a better firsthand understanding" by the contact he has had with Soviet representatives in the United States.

It is likewise more than coincidence that, in addition to attacking the Federal Bureau of Investigation, Eaton has repeatedly attacked what he has characterized as the anti-Russian belligerence of the United States.

Can he not see that the international Communist apparatus, now controlling one-third of the population of this earth, with a fifth column 25 million strong permeating the world, is now at war with the one nation which stands in the way of its world domination?

Can he not see that the Federal Bureau of Investigation—far from being a "Hitler-like Gestapo"—as he describes it—is the principal bulwark of our liberties and the chief weapon of the Nation against internal subversion?

In the March 1958, issue of the periodical the Progressive, Eaton states:

I am firmly convinced that the Russians want peace.

Can he not see that the only peace which the international Communist apparatus wants is a peace in which freedom is forever subdued by the forces of tyranny?

When listening to Eaton, Americans should keep in mind what Georgi Dimitrov, one of the world's top Communists and former instructor in the Lenin School of Political Warfare, taught. Dimitrov said:

We must always remember that one sympathizer is generally worth more than a dozen militant Communists. A university professor, who without being a party member lends himself to the interests of the Soviet Union, the writer, who without being a party member defends the Soviet Union, the union leader who is outside our ranks but defends Soviet international policy, is worth more than a thousand party members.

Mr. Speaker, the industrialist Cyrus Eaton, who, of course, is not a Communist, but who defends, as Dimitrov said, the Soviet Union and Soviet international policy, is worth more than a thousand party members.

Whether the Eatons understand it or admit it, we are presently engaged in a struggle—in a cold war—with an enemy the likes of which for debasement and inhumanity the world has never before experienced—an enemy whom we can ignore, appease, negotiate with, only at th expense of our survival. There are those like Eaton and his sponsors who are giving aid and comfort to the enemy in this struggle, particularly when they attempt to discredit one of the greatest Americans of our time, J. Edgar Hoover, and the Federal Bureau of Investigation which he heads—our chief bulwark against infiltration and subversion, which is the new and effective weapon of modern warfare.

At this point I would like to include in the extension of my remarks an editorial from the Cincinnati Times-Star of May 7, 1958, concerning Cyrus Eaton's television appearance:

SPIES HERE, THERE, EVERYWHERE

Cyrus S. Eaton, now 74, has made a tremendous lot of money in the United States in his life. But some of his remarks on the air the other night about current American life—he was born in Canada—do not make much sense.

The head of a huge coal, iron ore and rail network says the United States is in dire peril because of its scores of snooping and informing agencies; and it always worries him when a nation feels it is booming great because of the work of its policemen.

Does anybody besides Mr. Eaton feel that the United States has become great thanks to its policemen?

On the subject of policemen, Mr. Eaton went on to lengths worthy of Ezra Pound. "If," he said, "you were to take the police forces of the cities and the counties and the States and the governmental agencies and add them up, Hitler in his prime, through the Gestapo, never had any such spy organization."

Does anybody besides Mr. Eaton believe that the county police, the city patrolmen, etc., are spies?

If you observe this warning (put out under the aegis of the Fund for the Republic) don't take your beauty rest on that inner-spring mattress, there's a spy under every bed in the land, as in every closet, and behind every bar.

Even Hitler, a man not much disposed to laughter, would have had a chortle over this one. But nothing compared to the horse laugh to which Khrushchev is entitled.

The Solid Man

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. VAN PELT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the May 6, 1958, Fond du Lac Commonwealth Reporter on that great leader, Senator WILLIAM F. KNOWLAND, of California:

THE SOLID MAN

Senator WILLIAM F. KNOWLAND, of California, may or may not become the next Governor of his State, and he may or may not be a close competitor for the Presidency in 1960 and thereafter.

But few who watch him perform on the hustings in California or in the Senate in Washington can doubt that he is a man who has the courage of his convictions and is willing to follow wherever they lead him, whatever the political consequences.

A good many are saying that his championship of right-to-work laws is heavily damaging politically. Maybe this will turn out to be so. Sometimes, however, the voters are surprising. From time to time they are impressed by a man's willingness to espouse unpopular causes.

That seems to be KNOWLAND'S specialty. There are times when he appears a veritable mountain of convictions.

Not often are there any cracks in that granite. In fact, when he smiles, you sometimes get the idea that it has required a slip along the San Andreas earthquake fault.

Whatever his future, the Senate in 1959 is bound to look a little marshy and spongy without the Great Rock and California.

Golden Milestone Award to the State of North Dakota

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. KRUEGER. Mr. Speaker, I was greatly pleased to learn of the action of the National Highway Users Conference in presenting to the State of North Dakota its 1958 golden milestone award, a symbol of highway user's appreciation presented to highway departments for program reports to the public.

The golden milestone award, a miniature of the golden milestone of Rome erected by Caesar Augustus in 14 A. D., was presented during the recent National Highway Users Conference in Washington to Mr. A. W. Wentz, North Dakota State highway commissioner.

A highway department cited for the award is chosen because its program report is a clear-cut presentation of facts in which the public is interested. More than 1,900 organizations participate through the National Highway Users Conference and 48 State conferences, in making the golden milestone award. It is, in effect, an expression of gratitude from millions of highway users.

Here is the announcement made by the conference in making the award this year:

NINETEEN HUNDRED AND FIFTY-EIGHT GOLDEN MILESTONE AWARD TO THE STATE OF NORTH DAKOTA

The National Highway Users Conference is honored to present to the North Dakota State Highway Department the golden milestone award for outstanding service to the citizens of its State.

UNIVERSITY OF MICHIGAN LIBRARIES

This award confers the appreciation of highway users throughout the country, who comprise the organizations affiliated with the National Highway Users Conference and the 48 State conferences.

The North Dakota State Highway Department, by means of its activity report for the 2-year period, 1955–56, has done an outstanding service in presenting to the citizens of its State an easily understandable, concise summary of progress in highway improvement during those 2 years, and of plans for the years ahead. This activity report's clear-cut treatment of a highly technical subject goes a long way toward breaking through communication barriers between the highway department and the public.

With this report, and by close and understanding cooperation with highway user groups on issues which vitally concern them, the North Dakota State Highway Department has made a substantial contribution to the overall Federal-State highway program, designed in the interests of the national economy and the national defense.

The golden milestone is a symbol of highway users' grateful appreciation.

WILLIAM S. RICHARDSON,
Chairman.
ARTHUR C. BUTLER,
Director.
JOHN V. LAWRENCE,
Chairman, NHUC Award Committee.

Rumanian National Holiday

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. DINGELL. Mr. Speaker, Rumanians have a number of national holidays in their long and eventful history, but May 10 marks a great landmark in their history. On that day of 1881 Rumanians proclaimed the birth of their independent kingdom by the union of the two historic provinces, Moldavia and Wallachia. For all practical purposes Rumanians were independent and in charge of their destiny, except for the payment of a small financial tribute to the Ottoman Sultans, since 1866. But on May 10 of 1881, their national independence was officially recognized by the great powers.

Rumanians are one of the oldest inhabitants of the Balkan Peninsula, and today, even after the breakup of their historic country by the Soviet Union, they constitute the largest single ethnic element in the entire region, numbering more than 17 million. A brave and patriotic people, endowed with many native and natural talents, Rumanians have been subjected to unwanted alien regimes during most of their modern history.

In the middle of the 15th century Rumania was conquered by the Ottoman Turks, and for more than 400 years they suffered under the tyranny of callous Ottoman administrators. In the 19th century, when they succeeded in their attempt to secure independence from the Sultans, then they were under constant danger of Russian aggression. Rumanians managed to keep their country and their independence in the course of many wars. At the end of the First World War they even regained some of their lost territory, but the Second World War brought them misery and suffering. Since 1945, they have been under Moscow-oriented and Moscow-directed Communist tyranny.

It is a tragedy that such a gifted and brave people, who have sacrificed so much for the attainment and enjoyment of human freedoms, cannot even have the freedom to celebrate their great national holiday, the birth of their own independence state on May 10, 1881. But Rumanians of the free world in celebrating that day keep up the spirit of freedom even among their unfree compatriots. I am indeed glad to join them in the celebration of their national holiday.

River Development Is a Prime Need

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following newspaper article which appeared in the Tulsa World, Monday, May 12, 1958, entitled "River Development Is a Prime Need":

RIVER DEVELOPMENT IS A PRIME NEED

A week ago at Cushing, Dr. Raymond Thomas, director of the State department of commerce and industry, raised a number of eyebrows in a discourse on the state of the economy in 26 eastern Oklahoma counties. Deliberately eliminating mushrooming, prosperous Tulsa County from his survey, Dr. Thomas cited the vast need for eastern county development if the area is to catch up with other sections of the State.

Dr. Thomas' remarks were revealing, to say the least. Not a few of those in attendance at the water-industry conference at Cushing were importuned to criticize his treatment of figures and statistics.

Nevertheless, we believe Dr. Thomas performed an admirable service to the 26-county eastern area by pointing out its basic frailties. In particular were we struck by Dr. Thomas' reference to sales-tax collections in the area. His point was this:

Despite the fact the area supports 21 percent of the State's total population, the per capita sales-tax income for the 1957 fiscal year was $12.12, as compared with $22.02 for the rest of the State.

What does this mean? What can be done about it?

First, the sorry sales collections record is ultimate proof, if any is needed, that too much of eastern Oklahoma is living on a welfare-type economy, is not capable of caring for its own. Second, the best answer to improvement in the economy, in providing self-support and in lifting the standard of living, lies in the development of the vast water resources of the area.

Just as certainly as there are underdeveloped areas in other parts of the world, there are also underdeveloped areas right here in the United States. And that is why the trek of the tri-State (Kansas, Oklahoma, Arkansas) basin development group to Washington this week is so important.

The three State areas located along the course of the Arkansas River are in desperate need of the economic lift water development can and will bring. If the living standards of this vast area are to ever reach their actual potential, if there are ever to be jobs provided that will lift the area out of its welfare rolls economy, the development of water resources is mandatory.

In Washington this week the tri-State group will appear before House and Senate Public Works Committee groups. The goal of the group will be the speedy development of the Keystone, Eufaula, and other Kansas-Arkansas components of the great Arkansas-Red-White Basins.

Oklahoma's economic future is irrevocably tied to the success of this 3-State presentation of the needs of the area and the facts supporting the development of these needs.

Laos Celebrates 11th Anniversary of Constitution Day, May 11, 1958

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. POWELL. Mr. Speaker, on May 11, 1958, Laos celebrated her 11th anniversary of Constitution Day. In recognition of the occasion I wish to extend warm greetings to His Majesty Sisavang Vong, King of Laos, His Excellency Ourot R. Souvannavong, Ambassador of Laos, and to the Lao people.

It is not a small matter for a nation to embark upon the task of building up prosperity and happiness, of undertaking to assure peace and progress, and of assuming the responsibilities of insuring to its peoples freedom and liberty. When we look back at our own history in the fitful decade after independence, it is easier to appreciate the uncertainties that have affected Laos during her first 11 years as a free and sovereign nation. That Laos has survived and flourished and that she has managed to improve her living standards even slightly, is a tribute to the hardiness and perseverance of which the Lao people can be proud.

Believing that they must take the larger part of the responsibility in helping themselves and their nation to catch up with the rest of the world, the Laotian people are pulling themselves up by their bootstraps. But the road ahead to economic viability is long and uncertain. Because of Lao pride and real efforts at self-help, considerable attention is warranted in this country to see that she gets the public and private assistance she needs.

Apart from congratulations to Laos on her 11th anniversary of Constitution Day, what is required from the United States perhaps even more than continued help is a hard look at the long-range realities. It means appreciation of the importance of Laos to the free world and a willingness to keep this importance foremost in our thinking and planning. Although Laos has a population of only 2 million, her friendship for the

free world is valued. The weakening of this friendship not only would be a major propaganda defeat but would weaken the position of adjoining anti-Communist states in the area.

Fiftieth Anniversary of the Navy Nurse Corps

EXTENSION OF REMARKS
OF
HON. JOHN YOUNG
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks in the RECORD, it is my desire to congratulate the United States Navy on this the 50th anniversary of its Nurse Corps.

Rich in history from the beginning, the Navy Nurse Corps was established by an act of Congress in May 1908. Over the years from 1908 with a nucleus of 20 nurses to 1958 with approximately 2,100 nurses, the Nurse Corps had made outstanding contributions to the men and women of the United States Navy and the world at large in both service and in the field of education.

As early as 1910 members of the Navy Nurse Corps were serving outside the United States reporting to the Philippines, Guam, Honolulu, Yokohama, Samoa, Virgin Islands, and Cuba. The Nurse Corps over the years has expanded its service activities to hospital ships, air evacuation units, military transport ships, as well as the many Navy hospitals, air stations, and dispensaries throughout the United States and the world.

During World War II, Navy nurses within the continental limits of the United States were assigned to 40 naval hospitals, 176 dispensaries, and 6 hospital corps schools. True to Navy tradition at sea, they brought nursing care to the front lines, aboard 12 hospital ships, in air evacuation of casualties, and to foreign countries where American women had never before been seen. Serving in 17 countries overseas from December 7, 1941, until the surrender was signed aboard the U. S. S. *Missouri*, Navy nurses made military history.

Thousands of young men of the Navy had to be trained during the war to be hospital corpsmen. The majority of these hospital apprentices and pharmacists' mates had never been inside a hospital before their enlistment. Their teaching and supervision were important duties of Navy nurses, many of whom were experienced instructors. Their contribution to this work was invaluable. The effectiveness and skill of these Navy hospital corpsmen who tended our naval and marine casualties aboard fighting ships and on invasion beaches is a testimonial and a tribute to the effective instruction provided by the Navy Nurse Corps.

Navy schools, staffed by members of the Navy Nurse Corps, have been established throughout the world for the purpose of teaching the native population methods of survival against diseases common to them. As early as 1913 a school of nursing was established on Samoa for native women and later similar schools were also founded in the Virgin Islands, Haiti, and the island of Guam.

Late in 1943 two Navy nurses were sent to Brazil at the request of the Brazilian Government to establish and train a nurses' corps for that country's air corps. In spite of the great handicaps encountered by these nurses because of language and social problems, the school opened September 11, 1944, and the first class completed the 8-week course in November of that year. Because of Brazil's large jungle areas and mountainous terrain, the development of a method of transporting the sick and injured by plane represents a significant contribution to health advancement in Brazil which was made possible largely through the efforts of the Navy Nurse Corps.

At home the first class of 24 flying Navy nurses completed flight indoctrination January 22, 1945. They immediately started active flying service on 24 flying teams, consisting of a nurse and pharmacists mate. After some transcontinental trips with wounded, the teams went to the Pacific to serve in the Naval Air Evacuation Service, the first arriving in Guam in early February 1945. They worked tirelessly during the Iwo Jima and Okinawa campaigns flying out the wounded. Within 30 days, approximately 4,500 injured men were flown out of Okinawa alone.

Today the training of the Navy Nurses Corps continues apace with developments in modern warfare, and in conjunction with this training, our Navy nurses are receiving the finest possible education in such advanced courses as dietetics, laboratory techniques, anesthesia, and tuberculosis nursing.

The Navy Nurses Corps' marvelous record of accomplishment over the past 50 years, together with its proven ability to adjust to the many new and varied demands made upon it, have earned for it the respect and admiration of everyone.

It therefore gives me great pleasure to add my congratulations and best wishes to the many thousands which are being sent to the Navy Nurses Corps on this golden anniversary of the founding of the corps.

Poultry Production in the State of Maine

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. McINTIRE. Mr. Speaker, United States production of broilers in 1957 totaled slightly more than 1.4 million birds, an increase since 1950 of 126 percent. This striking advance has made the broiler industry one of the spectacularly productive segments of American agriculture.

Per capita consumption of broilers reached 16.7 pounds in 1957, a gain of 3 pounds over 1954–55. Ten States produce 70 percent of the national broiler production, and Maine is one of these with a production of 50 million birds.

The following article from the May 8 issue of the Portland Press Herald presents some interesting 1957 figures on the production of and income from poultry in the State of Maine:

STATE BROILER INCOME TOPS $37.3 MILLION

AUGUSTA.—Gross farm income from broiler raising reached a record high of $37,364,000 in Maine in 1957, the State Agriculture Department said Wednesday. It was a 23.7-percent gain from 1956 while farmers nationally were increasing gross income from that source by 6 percent.

The department said preliminary figures indicate Maine's total farm income from poultry may be at or near a record $66 million. Cash receipts from eggs and from chickens were below those of 1956, however—with a drop of 9.3 and 7 percent, respectively, compared to national reductions of 10 and 28 percent.

Broiler production totaled 191,611,000 pounds of meat, up 22.4 percent from 1956.

A Bill To Permit Small Business To Compete on the Same Price Terms as Large Firms

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. MACDONALD. Mr. Speaker, as every Member of this House knows, the small-business man is the foundation and backbone of our industrial system of free enterprise. Yet today the small-business men of this country are the forgotten men of this decade. It is alarming to me to see the number of small businesses that have gone out of business in a period of record prosperity.

During the past few months I have received hundreds of letters from small-business men in my district requesting that Congress do something to help them with their problems. One of the specific things they ask for was for Congress to enact a national fair trade law so as to protect them against rampant cut-price practices. Because of my intense interest in the welfare of these small-business men I introduced H. R. 11264, a fair trade bill which is designed to permit small business to compete on the same price terms as large firms. I feel sure that if this legislation is enacted into law, it will stop the present price war as exemplified by the price war that followed an announcement by General Electric. This, I believe will save the small businesses of our country from being forced into bankruptcy.

Hearings have been completed on this legislation. In order that my colleagues may have my views on this most important legislation I include my testimony

UNIVERSITY OF MICHIGAN LIBRARIES

before the Subcommittee on Commerce and Finance of the House Interstate and Foreign Commerce Committee on May 6, 1958:

STATEMENT OF HON. TORBERT H. MACDONALD, MEMBER OF CONGRESS FROM THE EIGHTH DISTRICT OF MASSACHUSETTS

Mr. Chairman and members of the Subcommittee on Commerce and Finance, I am grateful for the opportunity extended to me by your committee to present my views on my bill, H. R. 11264, which amends the Federal Trade Commission Act, so as to equalize rights in the distribution of identified merchandise.

Throughout our history, the American people have pinned their faith on two great principles, the principle of a free competitive economic system as the mainspring of the progress of our people and the principle of fair play. Both of these find legal expression in the antitrust laws which have set the rules for healthy competition for nearly 70 years. Of course, these laws have had to be modified and expanded as economic conditions and marketing practices were changed, as new problems for manufacturers and distributors arose. We stand at such a point today. Fair trade has been undermined to such a point that it has become almost totally ineffective. We must take vigorous steps to make it function as it should as a strong weapon against unfair competition.

The fair-trade legislation of the various States, backed by the Federal fair-trade law, popularly known as the McGuire Act, was introduced in most States in the thirties. It was designed particularly to protect small retailers from the ruthless and unfair competitive practice of chainstores and other large retail outlets of using a well-known trademarked articles as a loss leader. These merchants were selling such articles often at or even below cost, in order to attract customers who then could be charged higher prices on other goods once they had been lured into the store. Under the fair-trade laws of most States, once a manufacturer had signed an agreement with a single retailers within the State not to sell at retail the trademarked product of the manufacturer below a specified price, no dealer in the State is permitted to sell this trademarked product at any lower price. The first such law was passed in California in 1931. The number of such State laws increased rapidly to the point where all States except Missouri, Texas, and Vermont (and the District of Columbia) had fair-trade laws on the statute books. However, in recent years in numerous court cases, the nonsigner clause in the fair-trade laws—which binds a retailer not to sell a trademarked item at less than stipulated price even if he did not sign a contract to this effect himself—has been challenged. In 18 States, the State supreme courts declared this nonsigner clause unconstitutional. This has naturally seriously weakened the effectiveness of fair trade even in those States where the courts have upheld State fair trade acts.

A second blow to fair trade, following these actions by State courts, was the announcement by a considerable number of manufacturers that they were abandoning fair-trade price policies. Of these, the announcement of General Electric Co., long a stalwart superior of fair trade, on February 26 of this year was the most serious, particularly since it was quickly followed by similar announcements by such varied companies as Sunbeam Corp., Schick Corp., Toastmaster division of McGraw-Edison, Inc., Ronson Corp., and Royal McBee Corp., makers of Royal typewriters. The General Electric announcement was so significant that I should like to quote two paragraphs from it:

"Court after court has expressed its lack of sympathy with fair trade, and its disagreement with the legislative judgment which led to the passage of the fair-trade laws. A total of 14 State supreme courts have also declared their statutes unconstitutional in whole or in part. These decisions, combined with Missouri, Texas, Vermont, and the District of Columbia where fair-trade acts were never passed, create a total of 18 vast and commercially important non-fair-trade areas which adjoin fair-trade States and greatly compound the difficulties of equitable enforcement at their borders. Moreover, mail-order businesses, operating from the shelter of these non-fair-trade areas, recently have been permitted to riddle the price structure of fair-trade States by advertising, offering for sale and selling products to residents of these States below fair-trade prices. Finally, in some fair-trade States it has become increasingly difficult to secure adequate penalties to enforce compliance. Not infrequently punishment for violations of an injunction is either refused, or is so mild it does not serve as a deterrent in the future.

"All these facts are clearly evidence from our study of the recent trend of the over 3,000 fair trade cases instituted by us in the past 5 years, the thousands upon thousands of investigations undertaken, tabulated and acted upon, and the hundreds of contempt proceedings brought to enforce compliance with court orders. Current experience show that despite the magnitude of these continuous efforts, we can no longer uniformly establish and effectively protect our fair trade price structure in the manner originally contemplated by the fair trade laws. As a consequence, those who have signed fair trade contracts or voluntarily observed our fair trade prices have been placed in an untenable competitive position. This is especially true when they are located adjacent to the non-fair-trade areas or in States where violators have freely flaunted court injunctions or to which they have targeted mail-order operation."

This quotation indicates very clearly, it seems to me the crucial problems involved for small companies the country over as a result of these court decisions and the consequent loss of faith in fair trade by manufacturers and dealers alike. Particularly now, in a period of recession, we must fear more than ever that many companies will become increasingly ruthless and unscrupulous merchandising their products. Small business is gravely imperiled. We have become aware that, week after week, the number of business failures has been increasing. In March of this year business failures totaled 1,495, 21 percent above February, 12 percent above March 1957, and higher than any month since 1933, except for January 1939. Over half of these failures, 750 in all, were in the retail trades. This compares to 672 retail failures in March 1956. In addition to this rise in the number of business failures should be mentioned the continued increase in the number of mergers in business, whereby small firms are swallowed up and power of large business is extended.

A crisis is at hand and prompt action is imperative if we are going to reverse these ominous trends. If my bill is enacted into law it will provide businessmen with the assurance they need that the brand merchandise which is the small-business man's bread and butter will not be used as unfair loss leaders by their giant competitors. H. R. 11264 is designed to restore fair trade to its rightful place as a protective shield for small business.

My bill makes a fresh approach to the problem of fair trade. In contrast to the earlier fair-trade legislation which has precipitated such an endless series of court controversies, the current bill does not require either a signed fair-trade contract or the operation of the nonsigner clause. Instead this bill provides specifically that the manufacturer or distributor of trademarked or trade-name merchandise, called a proprietor (i. e., one who identifies merchandise manufactured or distributed by him by the use of his trademark or trade name), may lawfully "establish and control by actual notice to his distributors stipulated or minimum resale prices of his merchandise in commerce which is in free, open competition with articles of the same general class produced by others. He may so establish schedules of resale prices differentiated with reference to any criteria not otherwise unlawful. Such schedules may be changed from time to time by actual notice to distributors having acquired his merchandise with actual notice of any established resale price." This is the heart and soul of the act.

Let us examine this a little further. Actually this act, although providing a new legal framework for fair trade, is not creating a precedent by giving manufacturers a right to establish resale prices on their own brands. This right already exists for many manufacturers who choose to adopt certain methods of distribution, such as maintaining their own retail outlets, adopting dealer franchises, or consignment selling. This bill simply extends this right to manufacturers who sell their brands primarily through the thousands and thousands of small independent retail stores throughout the length and breadth of this land.

This is, I would add, purely permissive legislation. It does not require any manufacturer to establish resale prices on his trade-marked products. Some undoubtedly will; others will not; and there will be competition between both.

I want to stress that word, "competition." You will note that this bill provides for the right to maintain specified retail prices only where such merchandise is in free open competition with articles of the same general class produced by others. Thus a manufacturer with a monopoly in a product may not establish a resale price enforceable under this law.

In short this bill merely permits manufacturers of trademarked products to establish and enforce on a national scale specified prices on such products by the simple device of providing notice to the dealer of such minimum prices. Such notice may be imparted by mail, or through advertising, or through notice attached to merchandise or its containers, or imparted orally.

If such a resale price established by the manufacturer were violated, any person suffering or reasonably anticipating damage from such violations of established resale prices could sue in any State or Federal court of competent jurisdiction. This could be a competitor of the retailer violating this law, or even the manufacturer of the trademarked article.

This legislation will, I am thoroughly convinced, help counterbalance the economic forces which are operating constantly to grind down to extinction the small, independent retailer. It will help the small-business man compete against his large competitor. It will encourage young men of initiative who want to run their own business to go into business for themselves without the fear of being crushed by overwhelming competition before they are fairly started. It would help well-run small businesses to survive and prosper by curbing the price wars that turn popular brands into profitless goods that no one wants to handle.

We have seen in the past few weeks a lot of reports that fair trade is, if not already dead and buried, at least in a very perilous state and unlikely to survive much longer. It will be a sad day, I am convinced, if fair trade is permitted to disappear. In fact, I am thoroughly persuaded that we must not merely prevent fair trade from dying, but through legislation such as I have introduced bring fair trade to the point where

it can truly operate effectively and efficiently as an integral part of our body of antitrust law designed to prevent unfair competition, stimulate our free conomy, and help this country grow. Therefore, I commend this bill to this committee and strongly urge its approval.

America's Timber Supply

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. McINTIRE. Mr. Speaker, timber has performed as an important ingredient in the development of America, and as in the past, so will it be called upon to make further contributions to our country's expansion of the future.

A growing population is demanding more and more lumber products to satisfy its needs, but owing to certain limiting characteristics, a supply adequate to these needs will have to come from the same area of forest lands that has accommodated our past requirements.

The United States Forest Service has, as a result of an appraisal of the timber situation, presented a series of observations, and these are deserving of the attention of all having an interest in America's timber supply:

The Department of Agriculture through its Forest Service is to be commended on its excellent recent report on our country's timber situation. The Timber Resource Review, on which the report is based, is the most complete appraisal of our timber supplies and future needs ever made. Since timber will continue its big role in our economy, this report is a signal contribution to the future welfare and prosperity of the Nation. It projects our timber demands to the year 2000—just 4 decades from now—when there will be 100 million more Americans than we have now.

The report contains 700 pages of significant and useful facts. Implications from these facts are clear. With almost a doubled population by 2000, we will need to grow a lot more timber than we do now—perhaps twice as much on just about the same amount of forest land we now have. Forest land area will not increase—in fact, it may decrease somewhat.

An encouraging part of the report is this: the land we have to grow timber on is adequate—if we step up all our forestry activities over what we are now doing. We simply won't grow enough timber in the future unless we intensify forestry practices to a much greater extent.

Some highlights of the timber situation are:

1. Fifty-two million acres need planting. At the present rate of planting, it will take 50 years to put these idle acres to work.

2. Too many acres with too few trees on them—millions of acres only partially stocked.

3. Timber quality is declining. We are cutting, and have been for a long time, the better quality trees, and leaving the poorer trees.

4. More than half of the commercial forest land is in 4½ million small privately owned forests. Here is the key to a full supply of timber for the future since generally these private holdings are far less productive than the public and industry-owned forests. Moreover, the owners of these small forests are not obtaining the cash income they could obtain from these lands.

This monumental report holds significance for every American. If we heed its implications, we can be optimistic about our timber supplies in the future and our children and their children will know the timber abundance that we know. Many other public and private groups helped the Forest Service in making the survey of timber conditions. But much of the credit must go to the leadership of Dr. Richard E. McArdle, Chief of the Forest Service. The report is a fine example of his forestry statesmanship. He has made outstanding contributions in managing, protecting, and developing the Nation's forest resources. In addition, he has helped to build and strengthen Federal cooperation with the States and with private industry. He has developed and stimulated an effective forest research program. His Forest Service associates are welded into a unified action force with excellent esprit de corps. In directing the work of the Forest Service, Dr. McArdle always emphasizes the word service—service to the American people.

Farmers, Ranchers Having Boom Year

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. WILSON of California. Mr. Speaker, with all the unfounded talk of a farm recession, it is encouraging to learn that many great agricultural areas of our country are enjoying unprecedented prosperity. I hope the farmers themselves will start to count their blessings and quit blaming the administration and Secretary Benson for every problem from boll weevils to cloudbursts.

The Arizona Farmer Ranchman, published in Phoenix, which I understand is the third largest farm publication in America, recently featured a commendable front-page editorial pointing up the bright side of the farm picture in the great Southwest. Under unanimous consent, I include it as a portion of my remarks:

FARMERS, RANCHERS HAVING BOOM YEAR

Hey, folks, where is this depression—or recession—that everyone is crying about?

It certainly isn't visible from the cotton farms, the grainfields, the vegetable fields, the citrus groves or the cattle ranges and feedpens of Arizona.

Everybody who has any kind of a farm product to sell right now is selling on a booming market. The outlook is that demand will continue strong through the remainder of the year for everything that comes from the farms and ranches of the Copper State. No crop to be harvested later in 1958 is likely to be sold at a loss.

This promises to be a year far surpassing 1957, when the total income from Arizona crops and livestock was $398 million, a gain of $18 million over 1956. It's almost a certainty that 1958's agricultural income will be far over $400 million and it can reach a record $500 million.

Let's take a look at what happened in the first quarter of the current year and make a few prognostications as to the quarters still ahead.

Citrus, vegetables, and cattle are the principal commodities today being shipped to consumers who just can't get enough of the superior fruit, produce and beef that Arizona raises. It is true that the high vegetable and fruit prices are largely caused by Florida freezes, but Florida's tough luck had little or nothing to do with the phenomenal livestock situation.

With Valencia oranges selling as high as $4.50 a carton, this can be the most profitable citrus season in Arizona's history. We have even heard of packing house managers telling growers they can count on a return of $4.50 a field box for Valencias, up from $1.80 last season. That return would mean around $2,000 an acre just for growing the fruit and put a crimp in the aspirations of subdividers. At the same time grapefruit is selling at profitable levels and the price is improving. The other oranges are long since gone, and at good prices. Furthermore, Florida's trees are so badly damaged that citrus is almost certain to be in short supply for several years.

So, if you're looking for gloom, stay away from the citrus growers.

Almost before they had started shipping their spring crop the lettuce producers had recouped their losses from an unsatisfactory fall deal. Celery, carrots and even peas are in strong demand. A record acreage has been planted to melons and the growers will need only a little market luck to profit handsomely.

Fears that the rains and cool weather would result in heavy lettuce losses from mildew have faded away. There is no longer any great apprehension that rains and winds will cause the barley to lodge. The outlook is for the heaviest per acre yield of barley in the State's history, which is not likely to make anybody rich but should sell well if all the grain isn't rushed to market at harvest time. Our biggest wheat crop, estimated at 128,000 acres, looks even better than the barley and should be profitable even if it sells at no more than support prices.

The most sensational development in the Arizona agricultural front this spring is in beef cattle. In just a few weeks the price of finished steers shot up eight or nine cents a pound and Arizona steers have sold in Los Angeles above 30 cents. Feeders are being pressed to let their cattle go, at choice prices, weeks before they can grade as finished.

All cattlemen are holding their breath, feeling that this situation is too abnormal to last and some night will bring a sharp break. But the beef scarcity is national and any decline is unlikely to be more than moderate.

Chances are that Arizona feeders will have their best year, and there isn't a doubt that rangemen are in for their best year since 1941 for they have their best feed since 1941. The rains have made a tremendous difference in their prospects and many are now regretting the heifer calves they let go last fall when conditions were only fair. The feeders stand ready to pay them top prices for anything they can part with now, and it's predicted that they will get at least 25 cents a pound for their calves next fall. They'll be heavy calves, too.

Arizona's principal agricultural commodity is cotton, just now being planted, and the cotton farmers look forward confidently to a much better season than last. That wasn't a bad season, only a bit disappointing in grades, and that came about because of weather not likely to be repeated. There's a worldwide shortage of high-grade cotton which will be acute about the time picking starts again in Arizona, and prices should be well above the floor set by the Federal loan program. All that's worrying the cottongrowers is that they aren't allowed to raise enough quality fiber to supply their customers and may lose more of their market to synthetics.

UNIVERSITY OF MICHIGAN LIBRARIES

As for grapes, alfalfa, sorghum, and miscellaneous crops, only time will tell but at the moment there is certainly nothing on the horizon to generate despair.

Water? The Salt River project has twice as much in storage as a year ago. The San Carlos project has more than for several years. Yuma County's farm districts will again have all they need, from the Colorado. Of course we are still drawing much more water from underground than is being replaced, but even that sad story is lightened somewhat by the discovery of new supplies here and there. The general water picture is bright if not brilliant.

No, don't go looking among Arizona farmers and stockmen for pessimists, regardless of what is happening to ther industries and to the rest of the country. Don't come around Arizona Farmer, either.

This number of the big farm paper is 72 pages. In advertising volume it is almost a record.

Polish Independence Day

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, I am proud to echo the sentiments expressed by many of my colleagues in their salutes to the people of Poland on the occasion of Polish Independence Day, May 3.

Through long years of Russian domination—nearly two decades now—the people of Poland have retained their dreams of freedom, nourished by their memory of Poland as a free nation, the first European country to enact a democratic and progressive constitution.

It is this constitution, adopted May 3, 1791, that is recalled on this historic day. The Russian Communists, who still dominate the Polish people through armed strength, will not allow public celebrations of this event. But last year, for the first time in many years, the Polish people were allowed to mark the day in private.

It is only through their armed strength that the Soviets are able to keep the Polish people within their sphere. The Poznan revolt showed the Russians what would happen to their Communist form of government and their enforced adherence to communism if a ring of steel were not around this once-free nation.

We in America, who cherish our freedom as the Polish people do, mark this historic Polish Independence Day with renewed pledges of our friendship and encouragement to the people of Poland. Certainly the Soviets realize that armed strength and Communist-run schools are not winning the Poles to communism. And we know it also. Our people send to the people of Poland a warm and heartfelt greeting, and we join these oppressed people in their prayers that Poland will soon know freedom and independence again.

It's a Free Country, but—

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. BROOMFIELD. Mr. Speaker, those who stand up for the dignity of the individual are becoming fewer and farther between. When these people do assert their constitutional rights, all too often it is the Federal Government which attempts to knock them down. I would like to call the attention of my colleagues to an article which appeared in the Detroit Times on May 7, written by E. A. Batchelor, Jr. It is a sad story of what can happen under our present agricultural acts.

IT'S A FREE COUNTRY, BUT—
(By E. A. Batchelor, Jr.)

DOWAGIAC, May 7.—By the proud, unyielding code of Stanley Yankus, Jr. it is wrong to accept somebody else's money for nothing.

For years on his Cass County farm Yankus, 39, made sure he never had to.

His formula was simple. He grew grain on his farm, fed it to his chickens and took their eggs to market.

He never grew rich but his wife and three children did not want.

And Yankus had his independence. It was for that he left a humdrum clerk's job in Chicago 18 years ago to start life as a farmer deep in debt and willing to learn by his mistakes.

Independence is a precious heritage to Yankus. It was for freedom that his father left Lithuania. An uncle who remained behind is in a Russian concentration camp today.

But the Government that he reveres has seized the $3,403 he wrung from his farm and put in a savings bank here.

Yankus is a frightened man.

"I am not frightened for myself," he said today. "But I am frightened for this country I love.

"What happened to me is the action of a police state—the sort of life we were brought up to detest.

"And I find my friends and neighbors are afraid of the Federal Government. Don't they realize you and I and all other citizens are the Federal Government?"

This is what happened to frighten and bewilder Stanley Yankus: Four years the Agriculture Stabilization and Conservation Board, Federal agency, fixed the amount of land that farmers could sow to wheat.

The move was to control wheat surpluses. By preventing wheat from reaching the market, prices are kept up artificially.

It was done in Cass County by referendum by the farmers to whom the ASC had arbitrarily granted an allotment of 15 acres of wheat. Only they are eligible to vote in this annual referendum.

Yankus said, "This is not a free election. It is a price-fixing election by special interests. The consumers who buy bread can't vote in it."

But Yankus' wheat does not reach the market. It goes to feed his chickens.

In 1954 Yankus was told he was fined $900 for growing 38 acres of wheat instead of the 12 to which the ASC quota limited him.

It was a bad year to fine Yankus. Disease had riddled his chickens. The fine came within $25 of wiping out his profit for the year.

He did not pay. He has not paid for 4 years during which he has shown a modest profit and managed to save $3,403.

That's the bank account that the Government impounded last week until Yankus pays his fines which now amount to $3,848.

Yankus said, "Yet, if I signed up with the Government to grow only 12 acres of wheat, they would buy it from me at $2.08 a bushel and put it in storage to rot."

He said many of his farmer neighbors thought the whole thing was ridiculous but had gone along, either because they don't want to stick their necks out or because they don't care where the money for their wheat comes from.

He is not an easy man to appease, this Yankus. He admits it, and adds:

"I've read enough history to know that the men who wrote the Declaration of Independence weren't easy to do business with, either. They didn't accept the British Government just because it was the government. They wanted a voice in it.

"There were plenty in those days who didn't want to stick their necks out. But we call them Tories in the history books and we look down on them."

There is a strange eloquence to Yankus as he voices his creed.

The Constitution is his bible and he points to that section which says that no citizen shall be deprived of life, liberty, or property without due process of law.

"Who made the law that seized my savings?" asks Yankus. "I didn't vote on it and you didn't. If I had robbed a bank I would have had my day in court. But they tell me I can't get a jury trial for my crime."

Since his bank account was impounded Yankus has been forced to sell 1,000 pullets to get some ready cash.

"That hurt," he said, "but here's something that worries me even more. I learned that an FBI agent had been over asking my egg buyer in Benton Harbor a lot of questions about me.

"This awe people have of the FBI makes that very damaging to me. People get leery of doing business with a man if they think it will bring the FBI down on them. You see, they are getting afraid of their Government."

Yankus said the Cass County ASC board urged him to plant corn instead of wheat, explaining:

"They told me I could raise all I wanted and feed it to my chickens or sell it. In the first place, to raise corn I would have to buy about $2,000 worth of specialized farming equipment.

"Then if I did sell the corn, I would have to take the money and pay ridiculous high prices for the wheat my birds need.

"It's just too much like somebody telling me what I have to serve for supper each night. I can't go for it."

To try and get the Government explanation you go to the offices of the Cass County ASC board which administers the law Yankus is fighting.

The Federal Government is represented there in a remodeled old railroad depot by Office Manager Russell Leach and five women clerks.

The walls are lined with filing cabinets. They are bulging with the form B-16's and the J-11's so essential to the bureaucrat's existence.

Leach, 49, is a little man with a tiny mustache. He gets $5,400 a year for checking and reporting on men like Stanley Yankus and seeing that the girls file the multiple reports correctly. He also owns a farm nearby.

In his way, he seems just as bewildered as Yankus. The first thing he tells you is, "I'm just working here. My job is just to see that his excess wheat is reported."

Just a cog in a big Government wheel?

"Yes, that's all," says Leach.

True, he said, Yankus is the only farmer in Cass County who is violating the law by growing excess wheat solely for his own use. But the law as written didn't take that into account and "I didn't write the law."

"I don't see why he won't be reasonable and put the land into corn. I think his chickens would do better on that than wheat," said Leach.

They looked pretty healthy on their present diet, the visitor suggested.

Leach smiled wanly and offered no argument.

"I want to get along with everybody, I'm sorry this Yankus thing has caused so much trouble," he said.

"But if I'm not in this job somebody else would be."

As Stanley Yankus had said, "this Government thing has gotten so big and involved a man doesn't even know who he's fighting any more."

Soviet Arctic Veto Unmasks Mr. Khrushchev

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. DEROUNIAN. Mr. Speaker, Russia's true face should be clearly known to all Americans, but her latest veto of President Eisenhower's inspection proposal once again shows her true colors. I commend to you for reading the following article which appeared in the Long Island Daily Press of Sunday, May 11, 1958:

SOVIET ARCTIC VETO UNMASKS MR. KHRUSHCHEV

(By Alexander F. Jones, executive editor, Syracuse Herald-Journal)

The Soviet Union veto of the United States proposal for Arctic inspection to avert danger of surprise attack across the North Pole is the real tipoff on Russian planning.

If there was any sincerity whatsoever in Soviet claims to peaceful intentions, the American inspection proposal for Arctic flight would have been accepted.

Of the 11 members of the Security Council of the United Nations, only the Russians opposed it.

Thus all efforts to bring about a summit conference are off, for the time being at least. There can be no discussion.

The only way the Communists can hit the United States with mass flights is over the North Pole.

So when the United States put its finger on this nerve center and proposed to make certain surprise attacks impossible from either side, Mr. Khrushchev, through his delegate, Arkady A. Sobolev, had to take his mask off. And there was not the cheerful, back-slapping advocate of a peaceful world, but a sinister gangster of as evil a stripe as Stalin.

Ambassador Henry Cabot Lodge, our chief delegate at the United Nations, did a masterly job in forcing Sobolev who up to this time has been a comparatively rational and reasonable representative of Moscow, to sputter incoherently in carrying out the Khrushchev decision.

Sobolev even took out after Dag Hammarskjold, executive secretary of the U. N., for expressing the hope the Soviet Union would agree to the American proposal.

All of this is very discouraging.

It reveals there has been no real change in Soviet policy. World domination is still the Communist goal. John Foster Dulles has never been fooled about this fact for one moment.

This sad development takes me back 12 years to a luncheon with the late Gen. Henry A. Arnold, commander in chief of the Air Force in World War II.

General Arnold was retiring and making a final report. He wanted to explain it and he did, at the expense of a linen table cloth.

That report detailed the danger of attack over the North Pole and the need for a gigantic radar screen to act as an alarm. It also detailed the need for Arctic bases and cooperation with Canada.

There have been many refinements in the Arctic protective screen since the Arnold report but, in general, his ideas have been carried out. Gen. Carl Spaatz, his successor, was equally alert as to the danger.

The web that has been woven has, as much as any other defensive precaution we have taken, spelled American security.

How much it means has been revealed by the Soviet wrath when the United States proposed an inspection system.

Maintenance Increase for Rural Carriers

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, I regret that a short stay in the hospital prevented me from being in the Chamber when the House acted on S. 3050 last week. I was very pleased to note that not one Member spoke against this legislation, which certainly indicates the clear recognition by all concerned of the need for this very necessary adjustment in compensation of rural carriers.

A 1-cent-a-mile increase in mileage expense and an increase in the minimum compensation to $3.50 per day are only fair in view of the increased costs which rural carriers must bear. It was 7 years ago this summer when these carriers received their last adjustment, and there can be no argument about the need for at least the increase as provided in S. 3050.

I was happy to be present in our Post Office and Civil Service Committee when this legislation came before us, and to add my vote in support of this legislation. I regret that I was unable to add my voice to those speaking for this bill when it was before the House.

Our colleagues in the other body have, in their wisdom, acted speedily on this measure. It has the full support of the National Rural Letter Carriers' Association, a group which certainly knows the needs of our faithful carriers.

The United States Should Continue To Oppose Commodity Agreements

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the Habana Charter for an International Trade Organization was never approved by the Congress. Chapter VI of the proposed charter dealt with commodity agreements. They are not compatible with our free-enterprise economy.

The majority report of the Commission on Foreign Economic Policy, better known as the Randall Committee, during the 83d Congress said:

The Commission does not believe that extensive resort to commodity agreements will solve the problem of price instability; and it believes that such agreements introduce rigidities and restraints that impair the elasticity of economic adjustment and the freedom of individual initiative, which are fundamental to economic progress. • • •

The Commission finds the same objections to the proposals for unilateral buffer stock action by the United States to stabilize world prices of raw materials and foodstuffs.

My able colleague the distinguished gentleman from New York [Mr. REED] and I dissented from this statement. While the majority opposed extensive resort to commodity agreements, we opposed any use of such agreements.

In 1954, the United Nations established a Commission on International Commodity Trade. The United States opposed the establishment of this new United Nations Commission, and it has refused to participate in its work. Our opposition was based on the fact that its terms of reference clearly suggested that international commodity agreements would be the instrumentality to control the price and volume of trade in basic commodities.

When the proposal to establish the Commission was before the United Nations Economic and Social Council in April, 1954, the United States representative to the Council, Mr. Preston Hotchkis, said:

The experts also believe, however, that commodity agreements, if properly drawn and operated, may be an effective means for preventing excessive price fluctuations. This they hope might be obtained if the attempt were made to cover several commodities in a single agreement, instead of relying on the inevitably slow and uncertain increase in single commodity agreements.

I must confess, Mr. President, that I find no ground to justify this hope. The difficulties experienced in negotiations relating to a single commodity would in my judgment be greatly multiplied if we attempted to deal with many commodities at the same time. Moreover, any agreement covering many commodities would involve widespread interferences with the workings of a free world economy. It would magnify the danger of diverting production, consumption and trade patterns from the channels they would be likely to assume under a

UNIVERSITY OF MICHIGAN LIBRARIES

more healthy, competitive, and free-enterprise system. The net result of such arrangements, even if it were practicable to conclude them, would I firmly believe, be detrimental and not beneficial to economic development.

Mr. Speaker, I endorse this statement.

In view of the consistent stand this administration has taken, I am obviously distressed at reports that some State Department planners are now considering changing this position.

Mr. Speaker, under unanimous consent, I include an article by Mr. James Reston which appeared in the New York Times on April 15 at this point:

ADMINISTRATION MAPS MOVE TO SAVE ITS TRADE PROGRAM

(By James Reston)

WASHINGTON, April 14.—The administration is deeply worried about the future of its foreign trade program—so much so that the State Department is now seriously considering a revision of two of this Government's pet economic doctrines.

These are its long-standing opposition to the principle of international commodity agreements, and its opposition to prolonged Government purchases of such things as domestic-produced lead and zinc.

Thus, to save the reciprocal trade agreement program in the Senate, State Department economic experts are urging a new Government-buying program of United States lead and zinc for stockpiling.

Coincidentally, these same experts are discussing the feasibility of an international coffee commodity agreement to avoid financial distress and political trouble, particularly in Brazil and Colombia.

The administration ended its zinc-buying program last month, and allocated no funds for Government purchases of lead after June 30, 1958. These decisions, coupled with the competition of foreign produced lead and zinc, have caused widespread unemployment in United States lead and zinc mines, and have greatly increased the demand in the Senate for high tariffs against lead and zinc imports.

In short, the situation is as follows:

Lead and zinc: Senators from the lead and zinc States—New Mexico, Arizona, Colorado, Idaho, Utah, Montana, and to a lesser extent Wyoming—have served notice on the administration that they will not vote for the reciprocal trade agreements program unless the lead and zinc miners are given relief in one form or another.

This informal mining bloc, most of whose Members have previously favored the reciprocal trade agreements program, is working closely with the Senate textile bloc and oil bloc, both of which also want protection against foreign competition. And the combination has convinced the State Department economic experts that unless some concessions are made to the protectionists, the reciprocal trade agreements program will be severely crippled if not defeated.

Coffee: Brazil, Colombia and several other Latin American countries get 80 percent of their foreign exchange from the export of coffee, primarily to the United States and Europe. Their revenues from this country have been dropping steeply in the last 18 months.

COMPETITION FROM AFRICA

Meanwhile, competition from French and British African coffee has been hurting their market, particularly in Europe, and when the European common market agreements get into full operation, African coffee will enjoy a greater priority in the European market.

The question raised here, therefore, is whether to sit down with the Latin-American coffee producers and discuss the problem, knowing that such a discussion would inevitably lead to proposals for an international coffee agreement similar to the sugar agreement now in operation.

In the past, the United States Government, while feeling that the commodity agreement for sugar worked fairly well, has opposed the extension of this device to coffee. The idea here has been that the United States was the world's largest consumer of coffee and that it should buy coffee anywhere it could for the lowest possible price.

Accordingly, United States officials have refused to enter into international negotiations on a coffee-commodity agreement. Now, however, they see serious trouble ahead for the Latin-American Nations—Guatemala and Costa Rica are involved as well as Brazil and Colombia—that depend primarily on this one crop for foreign exchange.

EXPORTS FROM BRAZIL

For example, Brazil's coffee exports to the United States dropped from $604,731,000 in 1956 to $528,402,000 in 1957, a decline of $76,329,000. Colombia's dropped in this same period by $24,638,000, and the estimates for the future are even more disturbing.

This is happening when the Soviet Union is in the midst of a major trade drive in Latin America. The State Department's argument is that is would undoubtedly be cheaper and safer in the long run to revise our theory about commodity agreements than to deal with the economic and political consequences of a financial crisis in the coffee-producing countries in the South.

There is, however, serious opposition to this line of thought within the administration. Some officials think the controversy over commodities agreements and stockpiling payments for lead and zinc will be the major issue within the executive branch of the Government in the next 3 months.

A QUESTION BY OPPONENTS

The opponents of commodity agreements ask why the administration should start down the road toward more commodity agreements when it has had so much trouble with trying to fix prices and agricultural quotas at home. The free market is the best market, these officials say. Therefore, they are opposed to the arguments being heard in the State Department.

Nevertheless, political considerations in both the lead and zinc and the coffee controversies are forcing a review of economic doctrine.

Even the State Department officials who are advocating a modification of present policies do not like commodity agreements or perpetual stock-piling programs, but they are faced with harsh alternatives and feel that the time has come to talk out the differences with the administration.

It is difficult to be precise about the Government purchases of lead and zinc in the past, for these are not published. Reliable estimates, however, put the cost at about $50 million a year.

The State Department argument is that this will be very little to pay if, as it believes, the future of the Trade Agreements Act depends on the votes of the mining bloc in the Senate.

State also argues that the Latin-American market for United States automobiles and other products will seriously decline unless some way is found to avoid a financial crisis in important parts of the hemisphere.

The Secretary of State, John Foster Dulles, dealt with the Latin-American commodity price problem in a speech at Pan American Day ceremonies here this afternoon.

He said that the United States Government had realized "the potential consequences of violent fluctuations in the prices of Latin America's exports and is daily searching for ways and means to contribute toward a solution."

"I can assure you," he said, "that we are truly anxious to help within the limits of what is sound and within our governmental capabilities. And we are always ready to discuss with our neighbors these mutual problems in an effort to find practical and acceptable solutions."

Mr. Speaker, if we attempt to stabilize the price of Brazil's coffee, we will immediately be asked to assist in the stabilization of other commodities, most of which we do not produce in the United States. The unlimited possibilities of our involvement are indicated by an article in the New York Journal of Commerce on April 4, which reported that the new Republic of Ghana proposed the formation of a world cocoa agency. Under unanimous consent, I include this article at this point:

WORLD COCOA AGENCY PROPOSED

(By Hy Cohen)

A proposal for a central cocoa agency, empowered to buy and sell raw stocks on world markets at favorable prices, will be set before the cocoa study group of the Food and Agriculture Organization (FAO) of the United Nations.

This plan was introduced by the Ghana delegation at the recently adjourned London meeting of the group's working party. Representatives from 12 countries, including the United States, attended.

PLAN FAVORABLY RECEIVED

Sources in touch with the conference told the Journal of Commerce that this plan was more favorably received than the "orthodox buffer stock scheme," which was considered unworkable by many, and has little chance of adoption.

Also included in the Ghana plan, as presented by Sir Eric Tansley, was a maximum-minimum price range of 37½ cents to 25 cents per pound.

A counterproposal was suggested by the Nigerian delegation offering a 10-cent fluctuation, with a floor of 30 cents per pound, and a ceiling of 40 cents per pound.

CLOSING COCOA PRICES

Cocoa prices at the closing of the New York Cocoa Exchange ranged between 36.15 cents to 40.15 cents per pound.

Ghana's proposal was reported as a revision of Sir Eric's earlier antagonism to futures trading in this commodity.

As presently envisioned, the agency would operate from London and New York, buying cocoa when prices were low, and selling when they advanced. A council established for this purpose would be responsible for necessary decisions.

BRAZIL LATE AT MEETING

Brazil, a key cocoa producer, and chief mover for a world buffer stock, was only represented at the meeting during the last day.

Price stabilization of world cocoa prices has been a major concern of the study group since it was founded in 1956. Traders here have been consistently unfriendly toward any price-fixing schemes, or suggested cartel arrangements.

At this meeting, the strongest delegates for controls were the Swiss and the French. Most of the other consumer nations represented were described as not in favor of fixed prices.

COCOA IN SHORT SUPPLY

Trade sources here consider any plan for a world buffer stock in cocoa as unrealistic under present conditions when cocoa is in short supply, and prices are running at high levels.

Current high prices are detrimental to any expansion of chocolate, it was pointed out at the London meeting.

Other nations represented at the London conference were the United Kingdom, Brazil, France, Italy, Germany, Netherlands, Switzerland, Ghana, and Australia. Denmark, the Dominican Republic, and Mexico were there as observers.

The American delegation emphasized the need for increased crops, and improved, cheaper production methods, to permit producing countries to realize a greater return on this commodity.

Word has just been received from the cocoa study group committee in Rome that the results of the London meeting on price stabilization will be submitted to the group meeting scheduled to run May 16–23 in Hamburg.

COCOA CLOSES LOWER

Cocoa futures closed 7 to 22 points lower after opening with strength. The market shifted over a one-half-cent range as covering, which supplied the early buying, dried up. Turnover for the session was a light 258 lots, including 18 switches and 8 sales against actuals.

Mr. Speaker, at a time when we are having difficulty in maintaining the income of our farmers, miners, and ranchers, I do not believe that we should embark on any program at the expense of the American taxpayer which attempts to stabilize the world price of any raw material. Let us do first things first and protect our own producers through an adequate tariff.

Coffee, cocoa, and many other raw materials which are now receiving special consideration by the State Department are on the United States free list. We should let free markets determine the price of any commodity we are willing to import without any tariff or other trade barriers.

No Recession in Studio City

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mr. HOLT. Mr. Speaker, I would like to call the attention of my colleagues to the following telegram regarding the recession sent to the President by two of my constituents:

DEAR MR. PRESIDENT: In accordance with your recent statement the merchants of Studio City set out to prove that no such thing as a recession actually exists in our land, that there is only talk and fear of a recession. As a consequence we picked the most unlikely hour, 12 a. m. to 3 a. m., Sunday morning, April 19. We placed advertising in the press and on television station KCOP. Mr. President, at 2 a. m. Sunday morning 100,000 people jammed our business district and they were buying not sightseeing. This is a small segment of Los Angeles where 1,000 people shopping at the same time is just about normal. Studio City shopping district is about 8 blocks long. Mr. President, we in Studio City have proved that there is no such thing as a recession and we have proven it dramatically. We believe that official notice would be a stimulus for other cities and for business in general.

DE WITT MCCANN,
President, Studio City Chamber of Commerce.
EDDIE LEWIS,
Chairman, Studio City Merchants Association.

Abuse of Loss Carryover

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mr. FORAND. Mr. Speaker, the loss carryover provisions of the Internal Revenue Code were written into the law to help business and industry recoup their losses of poor years in years when they realized a profit. However, many smart operators take advantage of this law to save taxes. This they do by purchasing businesses which have operated at a loss and apply these losses against the profits of their own successful business and thus reduce their taxes.

If the law is not being abused, it is, at least, being used by individuals and corporations for profit and to the detriment of the working people of this country generally, and of my home State of Rhode Island in particular, because in addition to obtaining a tax reduction, these operators, as a rule, shut down the plant and sell the real estate and machinery separately, throwing workers out of jobs and at the same time remove the job potential.

I have tried, with the help of the tax experts here in the Congress, to find a way to close this loophole in our tax law, while at the same time preserving the basic purpose of the law. Some progress to that end was made a few years ago but more must be done.

I nave not given up and I am hopeful that before long the technicians on the staff of the Joint Committee on Internal Revenue Taxation will recommend a way to close this loophole against abuse while at the same time protect the legitimate taxpayer who needs this relief in his efforts to continue to provide jobs.

Under leave already granted me I include as a part of my remarks a study of loss carryover in the textile industry, entitled "Trafficking in Corporations," and a proposed remedy, prepared by Solomon Barkin and George Perkel, which illustrates the points I am trying to make. It follows:

TRAFFICKING IN LOSS CARRYOVERS

The loss carryover provisions of the Internal Revenue Code are designed to treat corporations which suffer operating losses on an equitable basis in relation to the tax treatment of other corporations. The application of this worthy purpose to corporations succeeding to the business or assets of a predecessor corporation which had incurred the loss has been fraught with much confusion and uncertainty. Prior to the enactment of the Internal Revenue Code of 1954, there was no statutory provision governing the use of carryovers by successor corporations. The new code sought to remedy this situation by establishing rules under which carryovers would apply to such corporations and setting forth special limitations to prevent abuse.

The textile industry has suffered from serious economic reverses in recent years and the new rules for applying loss carryovers to successor corporations have therefore had extensive applicability to the firms in this industry. Corporate interests with no previous connection with textiles have looked upon the substantial loss positions accumulated by textile companies as an inviting inducement for acquiring such companies so as to make use of their tax advantages. In spite of the limitations imposed by the statute, many textile corporations have been acquired by other corporations and, after being milked of their tax advantages, have been liquidated. This cannibalization of textile enterprises has had serious repercussions through the industry.

PURPOSES OF LOSS CARRYOVERS

The economic consequences of the adoption of sections 381 and 382 have been just the reverse of the purposes which the loss carryover provision is designed to achieve. As noted in a Treasury Department study entitled "Business Loss Offsets," published in 1947, the principal purposes of this provision are as follows:

A. Equity considerations

In the absence of the loss offsets, the business entity whose net income becomes negative in some periods is not permitted to deduct all the expenses of earning income. To this extent, the tax on net income becomes a tax on capital. The owners of such a firm are discriminated against, because higher taxes are levied on their net income than on the income of owners of businesses with stable income.

B. Economic considerations

1. To remove impediments to risk taking: Without loss offsets, investments in assets with less risk of loss are favored over those in which the risk may be greater. Thus, the absence of loss offsets will reduce the relative investment in risky assets and ventures. Investment in such assets and ventures may be particularly desirable in the economy. Ventures may be risky because they are new firms challenging established ones or introducing new products. If successful, they may bring reduced prices in the industry they enter, or may create employment in an entirely new industry. They may be faced with a period of hard sledding and losses in their early years. If losses in this period cannot be offset against income of future periods, the prospective return from the investment is reduced relative to the return connected with a safer haven for their funds.

2. To increase the countercyclical effect of taxes: Absence of loss offsets may also contribute to cyclical instability. In years of losses, expenditures will be held to a minimum. The making of these expenditures may be unprofitable when the firm bears their full cost but must pay a tax on the additional income they would bring in. Yet they might profitably be made if the cost of the expenditure could reduce taxes through loss offsets.

Instead of preserving equity among taxpayers, removing impediments to risk taking and increasing the countercyclical effects of taxes, the application of sections 381 and 382 of the code has created windfall tax gains for certain taxpayers, discouraged enterprises from making investments necessary for their survival, and encouraged the liquidation of existing business. This per-

UNIVERSITY OF MICHIGAN LIBRARIES

version of the purposes of the loss-carryover provision has caused severe distress among the thousands of workers who have lost their jobs as a result of plant liquidations. In the textile industry, which has been suffering from the impact of several major factors tending to depress the economy of the industry, the use of section 381 of the code as an additional spur to mill liquidations has aggravated the industry's problems of adjustment and accelerated its demise. Instead of serving to stimulate constructive efforts to rehabilitate the industry, loss carryovers have been made use of by financial manipulators to the detriment of the industry and the public interest.

IMPACT OF SECTION 381

The adoption of section 381 of the Internal Revenue Code of 1954 injected a new and disturbing element into the textile situation. The owners of corporations which had suffered substantial losses found that they owned a valuable asset in their corporate tax-loss position. People who were operating a profitable enterprise were anxious to acquire the loss corporation's "tax shoes" so they could reduce their tax liability. Lured by the blandishments of attractive offers of tax-free exchanges of stock, complete with the advantages of obtaining stock in a listed corporation in place of securities of a closed corporation, many could not resist the opportunity of selling out. Why continue the competitive struggle with its demands for new investments for modernization when selling out yields a handsome and quick return?

In many cases the interests which acquired these loss corporations had no interest in continuing the operation of the company's facilities. Once the right to the loss carryover was achieved, the acquired plant or plants were liquidated. Frequently the funds yielded by textile mill liquidations were used by the new owners to buy up nontextile companies. Thus the resources of this depressed industry were diverted from the much-needed task of rebuilding it.

This process has operated to the benefit of those who sold their stock and to the interests which have acquired their "tax shoes." But their gains have been achieved at the expense of the workers who lost their jobs, the communities which have become distressed areas, the industry whose problems of adjustment to diversity have been aggravated, and the Federal Treasury, which has been deprived of tax revenues. In short, the windfall gains of the few have been won at the expense of the public welfare.

Information on the effects of the use of the carryover device are necessarily limited. Many of the deals are made between closely held corporations and details are not divulged. Information made available by public corporations is also limited. Nevertheless, sufficient information has been made public to yield a clear picture of some of the patterns which have developed in the exploitation of this tax loophole in the textile industry.

ACQUISITION OF LOSS CORPORATIONS AND LIQUIDATION OF THEIR PLANTS

Textile companies with loss records have been purchased by various interests, some of which had no previous experience in textiles, and within a year or two, much if not all of the facilities for producing textiles have been liquidated. In many cases, the proceeds of the liquidation have been used to acquire other corporations engaged in unrelated businesses. The corporations which incurred the losses have been used to set up a favorable tax position for corporations which are not, in essence, the same as the corporations which had suffered the losses. The following cases illustrate the manner in which the law has been manipulated for private gain and public loss:

A. Acquisition by corporations in unrelated businesses

1. The stock of the Wanskuck Co., a major producer of worsted textiles with a record of losses in prior years, was purchased by the New England Butt Co. in September 1955. The latter is engaged in the manufacture of iron castings and machinery. In May 1957, the 3 textile plants of the Wanskuck Co., located in Providence and Oakland, R. I., were liquidated, displacing 1,300 workers.

2. The stock of Boott Mills, a cotton textile company with reported losses in 1951–53, was purchased by ODC., Inc., a subsidiary of the Overseas Discount Corp. in December 1954. The latter is a holding company for various international investments. In June 1955, the Boott Mills operations were discontinued and its facilities in Lowell, Mass., liquidated. Five hundred workers lost their jobs.

3. John L. Fead & Sons, Inc.: John L. Fead & Son, Inc., a knit goods manufacturer, was purchased by the United Industrial Syndicate, Inc., in November 1954. The latter is a holding company for various manufacturing enterprises. In January 1955, the Fead plant in Port Huron, Mich., was closed, throwing 60 workers out of their jobs.

B. Acquisition by textile companies

1. The stock of A. D. Juilliard & Co., a cotton and wool textile manufacturer, was acquired through an exchange of stock by United Merchants and Manufacturers, Inc., a diversified textile corporation, in August 1953. The latter's annual report to stockholders for the year ended June 30, 1954, includes the following reference to its acquisition of Juilliard and the resulting tax position:

"During the year the corporation acquired the outstanding capital stock of a subsidiary company and, in connection with the discontinuance of certain operations of the acquired subsidiary prior to and following the time of acquisition, losses were realized from the liquidation of inventories, the closing of mills and the sale of real properties. These realized losses and additional anticipated liquidating losses were provided for either prior to or as of the time of acquisition and, therefore, are not included in the accompanying consolidated statement of income which includes the operations of the subsidiary company only from date of acquisition. The corporation esticates that the deductions of such liquidating losses (to the extent realized) and the use of carrybacks and carryovers of operating losses of subsidiary companies for purposes of computing Federal taxes on income resulted in a provision for Federal taxes for the year ended June 30, 1954, which was approximately $1,300,000 less than would have been required had such factors not entered into the tax computation.

"As at June 30, 1954, the unused loss carryovers of subsidiary companies for Federal and Canadian tax purposes approximated $14 million."

The Juilliard worsted textile plant at Providence, R. I., employing 2,200, was closed in September 1953. The Juilliard woolen mill at Stottville, N. Y., employing 800, was closed in April 1954. The Juilliard cotton mill in Brookford, N. C., employing 475 workers, was closed in December 1956.

2. The stock of Forstmann Woolen Co., a major wool textile company with losses aggregating $6,600,000 in the previous 2 years, was acquired through an exchange of stock by J. P. Stevens & Co., Inc., a diversified textile company, in June 1957. In October, the liquidation of the Forstmann plant at Garfield, N. J., with 1,700 employees, was announced.

C. Acquisition and liquidation, followed by acquisition of unrelated businesses

1. Gera Mills, Inc., a wool textile company with substantial prior losses, was purchased by the Cleveland Arcade Co., a warehousing concern, in December 1953. In April 1954, the Gera woolen mill in Passaic, N. J., was liquidated, displacing 800 workers. In August 1954, the company's name was changed to Gera Corp., and its certificate of incorporation changed so as to permit it to "carry on any manufacturing, mercantile or other business whatsoever." It proceeded in November 1954 to acquire 2 corporations engaged in unrelated businesses (Chatham Electronics Corp., and Otis Terminal Warehouse Corp.) In March 1955, Gera Corp. acquired U. S. Finishing Co., a textile dyeing concern. A letter from the latter company to its stockholders dated January 28, 1955, referred to Gera's tax position as follows:

"Furthermore Gera Corp. had losses arising from other operations, which it is believed can be offset for Federal income tax purposes against earnings from the business to be acquired from the company, and from its own electronics and other divisions, which otherwise would be subject to tax."

In January 1957 the Jewett City, Conn., plant of United States Finishing was liquidated, throwing 550 workers out of their jobs. In October 1957, Gera was reported to have acquired the Triplex Corporation of America, a manufacturer of engine pistons. The bulk of the Gera Corp.'s current business is now carried on in nontextile fields.

2. An outstanding instance of the milking of a textile company by nontextile interests for tax purposes and the subsequent application of the company's tax position for the acquisition of unrelated businesses is the case of Botany Mills, Inc. The controlling stock in this wool textile company had been owned for generations by the family of Chas. F. H. Johnson. In May 1953, Bankers Securities Corp., an investment firm, and H. Daroff & Sons, Inc., a clothing manufacturer, each acquired half of the Johnson family stock. In August 1954, a syndicate headed by A. M. Sonnabend, a real estate and hotel operator, took over the controlling share of the company's stock. The company's annual report for the year ended December 31, 1955, described its carryover credits as follows:

"Based up consolidated Federal income tax returns filed and to be filed, the company has net operating loss carryovers which may be availed of to reduce the consolidated taxable income of the members of the group whose income is consolidated for income-tax purposes, during the succeeding tax years by approximately the following amounts:

"Next 5 years	$3,700,000
Next 4 years	8,100,000
Next 3 years	9,500,000
Next 2 years	14,700,000

"It is expected that approximately $3 million of estimated losses provided for in the net loss for the year ended December 31, 1955, will be taken as deductions for tax purposes subsequent to that date. Such amount is not included in the net operating carryovers shown above. All of the net operating loss carryovers set forth above are subject to those provisions of the Internal Revenue Code of 1954 and the regulations issued thereunder which pertain to consolidated returns."

The recognition of the role of the carryforward was described in a company letter to stockholders, dated February 2, 1956, in which the chairman of the board urged the adoption of a recapitalization plan. He noted: "Our principal asset, a tax loss carryforward of over $13 million, I fear, will be largely lost and our securities greatly depreciated in value without approval of this recapitalization plan."

In the annual report to stockholders for 1955 the board chairman notes:

"Our losses for the past 4 years and to be sustained in 1956 on account of liquidating sales of inventory and machinery will amount

to approximately $18 million. It is my confident belief that this amount can be earned by our company during the coming 6 years and, because of favorable income-tax provisions, can be retained to restore the stockholders' equity."

In 1955, the company acquired two other businesses which it operates as wholly-owned subsidiaries: Botany Cottons, Inc, cotton textiles, acquired in June 1955; Rolley, Inc., suntan lotion manufacturer, acquired in October 1955.

The Passaic, N. J., woolen mill of Botany, employing 2,000 workers, was liquidated in January 1956.

From 1956 to date, 10 additional corporations have been added as wholly-owned subsidiaries, 6 of them in nontextile fields:

Company	Date acquired	Product
Glenoit Mills, Inc	June 1956	Fur fabrics.
Baltimore Luggage Co	July 1956	Luggage.
Jos. H. Meyer Bros	Oct. 1956	Pearls.
Markson Bros	Nov. 1956	Retail clothing.
Calvine Mills, Inc	Jan. 1957	Cotton textiles.
Moss-Gordon Lint Cleaner Co	Mar. 1957	Machinery.
Premier Knitting Co	do	Sweaters.
Horsman Dolls, Inc	do	Dolls.
United Supply & Manufacturing Co	June 1957	Distributor of oil field gear.
Smartee, Inc	Nov. 1957	Knitwear.

3. Another illustration of the diversion of resources from a textile operation to an unrelated business by a new owner is afforded by the case of Powdrell & Alexander, Inc. The controlling interest in this cotton textile company was bought by George Meehan in June 1954, whereupon he became president of the company.

Following the change in management, a series of important steps took place. In November 1954, the company closed its cotton textile mill and liquidated the subsidiary Gosnold Mills Corp. in New Bedford, Mass., displacing 1,600 workers. In June 1955, it sold its dye plant at Danielson, Conn., to a new concern called Danielson Finishing Co. The various facilities and pieces of equipment at the Connecticut and New Bedford, Mass., mills were sold. The funds thus obtained were then employed to acquire the Pepsi-Cola Bottling Co., of Cincinnati, Ohio, in January 1955.

From its operations, it is apparent that the new management desires to get out of the textile business and use the loss carryover credits, not to rebuild the textile operations, but to obtain tax advantages through the acquisition of profitable nontextile enterprises. In the years 1952 through 1954, it recorded losses of $2,744,885, which it wanted to employ for tax avoidance. It acquired the bottling division as a means of earning just enough money to offset the firm's loss over credits. The speculative nature of this operation is suggested by a footnote to the annual report to the stockholders for 1955:

"On January 22, 1955, the company acquired the business and assets and assumed the liabilities of the Pepsi-Cola Bottling Co., of Cincinnati, Ohio, and has since operated that business as a division of the company. The company entered into a long-term employment contract with the manager of the bottling division which provides, among other things, that, when the bottling division shall have earned an aggregate net profit of $3 million before taxes on income, the company will sell to a new corporation, to be organized for such purpose, all of the assets of the bottling division, except cash and accounts receivable, at the book value of such assets at the date of sale. The company will own 60 percent of the stock of this new corporation and the manager and another employee will have the right to acquire 40 percent of such stock. The net profit of the bottling division for the current year, before Federal taxes on income, amounted to $599,535."

It is important to note that, for this period, 1952–54, the net operating loss before taxes was $2,744,885 and that the company has arranged to dispose of its bottling operations to a new firm after these operations yield $3 million income before taxes. While the employment agreement with the manager of bottling operation was canceled at the end of 1956 and replaced with a new arrangement giving him stock option rights in Powdrell & Alexander, Inc., the 1955 agreement casts a significant light on the motives of management.

Another interesting fact was revealed in the president's letter to stockholders, appearing in the annual report to stockholders for 1956. The letter discloses the following:

"In 1956, land was purchased in Cincinnati, Ohio, the home of the bottling division, part of which is being held as a future site for a new bottling plant. The remaining industrial property is being developed for resale."

The balance sheets for year-end 1955 and 1956 show the following items:

	1955	1956
Land	$5,165	$165,000
Land for investment		408,888

The above would seem to indicate that the company may now be entering the real-estate business. Income received thereby may possibly be offset by the carryover credit. The corporation's charter was amended in 1954, permitting engagement in any business the directors may determine.

4. The classic case of the use of mergers to erect a tax shelter, with tragic consequences to the employees and communities involved, is that of Textron, Inc. This company was formed by a merger of American Woolen Co., a wool textile firm; Robbins Mills, Inc., a synthetic textile manufacturer; and Textron, a cotton and synthetic combine, in February 1955. The American Woolen Co. notice of a special meeting to consider the merger, dated January 6, 1955, made the following reference to the subject of carryovers:

"As at the end of October 1954 the portions of the consolidated net operating losses attributable to each constituent corporation which may be succeeded to and taken into account by the merged corporation are estimated at approximately $18,750,000 for American Woolen, $10 million for Robbins, and $1,300,000 for Textron, or an aggregate of approximately $30,050,000. Such amounts will, subject to the applicable provisions of the Internal Revenue Code, be available as loss carryovers to be offset against future earnings for Federal income-tax purposes. Such loss carryovers, to the extent not utilized, will expire at the end of 1956 to the extent of $200,000, at the end of 1957 to the extent of $14,250,000, and at the end of 1958 to the extent of $15,600,000."

In his letter to stockholders of February 26, 1957, Board Chairman Royal Little boasted that "since the merger * * * (on) February 24, 1955, we have disposed of 36 textile properties and 5 textile converting divisions." These textile plants had employed approximately 20,000 workers before they got caught up in Mr. Little's taxsaving scheme.

Textron has used the resources released by the disposal of textile properties to buy up no fewer than 14 companies, 13 of which are in unrelated businesses, with products varying from storm windows to steamships. All but the textile operations are carried on as divisions of the company, which reports its income in a consolidated statement. The textile operations, which comprise only a small fraction of the company's sales, are conducted by a subsidiary, Amerotron Corp., whose accounts are also consolidated in the Textron statement.

In the year ended December 29, 1956, the company reported consolidated net profits of $6,502,592. No corporate income tax was paid.

A note on taxes in its financial statement reads as follows:

"Taxes: The Federal income and excess-profits tax liability of the company and its subsidiaries is subject to final determination by the United States Treasury Department for the years subsequent to 1945. Management is of the opinion that there is no material liability with respect to the open tax years. No provision for Federal income taxes was required on 1956 income due to losses during the year on the disposal of plant properties and equipment, which losses were charged to reserves previously provided.

"As at December 29, 1956 the company had unused Federal tax loss carryovers of approximately $45 million. Under the present tax laws these loss carryovers may be applied, subject to the applicable provisions of the Internal Revenue Code, as an offset against future earnings for Federal income-tax purposes. To the extent not utilized, approximately $14 million of the loss carryover will expire at the end of 1957 and $20,500,000 at the end of 1958."

5. Another example of the use of the merger route for the transfer of a loss carryover from one corporation to another and the subsequent liquidation of the bulk of the loss corporation's facilities, is provided by the experience of Utica Knitting Co. Controlling interest in this company was achieved by a group headed by Jerome A. Newman, a financier, in March 1952. In December 1952, the company was merged with J. T. Flagg Knitting Co. in an assets-for-stock deal and the reorganized company became Flagg-Utica Corp. The annual report of the company for the year ended December 31, 1952 stated:

"Net loss was $1,216,292, after giving effect to a Federal tax carryback of $350,000 and after giving effect to the approximately $10,000 earned by the Flagg division during December. Under the Federal tax laws, a portion of this loss may be carried forward for a period of 5 years and, to the extent that the corporation has earnings for this period, will be available for reduction of taxes payable."

Between 1953 and July 1, 1955, the company's plants (all previously operated by Utica Knitting) in Utica, Clayville, and Sherburne, N Y., were permanently closed. These mills had produced knit goods and had employed a total of 1,300 workers.

CONCLUSION

The Congress has recognized the need to restrict the carryover of losses in accordance with economic realities rather than such artificialities as the legal form of a reorganization. It has sought to insure that the benefit of the carryover shall not be exploited by persons other than those who incurred the loss. However, the limitations provided in section 382 of the Internal Revenue Code of 1954 have proven to be too loose to accomplish its purpose.

UNIVERSITY OF MICHIGAN LIBRARIES

Abuse of the carryover privilege has become as rife under the new code as it had been under the previous statute. Loss corporations have been acquired by new interests, either through purchase or reorganization, and all or part of their businesses liquidated within a short time, without impairing the acquiring corporation's right to claim the loss carryover. The proliferation of advertisements for the sale or purchase of loss corporations is clear proof that trafficking in corporations with loss carryovers is growing rather than being retarded.

In the textile industry, the application of the carryover provisions to corporate purchases and reorganizations has accelerated the liquidation of many operating units. It has discouraged long-established enterprises from making the investments necessary for their survival. They have succumbed to the lure of a deal with outside interests intent on exploiting the loss corporation's carryover. As a result, many thousands of workers have lost their jobs and once-thriving communities have become ghost towns.

The windfall gains of the predatory manipulators of these deals run into hundreds of millions of dollars. These gains are won at the expense of the United States Treasury and the public welfare. Action is imperative to plug up the loopholes which make possible this mulcting of the Federal Government. Equity and public policy demand that the carryover be denied to any taxpayer who terminates the business which incurred the loss if he does so within 3 years of acquiring it.

Paper Machinery Firm Stakes Future in Lawrence, Mass., Research Center

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article which appeared in the Boston Sunday Herald, May 11, 1958, in reference to the progress being made in the development of paper mill machinery, through a new $250,000 research center established by John W. Bolton & Sons, Inc., Lawrence, Mass.:

[From the Boston Sunday Herald of May 11, 1958]

PAPER MACHINERY FIRM STAKES FUTURE IN LAWRENCE RESEARCH CENTER—REVOLUTION DUE IN INDUSTRY UNCHANGED IN 35 YEARS

(By Juan Cameron)

LAWRENCE.—Through a new $250,000 research center, John W. Bolton & Sons, Inc. hopes to stake out its future as machinery supplier to the $10 billion pulp and paper industry.

"This entire industry is coming of age technically," said Bolton Treasurer A. LeRoy Bolton, Jr., last week at the research center's opening, "and we want to make sure we're not going to be left sitting on the sidelines."

BETTER WAYS

The new research facility, 2 years in planning and building, is a major step for the 53-year-old family owned paper machinery firm that does a $5 million-plus business annually.

The pulp and paper research center, housed in a new building near the company's Lawrence plants, will be a commercial laboratory geared to finding better ways to treat fiber; to improve machine and process design.

Even before the laboratory's official opening last week, a research project for a chemical company (Bolton would reveal no details) was underway.

Such outside work undertaken on a fee basis will be in addition to research Bolton will conduct to improve its own machinery and equipment used by paper mills through the United States and Canada.

The center, believed to be the only one of its kind in this country, underscores the revolution that Bolton feels is going to take place in its industry that sells an estimated $215 million worth of machinery a year to the pulp and paper industry.

"Our industry has seen no change in paper making machinery as it has in chemistry. Although today the machines are bigger and faster, they are the same basic designs as were being used 35 years ago," says Treasurer A. L. Roy Bolton.

IN NEXT DECADE

In the next decade, he feels, machinery will make a contribution to the industry not seen in a quarter of a century—and this contribution can only come about through intensified research.

"We're not going to see important processes—but entirely new ways of making paper be introduced," Bolton says.

Already the Nation's fourth largest industry, pulp, and paper output is expected to jump 20 million tons, or 66 percent, over the next 20 years, according to the Pulp and Paper Research Institute of Canada.

The chemical pulp mill of the future, the institute forecasts, will resemble a modern petroleum refinery with its complex of pipes and valves and completely automatic operation.

Engineers are already working on ways of processing pulp in a matter of 30 seconds through new heating methods. Accomplished through sudden and very high temperatures plus swift mechanical handling, entirely new equipment is needed.

These swift changes taking place in the paper industry, Bolton states, are pulling it out of the stage where the artisan and the rule of thumb held sway.

FORMERLY AN ART

The company's technical director George E. Soyka adds:

"Papermaking was formerly regarded as an art, with secrets closely held by practitioners. Nowadays we in the industry regard it as a science and attempt to express our findings in terms and numbers that can be easily understood and communicated."

Soyka states the basic problem as increasing the maximum yield from existing timber supplies.

In turn other problems arise: How to process pulp to produce paper and board of better quality faster and more economically; how to utilize short-fibered hardwoods and vegetable fibers like bagasse or cotton.

Then, the machinery maker like Bolton must develop grinders, pulpers, refining controls, machine knives that bring the laboratory solutions to the production stage.

When Vermonter John W. Bolton started his company in 1905 with $4,000 ($2,000 borrowed from his children), total United States paper production was less than 10 million tons. Two years later his company did an annual business of $37,623.

MATERIALS SCARCER

With paper production today around 60 million tons, Bolton sales have grown to more than $5 million, according to its officers; normal employment to around 300.

Bolton is one of the 4 or 5 leading firms in its specialized field. Others include Rice, Barton Corp., Worcester; E. D. Jones & Sons Co., Pittsfield, and Beloit Iron Works, Wis.

Roy Bolton lays the paper industry's new emphasis on research to ground work done in engineering schools like the University of North Carolina, the University of Maine, and Western Michigan University.

When professional managers begin to take over the large papermaking firms, they realized mills had been running by rule of thumb instead of on a scientific basis.

"To find the scientific whys and wherefores of papermaking, they began to seek out technically competent managers. This led to the growth of engineering schools' programs supported by the industry," Bolton comments.

Other factors leading to increased attention on research have been the growing per capita demand for products like newsprint, writing papers, tissue, and boxes, as well as new products that combine paper and plastics.

The new paper demand has made raw materials scarcer, says Bolton, as well as requiring paper producers to upgrade their materials. And as chemicals take a greater part in papermaking, the cost of recovering paper waste has become more complex and expensive.

The School Situation in Pennsylvania

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Mr. Stephen McCann, Carmichaels, Pa., before the Subcommittee on General Education of the House Education and Labor Committee. Mr. McCann is a member of the State legislature and he has served for 6 years as a member of the house education committee and in 1955 was elected chairman of that committee. He has always had a keen interest in education, and I believe he presents a comprehensive picture of the school situation in Pennsylvania. The statement follows:

Gentlemen, my name is Stephen McCann. I represent no organization. I speak as a citizen of the Commonwealth of Pennsylvania. My residence is at Carmichaels in Greene County.

It was my good fortune to be born in the United States of America and the Commonwealth of Pennsylvania—a Commonwealth in which from its earliest beginning the schools were as much a part of the life of the Commonwealth as our churches and our homes.

I am deeply indebted to the public schools for the educational opportunities which were extended to me. I am zealous that not only in my community but throughout the Commonwealth of Pennsylvania and throughout the United States of America no child or youth shall be denied the blessings of education.

Because of this deep interest I became a member of the school board in Cumberland Township, Greene County, Pa. I served as a school board member for 4 years.

In 1952, I was elected to the House of Representatives of Pennsylvania. I have been a member of this body since that time.

As is customary in many legislative bodies newly elected members may state their preference for membership on committees. My first choice was for membership on the house education committee. My wish was granted. I served on this committee for 6 years. During the 1955 session, it was my

privilege and honor to be chairman of this important committee.

I have given this personal background solely to impress upon you my deep interest in the youth of our land and a devoted desire on my part to use every talent at my command to make available good teachers, modern facilities, and efficient instruction. It is in this capacity that I appear before you and urge favorable consideration of the legislation which has as its purpose to increase teachers' salaries and speed school construction, H. R. 10763.

Pennsylvania in recent years has provided and guaranteed from State funds unprecedented amounts to increase current school construction and has likewise mandated increased expenditures for teachers' salaries by statewide mandated salary schedules.

Since January 1955, 579 schools have been built, enlarged, altered, or approved as projects by our State school building authority. Pennsylvania has provided generously for school construction through a series of legislative acts and has approved for school districts through our school building authority $825 million as of July 1958. Of this amount the department of public instruction informs me that as of April 25, 1958, school building projects had been approved in the amount of $800,747,138.70. This leaves a balance of less than $25 million that is not committed.

As of July 1959, the ceiling on the building program through the authority will be increased to $925 million. These are new State funds available through the authority from July 1958, to July 1959, of $100 million.

The Department of Public Instruction informs me that already there are on file applications for approval of construction in total amount of $450 million, or $350 million, in excess of the amount available.

In support of these new buildings and added facilities, the general assembly at the 1957 session approved $47,033,200 as its share of annual rental or sinking fund charges on school building construction—an increase of more than $16 million over the previous biennium.

Currently, on a long-range basis, the Commonwealth is assisting local districts by accepting financial liability for 50 percent of the rental charges on approximately $1 million of new building construction.

The trouble is that when this money is spent the job will still not be finished. Again the department of public instruction informs me that the construction of approximately 8,000 classrooms in our Commonwealth is dependent upon some form of financial assistance.

They tell me further that between 75 and 80 percent of our smaller school districts have insufficient borrowing power to provide them with adequate school facilities, if the cost of such facilities must be met with general obligation bonds in which the school district itself assumes complete responsibility for payment.

Without the generous contribution by the Commonwealth in our school-building program, the situation today would indeed be chaotic. It is obvious that the Commonwealth and the local community cannot do the job alone.

To expand further as required by increased school and shifting population, to replace buildings that have become antiquated and dangerous to the security of our children, the Commonwealth of Pennsylvania looks to the Federal Government for assistance.

May I comment now on teachers' salaries and the support of schools. Pennsylvania, I am happy to say, is one of the few States that has a mandated salary schedule for professional workers from the teacher to the superintendent. Its provisions are uniform throughout the State. Our mandated minimum in 1959, when this legislation is fully effective, will be $3,600. It is mandated that teachers with a baccalaureate degree advance by annual increments of $200 to a maximum of $5,400; those with a master's degree to a maximum of $5,800.

Beginning at much lower levels, practically every session of the general assembly since 1941 has seen major legislative enactment to improve our mandated schedule.

Increased financial assistance to the school districts through an equalization formula has paralleled the increased obligations to the local districts because of increased mandates in salaries. For the biennium 1951 our subsidies to public schools increased $83,700,000; for 1953, $63,800,000; 1955, $83,030,000; 1957, $135,676,804. In total amount our subsidies for the support of public schools increased from $314 million for the biennium 1951 to $564 million for the biennium 1957 an increase of $250 million.

May I emphasize that this is the effort which the State has made to maintain and advance an efficient system of public schools. In like manner, the local communities have made corresponding increases in tax revenues. A law requiring revision of assessments in our counties was enacted. A tax law was enacted that broadened the local tax base by permitting the local communities to levy many miscellaneous taxes.

Currently, however, and notwithstanding this broad effort at the State and the local levels, the situation in Pennsylvania is critical both with reference to the needs for additional school construction and for salary schedules that will give credit to the importance of teaching and recruit and maintain in the profession our able youth.

It is my belief that Pennsylvania offers a striking example of the fact that in this terrific problem of educating our youth, the States cannot go it alone. For, indeed, Pennsylvania, a relatively wealthy State, has made a great effort, but Pennsylvania is in dire need of financial assistance from a political taxing unit that has a much broader base than that which is available either to the local community or the Commonwealth or both.

There are certain features of H. R. 10763 that I like. One of them is that the assistance from the Federal Government will not be a gratuity but rather it will require reasonable State and local effort for participation.

It is desirable, also, in that it will not be unduly restrictive upon the State in determining the method of financing to be used. Moreover, it has appeal because it will be disbursed through the State educational agency with Federal controls limited to those which are necessary for adequate fiscal accounting.

Mr. Chairman and members of the committee, this is my story. I believe that the children of America are its greatest resource; that America can continue to be great only as these human resources come to their full development through our schools; that material and military defense, no matter how effective, will fail unless bolstered and supported by citizens who through education are prepared to act well their part in maintaining the freedom and power inherent in our representative form of Government.

As stated in the bill, "It is the purpose of this act to provide Federal financial assistance on a great basis to help meet the problems of inadequate facilities and inadequate teachers' salaries."

I request with all the sincerity and power at my command that this committee report out for favorable action by the House of Representatives H. R. 10763.

National Allergy Month

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mr. FOGARTY. Mr. Speaker, I have today introduced a joint resolution authorizing the President to issue a proclamation designating the month beginning August 15 and ending September 15 as National Allergy Month. Its purpose is to urge the people of this Nation to cooperate in the fight for the prevention, treatment, and cure of allergic illness and to invite the communities of the United States to observe such month with appropriate ceremonies and activities.

Allergies afflict an estimated 17 million persons in the United States. Some idea of what a staggering burden this represents can be gained if we remember that this figure approximates the combined populations of our four largest cities: New York, Chicago, Los Angeles, and Philadelphia. Stated another way, the number of people in this country who suffer from some form of allergy is equal to the total population of the following States: Arizona, Arkansas, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Washington, and Wyoming. Thus we see why allergies rank third in prevalence among the chronic diseases, outnumbered only by cardiovascular disease and the arthritic disorders.

The burden which the allergic diseases place on our people is heavy indeed. These disorders include such conditions as asthma, hay fever, eczema, allergic headache, abnormal reactions to drugs, and many others. In addition, allergic factors are increasingly under suspicion in connection with chronic conditions such as heart ailments, hearing loss, ulcerative colitis, kidney disorders, and connective-tissue diseases. Allergies also complicate many parasitic infestations.

One of the most striking characteristics of human allergy is the diversity of its causes. They include, for example, inhaled materials such as plant pollens and molds; ingested substances such as food and drugs; injected materials such as antitoxins made from animal serum; and contact substances ranging from metals and plastics to dyes and a wide variety of chemicals.

Industrial progress has intensified the problem of allergy. There is widespread evidence of sensitization to industrial chemical agents, including the constantly increasing number of new compounds used in our modern technology.

Investigators who are studying these problems state that allergic contact skin disease is one of the more common diseases in industry today. It is frequently seen, for example, among workers who handle dyes and dye intermediates,

UNIVERSITY OF MICHIGAN LIBRARIES

photographic developers, rubber accelerators and antioxidants, soaps, mercury solutions, plants and plant derivatives, insecticides, plastics, and antibiotics.

Many allergy sufferers periodically lose time from work, reducing our industrial productivity, and some become permanently disabled. A survey of this problem in the soap industry was recently completed by the Association of American Soap and Glycerine Producers. The study, covering 141 plants employing 429,000 persons, showed that 26 percent of the employees were exposed to potential skin irritants every day. Of this 26 percent, at least one-third picked up some form of skin disease; many of these were of allergic origin.

About 3 million persons in the United States suffer from asthma, which ranks as the most serious and important of the allergic disorders. This disease is characterized by attacks of choking, shortness of breath, coughing, and wheezing. In some it occurs only at certain seasons of the year, in others at fairly long intervals, while in many it is a daily problem. Many of these cases are in young children. The extent of the asthma problem is not fully appreciated. Few people realize, for example, that crippling lung conditions due to asthma are many times more common than crippling from poliomyelitis.

The most prevalent allergic disease is hay fever, a nasal allergy produced by seasonal substances such as pollen and molds. Hay fever can also be produced the year around by materials such as house dust and animal dandruff. Untreated, the condition often delevops into asthma.

The economic cost from loss of work by the affected individual is enormous. It has been estimated that about one-third of hay fever victims are bread winners and that the average loss from work is about 7 days. This gives us a figure of 16 million man-days lost. Stated another way, it would take over 40,000 people working for an entire year to make up the work left undone by hay fever sufferers.

The antibiotics and new drugs so essential to modern medical practice have likewise introduced additional problems of drug hypersensitivity. Those who have studied reactions following antibiotic administration are convinced that the number and severity of such reactions have been on the increase for several years.

An editorial in a recent issue of the Journal of the American Medical Association stated that about 2½ million pounds of antibiotics were produced in the United States in 1956. Of the 17 different antibiotics available to physicians, penicillin accounted for 25 percent of the total produced.

The Journal states that a study was recently made of case histories of drug reactions reported as severe by the physician or hospital involved. The results showed that penicillin was involved in 80 percent (2,517 out of 2,995 cases) of all reactions reviewed.

"The great majority of severe penicillin reactions," reports the Journal, "were of the anaphylactoid shock type, with a fatality rate of 9 percent. No deaths occurred in the cases of anaphylactoid reaction involving orally administered penicillin, while there were 63 deaths following intramuscular injection of this drug in 611 cases. Sixteen anaphylactoid reactions with two deaths were associated with other antibiotics. The incidence of anaphylactoid reactions increased during the 3 years covered by this survey: 179 cases in 1954, 231 in 1955, and 301 in 1956."

No one would question the fact that penicillin has saved many thousands of lives in the past decade, and this reduction in mortality and in complications of disease have affected the lives of millions. Nevertheless, the allergic problems posed by these widely used therapeutic agents are serious and deserve extensive study.

Many other examples might be cited of the growing importance of allergy as a major health problem. In this area, needs are varied and pressing. Most medical schools, for example, still present inadequate teaching in allergy to medical students. And many physicians could benefit from specialized training in this field. Still others should be encouraged to seek careers in allergy research.

What is being done to help the millions of Americans suffering from allergic diseases? To begin with, a new voluntary organization, the Allergy Foundation of America, has ben established under the sponsorship of the two national professional societies, the American Academy of Allergy and the American College of Allergists. This agency was formed 5 years ago and has done much to bring to the American people a deeper awareness of allergy as a major health problem.

The allergy foundation has initiated a program of student scholarships, established fellowships for training specialists and investigators, and has published a number of pamphlets on various aspects of allergic disease. This program is complemented by the additional support which the Federal Government is now supplying through an expanded program of research and training supported by the National Institutes of Health, research arm of the Public Health Service, United States Department of Health, Education, and Welfare.

This year the Allergy Foundation of America plans to sponsor National Allergy Month, August 15–September 15. The purpose of this observance is to disseminate as widely as possible information concerning allergy as a growing health problem and how it can be combatted through support of basic research and the development of better methods of treatment and control. To this end the joint resolution which I have today introduced in collaboration with Senator HILL will seek to obtain presential proclamation urging Americans to back this program through voluntray gifts and services in their communities.

A Five-Point Plan

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the five-point plan to curb the recession and bring about a wholesome, sound, prosperous, and stable economy:

A FIVE-POINT PLAN TO CURB THE RECESSION AND BRING ABOUT A WHOLESOME, SOUND, PROSPEROUS, AND STABLE ECONOMY

1. HOMEOWNERS REPAIR PROGRAM

Permit homeowners to deduct from taxable income the cost of repairing homes (for example, up to $500 or 5 percent of the original cost of the house whichever is greater), said repairs to include exterior and interior painting, plumbing, heating, air conditioning, roofing, storm windows, and other physical improvements and additions.

Beneficial results: This would encourage a nationwide home-improvement program by creating an attractive incentive to homeowners, most of whom are still gainfully employed or in business. It would not require any change in our present banking system, while providing business for the metals, hardware, paint, lumber, and kindred industries, and supplementary services. It would provide employment for skilled and unskilled workers. It would create a movement of goods benefiting transportation firms and manufacturers of transportation equipment.

Cost to the Government in lost taxes would be offset to a major extent by additional taxes derived from individuals and companies benefiting from this program.

2. PERSONAL AUTOMOTIVE REPAIR PROGRAM

Permit owners to repair their personal cars and to deduct this cost from taxable income to the extent of a small percentage of the original cost of the car. Repairs to include painting, replacement of tires, overhauls, seat covers, etc..

Beneficial results: This would provide immediate increased business for the smaller gasoline station, automobile repair shop, the producers of tools and repair parts, skilled and unskilled labor, transportation, etc. Here again the amount of tax loss involved would be offset to a major extent by the benefits that the Government would obtain from increased taxes generated by new business.

3. CAPITAL GOODS INCENTIVE PROGRAM

Permit users of machinery of all kinds to apply accelerated depreciation to all new machinery bought, received, and installed within 12 months beginning April 1, 1958. This depreciation rate could be on either of two plans: (a) 4 percent a month for 12 months and 2 percent a month for 24 months or (b) 3 percent a month for 24 months and 2 percent a month for 12 months. It will be noted that this would provide 96 percent depreciation in 3 years. The Internal Revenue Code or Regulations should be amended to provide that if any equipment subjected to this rapid writeoff should be sold, the profits, if any, resulting from such sales would become ordinary income and not capital gain.

Beneficial results: This would provide an incentive for all users of machinery—whether in mines, railroads, bakeries, chemicals, metal products, or any other type of

operation—to place orders immediately for modern equipment. Such orders would provide immediate employment in foundries, in pattern shops, in iron and steel mills, in transportation, for both skilled and unskilled labor. Again the loss of tax income would be spread over a time and would be offset in major part (if not entirely) by added income to the Government from reemployed workers and profitably operating companies.

4. COMMERCIAL AND APARTMENT BUILDING REPAIR PROGRAM

Permit operators of commercial and apartment buildings to make physical repairs and improvements, and to charge such costs to taxable income instead of capitalizing the expenditures. The expenditures could be limited to a percentage of the net depreciated cost of the building, say 5 percent or 7½ percent. Thus, on a million-dollar building the owner could spend $75,000, whether it be for air conditioning, elevators, new windows, sandblasting, painting, or other improvements.

Beneficial results: Here again a wide area of skilled and unskilled labor would receive employment, and would boost transportation, producers of machinery, paints and chemicals, etc., quickly, and with a minimum, if any, tax revenue loss.

5. EXCISE TAX REDUCTION PROGRAM

Inaugurate a program of reduced excise taxes on automobiles, automobile accessories, appliances, and other consumer durable goods. This would include such items as television and radio sets, pleasure boats, typewriters, and so forth.

Beneficial results: This point is a longer range one and will produce results at a slower rate than points 1 through 4, but will definitely provide a stimulus to the sale of new cars and appliances—and again, provide greater opportunities for employment of skilled and unskilled labor, for the production of components, for their transportation, for the employment of sales and other service people.

It should be noted that none of the above will require financial aid from the Government, easing of bank credits, or relaxing of inflationary controls.

HERBERT I. SEGAL,
President, Van Norman Industries, Inc.

Plans for 1958 Congressional Tour of New York City, May 23, 24, and 25, for Members of Congress and Their Families, Have Been Perfected

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. VAN ZANDT. Mr. Speaker, the annual congressional tour of New York City on May 23, 24, and 25 for Members of Congress and their families has been perfected. The tour includes an evening in Chinatown, a visit to the United Nations, West Point, City Hall, Staten Island, a harbor trip and a visit to the steamship *Independence*, as well as several prominent restaurants in the New York area.

A copy of the official announcement which went forth to Members of both branches of Congress early last week is as follows:

ALL EXPENSE 3-DAY CONGRESSIONAL TOUR, MAY 23, 24, 25, $37.50, CHILDREN 5–12, $32.50, FOR MEMBERS OF THE SENATE AND HOUSE OF REPRESENTATIVES AND THEIR FAMILIES AND FRIENDS

SCHEDULE OF EVENTS

Friday, May 23, 9:45 a. m. daylight time, party will leave Washington via Pennsylvania Railroad. Luncheon in dining car. One forty-five p. m. arrive Penn Station. Motor coach will take party direct to City Hall for reception by the mayor, Hon. Robert F. Wagner. Thence United Nations for 2-hour tour. Arrive Paramount Hotel about 5–6:00 p. m. Members will board motor coach for a reception and dinner in Chinatown. Evening will be open to attend theaters or see the bright lights of Broadway.

Saturday, May 24, 9 a. m. motorcoach will leave for boat trip of harbor with stop and tour of Staten Island. Luncheon at Staten Island. Four to six p. m. we will have reception and tour of American Export liner steamship *Independence*. After short stop at the Paramount we will go to Toots Shor's famous New York restaurant for reception and dinner. Evening open for you to attend theaters.

Sunday, May 25, 9 a. m. motorcoach for trip up along the Hudson River to West Point for a complete tour of the Academy; parade of cadets also. Luncheon will be served during our stay at the Point. Motorcoach will return us direct to Penn Station. At 5:20 p. m., daylight time, our train will leave for Washington. Members will meet at Penn Station west gate track 18 at least 15 minutes before departure time. Dinner will be served in dining car en route home.

Make your reservations today. Dial extension 4576, room 1104, House Office Building.

Batista Backed by Communists

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

BATISTA BACKED BY COMMUNISTS

My name is Jack A. Ossorio. My home address is 2028 Southwest 57th Court, Miami, Fla. I was born at Manzanillo, Province of Oriente, Cuba, of American and Cuban parents. I acquired American citizenship by birth abroad of an American parent (my father). I am registered at the American Embassy, Habana, Cuba.

I came to the United States in 1937 to go to school. I attended Miami Senior High School, the University of Miami, and the Fletcher School of Law and Diplomacy, Boston, where I received my master's degree. I served 3½ years in the United States Air Corps during the war and was honorably discharged.

I have worked for several Miami radio stations, the General Electric Co., International General Electric Co., the North Dakota Research Foundation, and smaller companies. In 1954 the United States Department of State sent me to Honduras for a year.

I am a specialist in inter-American affairs, a bilingual journalist, and a professor of English for foreigners. I am interested in Latin American affairs because I was born in that region, where my father is a Presbyterian missionary (in Cuba). I appear voluntarily before this committee because I have, for a long time, carried on a one-man fight against despotism in the Americas, believing that dictatorships are anachronistic and undesirable in our hemisphere. My main concern this time will be with the present regime in Cuba. I hope to convince you that aid to any dictatorship, and especially Batista's, gives us a black eye internationally.

DICTATOR BATISTA AND THE COMMUNIST PARTY

Gen. Fulgencio Batista, of Cuba, is like a chameleon: he changes color to suit his surroundings. In the year 1940 he allied himself with the Communists and was elected President of Cuba on the official Communist ticket, as the head of a coalition.

Exhibit 1 shows the hammer and sickle and the Communist Party's promise to divide the land among farmers. One of the slogans at this time was "Cuba Out of the Imperialistic War."

Exhibit 2 is a photo which shows Batista and Cuba's most famous Communists: Juan Marinello, far left, and the colored man in the back, Garcia Agüero.

Exhibit 3 shows Batista with the famous Communist leader Lombardo Toledano, and Lazaro Peña, the former secretary general of the Cuban Workers' Federation.

Exhibit 4 shows Batista with the principal Cuban Communists.

Exhibit 5 shows a picture of Communist Marinello, running for mayor of Havana, and Batista running for President. This was taken from the Communist newspaper Hoy, which Batista always allowed to circulate freely.

Exhibit 6 is the statement made once by General Batista that the Communist Party exercised a democratic function in Cuba.

Exhibit 7, dated July 1, 1953, was taken from the newspaper Prensa Libre. The news item reports that the CTC (Cuban Workers' Federation) had just made a pact with the Communists. The secretary general of the Tobacco Federation makes the statement that the pact with the Communists strengthens the workers' movement.

Exhibit 8 is a copy of the official organ of the University Students' Federation, containing photographs of some of the dramatic events which have taken place in Cuba lately.

Exhibit 9 is a publication by Cuban doctors denouncing Batista as an assassin. Included is a phostatic copy from the World Medical Convention, charging Batista with killing, torturing, and molesting doctors and patients. On the last page is a photograph of the American military mission: American Colonels Isaacson, Keller, and Stewart, and Commandants Cameron and Blackwell, when Tabernilla, Jr., received an American decoration. Tabernilla is the Cuban officer who bombed the open city of Cienfuegos with American military aid.

Exhibit 10 is a report written by Carlos Hevia, a former President of Cuba and minister of state. This is a well-documented account of the intimate connections Batista has always had with the Communists. On page 6 we read the following significant paragraphs:

"Since Batista staged his coup d'etat of March 10, 1952, the Communist newspaper Hoy has had free circulation in Cuba, and big trucks carrying the newspaper throughout the island. And he is, in an undercover way, helping the Communists to gain once more control of the labor movement of Cuba. At the same time, democratic radio commentators are silenced, broadcasting stations closed, newspaper commentators and writers jailed and brutally beaten.

"While Batista has forbidden public gatherings, yet the Communists have been permitted to have large meetings. All Communist leaders are in Cuba without the Government harassing them in the least;

UNIVERSITY OF MICHIGAN LIBRARIES

most of them recently returned from Russia, arriving freely by plane at the airport.

"Batista has been in conversations with the Communists so that the so-called anti-Communist law that he has claimed to be preparing will finally be drafted in such a manner that it could be used against those who oppose him and favor democracy, and not against the Communists.

"When Batista organized his present party, P. A. U., about 1949, the Communists helped him; and thousands of them, including some of the best organizers, joined the new party; and these same Communists and their bosses are again gaining control of important positions in the government and in the labor movement of Cuba."

Batista finally established an organization to repress Communists, but it is interesting to note that no Communist has ever been jailed and no restrictions have been placed on Communists. The organization has been used solely, however, to silence, jail, torture and kill democratic Cubans.

To the question, Is Batista a Communist? I would answer that he is both a Communist sympathizer and a Fascist. His communistic inclinations and indoctrination have been shown in his actions as director. For example, he has not persecuted any Communist, but has placed them in important posts; he accuses his enemies of being Communists, so that in essence he is allied to communism, but poses to the contrary; he does not respect any fundamental freedom; he does not believe in freedom of the press; he discarded a democratic government and a constitution; he assumed the powers of Congress; he has made a mockery of judiciary power; he has not respected Cuban womanhood; last and most important, he has stolen millions (he probably has $200 million), exiled hundreds, tortured and killed thousands, mostly young men—the hope of Cuba.

Batista is, more than a Communist or a Fascist, a political adventurer. He would sell out to Moscow tomorrow, if he stood to gain by it. He is typical of the man who would sell his own mother to get what he wants.

FOREIGN ESPIONAGE IN MIAMI

Any assistance given to dictators hurts the people who suffer under them and hurts us also. Take the matter of espionage.

The city of Miami, Fla., is a hotbed of foreign espionage. There are any number of agents here paid by Batista, but without the knowledge of the Justice Department. Recently, when a briefcase was snatched from the Cuban consul, the names of spies were divulged. One of them is reported to have over $100,000 in the bank and, if so, probably paid no income taxes on it.

What this amounts to is that a representative of a foreign government is really the head of a large and well-organized spy system, which spends large sums of money to spy on both foreign and American nationals.

Certainly any aid given to Cuba, Santo Domingo, Nicaragua, or Paraguay is a definite contribution to the forces of tyranny in the Americas. For the great American democracy to play the dangerous game of fooling around with Fascist despots is to open the door to communism in the Americas, not to mention other similar evils.

THE STATE DEPARTMENT AND CUBA

As you consider aid under the Mutual Security Act of 1958, you should look into the mistaken, prototalitarian, criminal policy being followed by Secretary Dulles and Under Secretary for Latin American Affairs Roy Rubottom.

The Mutual Defense Assistance Agreement was signed between the United States and Cuba at Havana on March 7, 1952, and its original purpose was "to assist any American State subjected to an armed attack and to act together for the common defense and for the maintenance of the peace and security of the Western Hemisphere."

According to article I, paragraph 2, "the Government of Cuba undertakes to make effective use of assistance received from the Government of the United States of America pursuant to this agreement for the purpose of implementing defense plans, accepted by the 2 Governments, undre which the 2 Governments will participate in missions important to the defense of the Western Hemisphere, and will not, without the prior agreement of the Government of the United States of America, devote such assistance to purposes other than those for which it was furnished."

Now, such assistance has been used, over and over again, against the defenseless people of Cuba, and not for hemispheric defense, with the tacit consent of the United States Department of State. The worst instance to date of these violations was the inhuman attack against the open city of Cienfuegos, where tanks and airplanes put down by force the uprising of September 5, 1957. These were arms supplied to Batista by the United States Government in conformity with the provisions of the Mutual Defense Assistance Agreement for the defense of the Western Hemisphere. Did the Government of Cuba obtain the prior agreement of our Government?

Certainly, the agreement has not been denounced. So, as many Cubans see it, if Russia raped Hungary, then the United States State and Defense Departments are raping Cuba. Even in India people are saying so. Is this the kind of aid the Mutual Security Act encompasses?

Another sore spot is the agreement between the Government of the United States of America and Cuba, providing for the services of a United States Army mission to Cuba. Title I, article 1, declares that "the purpose of this mission is to cooperate with the chief of staff of the Army of the Republic of Cuba and the Cuban Army. Officers of the mission will act, as required by the chief of staff of the Army of the Republic of Cuba, as tactical and technical advisers to the Cuban Army."

The people of Cuba see in such a provision a perfect excuse for the United States Army to intervene in favor of Batista. Thus the United States is taking sides, in the civil war now raging in Cuba, against the people of Cuba, for Batista is opposed by over 90 percent of the Cuban people. The State Department knows that the American mission is training Cuban officers to fight the young people of Cuba, who are fighting the tyrant on unequal terms. At any rate, the mission is only beginning ill will for Americans.

Jules Dubois, writing in the Chicago Tribune, March 21, 1958, stated: "Cuban public opinion, although throttled by the most severe censorship ever exercised by Batista, is outspoken against the United States. The people, from the leaders of the civic, religious, professional, and social institutions who demanded Batista resign, to the students, accuse the United States of pursuing a policy to support a dictator and lose the friendship of a nation.

"Smith (ambassador) is being branded as worse than his predecessor, Arthur Gardner. Yet when he first arrived he was a hero to the Cuban people and managed to erase the animosity that htad been engendered by Gardner.

"Cubans, more than 90 percent of whom are trying to oust Batista, insist that the latter is being retained in office by the United States. When it is explained to them that the policy of our State Department is one of correctness and neutrality in this civil war, they reply: 'Yes, we know. You Americans are very correct and very neutral on the side of Batista.'"

By paragraph b, article 4, of the Army mission agreement, the United States Government may recall the entire mission in the public interest of the United States of America. Since the State Department has not done so, the conclusion is that it considers it a wise policy not to recall the mission.

But article 5 really shows how criminally negligent the men in the State Department are. Article 5 clearly states that "this agreement is subject to cancellation upon the initiative of either the Government of the United States of America or the Government of the Republic of Cuba at any time during a period when either government is involved in domestic or foreign hostilities."

Since Cuba is involved in a civil war and since the men at the Department of State have ignored such a provision, it can only mean that they wish to keep Batista and his Gestapo-like henchmen in power. Is this what the Mutual Security Act contemplates?

The conclusion is obvious. While we continue to send arms to Batista and training his men, we are very careful to enforce our neutrality laws, thus depriving the people of Cuba of the help they desperately need to get rid of the monster. No wonder democrats everywhere feel that we are intervening in Cuba directly, in favor of Batista and against the best interests of 6 million long-suffering Cubans, for our tanks and jets have kept Batista in power during 6 long, painful years.

We are asking for trouble. Is there not a possibility that, as a desperate reaction to so much injustice and oppression, some post-dictatorship government may accuse us, before the United Nations, of complicity in genocide or extermination of a national group as a planned move? Would that not be very embarrassing, after the rape of Hungary?

LATIN AMERICAN DICTATORSHIPS

As long as despotic regimes continue to flourish in Latin America, there will be no peace, no security, no solidarity in our continent. Democratic governments, elected by the people in honest elections, must replace the present dictatorships, which exist only through force and fraud.

All American dictators hide, behind a false front of material progress, blood, tears, poverty, and terror.

The whole world blames our Department of State for the prevalence and continuance of Fascist dictatorships in Cuba, Nicaragua, Santo Domingo, and Paraguay. The argument advanced to explain our strange behavior is that we wish to protect our interests and the most expedient way to do it is through caudillos or strong men. It is unfortunately true that our ambassadors too often have left the impression that we approve of and sympathize with unpopular regimes.

Our interests are best protected by representative governments, not by ambitious, ruthless dictators. The adulator, the servile ruler is not our best friend. On the contrary, when we help our neighbors to get rid of oppressors, we protect our interests and secure peace and happiness for our continent.

IN CONCLUSION

If I could get only one thing across to this august committee, it would be this: No aid should ever be given to any government which is not the result of popular consent, as expressed through entirely free elections. No aid should ever contribute to the strength, permanency, or encouragement of a despotic government.

We are the undisputed world leaders against totalitarianism, but we appear to have adopted a dual policy, namely, one for Communist nations and one for American despots. Democracy and freedom are inseparable, however.

Specially here in this hemisphere, where American conduct is watched closely by the whole world to test our real intentions, the wealth of Americans must not be spent on those who enslave our brothers. It is in our best interests to help those who think and act like we do. Latin Americans do not need guns. They need, however, technical aid, loans, and encouragement in their democratic aspirations.

To this effect, I would recommend, as a great contribution, the identical resolutions introduced in the Senate and the House by the distinguished legislators, Senator WAYNE MORSE, and Representative CHARLES O. PORTER, of Oregon. The resolutions make a specific reference to article 5 (d) of the O. A. S. charter, which states, in part, that "the solidarity of the American States and the high aims which are sought through it require the political organization of those states on the basis of the effective exercise of representative democracy."

United States aid, given only to democratic governments, will make us a better people and will make this a better world in which to live, that government of the people, by the people, and for the people shall not perish from this earth.

ANNEX A

TORTURES UNDER BATISTA

Tortures under the ruthless, bloodthirsty dictatorship of Batista are commonplace. His Fascist, pro-Communist regime has not even respected Catholic priests, even though that is the religion professed by the majority of Cubans. Witness the torture of Rev. Father Ramon O'Farrill, now a Miami exile, who was hit with the butt of a rifle squarely on an ear and his hearing impaired.

Exhibit 11 is a clipping from the Chicago Daily Tribune, which tells of the shooting of a Catholic young man studying for the priesthood. His body was found riddled by 36 bullets (probably supplied by the Mutual Security Act). He was shot to death despite the pleas from the Roman Catholic clergy, who tried to save his life. The papal nuncio and Cardinal Arteaga had been given assurances that his life would be saved, but the word of gangsters can never be trusted.

There is a new case of torture, however. In the United States right now is a 50-year-old schoolteacher who knows what despotism means. After her unbelievable torture, her life was threatened because she dared to denounce Batista's regime of terror. Through a priest she knew, and the papal nuncio, she was able to obtain political asylum in a foreign embassy and leave Cuba. In an interview for the American Daily, a Spanish newspaper, she had this to say:

"Batista's police agents broke into my home. They were obsessed by the idea that I knew where arms were hidden. Other decent Cuban women have suffered before what I went through. That's why I told everything, in spite of the threats against my life if I spoke the truth about the terrible things that happened to me.

"I am 50 years old, and I have 2 daughters, 19 and 17, and a boy 15 years old. I am a teacher and a practicing Catholic. In the early morning of February 24, at exactly 5 o'clock, a group of men, armed with submachine guns, entered my home and made me put on my clothes in their presence. They took me to the 12th district police station. They robbed me of $25 in cash and an expensive gold watch.

"Taken before a captain by the name of Sosa, he hit me right in the face, throwing me to the floor. Nothing stopped them, not even my age or sex or the fact that I was a mother. What happened in that hell on earth for 3 long, horrible days still seems like a nightmare.

"I was savagely struck and whipped. They repeated every few minutes that they would kill me if I didn't tell them where the arms were. They pulled my hair and ears. Modesty prevents me from repeating the dirty remarks and insults that were thrown at me by young men who could have been my sons.

"Only my faith in God, my deep belief in divine grace, and my Catholic faith permitted me to endure stoically the pain and the affront. A Colombian citizen was savagely tortured in my presence and his ear torn off by blows. The image of the Saviour on the cross supplied me with spiritual light to stand the torture.

"While they were beating me, they kept shouting: 'Talk, you Communist bitch.' When I resented the remark and told them that they could only accuse me of being a Catholic, they hit me again and shouted: 'All you Catholics are worse than the Communists.'

"To hide the facts is to allow the occurrence of further crimes. If God chose me to live and denounce this infamy, I hope it will not be in vain. The whole truth must be told that everyone may know how low Cuba has sunk under Batista: They stuck a steel pipe through my vagina, while shouting: 'Talk, you old bitch, we are going to perforate you.'"

Certainly, as you consider aid to the Government of Cuba, now ruled by gangster elements, you must keep in mind how that aid will be used against the people of Cuba and against their democratic aspirations.

ANNEX B

(By Rev. Father Ramon O'Farrill, who was brutally beaten in Habana)

AGGRESSIONS AGAINST THE CATHOLIC CHURCH

On February 20 of this year a bulletin, issued by the Cuban Army, was published in all the newspapers which, like all its official dispatches, never reports the true facts on the people's struggle against the dictatorship. The said bulletin terms a good story my statements to the foreign press concerning the tortures I underwent, during 4 days, at the hands of Batista's repressive forces, and it calls rebellious propaganda the silence I kept for a year before releasing the facts.

All the people of Cuba know, and especially those in Habana, how I was unmercifully beaten by policemen under the dreadful Captain Ventura (now a commandant). After the attack, I was taken to the police station, where I remained, hurt and incommunicado, 4 days, while Batista's henchmen negotiated my release. The one condition they demanded, complete silence of the church, was the same one asked previously when his eminence, Cardinal Arteaga, was attacked by members of the police force.

On the fourth day I was delivered, by high police officers, to members of the church, Msgr. Arcadio Marina and Raul del Valle, both of whom, under police threats, promised to keep silent and to get me out of the country without letting anyone, and especially Cuban Catholics, know that a priest had been beaten up.

As a Catholic clergyman, I had to accept the discipline of my church. I was moved to an ecclesiastical residence in Canada, where I was held practically incommunicado for a year, under orders from the Batista police to the Catholic church. Later the bishop of Cienfuegos authorized my transfer to Miami, Fla.

I challenge publicly the chief of staff of the Cuban Army to deny the following aggressions committed against the Catholic church, which remain as proofs of our long calvary:

1. July 1953. Aggression to his eminence, Cardinal Arteaga, by policemen who tried to seize from him the proofs in his possession of crimes committed by the armed forces.

2. Catholic meeting at Guanajay stopped violently by the army with bullets. The leaders were insulted and taken to army headquarters.

3. The office of the Catholic youth and the university Catholic home raided repeatedly and everyone taken to police headquarters.

4. Attack on the premises of the Catholic young workers; several members beaten and imprisoned.

5. June 1956. Assault on the Arroyo Arenas church and destruction of its doors.

6. Rev. Father Leon Lemus exiled from the country after his brother was assassinated.

7. November 30, 1956. The cathedral at Santiago de Cuba machinegunned by the armed forces.

8. The archbishopric at Santiago searched and the archbishop insulted.

9. July 1957. The temporary priest at the cathedral of our holy church, Santiago, insulted.

10. The Reverend Father Maximiliano Perez of Managua taken in custody several times, and his sister mistreated by police.

11. Rev. Father Manuel Martin, of Santa Isabel de las Lajas, detained during a mass (typical case of intrusion upon freedom of worship).

12. Constant attacks against the church and priests, including defamations, scandals and profanations, from the pages of the government newspaper Time, in Cuba, owned by the Communist gangster, Rolando Masferrer, Batista's righthand man.

13. Rene Fraga, leader of Catholic Action and teacher, assassinated at Matanzas. The bishop marched at the front of the cortege until it was broken up by police bullets.

14. Mass at Vedado Parochial Church, in suffrage for the soul of murdered student leader, halted.

15. 1957. Two young fathers from Victoria de las Tunas, accused of taking in some Cubans whose lives were in danger, exiled from the country.

16. Ramon Rodriguez, member of Catholic Youth, assassinated.

17. 1957. Church at Jaguey Grande emptied to stop a mass in suffrage for the souls of students killed. The faithful then kneeled at the park outside.

18. 1957. Church of San Francisco, Santiago, assaulted and robbed by gangsters under Masferrer (Batista's righthand man).

19. Reverend Father Jorge Bez Chabebe and Father Rivas of Catholic Action, detained.

20. March 1958. Protest by the president of the diocesan council at Santiago of the disappearance of a member of the group Sacred Heart of Jesus.

As it can be seen, Batista's dictatorship, like all other American dictatorships, has engaged in aggressions and outrages against the Catholic church because she is the great defender of the human rights and the democratic principles to which all free peoples are entitled.

An Economic Danger: Clear and Present

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mr. METCALF. Mr. Speaker, former Secretary of the Army, Robert T. Stevens is not only an adopted son of Montana because he operates one of our finest ranches at Two Dot, Mont., but, as he indicates below, his grandfather's cousin, Gen. Isaac I. Stevens, was the first Territorial Governor of the

UNIVERSITY OF MICHIGAN LIBRARIES

Washington Territory, when Montana was a part of that Territory.

He was still speaking for Montana when he addressed the annual meeting of the Montana Society of Engineers at Butte, Mont., on April 26, 1958.

I call your attention to his comments relative to the proposed extension of our trade agreements program.

Mr. Stevens' speech follows:

AN ECONOMIC DANGER: CLEAR AND PRESENT

Mr. Chairman, Governor Aronson, members of the Montana Society of Engineers, guests of the society and your ladies, first of all I would like to express my appreciation to the distinguished Governor of Montana for the honor he has accorded me in introducing me to this annual dinner of the Montana Society of Engineers. I count Hugo Aronson among my closest friends, value his friendship very highly and appreciate what he has just said to you.

I would also like to be among the first to congratulate the Montana Society of Professional Engineers on its forthcoming 71st anniversary, in July, and for its importance to the welfare of the professional engineers of this State. It appears that, since you joined forces with the National Society in February of last year, the Montana Society has been in the forefront nationally in the acquisition of new members. A special note of recognition is due the "baby brother" of this important group and I refer, of course, to the Helena Chapter which was "born" last August.

My information is that the Montana Society of Professional Engineers is one of the oldest, most highly respected and one of the best organized of all the State groups belonging to the National Society. I also understand that, through the efforts and aggressive leadership of President Olund and the membership of the society, you are extending your activities and expanding your sphere of usefulness. I congratulate you on the vigor and success of your programs. It is indeed a pleasure to be with you this evening.

Montana is most generous in the way it welcomes the Stevens family and makes us feel at home. When Mrs. Stevens and I visit our ranch at Two Dot, our good neighbors never fail to come by and greet us. They have a wonderful way of indicating that they like to have us in Montana—even on a part-time basis. We hope to spend more time in Montana in the future.

There are many things that have attracted us to this treasure State. The inspiration of the frontier, the vastness of Montana, the beauty of its rivers, ranges, and lakes, the friendliness of its people and the absolute certainty of its tremendous future. All these things appeal to us. And perhaps there is another factor that has unconsciously had an effect upon us. That factor goes back 105 years.

In 1853, the Congress of the United States created the Territory of Washington. That territory embraced, at that time, much of the western part of Montana. As a matter of fact, the spot at which we are now gathered was included within the boundary of that territory. Stevensville, about 80 miles northwest of here, is also within the then Terirtory of Washington. And that town was named for my grandfather's cousin, Gen. Isaac I. Stevens, who was appointed in 1853 by President Pierce as the first governor of the Territory of Washington. I am extremely proud of this early connection with our great Northwest.

General Stevens graduated from West Point in 1839. He stood number one in his class and was an engineer. He had a noteworthy record in the Mexican War and became governor of this territory at the age of 36. He headed an expedition that made the first survey for a railroad route across Montana. I am proud of that soldier-engineer-diplomat ancestor and, perhaps, I was thinking of this engineer member of the Stevens family when I accepted your cordial invitation to be with you tonight.

Since I am not an engineer, it ill behooves me to discuss with you the latest methods of mining copper, or lead, or zinc from our Montana soil. I feel even less than equal to the task of predicting the future advances in this field. However, I do feel that my deep and ceaseless interest in the education of our youth, having in mind that some of these youths will be the engineers of tomorrow, permits me to comment briefly on the educational problem that faces America today.

In preparing for my appearance here, I asked 2 of my friends in the field of education and 2 of my friends in government about the engineering needs of our country. These men are Deane Malot, president of Cornell University; Fred Hovde, president of Purdue University; the Honorable Marion B. Folsom, Secretary of Health, Education, and Welfare, and James R. Killian, Jr., special assistant to the President for science and technology. They have all been good enough to write me regarding their views.

Without exception, these outstanding men in government and education are convinced that our need for educating engineers of quality is far greater today than at any other time in the history of our country. We should recognize potential scientists and engineers early in our secondary schools. By encouraging their imaginations and by nurturing their ambitions, we need actually have no fear of the future supply of men with creative minds.

Quality even more than quantity is the crying need. In order to obtain more engineers of quality, we should grant incentives to outstanding graudate engineers to encourage them to remain on the faulties of our schools in order to teach the future engineers of America. In this way, we can insure a continuous flow of qualified engineers who possess the creative and imaginative minds needed in our complex society. I was shocked to learn recently that, in New York City alone, there is a present need for almost 900 mathematics teachers to staff the junior and senior high schools. By comparing this deficiency in just one city, in just one subject, with the situation all over America, it is small wonder that the tasks we face in meeting our basic needs for qualitative factors in education are nothing short of monumental.

In addition, we should be much more careful than we have been in the past to make certain that our men of learning are not hidden under the proverbial bushel basket, where their real potential may never be utilized to the utmost. This requires topnotch personnel policies by the employer and it may be necessary for business and Government administrators to revamp these policies now wherever the need exists. There is no room today for wastage of engineering talent.

The position and importance of today's engineer was summed up by Dr. Killian in his letter to me when he said, and I quote:

"One hardly needs to emphasize the fact that engineers steadily assume greater professional responsibilities in our society. We have had a great volume of national discussion on the importance of science and on the need for training more and better scientists. This discussion has tended to overlook the important fact that we need first-rate engineers as much as we need first-rate scientists, and that if we are to have a flourishing, advancing technology we must recognize that the engineer is an essential partner in the tripartite team of scientist, engineer, and manager.

"I suggest that the engineering profession itself has a very great responsibility to make clear the important role of the engineer, and the need for engineering and engineering education to keep abreast of the accelerating scientific advance and discovery we witness today. Both from the standpoint of my experience as an educator in the field of science and technology and my brief period of public service, I am increasingly impressed with the importance of the engineering profession speaking with a more unified voice in our national councils, and with the professional status of the engineer being enhanced."

Incidentally, Dr. Killian has asked me to extend to you, the members of the Montana Society of Engineers, his very warm regards and best wishes.

The dramatic changes in our attitude with respect to higher education since the advent of the sputnik and its American counterpart, best described by the French as the Ikenik, can do nothing but good. These divining rods into the future advances of science and technology have focused the attention and concern of the American people on the importance of education and particularly higher educational pursuits. I am sure the youth of America are ready to respond to the need if only we will point the way. We can surely do something about this at the family and community level.

I surely do not know all of the answers with respect to our educational needs. However, I do know that we as a people have never liked to be second best in any competitive arena. The pioneers who settled these magnificent Western States never relinquished their competitive spirit and I have every reason to believe that that competitive drive continues today. The competition today is not over the survival of the wagon train, but over the survival of our Nation.

While we are on the subject of competition, I would like to turn now to another matter which is of great importance to the continuance of a strong and vital America. It is a subject which involves unreasonable competition. It could impair the dynamic American economy which we all agree is so essential to the security of our country.

I refer to something that could not only tear down much that you here in this room have erected but much that you dream of bettering. This subject has been described by the use of catch phrases like "trade, not aid" and, in mathematical terms it sounds like 2 plus 2 equals 4, but, in actual operation it is more like 2 minus 2, which equals nothing. I am speaking of the proposed legislation before Congress right now, known as the Reciprocal Trade Agreements Act. It is up for renewal for another 5 years and the plan would authorize substantial additional tariff cutting powers. Many of the top level men of our Government have spoken for the program. These are friends of mine. I differ honestly with them on this measure but that does not lessen my regard for them as public servants or as personal friends. Their voices and pens are, however, diligently at work to keep this amazing world trade anchronism intact. Free trade proponents from commerce and industry are fighting side by side with my friends in Government to extend this ill-advised legislation.

An enormous number of well-intentioned and fine people really believe that these so-called reciprocal trade agreements are actually reciprocal. Nothing could be further from the truth. This legislation was enacted originally in 1934 as an emergency measure to aid, the country during depression times and was frankly called an emergency measure for emergency conditions. It has been renewed 10 times for varying periods and the emergency never ends, in spite of the fact that since Pearl Harbor, in 1941, our country has experienced greater economic growth than ever known by any

nation since time began. Instead of being an emergency measure, today its friends now call it an antirecession measure. They move with the times and always have an opportunistic reason for renewal.

This emergency measure has kept growing like a blight; wider, more complex and more dangerous, at the expense of many American workers and many American businesses. While textiles and other soft goods were hit hard at first, today, the whirlwind of cheap imports is affecting many kinds of goods and machinery. Our people divide sharply on this subject and the Congress itself breaks up into large blocs of those who are for and those who are against, or those who lean toward or those who lean against. Many of our people have tranquilized their own convictions by repeating a little sing-song that deserves some comment. The sing-song goes something like this: "Free trade means no conflict between nations and that means no wars and that in the end means that our sons will not go forth to battle." Who among us has the courage to take issue with such sentimental reasoning? It is a strong America that will deter war, not an America with holes in its military and economic armor.

The shocking fact is that many American markets and American jobs are just as easy for foreigners to take as stealing a baby's candy. Let's consider these salient points:

1. Wages paid to workers abroad, making all kinds of goods that we buy, range from 35 cents or 40 cents an hour down to about 8 cents per hour. By comparison I'm sure it is unnecessary for me to cite the hourly rates of the average worker in the United States.

2. In 1934 when the tariff cutting spree began, the average tariff levels protecting our industries were 46.7 percent—now they are 11.7 percent. The so-called protection is three-quarters gone. And there will be more of the same if the act is renewed as proposed.

This has been mercilessly destructive to the basic foundations of American jobs. You, as engineers, know full well that no amount of technological improvement in processing can compensate for those wage differentials, in the light of what you know about present-day equipment here and abroad. As a matter of fact, many foreign countries have very modern, new equipment that was partly paid for by you and by me, as American taxpayers. How can we as a Nation give money, know-how, and lowered tariffs to our friends abroad and not have trouble at home. We can't eat our cake and have it too.

Now what about the "reciprocity" in our trade agreements? Well, in the first place, as these successive trade agreements were made with various countries, all the benefits were passed around to all the other trade-agreement countries. As you know, this is called the "most favored nation" clause. It is not surprising that the country with the lowest wages and the required skills gets the business. Obviously, again, because our wages are 5 to 10 times greater than those of other countries we didn't get the business, we got the "bizness."

The whole thing reduces itself to very understandable elements if we take a look at the facts and forget the much-touted slogans. For most items, wages are the deciding factor in measuring what country will make which product, depending upon where the necessary skills and materials can be made available. For example, England controlled the wool-goods-export market for centuries. In recent years the Italians, with lower wages and excellent skills, have chased the British woolen goods off many trade routes. And now the Japanese are invading the wool-goods-export market in a big way. Japanese goods made of wool are seriously affecting the already-stricken woolen-manufacturing industry of the United States. This is bad for the wool-growing industry in which Montana is so vitally interested, as well as being bad for the American worker.

With our generous showering of goods, services, and money upon so many lands, in addition to having cut our average tariff rates by three-quarters and with foreign wages so far below ours, what did our foreign friends do? How did they reciprocate? The facts show that the 89 trading nations, other than the United States, have developed no less than 36 different, ingenious practices, restrictive to international trade and investment. As examples: 62 countries require import licenses to get goods into the countries and skullduggery is rampant in this area; 46 require export licenses, sometimes tied up with stringent currency controls; 26 have restrictions on outgoing capital movements; 28 have restrictions on incoming capital movements; 33 have exchange licenses; 23 have multiple exchange rates; 9 have import quotas, but the import licenses operating in 62 countries are, in effect, just the same as quotas.

The problem is the same whether it be in Rhode Island, Ohio, Georgia, or Montana. Only the names of the products involved are different. The blight is on a vast variety of items; textiles, machinery, machine and hand tools, chemicals, metals, cameras, appliances, and countless others. The great State of Montana is probably first in the Nation in zinc, third in copper, and fifth in lead production in the United States. As you know, the price structure is not only disheartening but is ruinous to many American mining companies. It is tough on many Montanans who depend so greatly upon these metals for their livelihood. We get the same end result whenever low-cost imports shut down plants and mines and people are put out of jobs.

Probably one of the least understood phases of the market place, and certainly the phase misunderstood by most of the proponents of free trade, is the psychological effect of the sale of a small quantity of really cheap and unrestricted imported goods on the basic price level of the rest of the domestic supply. The result is dramatic, immediate, and destructive. The price of all the rest of the goods, no matter how high the wages, rent, heat, light, taxes, and other items of cost that went into them, will grind inexorably downward with the sureness of the pull of gravity.

Unrestricted imports encourage the disintegration of price levels based upon American costs. There may be a temporary advantage to consumers but, if uncontrolled, it will wreak havoc on employment in America. The result is decreased purchasing power, hardship, relief, and a lower standard of living. American jobs must be preserved for American workers.

What advantage is there to the American worker and his family if we permit the further liberalization of these foreign trade laws? The gains that have been made in the fields of minimum wages, overtime pay, social security, industrial safety, health and welfare could be seriously affected. Any manufacturer can now escape American labor legislation and most American taxes simply by locating his plant abroad. The laws governing interstate commerce should not discriminate against goods produced in the United States.

Why should two identical garments, one manufactured in the United States and the other manufactured in Japan, run into different rules at our State borders? If, as is true, we have legislated costs on the United States product, is it fair or reasonable that foreign goods should move in interstate commerce entirely exempt from the rules that apply to American manufacturers?

In my judgment, the American people are too fairminded to approve this type of unfair competition if they understood it. The point is that our laws should take into account the high costs of American manufacture when evaluating the entry of foreign goods into our country. Tariffs, quotas, or a combination of both are necessary if we are to preserve our American standard of living. And let us not forget that American industry has twice been the arsenal of democracy in world wars. Is it wise, in the nuclear age, to decimate, under the halo of reciprocal trade, industries which were essential to allied victories in World War I and II?

Ladies and gentlemen, it is fantastic to many American businessmen to speak of this idea of international trade as reciprocity. Almost alone, we have done all the giving and yielding and losing. It was all the American Government's idea in the first place, 24 years ago, and we sold it all over the world. The act took the tariff control out of the hands of Congress and gave it to the executive branch. The control of American international trade should go back into the hands of Congress, where it belongs. This is the point at which local conditions register promptly and accurately.

Two bills are now in the House Ways and Means Committee and will shortly be acted upon. One is the Dorn bill, H. R. 11250, and the other is the Simpson bill, H. R. 11462.

Both bills return the determination of when American industry, and thus, our country is injured to the Congress, through the medium of the Tariff Commission, by whatever name it may be called. Under these bills economists in the State Department could no longer use global politics, sputniks, or other convenient reasons to overrule the true facts when our industries and mines are actually hurt, as is now the case.

I urge all of you connected in one way or another with American free enterprise to give serious thought to this vital and current subject and to advise your Congressmen and Senators how you feel. There isn't too much time. I have opposed the encroachment upon American jobs of these misleading trade agreements since their inception and I shall continue to do so until some form of equitable relief, based upon the American standard of living, is available.

The danger is clear and present. No one can deny that we must stop being complacent about our technical educational system. By the same token, we cannot be complacent over the fact that our country has actually become the battlefield for cheaply made imported manufactured goods. The American standard of living is under attack from overseas. Many countries who are attacking us in this way are our friends. They rely on our economic strength and our aid. Personally I believe most of them would understand our problem if our representatives at the international bargaining table would present our situation effectively and fearlessly. Let us join together to remind our Government of the necessity of defending our hard won high standards of living.

I thank you.

Argus-Leader Given Public Service Award—Tops Class for Largest Newspapers

---

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mr. McGOVERN. Mr. Speaker, the Sioux Falls Argus-Leader, the largest

UNIVERSITY OF MICHIGAN LIBRARIES

newspaper in South Dakota, has recently won a first prize award from Editor and Publisher for "a newspaper's service to the community." The South Dakota newspaper was given this splendid recognition because of a study of a local gas rate increase conducted by a utility rate specialist at the expense of the Argus-Leader, and the newspaper space given to this study.

The publisher and editor-in-chief of the Argus-Leader is Mr. John A. Kennedy. Mr. Kennedy has recently attracted nationwide attention on the basis of firsthand reporting on the advances in Soviet education which he has noted in his extensive travel and study in the Soviet Union. He and his staff are entitled to considerable public appreciation for this most recent honor that has been extended by Editor and Publisher, the leading trade publication of the Nation's newspapers. I include at this point the following news article from the May 4, 1958, issue of the Sioux Falls Argus-Leader, which relates the account of the paper's service award:

ARGUS-LEADER GIVEN PUBLIC SERVICE AWARD—TOPS CLASS FOR LARGEST NEWSPAPERS

The Sioux Falls Argus-Leader has been given an Editor and Publisher first prize award for "a newspaper's service to the community," it was announced Saturday night.

A study of a local natural gas rate increase conducted by Dr. John Bauer, a nationally known utility rate specialist, at the Argus-Leader's expense and the newspaper space given the subject were the basis for the award.

The classification, one of several judged annually by the leading trade publication of the Nation's newspapers, was described by George Wilt of E. & P. as being evaluated on service to a community." The Argus-Leader gained the prized award for 1957 in the over-50,000 circulation section, including the largest newspapers in America.

Winners of the honors are announced in this weekend's edition of Editor & Publisher. Presentation of the awards is set for a Monday evening dinner at the National Newspaper Promotion Association convention at Pittsburgh. Fred Schweikher, promotion manager of the Argus-Leader who is attending the convention, will accept the award for his newspaper's entry in the judging.

Awards for services rendered by newspapers to their communities were in two classifications.

For papers with more than 50,000 circulation, the Louisville, Ky., Courier-Journal and the Shreveport, La., Times ranked next to the Argus-Leader, receiving certificates of merit.

For newspapers having less than 50,000 circulation, first prize was won by the Riverside, Calif., Enterprise, and certificates of merit by the San Angelo, Tex., Standard-Times and the Findley, Ohio, Republican-Courier.

Dr. Bauer, with a background of 40 years in the utility rate field, was employed by the Argus-Leader to review the local gas rate structure after a rate increase, which has now been in effect since August, 1957, was announced by Central Electric & Gas Co.

Dr. Bauer undertook his study earlier in the summer and submitted six recommendations to the City Commission.

He suggested that the city request of the Gas Co. "all of the information" which he deemed essential to a conclusive perusal of the gas rate question here.

On December 5, 1957 the company turned over to the commissioners facts and figures relating to its Sioux Falls operations. City officials met with representatives of the gas firm for a conference.

It was made clear, at all times, that Dr. Bauer's research was designed to ascertain whether the rate increase seemed justified.

Over a period of 6 months, the Argus-Leader published numerous articles reciting all these developments, step by step and in full detail.

Eidtorially, this newspaper didn't challenge the rate boost, but said the prime objective was a rate scale which would be fair to the company and consumers alike.

February 10 of this year Mayor Fay Wheeldon said the city would employ its own expert to continue the gas rate study.

At that time the city commission called upon South Dakota Senators and Representatives at Washington to oppose the Harris-O'Hara bill being considered by Congress.

The bill provided for the removal of certain existing Federal regulations governing prices charged by producers of natural gas. It would permit increases in the price of gas without Federal regulation.

The mayor reported yesterday that the city is still looking for an expert with combined accounting, engineering and legal background.

He said it may be necessary to employ an expert who, in turn, will gather about him a staff of consultants specializing in those fields.

"It's a fine thing for the city of Sioux Falls and all of South Dakota," commented Mayor Wheeldon, "that the Argus-Leader should be chosen from all the newspapers of the country for this high award. It focuses national attention on Sioux Falls in a way that is beneficial to the city. The Argus-Leader should be congratulated for this unusual recognition."

Seventieth Birthday of Congressman Emanuel Celler

SPEECH
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. FARBSTEIN. Mr. Speaker, I rise to salute one of our most distinguished colleagues, EMANUEL CELLER of New York, who on Tuesday last celebrated his 70th birthday. I am honored to have this great privilege not only because of my personal friendship and admiration for MANNY CELLER, but because this is a man whom all of us can regard with respect, warmth and affection.

In every generation there are men who stand out above their contemporaries in service to their fellow man, in striking achievement over a long period of time. MANNY SELLER'S public record, stretching back 35 years to the day when he first entered the House of Representatives, sets a goal of accomplishment which has few parallels. His efforts to make life a little better for the underprivileged and to provide minority groups with opportunities for productive careers on a more equitable basis testify to his unfailing sense of justice and fairness. He has constantly been working for a better society and a more advanced social order in which the civil rights of all men will be respected and no man will be made to suffer because of his color, creed, or place of birth. Over the years he has expanded the scope of his efforts to cover not only his beloved country but also the oppressed and homeless of other lands throughout the world. Certainly, his works in behalf of the Jewish people, who have been driven across the face of the earth, alone have earned for him a place on humanity's roll of honor.

I am very proud indeed to come from the same State and the same city and to serve under the same political banner as MANNY CELLER.

Anyone who has known him becomes immediately aware also of the fine human qualities which have endeared him to so many of us—his warm nature and ready friendship, has keen sense of humor, and the down-to-earth quality he imparts to every conversation.

I, in particular, have good reason to speak of this, for when I first met MANNY CELLER, I was a neophyte, fully aware of my shortcomings, and therefore fully appreciative of his kindly and considerate assistance and encouragement in any and all matters on which I consulted him.

In times such as these when the Nation faces economic recession and its fearsome consequences—consequences which will inevitably affect most seriously those in the lower income brackets—it is noteworthy that MANNY CELLER is to be found in the ranks of those working to protect the small businessman and the unemployed. But this is only one of his numerous activities. His work in regard to antitrust legislation and civil rights as well as his defense of the Supreme Court against the attacks of those who would weaken its power—all these add luster to an already star-studded record as one of the Nation's outstanding liberals.

It is in behalf of a better future, a better America, and a better world that I salute the venerable gentleman from New York having reached the ripe young age of 70 and still in possession of more physical vigor than many men half his age, he will, I hope, together with his charming wife, remember to invite me to another birthday party 10 years from now.

Idle Workers Want New Jobs, Representative Dwyer Finds in Survey

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. BASS of New Hampshire. Mr. Speaker, I include in the Appendix of the RECORD, an article from the Elizabeth (N. J.) Daily Tribune of May 7 headlined "Idle Workers Want New Jobs, Representative DWYER Finds in Survey." The article interestingly details a survey

and conclusions made by Congresswoman FLORENCE DWYER on the unemployment problem in her district. I am sure this news item will prove valuable to many of us who have similar conditions in our areas.

IDLE WORKERS WANT NEW JOBS, REPRESENTATIVE DWYER FINDS IN SURVEY—CONGRESSWOMAN VISITS UCC OFFICES IN COUNTY, HEARS OF FINANCIAL WORRIES AMONG UNEMPLOYED—SAYS STUDY WILL HELP GUIDE HER VOTING

Distressed men and women, still proud and conscientious and ready to work, are standing, often unwillingly, in the unemployment compensation offices in her district, Representative FLORENCE P. DWYER, of Elizabeth, said today.

She discovered this, she added, in a day-long inquiry to determine the attitude of the citizens, the effects of Federal palliatives already begun, the efficacy of the system of disbursing checks, and the attitude of the people most involved.

The bulk of the unemployment compensation claims in Union County is administered through the Elizabeth and Plainfield offices.

Technical procedures have been expedited by additional Federal funds made available at the first signs of the recession, Mrs. DWYER said. The United States Government pays the administrative cost and the States issue the checks from employer-employee contributions.

Statistics in both Union County offices show that unemployment, despite the availability of numerous jobs, approximates twice that of a year ago. In conversations with citizens standing in line for checks, Representative DWYER heard stories of financial distress in homes, mortgages endangered, educations in jeopardy, instalments in arrears.

FEAR OF LOSING HOME

One wife told Mrs. DWYER her husband's unemployment compensation claim is exhausted and her own is nearing its terminus and they may lose the home acquired when both were working.

A man reported dejectedly he had purchased a car when overtime wages were sufficient to meet the payments. Now he has no job.

A widow, pinching frugally to keep her son in college, despairs of the next heavy tuition payment.

"This is my first time in a line like this," a woman shyly confessed. But she added quickly she was not accepting charity.

Women presented a universal complaint, and some urged a radical remedy—a price freeze at the grocery. Food, all said, costs too much; prices are out of proportion to income and wreck unemployment compensation claim check budgets.

The 26 weeks of payments available in New Jersey have been consumed by many families.

Representative DWYER told persons she interviewed that proposed Federal legislation contemplates aiding any State in extending by one-half the period in which it will pay jobless benefits.

Other Federal measures she described are new secondary road program to ease the situation in the construction field; drastic modification of the financing of new homes; credit relaxation, and the distribution of $6 billion in defense contracts, which will touch all phases of industry.

On that last facet, she will confer next week with the Department of Defense and the Small Business Administration.

HOPES TO SEE JOBS

"My concern," she said, "is to get people back to work. The allotment of contracts in idle and slowed down plants in this district will help."

Elizabeth's difficulties primarily are those of Detroit, the slowdown in the production of motor vehicles. Many Elizabeth factories, large and small, contributed directly to the Detroit assembly lines.

All industries are slowed, although chemicals and pharmaceuticals are the least affected, Representative DWYER learned.

This intimate study of the effects of the recession in her district will guide her, Mrs. DWYER said, in voting on remedial measures now in the Congress or to be introduced. She said it also proves the accuracy of Labor Secretary James P. Mitchell in recommendations he had made to the administration and Congress.

Depression

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. MILLER of Nebraska. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an article written by the news editor of the Western Nebraska Observer, Bob Pinkerton, of Kimball, Nebr.

You will note his article takes sort of a reverse slant on the thinking of the people of the East on this thing we call a repression.

Actually, Mr. Speaker, in Nebraska when you talk about a depression some people just grin; they wonder what you are talking about. Nebraska took a pretty solid whipping in 1956 when more than half of the counties went on a total drought relief program but last year and again this year things are looking up. There is a lot of moisture and good prospects for an excellent crop, good prices for cattle, hogs, and other meat products.

I have known Robert Pinkerton since he was a little boy. His thinking is sound. I recommend to my colleagues the reading of his article on the depression.

The article follows:

I am deeply concerned with the affairs in the Cornhusker State. It seems that Nebraska somehow cannot seem to get into the swing of recession like the other States. So reports the university's business research department.

Some of you, I suppose, are lulled into a false sense of security by this report, which claims retail sales are ahead of last year.

This is obviously an unhealthy condition. When the rest of the Nation is deep in the pangs of recession, here's Nebraska, enjoying prosperity. What if a group of States got to gether and did this. See the picture? Wouldn't be long before the depression would strike the recession States, and the prosperous States would become more prosperous.

Now the problem occurs: Civil War II.

I think it is the duty of every conscientious citizen of Nebraska to talk themselves into a recession. If the other States do, well, remember, "United we stand, etc."

With unity and purpose for all, I submit the following cures to prosperity.

All citizens, regardless of economic status, should not rush out and buy things they need. "Don't buy," is my slogan.

Ask your boss for a wage cut.

Talk depression; think depression; sleep depression. This is the most effective way to attain a recession, and maybe shoot for the moon—depression. Tell your neighbors you are sinking fast. Ask them to do the same.

Write your Congressman. Let him know how bad things really are in your home State. Don't let anybody tell you differently.

Wear old clothes. This gives an overall frightening picture, and others will follow suit (so to speak).

Above all, practice recession. Practice makes perfect. For the cause of patriotism, act now, before it's too late.

Address of Mr. Reid Brazell, President, Leonard Refineries, Inc.

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. DINGELL. Mr. Speaker, Pursuant to permission granted, I am inserting into the RECORD an address made by a distinguished citizen of the State of Michigan, Mr. Reid Brazell, on the occasion of the 12th annual testimonial dinner given by the Association Executives of Michigan for Michigan Members of Congress on April 29, 1958.

The address follows:

ADDRESS BY REID BRAZELL, PRESIDENT, LEONARD REFINERIES, INC., AT THE 12TH ANNUAL TESTIMONIAL DINNER GIVEN BY THE ASSOCIATION EXECUTIVES OF MICHIGAN FOR MICHIGAN MEMBERS OF CONGRESS, WASHINGTON, D. C., APRIL 29, 1958

Needless to say, I appreciate the opportunity and feel honored to have the privilege of speaking to you on this auspicious occasion—an occasion when busy folks take time to come here to Washington, to talk to, to break bread with, and to honor their Representatives in the Congress of the United States.

When Bill Palmer called and asked me to talk to this group, my first reaction was, "What do I have to say that would be of interest to such a meeting?" I asked Bill, "What do you want me to talk about?" His reply was, "Why you like Michigan." That was easy. I like Michigan because I believe in Michigan, and because I believe in Michigan I suggest to you and to the people of Michigan that we establish as an objective, as a goal, the job of putting real meaning and truth into the three words, "Michigan means business." The achievement of this goal should not be too difficult for the people of Michigan if past performance is any indication of what they can and will do if such a challenge is accepted.

Let us take a look at our State, its history, and, more importantly, its people; also a look at the present, and look to the future.

First, as personal reference, I should like to mention that it was by no accident of birth that Michigan is the State in which I make my home, in which I raise my family, and in which I earn my daily bread. I was born in Oklahoma and lived there and elsewhere for 30 years before adopting Michigan. Notwithstanding my love for Oklahoma, my native State, and my pride in it, I adopted Michigan for my home. I chose it for reasons that are reflected in its history, its geography, its climate, and, above all, in its

UNIVERSITY OF MICHIGAN LIBRARIES

people. That faith of mine has become stronger each of the year that I have lived here. I truly believe in Michigan.

Perhaps from the vantage point of the past we can more clearly perceive why confidence in the future of our Michigan is justified—and come to a better understanding of why we all of us should believe in Michigan.

Consider for a moment: What sort of a State is Michigan? What are Michigan people like? There is no simple answer to those questions. Michigan is unlike any other State lying between the two oceans. Michigan people and the development of the State reflect circumstances most unlike those that exist elsewhere in this world.

Senators MCNAMARA and POTTER must find it a great challenge as well as great honor and responsibility to wear the mantle of United States Senator for Michigan.

If we start at Monroe in Congressman MEADER's district and go westward to the western boundaries of Congressman HOFFMAN's district, we find fertile lands where Michigan farmers plow soil as rich as can be found in our whole country.

Moving northward, we find the busy Saginaw Valley district so ably represented by my own Congressman ALVIN BENTLEY, to the east we find the great thumb area represented by Congressman MCINTOSH, moving farther north into the districts represented by Congressmen GRIFFIN, CEDERBURG and KNOX; a vast region of generally sparse soil where a few short years ago stood our vast treasures of pine and hardwood. Some people thought these treasures inexhaustible, but the trees were felled and by 1890, they were largely gone. In every frontier country there are heedless people who despoil without thought for the future. So it was with Michigan's forests. But others come to heal the wounds. Thus today, happily, there stands in that region row upon row of growing pines and hardwoods which will bless future generations.[1] At the upper part of Congressman KNOX's district are the Straits of Mackinac which so long divided Michigan, but now spanned by the world's great new bridge, to unite the people of the upper and lower peninsulas and open new horizons for us. The eastern end of the upper peninsula, also in Congressman KNOX's district, was another land of hardwood and pines which, once despoiled, is again emerging as a land of bounty. Traveling westward toward the Wisconsin border, in Congressman BENNETT's district, rock ridges emerge from the soil and there are found the iron and copper riches that for so many years sustained large segments of our population.[2][3]

I believe in Michigan because of its great natural opportunities. Michigan is a State apart. Its uniqueness lies in the varieties of its geography, climate and terrain and particularly in the uniqueness of its peoples. Its uniqueness is perhaps best exemplified by the fact that Michigan is dotted by more than 11,000 inland lakes, is traversed by 20,000 miles of streams and is framed by waters as blue as those of the Mediterranean. It has a shoreline of over 3,200 miles. Michigan is bounded by 4 of the 5 Great Lakes. There is Lake Superior, with its cold and mighty breakers smashing the rocky shores of the upper peninsula—Lake Michigan, beating at the sand dunes to the west; Lake Huron, gently touching the eastern side of Congressman MCINTOSH's district; and Lake Erie; lazily lapping the Monroe marshes.[4][5]

Michigan's climate is also unique. Our State is air conditioned by the waters of the Great Lakes. The lake waters absorb heat from air warmer than themselves and warm the colder winds. The Great Lakes regions are frequently a meeting point for high and low pressure areas, with the result that we have frequent changes of weather. Our climate is a seasonal climate. Each year we enjoy spring's rebirth of nature, summer's warmth tempered by the cooling lakes, autumn's brilliance unexcelled in beauty in any place else in the whole world, and winter's quiet snows.

Our uncommon geography and climate have produced an uncommon people. Our people vary as to types and ancestry, and because of what Michigan people have done with the land that they found, our State never developed into any common type of State.

Little more than a hundred years ago Michigan was wilderness. Its chief industry was the fur trade. As late as 1814 history records Indian massacres in Michigan. It was not until 1842 that the Indians ceded the last Michigan lands. In the space of little more than a hundred years this State was created from a wilderness land of trappers and fur traders to its present greatness. Into its development went incredible extremes of vision and stupidity and greed and generosity

Our State was born of bloodshed and dissensions so often common to frontier lands. It was born of the calamities of Indian massacres, pestilences, destructive fires, wars and unprecedented waste and greed and wisdom and folly and cupidity and integrity. Truly Michigan has had a tempestuous past.

The Michigan wilderness did not come to the forefathers easily. They fought for it. First they fought the French, then the British and then the British again, and all the while they fought the Indians. When peace came many of these frontiersmen entered upon an orgy of exploitation of the Michigan land and the treasures beneath the surface unprecedented in history. It is, however, of some comfort to recall that the pines of Michigan housed much of the Nation and produced values equal to 3 times the gold that California's earth gave up and 10 times the gold from Alaska. Many houses built of Michigan pine still stand today. And much of the money derived from this so-called "rape of the woods" found its way into our colleges and our hospitals. It might be well to consider that had these pine lands not been cut away we would not have our great and growing State and national forests that are so important to our beloved Michigan outdoors.[6]

During roughly the same period that Michigan trees were producing their fortunes, Michigan produced half the copper mined in the United States—more than 9 billion pounds of it—and millions of tons of iron ore. Into this land came Welshmen, Lithuanians, Austrians, and Finns to fell the trees and tend the mines, joining the earlier migrations of Germans, Dutch, Irish and Polish peoples, who had come to mingle with the original French and English settlers. Thus came our complex and uncommon people.

When the first great native pines came crashing down in the Michigan forest and when our iron and copper ore became much less bountiful, there were heartbreaking times in many parts of our State. The lumberjacks and the ore workers took up farming. We see today in many sections of our State tragic reminders of their vain efforts and of their dreams of establishing farms in soil inhospitable to farming. A lonely chimney against the evening sky. A rotting door stoop. A dilapidated barn. We must not assume that all of our State is thus inhospitable. Today much of that soil once unsuccessfully tilled is producing fruits, cereals and meats in great abundance. These developments have come about because Michigan men who failed once were willing to try again and try ever once again. They have come about also because, just as there were those who despoiled our land, there were in greater number those who made efforts to enrich it and to insure its future bounty. In 1957 our legislature had the wisdom to found our great Michigan State University, the first agricultural college in the entire Nation to open its doors. That institution and our great conservation department are fulfilling their destiny in securing to us the utmost bounty of our soil and the riches beneath.

I believe in Michigan because our State has been well endowed with many resources. There are the great salt deposits in the State which have placed Michigan ahead of all other States in salt production. Lest we think salt a common sort of product for table use only, we should remember that salt and derivatives from it are used in more than 14,000 different products.

Petroleum, too, is found in Michigan—enough so that in 1938 Michigan was second in the producing States east of the Mississippi. While production has been declining, it is still an important product to many of us.

In the era before the automobile, other great industries came to Michigan: furniture in Congressman FORD's district, wagons and carriages in Congressman CHAMBERLAIN's district, the great paper and pharmaceutical industries in Congressman JOHANSEN's district, and the great and growing pharmaceutical industry in Detroit. There came also a wide variety of small factories which depended upon the hardwood of the region, dotting areas to the north.

Michigan is bounded by waters that were bountifully filled with fish. Thus it became a land of fishermen. It became also a land of sailors. Our great fishing industry has declined, but with the development of the St. Lawrence seaway, our State promises to provide ports for the shipping of all the world. Michigan woods have always abounded with game. Thus we are a land of hunters and outdoorsmen.

Up until now we have considered for the most part those people of Michigan that depended upon the soil, the forests, and the treasures beneath the soil for a livelihood.

There was, and is, the Detroit industrial complex so ably represented by Congressmen MACHROWICZ, DIGGS, RABAUT, DINGELL, LESINSKI, GRIFFITHS, and BROOMFIELD. First established as Fort Pontchartrain by Cadillac in 1700, Detroit and its environs had a population of only 1,442 people in 1820 and only 21,000 people by 1850. As late as 1900 Detroit's population was only approximately 300,000 people. Today its population exceeds 2 million, and it has become one of the largest cities in the United States.[7][8]

In 1900 Detroit was a city of stability. It was a self-satisfied city. True, there had developed in Detroit the successful manufacture of stoves, drugs, machinery, and railroad equipment, which continues to be successful. But at the turn of this century the most extravagant prediction as to Detroit's future would have paled into insignificance when compared with the actual events that followed. Ford, Chalmers, Olds, Joy, Durant, Nash, Willys, Chapin were pioneers of another sort than the trappers, fur traders, and timbermen who penetrated the Michigan wilderness, but they pursued their dreams with the same tireless energy and zeal and at the same hectic pace. By 1910 the population of Detroit had grown to almost half a million people and Detroit had become the ninth largest city in the United States.[9]

Detroit did not invent or create the automobile, but Detroit did create and perfect the art of making tens of millions of them

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

through assembly line techniques and industrial practices that revolutionized not only Detroit but the world; techniques and practices which may revolutionize society itself before their influence is fully spent. Into the crucible of Detroit came armies of unlike men. From Michigan itself came the grandsons of the fur trappers, the sons of the lumberjacks and timber cruisers, the unsuccessful farmers and the sons and grandsons of the copper and iron miners. But Michigan was an insufficient reservoir of manpower to supply the virtually insatiable appetite of the assembly lines. From the Appalachians and from the deep South came other armies of men. When World War I ended, other nations poured their unneeded and unwanted sons into Detroit. These were a most uncommon people.

These diverse and unlike peoples from all parts of the world have been assimilated in the State of Michigan. The melding of their diverse skills, cultures and backgrounds has given us a citizenship unique among the States, but with many common characteristics.

Michigan peoples have many common traits. Among those common characteristics are ambition, industry, bravery, skill and a love of their State and Nation. We should not forget that Michigan gave us many supremely brave and self-sacrificing men—673,000 of them who served our Nation in World War II. Most of our peoples who were not in active service, hundreds of thousands of others, gave their skills to produce the munitions of war—more than 20 billion dollars worth by the end of World War II—far more than the production of any other State, to make Detroit and Michigan the arsenal of democracy in World War II.

Until now I have spoken most of material things. I have said little of Michigan's inanimate treasures. True, we are a people who have devoted much of our lives and resources to material things—but there is another side equally or more important. In 1817 our forebears established a great university—the University of Michigan—one of the 4 or 5 great universities in the world. At almost each crossroad we established a church and in hamlets a college, so today there are more than 20 colleges and universities. In 1785 a land ordinance was adopted setting aside section 16 in every township to be used for educational purposes. Thus today the son of a Finnish immigrant writes our Nation's songs, the son of a Polish immigrant is a judge or a Congressman. A most uncommon people we are.[10] [11]

Detroit made automobiles available to even the poorest of our country's citizens. More than 7 million of them in a single year. That availability has been largely responsible for the second greatest industry that our State now enjoys, the tourist industry. Thus there is a close kinship between Detroit and the outer regions of our State.

Our 11,000 lakes, our shorelines bathed by the waters of the Great Lakes, our thousands of miles of trout streams and our tens of thousands of reforested acres beckon to the weary to come at all seasons and enjoy peace and beauty and to return to their homes and jobs refreshed. The automobile has provided the means for them to come. And how they have come. From an occasional visitor a few years ago seeking relief perhaps from hay fever, we now have a flood of visitors who come from all parts of the world and at all seasons of the year to visit with us and to spend with us more than $600 million annually.

When Etienne Brule crossed the Straits and landed at Sault Ste. Marie in 1618 he could not imagine that a few short years hence, as history goes, a span of steel and stone more than five miles long would bridge the rushing waters of the straits. Cadillac and his small band of men and women manned the ramparts of Fort Pontchartrain on the shore of the Detroit River in 1700, and met with equal fortitude the vicissitudes of Indian attack, destructive fire, cholera and near starvation. I doubt Cadillac could envision that towering edifices of steel and stone would one short day stand on the site of and near the old fort. The timber cruiser who as late as the 1880's stood in the hushed silence of a grove of towering pines would never have believed that hundreds of thousands of people would come to these woods and lakes and streams of Michigan each year to find renewed vigor and contentment. I suspect that as Brule, Cadillac and the timber cruiser would have been unable to prophesy the future of Michigan, we now cannot successfully prophesy that future.

We do know one thing well, however, that this great State of ours, and its magnificent institutions and its people, have developed, been preserved, grown and flourished in a climate of personal, political and economic freedom. It is the hallowed function of you gentlemen whom we honor tonight, to help to continue to preserve those institutions of freedom.

It is not my purpose of province to advise you as to how you shall insure that freedom endures. There comes to my mind, however, the words of two great and honored Michigan statesmen who described their creeds when dealing with critical political problems of their day. First, there was Senator Lewis Cass, who as a Senator in 1850 enjoyed the dubious help of being required by custom to vote in accordance with instructions of the Michigan legislature, which appointed him. Differing with the instructions received from the legislature, he had this to say, "When the time comes and I am required to vote upon this meaesure, I shall know how to reconcile my duty to the legislature with my duty to myself by surrendering a trust I can no longer fill." Friend and foe alike proclaimed him for his courage and ultimately the instructions from the legislature were withdrawn and Senator Cass not only retained his integrity and independence, but he has been forever honored by his people.

More recently the late Senator Vandenberg, having changed the views he had previously held on matters of the greatest national interest, reported to the shocked constituents who had elected him and said, "What happens to me politically is of no moment to me or to the State, but what happens to the country is of vital moment to all."

What can we predict for the future of Michigan? I am reluctant to predict as to its physical characteristics, its modes of transportation or even as to the form and nature of its industry. It has been predicted by scientists that in the next 25 years worldwide transportation may become as rapid as communication is now; that nuclear developments may make energy almost as cheap as air and that climate control will permit us to have alternatively a tropical grade or an ice age. In the light of these predictions it would be presumptious for me to try to predict the rate of growth of our State or the precise forms that growth shall take.

I believe that Michigan has the greatest growth potential of any State in the union. It has great natural resources, particularly the greatest bodies of fresh water in the world; the geography and terrain that make it an outdoor paradise for its residents and tourists; and above all the most important resource. People of indomitable spirit.

How can we put action—truth—into the words, "Michigan means business."? First—we—you—each person in Michigan, should recognize it is a job for us to do ourselves. Stop expecting Washington and our Federal Congress to do the job for us. We should ask for and expect to receive the cooperation of the Federal government in those areas where joint State and Federal action is required.

Second, advise our State officials and our State legislative bodies that in the development of our land of plenty, it will be necessary to invest money, now and in the future, in many projects, such as roads, educational institutions, health institutions, harbor projects, recreational facilities, to name only a few—projects that will permit the rapid development of our Michigan, and, incidentally, a rapid return of the money invested, through taxes that would be paid. We should expect the legislature to provide the funds necessary.

Third, the organization of groups whose efforts can be directed toward the many community projects that should be undertaken, projects that will help to put action and truth into the words, "Michigan means business."

Increased Mileage Allowances for Rural Carriers

SPEECH

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. PORTER. Mr. Speaker, the House in passing S. 3050, a bill to increase the rural carrier equipment maintenance allowance from 9 cents to 10 cents per mile or to $3.50 per day, whichever is greater, has acted to correct a financial injustice which is presently imposed on this loyal group of postal employees. This meritorious and needed legislation has been of vital concern to me. I introduced a bill (H. R. 6371) in the House on March 26, 1957, which provided essentially what is provided in the legislation that passed the House this week.

The subcommittee, of which I was privileged to be a member, carefully considered all the testimony presented on the legislation. Overwhelming evidence made it abundantly clear, even at the time of these hearings in June 1957,

Footnotes at end of speech.

UNIVERSITY OF MICHIGAN LIBRARIES

that rural carriers were being required—in effect—to subsidize the Government in the delivery of rural mail. Costs of operation had exceeded the allowance paid to such an extent that it was actually taking of their salary dollars to cover the required expenditures to provide the vehicle to do the job. Factual, substantiating data clearly established the need and justification for an increase in mileage allowances. Despite this obvious conclusion, the Post Office Department opposed this legislation last year.

Our subcommittee carefully considered the testimony and facts presented at the hearings on this legislation. The apparent need of an increased allowance resulted in my bill being favorably reported to the full committee. On July 25, 1957, the bill was unanimously approved and reported by the Committee on Post Office and Civil Service.

It is unfortunate that the House did not have the opportunity to act on this legislation earlier. However, I commend the distinguished Chairman of the Committee [Mr. MURRAY] and the leadership of the House for expediting consideration at this time.

The need of higher allowances was also indicated in hearings held during the current session before a subcommittee in the Senate. The antipathy of the Post Office Department to this financial plight of the rural carriers was gone this year, and testimony presented in the Senate was an acknowledgment than an upward adjustment in these allowances was necessary. As a result of the hearings in the Senate, a bill was reported which reflected more liberal provisions than that reported by our committee last year. The Senate accepted S. 3050 as reported by the Committee on Post Office and Civil Service and in that action transferred responsibility for prompt action to the House.

Many of my colleagues in the House as well as myself favored the more liberal provisions of the Senate bill. The points of difference in the two bills had to be resolved and the only sensible solution was to seek an intermediate point of acceptable agreement. Concessions were necessary. The bill which cleared the House and was accepted by the Senate was, in my opinion, the very best that could be had at this time.

Mr. Speaker, I would like to commend the officers of the National Rural Letter Carriers' Association for their tireless and successful efforts to blend the differences of thinking and opinion which existed in regard to this legislation. In representing this large group of postal employees they have ably demonstrated that they are not too bigoted to accept reasonable compromise, when it becomes clearly evident that such action is necessary. They have rendered a service to the Congress by assisting in uncovering the facts so necessary to permit us to act wisely on legislation. They have further rendered a service to their membership, and have acted in their best interest by facing up squarely to the realities of the moment. Their judgment in recognizing the necessity of the compromise between the two bills should result in the rural carriers of this Nation receiving an increased mileage allowance in the near future.

It is my hope that the President will not delay signing the measure. These increased allowances are necessary to help these employees more nearly meet the present-day costs of delivering rural mail to the 35 million postal patrons of the rural free delivery.

Following passage of S. 3050 by the House on Monday of last week, I received the following telegram:

> On behalf of the rural carriers of the Nation, we wish to express our sincere appreciation for your efforts in connection with the equipment allowance bill which passed the House today. We are deeply grateful for your able assistance in the House passage of this meritorious and needed legislation.
>
> RAY L. HULICK,
> *President, the National Rural Letter Carriers' Association.*

I want the rural carriers of the Nation to know that it was a pleasure to work with their organization, with the Committee on Post Office and Civil Service, and with my colleagues in the House in the interest of legislation to correct their financial plight, and to relieve them from personally bearing undue expenses to perform a valuable government service.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. KEATING. Mr. Speaker, May 10 is celebrated by freedom-lovers all over the world as Rumanian Independence Day. This day is even deeper significance than ever this year, since the brave people of Rumania today suffer under the yoke of a foreign tyranny.

For the Rumanian people, enslaved first by the Nazis and then by the Communists, the sunlight of freedom shone all too briefly. But the will to be free, the desire for liberty, cannot forever be curbed.

Rumania today is a restive land. More and more its Communist overlords become anxious and fearful as they watch the backlash of their years of brutality and suppression take form. Perhaps even the men in the Kremlin are slowly coming to the realization that tyranny cannot survive man's urge for freedom.

I am happy today to join with all freedom-loving Rumanians in honoring their former independence. We in this country can well take this occasion to again pledge our efforts to help the courageous people behind the Iron Curtain in their determined efforts to regain their independence.

We in the United States must not, and will not, forget our friends in Rumania. We hope and pray for the day when America and Rumania will again meet on the common and hallowed ground of liberty.

Bigness Is No Sin but Bigness Certainly Does Sin

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. MULTER. Mr. Speaker, we have been told repeatedly that bigness is no sin. However, when bigness can repeal the law of supply and demand, when bigness violates every rule of reason, keeps prices up and pushes them up higher, when prices should be going down, then bigness is committing the sin which must inevitably destroy it.

Permit me, today, to call attention to a very fine article on the subject. The article is written by John L. Hess and appeared in the Reporter, May 1, 1958, issue.

The article follows:

WHAT KEEPS PRICES UP?

(By John L. Hess)

Word flew around the financial markets of the world late last fall that a meeting had been called in London to do something about the copper slump. Copper shares rallied. Smelters cautiously raised prices. United States antitrust laws being what they are, the American Big Three—Anaconda, Kennecott, and Phelps Dodge—did not attend. But the first two were represented anyway by the copper department of Chile, where they are the major producers. The meeting was behind closed doors, but the decision could hardly be kept secret, nor did the participants want it to be. World copper production was to be cut back roughly 10 percent.

In the Belgian Congo and Rhodesia, in Michigan and Montana, output slowed and some mines were closed entirely. There was a brief delay in Chile; Kennecott finally persuaded the negotiators, it was reported, that a cut in its higher-cost mines in the United States would be just as effective as one in its Chilean holdings. Layoffs rose in Arizona and Utah. In New York, the Cerro de Pasco Corp. announced it was reducing its production of copper in Peru by 11 percent. Its President said the industry had demonstrated statesmanship of a high order, and Cerro de Pasco wanted to be recorded in support of this constructive approach.

In view of the fact that the world supply of copper far exceeded demand, one can understand why a producer should welcome an orderly, across-the-board cutback. But statemanship, it seems, never calls for cutting prices. Two years ago, when copper was at an alltime high and important consumers were switching to aluminum, there were no recorded meetings of industrial statesmen to consider the problem.

The copper affair is cited here for what light it may cast on a phennomenon that, according to the New York Times, has been mystifying economists in Washington. "Experts Puzzled by Prices' Ascent," read a headline as far back as last November 4. "They Believe Slack Demand Should Be Causing Cuts."

The economists are still baffled. The administration, the Federal Reserve Board, and leaders of Congress have been nearly paralyzed by indecision ever since manufacturing began to taper off at the start of 1957. Should they act to combat a recession, or should they apply the brakes lest inflation run away with them? Indeed, with the

business statistics distorted by the rise in prices, many were unable to see the recession at all. As late as last August, the Federal Reserve System was still raising interest rates and constricting the money supply (over the opposition of the Federal Reserve Bank of New York) under the misapprehension that a boom was still on, chiefly because prices were high.

Economists agree that whatever measures are taken to restrain a boom or combat a recession, timing is of the essence. 'Applied too late, the brakes will not hold, the engine will not respond to the accelerator. But, unable to decide whether inflation, or deflation lay ahead, leaders of both parties were still reluctant early this spring, when the recession was already a year old, to plump for a tax cut or any other drastic move.

The indecision was the more agonizing because, while nobody will come right out and say he likes inflation, a decline in prices has come to be regarded with horror by all concerned.

It it still being taught in our schools that when the supply of goods is greater than the demand, prices fall to the point where they entice buyers. It's a nice theory. But in practice, whatever became of the free market? Or of the traditional American view that mass production and low prices are the path to prosperity, while cartels and other such foreign devices to shelter business against the buffeting of competition bring stagnation and poverty?

Industry after industry has abandoned the free-market concept. The prevailing doctrine now is: if sales, and hence profits, go down, raise prices. In February, the Civil Aeronautics Board granted the airlines a fare increase, with the explanation that profits and traffic had declined. It also suggested that there had been excessive scheduling of flights. In other words, the service was too good, or there was too much competition. Thus, in a mere 20 years, the airlines have come around to the defeatist outlook that it took the railroad industry more than a century to achieve.

REVERSE-ORDER DRILLS

It should be noted that the restrictive business philosophy is common both to high-wage industries such as steel, auto manufacturing, and construction, and to low-wage industries such as textiles and retailing. Nor does it take the threat of imminent bankruptcy to cause a free-enterpriser to abandon principle and curb production. The oil industry has been doing it for years.

Ostensibly for conservation, the major oil-producing States each month fix the allowable output after the refiners have reported how much they want. The theory is that any excess of supply over demand would be wasteful. It would also hurt prices. The Federal Government obliges by banning the shipment in interstate commerce of any oil produced in excess of the allowable. This amiable conspiracy against the consumer has worked almost too well. The price of a barrel of crude oil in Texas has risen from as low as 10 cents in the depth of the depression to $1.25 during the Second World War to more than $3 now. (The last big rise came during the Suez crisis, and did perhaps as much to hurt American prestige in Europe as the Marshall plan did to help it.)

But the fabulous profits to be made have inspired a worldwide oil rush. On land and under sea, drilling rigs have made rich strike after strike. Geophysics has greatly reduced the risk of dry wells. And the increasing flow of new, unregulated oil has threatened to swamp the carefully built price structure. Whereupon the rugged individualists of Texas have appealed to Washington, and not in vain, for protection against the operation of the free market.

The White House announced last year a program of voluntary quotas, limiting oil companies to the amounts they had imported in the past. This was accepted by the giants of the industry; it froze them into their dominant position. But relative newcomers to oil importing, with costly new refineries at coastal ports, defied the quotas, and it began to seem as though the free market might break through the dike. Last winter, with demand declining and imports rising, refiners began to trim the prices they pay to domestic producers, though not to the level prevailing before the Suez windfall.

At this point, a powerful force stepped into the breach. The Wall Street Journal reported on February 13:

"The oil industry should make further cuts in processing crude oil to correct the imbalance between supply and demand, M. J. Rathbone, president of Standard Oil Co. (New Jersey), said.

" 'What we need right now,' Mr. Rathbone stated, 'is less refinery runs and consequently less product and the ability to work off burdensome stocks.'

"Mr. Rathbone asserted that a general cut in the price of crude oil would not accomplish anything at this time. 'I do not myself see why it should not aggravate the situation rather than alleviate it,' he said."

The Chase Manhattan Bank, in its monthly petroleum review, admonished the industry: "Clearly the time is now at hand for a drastic cutback." Price cuts would not increase demand, it asserted. (The coal industry apparently disagrees; it favors tight curbs on oil imports to keep oil prices up, lest power companies switch from coal.)

In admirable unison, oil companies cut their runs. Texas ordered the sharpest reduction in "allowables" ever, about one-fifth, and Oklahoma and Louisiana went along. As demand still lagged, inventories remained burdensome, but earlier price cuts on gasoline were rescinded. By March, Gulf Oil could announce with satisfaction that there was "no need or justification" for a reduction in petroleum prices.

"MATURITY" COMES TO THE MILLS

A valiant effort to tame the free market even without Government help may be observed in the textile industry. Except in wartime, this has been known as a depressed business for many years. Its wages have been close to the legal minimum, but cotton mills traditionally worked 6 days a week, so that employees have been able to eke out a living with overtime. Now all that has changed. On April 5 of last year the Times reported:

" 'Realistic' cutbacks in production are being planned by textile executives in an all-out effort to restore the laggard industry to a healthy condition.

"The consensus among leaders at the convention of the American Cotton Manufacturers Institute is that the industry's salvation depends on the willingness of individual companies to forego immediate gains to bring about long-term well being to the industry.

"As one executive put it, 'The textile industry finally seems to be reaching maturity. Steel and automotive companies have long realized that cutbacks are necessary, and our industry is no exception.'

"Textile men of long experience say this convention is characterized by a greater desire for industry cooperation than has existed in a long time. Traditionally, the industry has suffered because leading elements in it have insisted on pursuing a course of 'rugged individualism,' which has often piled up disastrous results."

The results of this new spirit of restraint and cooperation were gratifying, for a time. The industry generally abandoned the 6-day week for 5 and even 4 days. Within 2 months, textile prices had strengthened, although demand was still slow. The textile industry appeared to be taking its place among the mature industries.

Unfortunately, the developing recession canceled out much of the gain, and in the fall it was necessary for M. Lowenstein & Sons to do for textiles what Jersey Standard was to do for oil. Lowenstein called on the industry to shut down for extended holidays at Thanksgiving and Christmastime and, not relying on the spirit of cooperation alone, it explicitly reminded all that Lowenstein was not only a textile producer but also "the largest buyer of print cloths in the industry."

Not only did the holiday shutdown take place but the curtailment spread to the previously prosperous synthetic-fabric mills. Textron, Inc., made a public pledge not to operate more than 5 days a week during 1958.

The superior maturity of the steel and auto industries, enviously referred to above, of course reflects their superior concentration of control. As Fortune magazine put it a while back, "to every major steel company, price competition means meeting U. S. Steel's prices." Exhortations are not necessary here. Yet the extraordinary discipline of the steel industry, holding the price line while furnaces are banked for lack of orders, merits further notice. Some steel firms have gone into the red, but no one has broken ranks.

Probably a sense of interdependence makes unnecessary the kind of tactics charged to nine steel companies in a little-noticed suit filed back in 1954. The Sunbury Wire Rope Manufacturing Co. complained that during the Korean war it had been warned by U. S. Steel and Youngstown Sheet & Tube that it would be wrecked if it persisted in underbidding the rest of the industry on Government contracts. It did underbid and it was wrecked, Sunbury said. According to the complaint, its customers were told that, if they dealt with Sunbury, they would get no steel and no orders from the major steel companies. The suit was settled out of court for about two-thirds of a million dollars and the idle plant was sold.

THOSE COMPETITIVE COMMUNISTS

The philosophy of lower production, higher prices has become almost unanimously accepted.

Last winter, the first closings of cement mills in twenty years were accompanied by another increase in cement prices. More mills shut down in March, and prices rose again.

The aluminum industry suddenly emerged last winter from a generation of shortages into an era of oversupply. It sold, and is selling, vast tonnages to the government under price-support guaranties made as an inducement to expand during and after the Korean War. In response to a slump in civilian demand it cut production, but it held the price line until April 1, when Aluminium, Ltd., of Canada effected the first price cut for aluminum since 1941. This forced the American industry to follow suit, and an American executive complained, as reported by the Times:

This is a good example of the havoc Russia can wreak in world markets. Although the Russians have been offering aluminum at the annual rate of only about 50,000 tons in Britain, their prices of one to two cents below the aluminum quotation apparently forced the Canadian concern to trim prices—and so we also have to cut in the much bigger United States market.

It is a curious development that Communist Russia should inject an element of price competition into a Western capitalist industry that has never experienced it.

SEMANTICS AND SECOND THOUGHTS

It is vain, probably, to quarrel with the morality of the prevailing business philosophy—or perhaps we should say reflex—on

UNIVERSITY OF MICHIGAN LIBRARIES

prices. It is, after all, the function of management to turn in a profit to shareholders, if possible. And when business generally is raising prices, no one company or industry can halt the tide; indeed, those sectors where the free market persists to some degree are in peril of being trampled.

Retailing offers a plethora of examples. In recent years, while the auto makers have been raising their prices, dealers have been forced by sales quotas and competition to cut their margins. The dealer mortality rate has been staggering. Back in depression times, organized retailers obtained passage of price-fixing legislation blandly called "fair trade" laws. (The semantics are intriguing. Nowadays "competition" is often preceded by the word "cutthroat," and "black market" and "free market" have become interchangeable.) Under "fair trade," dealers arrange with manufacturers to fix minimum retail prices on their goods, allowing a generous markup for all. Those who cut prices are haled into court as lawbreakers.

In recent years, however, a weakness has developed: Some judges did not care for the enforcement role, and the profit margins were so ample that a whole bootleg industry grew up to exploit it. "Fair trade" goods somehow seeped into "unfair" channels—notably discount houses. This February, mighty General Electric, its warehouses filled with appliances, abandoned "fair trade." Other appliance makers hastily followed. Prices went down as much as 40 percent in department and chain stores, which, if they did not make a profit on the items, were glad to bring shoppers in. Many small dealers, including many of the discounters who had started it all, helplessly quit the field.

Little noticed in the scramble was the fact that the manufacturers had not cut factory prices at all—in fact, some manufacturers actually raised them—and they unloaded a lot of appliances.

The tendency of business to seek shelter against the harshness of competition assumes the force of a natural law. Adam Smith recorded it nearly 2 centuries ago:

"People of the same trade seldom meet together, even for merriment and diversion, but the conversation ends in a conspiracy against the public, or in some contrivance to raise prices."

Hence, the administration's appeals to business and labor to exercise restraint have only caused raised eyebrows. For while businessmen and employees as individuals or in groups can do little about inflation, the Government can do, and is doing, a great deal. But most of its efforts have been in the direction of raising prices.

It spends billions to maintain farm prices and reduce farm production; it maintains tariffs that protect the high prices of a limited sector of United States business while depriving other United States producers of markets abroad; it buys minerals and stows them away to support the price level. In procurement, it prefers high United States bidders to low foreign bidders. Much of its enormous spending, accounting for nearly one-fifth of the Nation's consumption of goods and services, is done on a cost plus fixed fee or on a negotiated-contract basis. These methods of contracting reduce producers' cost consciousness and this tends to result in higher prices.

Private home builders, operating in a field of apparently unlimited demand and with the Government insuring them against loss, priced themselves out of the market long ago. As the Federal Reserve Bank of Philadelphia has observed, this went unnoticed for years because the debt was stretched out. On a 30-year mortgage, the monthly payment seemed extravagant but not impossible, especially if the inflation and boom were going on forever, as some economists, many politicians, and all salesmen believed.

But easy terms reached their limit. It was conceivable that buyers could be found to sign 40-year mortgages and 4-year auto loans, but with prices and interest rates up, the monthly payments suddenly became impossible. Housing and cars slumped, gradually dragging the rest of the economy with them.

The Government's response has been not to try to reduce the cost of housing—perish the thought—but to subsidize the mortgage lenders, raise their interest rates, and seek to overcome their sense of caution. Official standards of how much house a man with a given income can afford have always been optimistic. Now the Government offers to insure mortgages at which bankers blanch.

State and Federal policy on utility and transportation rates also tends to raise prices during a recession. The principle is that where rates are regulated they should guarantee a fair return on capital. No more, no less. In time of recession, when passenger and freight traffic and power consumption decline, the regulatory agencies are more or less automatically required to raise the rates. That this discourages business is beside the point.

During the postwar era of undreamed-of prosperity, the illusion has grown that a depression is impossible because the Government would not allow it. Furthermore, the layman has often been told by the expert that the Government now plays the role of a semiautomatic stabilizer in the economy.

Actually, the Government has played a highly contradictory role but, on balance, probably a destabilizing one. It threw its money and its credit behind the postwar boom and, rather than use the occasion to reduce debt, it encouraged States and cities, business and public to emulate it in deficit spending. The burden of supporting the Government has been gradually shifted away from favored businesses (through fast write-offs, inventory gimmicks, and other loopholes) and toward the consumer (through sales and excise taxes, for example). The Government has subsidized what has proved to be an overexpansion of industrial capacity.

To list the ways in which the Government promotes inflation is to suggest some possible countermeasures: abandonment of farm price supports as such (direct relief or subsidy would seem preferable); vigorous enforcement of the antitrust laws; a liberal, low-tariff trade policy; an overhaul of the philosophy of utility rate regulation; repeal of sales taxes.

One may doubt that exhorting businessmen further will serve any purpose. Apart from the fact that they are not, as individuals, able to shape the course of events, they have never been enthusiasts for the open welfare of the free market. In the words of the grim GI battlefield jest, "A feller could get hurt out there."

Democracy in Action

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. THORNBERRY. Mr. Speaker, recently the Giddings Public School in Giddings, Tex., which is located in the 10th Congressional District which I represent, sponsored an essay contest, the subject of which was Democracy in Action. In grades 5 and 6 the essay of Miss Jane Moody placed first.

Because of the nature of the subject, I feel that the Members of Congress will be interested in reading Jane's excellent essay.

Mr. Speaker, under leave to extend my remarks, I respectfully request that the following essay be inserted in the CONGRESSIONAL RECORD:

DEMOCRACY IN ACTION

(By Jane Moody)

To me the word democracy alone means freedom. But to see democracy in action we have to see the people going about their own ways without someone ordering them around.

Democracy is a great thing, but democracy in action is even greater. When we see people going about their own ways we see them going to the church of their choice, speaking freely, going to the school that they wish to go to, to name a few of the many examples of democracy in action.

Democracy begins in the home. The home is a very important place for democracy. The children grow up in the home. They could be taught democracy but they might not be. They could grow up to be good citizens but they might not. Therefore the home is important for democracy.

Democracy also means government of the people, by the people, and for the people. When we say government of the people we mean the Government is part of the people. When we say government by the people we mean the people make the Government. When we say government for the people we mean the Government is like the people want it. So as you see the people govern themselves. The people elect their own representatives to hold office.

We have a Government to keep and enforce laws which we, the people, make.

Then too, democracy means to me education. Each person has the right to have an education. They can go to elementary school and high school, then on to college. Then I would say they were educated.

The pledge to the flag is also a part of democracy. When we apply it, it becomes democracy in action. When we say it we are pledging that we will keep and obey the law that we the people make.

These things which I have written about are what democracy in action means to me and so in the words of Norman Wakefield let us make this freedom pledge.

"I am an American. A free American.
"Free to speak without fear.
"Free to worship God in my own way.
"Free to stand for what I think is right.
"Free to oppose what I believe is wrong.
"Free to choose those who govern my country.
"This heritage I pledge to uphold.
"For myself and all mankind."

Rumanian Independence Day

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of the following letter sent to me by Mihail Farcasanu, president of

the League of Free Rumanians. Mr. Farcasanu writes concerning the national Independence Day of Rumania, the celebration of which is now forbidden by the Soviets:

THE LEAGUE OF THE RUMANIANS,
New York, N. Y., May 8, 1958.

The Honorable ALVIN M. BENTLEY,
Representative from Michigan.

DEAR MR. BENTLEY: As you are aware the national independence day of Rumania, the 10th of May, cannot be observed any longer in that country, where the Soviet military occupation has suppressed it, imposing, instead, on the subjugated Rumanians the anniversary of their own enslavement.

We would be deeply grateful to you if you can mention in Congress the now forbidden day of Rumanian independence.

The free Rumanian principalities which, at the time of the Ottoman invasions of Europe, contributed so valiantly to the defense of Christianity, after being for a long period a battlefield, regained their independence in the 19th century. At the conclusion of the Crimean War, the Treaty of Paris, 1856, recognized the necessity for European equilibrium, to give international support to the Rumanian lands, a Latin barrier to the imperialist inroads from the East. This recognition was strengthened at the Berlin Congress, 1878, and at subsequent international conferences.

That the freedom of Rumania, together with that of other countries of Eastern Europe, was necessary for the balance of power on the Continent, has been fully evident since the establishment of the Soviet military occupation in that part of Europe. The idea that through the recognition of the Moscow installed stooge governments in the occupied area—thus indirectly acquiescing in the Russian conquest—the expansionist ambitions of the Soviet Union would be satisfied, has been proven a tragic illusion. The reconstruction of a Europe in which the subjugated countries will be reestablished as free and independent states, appears now as an indispensable prerequisite to world peace.

The 13 years of Soviet Communist occupation have greatly impoverished the country, victimized the population through political persecution and slave labor, while subjecting it to the oppressive schemes of sovictization. But while it is in the power of the occupant to destroy the body, the soul escapes him.

The reports we receive from Rumania, show the religious and nationalist feelings of the people are stronger than ever. The Marxist-Leninist indoctrination has not succeeded in gaining a hold on the youth. On the contrary the traditional attachment to the values of western culture has retained the same force on the minds of the young generation, while the aspirations and hopes for freedom constitute their main moral sustaining force.

Such are the facts which motivate the Soviet efforts of obtaining from the West recognition of the status quo, through a host of formulas like disengagement, Rapacki plan, equation of Warsaw, and NATO pacts' powers and cultural exchanges. Moscow is still in great need to demonstrate to the subjugated peoples the cooperation and friendliness between the Kremlin and Washington, in order to convince them there is no more hope for them from the West. This should be combatted by the United States which has a vital interest to preserve this important potential on their side.

Any message of hope and encouragement for Rumania's Independence Day will serve this purpose by helping the morale of her people, now suffering under Soviet domination. With all my gratitude.

Yours respectfully,

MIHAIL FARCASANU,
President, League of Free Rumanians.

Liberation Day, Ethiopia

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. POWELL. Mr. Speaker, on May 5, 1958, Ethiopia observed her 17th anniversary of Liberation Day. I wish to take this opportunity to extend warm and sincere felicitations to his imperial majesty Haile Selassie I, Emperor of Ethiopia, Mr. Kebbede Abbebe, chargé d'affaires ad interim of Ethiopia, and the Ethiopian people in recognition of that event.

The sovereignty and independence which Ethiopia had enjoyed from time immemorial were wrested from her by the forces of tyranny and totalitarianism during the recent world holocaust. Alone against a towering enemy, Ethiopia fought valiantly for its life and for the first time in 3,000 years she lost her independence. Thus, a short generation ago Ethiopia was the first victim of Fascist aggression, and Emperor Haile Selassie in his great speech to the League of Nations prophetically warned of the consequences of its failure to repel and punish Mussolini's assault.

Emperor Haile Selassie returned to his country on May 5, 1941—Liberation Day. In the years since liberation, Ethiopia has tenaciously striven to reconstruct the country by means of implementation of forward-looking policies which had been interrupted by the invasion and occupation. Realizing that the old ways, including the absolute monarchy, must yield, the emperor is trying to bring about an orderly transition. In 1955, Emperor Haile Selassie proclaimed a new constitution. It called for elections to choose a chamber of deputies. This major step toward democracy—the parliamentary elections of September 1957—marked the first election in Ethiopia's proud history.

The emperor's dream is to raise his 15 million subjects out of centuries of darkness into the light of modern, healthy self-sufficiency. He knows this will be a long, difficult road. Ethiopia has achieved a remarkable degree of economic stability in a very short period of reconstruction. There is a definite pattern of development in the country and while her progress along the uphill road is slow, it is steady.

The educational system is expanding. Six teacher-training schools are operating, as against one 6 years ago. In 1955, 1,000 students graduated from the eighth grade; in 1956, 2,000; in 1957, 3,000; and an even greater number is expected to graduate this year. Ambition for education has seized the people. A new agricultural college and farm, built and operated with United States assistance, has begun to change the face of the Ethiopian countryside. This is the 2-year-old Imperial Ethiopian College of Agricultural and Mechanical Arts. The million-dollar college was designed and built by Americans under the United States technical assistance program. Operation costs are jointly shared by the United States and the Imperial Government of Ethiopia. There exists a real thirst for knowledge. In the several educational programs conducted by the United States mission of Ethiopia—public health, nursing, vocational training, teaching—more applicants have been turned away than have been accepted because of the lack of facilities.

Ancient Ethiopia is gradually moving into the modern world under the active guidance of Emperor Haile Selassie. He is anti-Communist, a believer in collective security, and a friend of the United States. When the Communists struck in Korea, the emperor, true to his principles, sent troops from his imperial bodyguard which effectively contributed to the fighting forces there. Two years ago in the Suez and Hungarian crises, as on many other key issues in the United Nations, Ethiopia supported the United States position. We have for long enjoyed close and friendly relations with the Ethiopian Government and people based on mutual esteem and respect for each other's traditions.

Professor Wood and Missouri

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. CHRISTOPHER. Mr. Speaker, another great and notable Missourian, Prof. R. F. Wood, Central Missouri State College, is reaching an advanced milestone in his distinguished career.

It has been my pleasure and privilege to personally know Professor Wood for a number of years. In my opinion, no man in the State of Missouri stands higher in the teaching profession. The influence of Professor Wood's teachings, coupled with the example of his upright life and wonderful personality, will extend through many decades yet to come.

In his love of God and unswerving faith, his love of country and his outstanding patriotism, he has no superior. He has not only taught his pupils but has led them in their preparation for the battle of life. The example of his life extending over his long term of service at Missouri State Teachers College will ever remind me of the words of Oliver Goldsmith:

"And, as a bird each fond endearment tries
To tempt its new-fledged offspring to the skies,
He tried each art, reproved each dull delay,
Allured to brighter worlds, and led the way.

* * * * * *

"As some tall cliff that lifts its awful form,
Swells from the vale, and midway leaves the storm.
Though round its breast the rolling clouds are spread,
Eternal sunshine settles on its head."

Such a man is Professor Wood—may God lengthen his days and minimize his sorrows.

In connection with Professor Wood's retirement, Dr. George S. Reuter, Jr.,

UNIVERSITY OF MICHIGAN LIBRARIES

Holden, Mo., has written the following article which I take pleasure in extending in the RECORD, and also in commending it to my colleagues, especially those from Missouri:

PROFESSOR WOOD AND MISSOURI

(By Dr. George S. Reuter, Jr.)

Last year Dr. A. G. Capps of the University of Missouri reached retirement age and much was said concerning his years of service to Missouri. Once again a situation arises in which all Missouri is interested. Yes, and people and institutions throughout America feel a keen concern. The reason this year is the forthcoming retirement of Rolla Franklin Wood, professor of history and international relations at Central Missouri State College for the last 31 years.

Professor Wood is to Missouri what the late Dr. William Bell Riley was to Minnesota. The First Baptist Church of Minneapolis was organized March 5, 1853, and it became the largest Baptist church in the Northern Baptist Convention under the leadership of Dr. Riley.

Mr. Wood, who resides at 121 West North Street, Warrensburg, Mo., was born April 20, 1888, at Curtis, Nebr. He was the son of James M. and Laura Bell (Rader) Wood. He received his bachelor's degree in 1920 from Central Missouri State College and his master's degree in 1925 from George Peabody College for Teachers. He did additional graduate work at the University of Virginia, Peabody, and Columbia University.

He married Miss Minnie Edwards of Winston, Mo., who passed away during the last year. They were parents of two fine children, Janet Sue Wood and Don Edwards Wood. He was superintendent of schools of Pattonsburg, Mo., from 1920 to 1923, principal of the high school at Bessemer, Ala., 1923–27, and a member of the faculty at Central Missouri State College since 1927.

Professor Wood is a deeply religious man and has often preached in the Methodist church. Recently, Dr. Wilton Marion Krogman of the department of anthropology of the University of Pennsylvania, issued "A Decalog of Race," often referred to as "The Ten Commandments." Professor Wood ascribes to this point of view as do all broad-minded Americans. It is as follows:

"1. Thou shalt not bow down before the false god of racial superiority.

"2. Thou shalt not boast that only thy race is pure.

"3. Thou shalt not preach that whole races are at different levels of physical development.

"4. Thou shalt not attach importance to color of skin, or other racial traits.

"5. Thou shalt not establish racial groups as fixed and unchangeable.

"6. Thou shalt not, to the detriment of thy neighbor, assert that cultural achievements are based on racial traits.

"7. Thou shalt not hold that there are racial personality traits that are inborn, or inherited.

"8. Thou shalt not look down upon they brother because his appearance differs from thine.

"9. Thou shalt not because of a man's different religion or nationality, say that he belongs to a different race.

"10. Thou shalt faithfully and sincerely act on the foregoing admonitions and then, indeed, thou wilt love thy neighbor as thyself."

Mr. Wood has been active in promoting international goodwill by instilling in the hearts of his students a deep concern for a sound foreign policy. He has been able to demonstrate some of the principles he believes by being a three-time member of the city council of Warrensburg, Mo., and a member of the Missouri State Constitutional Convention of 1943–44.

One of the most delightful trips the writer ever took was to a Phi Sigma Pi meeting in Atlantic City in February 1941, which was under the direction of Mr. Wood. Mr. Wood was president of this national organization in 1928, and has been active in Phi Delta Kappa, the Masonic Lodge, Knights Templar, Rotary International, NEA, Missouri State Teachers Association, Mississippi Valley Historical Society, National Council of Social Studies, Warrensburg Chamber of Commerce, and American Academy of Political and Social Science.

It is doubtful that any Missourian has traveled more in the name of historical travel than he has. Quite often he tells the members of his class the direct positions the various armies took in the battles of the Civil War, data that could only be understood by him after visiting these battlefields many times.

In some respects Professor Wood reminds me of Dr. John R. Rice. Both are in agreement as to the desirability for a sound Christian faith. Both would oppose the concept of a professional man without adequate morals and proper ethics. Dr. Rice is termed the preacher's preacher and Professor Wood could also be termed the teacher's teacher.

Recently in one of his excellent TV programs entitled "Listen to Youth," Mr. Charles S. Wehrer, Jr., associate professor of elementary education at the State Teachers College, Minot, N. Dak., gave "A Teacher's Prayer." Professor Wood is nearing the end of his teaching career and fits in very nicely to the basic concepts of this prayer which is as follows:

"Oh, God, make me a better teacher. Help me to understand my pupils, to listen patiently to what they have to say and to answer all their questions kindly. Keep me from interrupting them, talking back to them, and contradicting them. Make me as courteous to them as I would have them be to me. Give me the courage to confess my sins against my children and to ask of them forgiveness, when I know that I have done them wrong.

"May I not hurt the feelings of my children. Forbid that I should laugh at their mistakes or resort to shame and ridicule as punishment. Let me not tempt a child to lie and steal. So guide me hour by hour that I may demonstrate by all I say and do that honesty produces happiness.

"Reduce, I pray, the meanness in me. May I cease to nag; and when I am out of sorts, help me, oh Lord, to hold my tongue.

"Blind me to the little errors of my children and help me to see the good things that they do. Give me a ready word for honest praise.

"Help me to treat my pupils as those of their own age, but let me not exact of them the judgments and conventions of adults. Allow me not to rob them of the opportunity to wait upon themselves, to think, to choose, and to make decisions.

"Forbid that I should ever punish them for my selfish satisfaction. May I grant them all of their wishes that are reasonable and have the courage always to withhold a privilege which I know will do them harm.

"Make me so fair and just, so considerate and companionable to my children that they will have a genuine esteem for me. Fit me to be loved and imitated by my children.

"With all thy gifts, oh God, do give me calm and poise and self-control."

Professor Wood and Missouri stand side by side. My only regret is that all America and the nations of the world are not completely acquainted with this dedicated person. Professor Wood has given so much that all mankind should arise and say together, "Thank you, sir, for doing so much."

Guns to Butter

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1958

Mr. BREEDING. Mr. Speaker, there appeared in the Wichita, Kans., Eagle, on April 19, 1958, an editorial which I consider worthy of the attention of the membership of this body; agricultural and industrial representatives alike.

The editorial points to current speculation that Russia is preparing to cut back its defense expenditures in an effort to bolster its reportedly lagging food and fiber production.

Statistically, we learn from the article that although some 52 million Russians are employed at cultivating 480 million acres of land, food shortages are prevalent in the U. S. S. R. While, on the other hand, here in the United States where only 6 million farmers are cultivating about half the number of acres being worked in Russia, or about 260 million, we have enormous agricultural production surpluses.

Whether one considers the story these statistics tell a blessing or a curse, I think they paint a picture highly complimentary to our American farm economy. The American farmer today is producing on the basis of agricultural scientific advances more food for consumption and fiber for clothing than our closest world competitor, and thereby contributing greatly to our higher living standards.

The editorial follows:

[From the Wichita (Kans.) Eagle of April 19, 1958]

GUNS TO BUTTER

If ever a tribute was paid to the farmers of America, it came in current speculation that Russian Dictator Khrushchev is prepared to cut his defense budget in an effort to match United States farm and ranch production.

This might even be a reason he is pressing so hard for summit conferences and other tension reducers.

The great disgrace in the Communist enterprise is its lagging farm segment. Although 52 million Russian peasants are employed cultivating 480 million acres, food shortages continue.

This is particularly embarrassing for the Communists because it matches abysmally with the United States where 6 million farmers cultivating 260 million acres have us knee-deep in enormous surpluses of grain, butter and other products.

In fact, if Russia hadn't been able to rob the farms of its east European satellites the past 13 years, there is no telling how serious their food shortage would be.

Khrushchev boasted recently that soon Russians will be better fed and clothed than Americans. But the amazing fact is that Russian meat herds are not much larger than they were when the last czar was killed more than 40 years ago. And an estimated 10 million Russians died of starvation during World War II.

Here is one of the greatest paradoxes of our times:

A backward country industrially, Russia has caught up with us in some lines, as the sputniks showed. Yet we, the industrial giant, have continually outstripped her in the very field of agriculture that was supposedly her base for growth.

Agriculture at Its Highest Level in Oskaloosa, Iowa, Area

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. LECOMPTE. Mr. Speaker, all of us are familiar with the old adage that prosperity on the farm insures prosperity throughout the whole country, and the best encouragement we have today that the present lag in industrial economy will be of short duration is the fact that agriculture in the midwest is showing strength. This was exceptionally well illustrated in the May 12, 1958 issue of Time magazine, which selected Oskaloosa, Iowa, in the district I have the honor to represent in Congress, as typical of the comeback being made by towns and cities in the farming areas of our Nation.

Oskaloosa sometime ago was designated as the typical midwest city. In this area agriculture is at its highest level. There is adequate industry affording considerable employment within the city and Oskaloosa has very fine educational facilities, with two privately endowed colleges—William Penn College at the north edge of Oskaloosa and Chicago Evangelistic Institute in a little municipality of its own known as University Park, adjacent to Oskaloosa. The city has not made spectacular growth, but through the years has held its own and kept pace with developments along all lines.

As cities go, Oskaloosa is rather small, but the opportunities offered here are very large.

Under leave to extend my remarks in the RECORD, I ask unanimous consent to include Time's article on Oskaloosa.

The article follows:

BOOM TIMES

The best economic news in the United States last week, bar none, was the boom in United States agriculture. From all over the country reports trickled into Washington showing that the farmer, after being the lowest man on the economic totem pole since 1955, is making an astonishing comeback. Agriculture Department experts scarcely dared believe some of their own figures. As of mid-April, the prices that farmers get are up 9.8 percent over the same time last year. The prices they pay are up, too—some 3 percent. But the net improvement is pushing their annual income to $13 billion versus $11.5 billion last year.

Moreover, the picture in individual farm commodities is even brighter. Items:

Thanks to a brisk competition between steak-hungry consumers and farmers trying to rebuild their drought-depleted cattle herds by holding back or buying up heifers, beef prices were running 30 percent above last year, spreading joy from Texas to the feed lots of Kansas City.

Hogs were up 20 percent above last year and holding long after most farm economists expected a seasonal price break; many counties in the corn belt reported the most favorable corn-hog ratio in history—up to 25–1. (Usual make-money point for hog raisers is when 1 cwt. of live hog sells for 12 bushel of corn.)

Even the egg—a big thing from California to Delaware—was selling for 25 percent above last year, so high that many poultrymen feared consumers might rebel.

Partly because of the Florida freeze, but also because of continued high food demand from city folks, fresh vegetables were selling 40 percent higher than last year.

And the once heavily subsidized potato was selling, unaided, more than 150 percent higher, carrying the new farm prosperity all the way up to Maine's Aroostook County.

MAIN STREET EVIDENCE

But as far as the general United States economy was concerned, the best evidence of farm recovery was on the main streets of farm towns. In Oskaloosa, Iowa, a typical Midwestern farm market town (population 11,000), where farmers long were sullen and resentful over drought and low farm prices, Time correspondent Jonathan Rinehart found cash registers jingle-jangling more merrily than in years. Manager Ernest Dilley of the Thriftway Supermarket reported that farm wives, in a delicate shift in buying habits, suddenly had taken to buying cake mixes, scorning the economies of blending their own. Manager John Liley of the local J. C. Penny store gloated: "We had the best April we've ever had." Predicted Mrs. Gilbert Howarth of Howarth Sales & Service: "Last year we sold 15 air conditioners. This year we expect to sell 20. And that's not bad when you consider there are eight other stores in town where you can buy them."

Chevrolet Dealer Robert Knoepfler sold 15 new cars and trucks in April, cleared out 25 used ones. At first he figured that he had simply cut into his competitors' business. Then Clay Carriker, manager of Greene's Ford, said that his new-car sales for the past 60 days were 20 percent ahead of 1957, used cars 30 percent; high-priced new trucks were slow, but lower priced used trucks were hot. Another major beneficiary of the farmer's new-found prosperity was the farm-machinery business. Owner Don Berkemeir of the Lytle Implement Co. reported that he sold 25 new tractors so far this year, drew groups of up to 25 farmers at a time to his showroom to view the latest in mechanical hay balers. "Business," said Berkemeir, "is within a few dollars of double last year." Used tractors taken back as trade-ins scarcely stay in the shop long enough to be oiled and repainted. Fresh from selling off 160 head of feeder cattle, Farmer Bill Hynick, 45, dropped by recently, plunked down $1,950 for a 2-year-old model. "I've been thinking of buying for a couple of years," said Hynick. "Until now, I couldn't do it."

Not only has returning farm prosperity benefited virtually every Oskaloosa business (lumber dealer Jim Mathew figures his sales are up 50 percent, due largely to farmers fixing up the old home place or repairing the the barn), but it has brought a flock of new civic improvements in progress, for example, 3 new schools, a $200,000 bowling alley and and amusement center. Two years ago Oskaloosa, hungry for an industry payroll to offset the setbacks to farming, almost landed an American Chain & Cable Co. plant, but at the last minute lost out. Putting its finger on the reason, the Iowa Development Commission said: "Poor community attitude." Last week a commission pulse feeler passed through, asked a workman in overalls what he now thought of Oskaloosa. "Best damned town in Iowa," the workman roared.

BACK ON HIS FEET

Oskaloosa's good fortune was not unique. The Central Iowa Farm Business Association completed its annual report on 153 representative farms, reported net income in 1957 averaged $11,200, or 32 percent over 1956's $8,467 and more than 2½ times 1955's low of $4,235. For a national view, the Farm Journal polled its regional correspondents, found business noticeably better in every section except the Southeast, where rowcrop farmers have been hit by weather and acreage cuts, but livestock and poultry farmers are prospering.

Having recently been through the mill, most farmers were being prudent with their new prosperity. In Fresno, Calif., heart of the San Joaquin Valley machine-farming area, Julius Neilsen, Bank of America farm-loan representative, said: "I never saw so many farmers come in ahead of time and pay off their loans." The Iowa Life Insurance Co. reported its sales to farmers through April were up 78 percent over last year. And, said Red Oak Agent Stanley Fagerland: "When the farmer gets around to buying life insurance, you know he is getting back on his feet."

Congressmen Get Public's Own Ideas of Foreign Aid

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to an article which appeared in the New York Herald Tribune of Monday, May 5, by Roscoe Drummond, entitled "Congressmen Get Public's Own Ideas of Foreign Aid." In his column Mr. Drummond refers to the efforts of two distinguished members of the Committee on Foreign Affairs, Representative A. S. J. CARNAHAN, Democrat of Missouri, and Representative CHESTER E. MORROW, Republican of New Hampshire, to disseminate the facts concerning the foreign-aid program. In so doing, they traveled some 15,000 miles to 36 cities in 25 States. During the recent hearings on the Mutual Security bill, they repeated their presentation to the Committee on Foreign Affairs. The committee took the unprecedented step of adopting the following resolution of commendation:

Resolved, That the Committee on Foreign Affairs hereby expresses its thanks and deep sense of appreciation for the outstanding work and efforts of two valued colleagues, A. S. J. CARNAHAN of Missouri and CHESTER E. MORROW of New Hampshire, who have given unstintingly of their time in disseminating factual information concerning United States foreign policy and the mutual security program to the American people; and be it further

Resolved, That the Committee on Foreign Affairs commends Representatives CARNAHAN and MORROW for the excellence of their factual presentation of information concerning the mutual security program and requests that their presentation be repeated in the

UNIVERSITY OF MICHIGAN LIBRARIES

House of Representatives during the forthcoming debate on the Mutual Security Act of 1958.

The text of Mr. Drummond's column follows:

CONGRESSMEN GET PUBLIC'S OWN IDEAS OF FOREIGN AID

WASHINGTON.—Very soon now, Congress is going to hear from the grass roots as to what a large cross section of people really think about the mutual security program and economic aid.

It will be a rather surprising report. It will be delivered in person on the floor of the House by two highly respected members of the Foreign Affairs Committee, Representative A. S. J. CARNAHAN, Democrat, Missouri, and Representative CHESTER E. MERROW, Republican, New Hampshire.

Congressmen CARNAHAN and MERROW have earned their credentials. They know what they are talking about and they didn't learn it from a Government handout or by reading public opinion polls or by sitting behind their desks in the House Office Building.

Over several 2-week periods since the opening of Congress they have been traveling and tromping across the whole country talking with people, listening to people, asking questions, answering questions, and providing facts about the foreign-aid program in order that their audiences could make up their minds on the basis of the facts.

During this period they have traveled 15,000 miles to 36 cities in 25 States, made 90 platform appearances, appeared on 33 TV shows, delivered 31 broadcasts and held 28 press conferences.

And shortly, when the mutual-aid bill comes to the floor, they are going to tell Congress what they heard and what they found. They will do it at the request of the Foreign Affairs Committee. It will be an unusual procedure in that Mr. MERROW and Mr. CARNAHAN will reenact for the whole House one of their typical question-and-answer sessions with a typical grass-roots audience.

Anyone talking with Congressmen CARNAHAN and MERROW can see why their audiences liked to question them and listen to their answers. Neither is a Bryan or a Dale Carnegie. They are as unpretentious and solid and authentically American as doughnuts and a sharp single through shortstop. Both are former schoolteachers, one in the social sciences and the other in physical sciences. They are accustomed to offering facts in answer to questions, so that the questioner can better think for himself. One night they went on a disc jockey show for 30 minutes and ended up answering telephoned questions for 3 hours.

What they found was this:

That the foreign-aid program is just about the most misunderstood thing in the whole United States—more misunderstood than the sack, the dismal showing of the Los Angeles Dodgers, or Enstein's $E=MC^2$.

That when the people get the facts in their hands about the real results of the program—the way it strengthens the defenses of the United States and helps our own economy as well as other economies, they favor it overwhelmingsly and want to see it carried forward.

That many critics of mutual security are absolutely flabbergasted to learn that the United States never did build showerbaths for Egyptian camel drivers, or send striped pants to Greek undertakers, or penguins to the king of Saudi Arabia—that these are simply tall tales made up by those who try to show that economic aid is a senseless giveaway.

That while their audiences wanted hard, factual answers to practical questions—and got them—Congressmen MERROW and CARNAHAN were impressed by the number of people who, quite apart from self-interest, believed it was morally right for America to help others help themselves.

That after the facts of the foreign-aid program had been set forth, they never found more than 5 percent in any of their many audiences who were against continuing the program.

The House Foreign Affairs Committee has just approved this year's mutual-security legislation with a cut of $339 million in the appropriations ceiling. But the real test is still ahead in the appropriaitons committees, and in the Senate.

The judgment of Representatives CARNAHAN and MERROW is that Congress will do what the American people want if they make their voices heard.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

Appendix

This Is My Heritage

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. JOHNSON of Texas. Mr. President, an old friend of mine, Mrs. Roy E. Dealy, a teacher in the Charles H. Milby Senior High School, has sent me a copy of an inspiring essay written by one of her students, Carol Couch.

Carol is 16 years old and a junior in high school. She chose as her subject the heritage that is hers as an American.

Of this essay, Mrs. Dealy wrote me:

I thought you might be interested to know that our national and local spirit in America are still very high.

I am indeed glad to have such evidence of this as the essay by Carol Couch. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THIS IS MY HERITAGE

(By Carol Couch)

My life began when the lives of so many others were ending so horribly. The world that I came into was resounding in frightful screams. Unlike the crying of a helpless baby, the screams and cries were those of nations—equally as helpless. The time I speak of is World War II. As a tiny baby, I knew nothing of the strife and anxiety which existed around me. Slowly, relentlessly the enemy swallowed up the helpless nations that stood in its path; and with each step it took, it became more and more a threat to my own America. Husbands, fathers, sons—the men and strength of our Nation passed in a never-ending stream across the waters of our world. The world trembled with the clash of metal and cries of agony. Then abruptly it was over.

Quiet enveloped the earth. It was the quiet of a tomb, the quiet of a home where the tennis racket of a teen-age son stood in the corner—never to feel the touch of his hand again. It was the quiet of a clouded day when no sweetheart's laughter would bring sunlight into the gloom. The stream had begun again—this time in reverse, and much slower. Some returned unharmed, some on crutches or stretchers. There were those who returned in flag-draped coffins, and those who returned not at all. Wounds of the flesh heal quickly, but those of the heart and soul are much slower. After living in fear and hate for so many years, we had to learn the ways of peace.

Slowly we began our task. As war had changed the land, it had changed the people too. We began, by degrees, to return our land to what it had been. Our industries boomed. Our inventions and discoveries raised our standard of living. The luxuries we produce have made our homes more and more comfortable. We are a nation of prosperity, but not one of neglect. We have not forgotten war. Each year we spend billions to insure that if another war comes, we will be prepared.

This is my heritage. This Nation, to which I was born when its life was threatened, is mine. Its hills and valleys are mine. The sunlight shining on its rippling waters and its fields of waving wheat are mine. The dainty wildflowers that make a rainbow across the green of its meadows are mine. They have been watered with the blood of our soldiers and the tears of our women. They too are mine. I pray to our Heavenly Father that I shall never forget what price was paid for my heritage. It is my responsibility to remember—to remember my privilege and my heritage.

Address by Col. William McIntyre, President-Elect of the Society of the American Legion Founders

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the address delivered by Col. William H. McIntyre, president-elect of the Society of the American Legion Founders, at the 39th anniversary of the St. Louis caucus, on May 10, 1958, at St. Louis, Mo.

As a commentary on the American Legion's past role and the challenge with which it is faced in the future, this address is well worth consideration by every veteran regardless of whether he belongs to the American Legion.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS MADE BY COL. WILLIAM H. MCINTYRE, PRESIDENT-ELECT, SOCIETY OF THE AMERICAN LEGION FOUNDERS, AT THE 39TH ANNIVERSARY OF THE ST. LOUIS CAUCUS, ST. LOUIS, MO., MAY 10, 1958

My fellow Americans, once more we are observing a day of remembrance. Two months ago a birthday of the American Legion was celebrated. Today we are gathered here to commemorate a caucus which was the cradle of this great veteran organization, the American Legion. We, of the society, have kept alive the spirit which prompted its foundation. As we enter our 40th year, have we followed out the precepts as outlined in the preamble to the constitution of the American Legion?

The work of the American Legion is a beautiful story from the founding days in 1919. Looking at the record the Society of American Legion Founders has given freely of its time and funds and it can point with pride to its contributions to the many activities of the Legion. But is that enough?

In our society, the membership shows ambassadors to foreign countries, Governors of States, Members of both Houses of the Congress, judges in high courts, captains of industry, railroad and bank presidents, and insurance executives. I could go on but you all know that an unusually large percentage of our members have held positions of trust.

The American Legion is a household word throughout our great country. It is the community center of patriotic, civic, and in many cases, social activity. It uses its strength to promote the interest of the defenders of America. It has put a high premium on patriotic service in the military forces during the time of war. It has championed adequate care of disabled veterans and the protection of war widows, orphans and dependent parents. Another monumental contribution to the national welfare of our country was it sponsorship of the GI bill of rights for World War II and Korean war veterans. More than 10 million veterans went to college under these bills.

Child welfare, youth training, Boy Scouts, baseball, oratorical contests, national preparedness, and community service are some of its many interests. It has been a foremost and militant opponent to communism.

Many in our society are members of national commissions and committees. Ours is the responsibility of continued leadership.

My presence here as a speaker is but incidental. You are here, not as observers or listeners, but as participants in a ritual of personal and national remembrance. My task has been to place in words some of the thoughts and feelings which I hope are common to all of us. I salute each one who has been impelled through his own inner convictions to be here to commemorate this memorial day in a way which seems most proper and fitting.

From about 500 who attended the Paris caucus and 1,100 who attended the caucus in this city, our membership has dwindled to about 200. This we realize is due to time. We are all going along in years and traditions send our thoughts down memory lane of history accomplished.

It is my opinion that even a greater chapter in American Legion history remains to be written, since, after all, the organization is only 39 years old. The American Legion has grown into a three-war organization of such dimensions in manpower, influence, and grassroots stability, that its future contributions to community, State, and Nation will dwarf its record of service since 1919.

But the great future destiny of the American Legion does not lie in nationwide concepts. It rests upon the vision of Legionaires everywhere and what they do locally as enthusiastic individuals and as work groups for their own communities.

The key to this vision is the spirit of community service. For building good, and constantly improving, local neighborhoods is the most solid foundation for strong States and an invincible Nation.

In the spirit of community service lies the great promise of tomorrow for the American Legion. In fulfilling that promise, the American Legion can make its proud boast of a grand prelude to an immeasurable great future.

UNIVERSITY OF MICHIGAN LIBRARIES

Today we are living with an H-bomb literally suspended over our heads. An H-bomb that bears the symbol of the hammer and sickle of world-conquest bent communism. At the same time we are confronted at home with a galvanized Red fifth column that has gained a new lease on life because of recent court decisions through technical rather than logical interpretations of the law. These aggressive forces within our midst are day by day raising the cost of setting up and defending America. Few citizens today have the intestinal fortitude to speak up for what they believe is right because it is easier and much less painful to remain silent. This is the challenge that faces every dedicated and patriotic American today.

The salvation of our Nation depends upon a great new rebirth of a dynamic conviction of Americanism. We must translate that conviction into positive steps whatever personal sacrifices this might entail.

Our goal should be to bring up a new generation of Americans whose word again will be as good as a gold bond, whose national pride is based on the knowledge and preservation of our very institutions, who understand the need for safeguarding and preserving every cherished American freedom and right, and who will be young men and women with the moral courage to speak up and defend their personal beliefs and national heritage.

This is a special day, a rallying day to rededicate ourselves to keep alive the memories of those who participated in the founding of our great American Legion.

Therefore, we shall build American strength, because in that direction alone lies the perpetuation of our liberty and the last best hope of freedom for all mankind.

The Inner World of Space—Importance of Action on the MURA Acceleration at Madison

---

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 12, 1958

Mr. WILEY. Mr. President, mankind is today engaged in a historic adventure into space. This adventure is twofold: (a) An adventure into outer space; and (b) an adventure into inner space.

As a member of the Senate's Special Committee on Outer Space, I have previously pointed to some of the implications of our earth satellite and related programs. But today I refer to a race which is just as important, indeed, perhaps infinitely more so. I refer to man's unlocking the mysteries of inner space through high-speed accelerators—the new and more powerful versions of the old atom smashers which first proved, more than two decades ago, that enormous amounts of energy might be released when atoms are split.

High-speed accelerators are big news, not simply to the physicists and other scientists, but to the world as a whole. For who knows what secrets they may reveal which will utterly change our concept of matter, and which may utterly break through present barriers fronting men's minds?

In the New York Times of this morning, May 12, there is a front-page story about the high-speed accelerators. This article, however difficult it may be for us laymen to comprehend, points to as significant an adventure as any which is now occurring anywhere in this land.

RUSSIA HAS BIGGEST ACCELERATOR

A few highlights of this article are:

First. The world's biggest accelerator is, unfortunately, not in the United States; it is in the Soviet Union.

Second. The biggest accelerator in the United States is the Bevatron, of the University of California, in Berkeley.

Third. But the most promising of all proposed American projects, one which will dwarf the bevatron of California, is the famous MURA project sponsored by the Midwest Universities Research Association, for this MURA project will provide the equivalent of 540 billion electron volts in collision.

TWO NOTED MURA LEADERS

Fourth. The designer of the proposed MURA accelerator is Dr. Keith Symon, a physics professor at the University of Wisconsin, who is technical director of MURA. I was pleased to have Dr. Symon in my office recently, and to have him give me the latest account of the progress toward the realization of the MURA project. Accompanying him was another distinguished leader, Dr. R. O. Rollefson, director of MURA, and also a professor of physics at Madison.

Fifth. In my judgment, no finer home for the accelerator could be established than in the Midwest universities, and in one university particularly, I may say with pride which I feel is pardonable, the University of Wisconsin, a real home of free inquiry. It is, in my judgment, far preferable to a Government laboratory, as such; that is, a laboratory staffed and controlled entirely by Government personnel answering to higher Government personnel and carrying out perhaps an overly rigid, not flexible, Government program.

Sixth. A further fact developed in this article is that so far MURA programs have almost been starved for lack of funds.

The office of MURA is on the second floor of a 40-year-old converted garage on University Avenue in Madison. There is no window, only a skylight, but here the brilliant minds of dedicated men of the Midwest and from elsewhere are marshaling for this great adventure into inner space.

Seventh. I wish I could indicate that all of the Federal Government agencies with appropriations available have displayed a sympathetic, encouraging attitude toward the 540-bev accelerator, as it is known.

A great many Federal Government officials have been most enthusiastic and cooperative. Others, I say frankly, rather less so.

These latter seem to prefer tightly controlled Government laboratories, exclusively, rather than university laboratories' greater freedom of action. But the past is past; it is the future that counts.

WORLD SCIENTIFIC COOPERATION ON ATOMS FOR PEACE

Eighth. A further fact that I should like to point out is that the scientists of many nations are now at work on parallel paths in this probing of what are now estimated as the 30 elementary particles of the atom. For example, a Japanese physicist, working with MURA, as pointed out in the Times article, has made most interesting comment with regard to the project.

I earnestly hope that from the universities of other countries—from the genius of France, England, Italy and other lands—will come the essential cooperation with our university and other laboratories that will make it possible for man to proceed with maximum efficiency in this adventure to inner space.

This is part and parcel of the International Science for Peace Program to which I have previously referred. Let us welcome the free flow of data for peaceful uses, among the scientists of the free world.

FRENCH ATOM CHIEF HEADS 1958 ATOMIC CONFERENCE AT GENEVA

Apropos of such cooperation, from September 1 to 13, there will be held in Geneva the second Atoms for Peace Conference. Already 2,300 abstracts have been submitted.

President of the conference will be Dr. Francis Perrin, French High Commissioner for Atomic Energy. Secretary-General will be Dr. Sigvard Eklund, head of the Swedish Atomic Energy Commission. An interesting interview with Dr. Eklund may be found in this months' issue of Forum Memo, published by the Atomic Industrial Forum.

I may say that back in 1955, I had been pleased to edit a Senate document, entitled "Atoms for Peace Manual" which was well received at the first Geneva Atoms Conference, and by the United States State Department and United States Information Agency.

I salute now the scientists of MURA and wish them well in their great undertaking.

I ask unanimous consent that a brief listing of my earlier statements in the RECORD on the MURA project and the Times biographical notes on Dr. Symon, be printed in the appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

SENATOR WILEY'S PREVIOUS CONGRESSIONAL RECORD STATEMENTS REGARDING MURA PROJECT

February 28, 1957, pages A1594–A1597.
August 23, 1957, page A6991.
January 13, 1958, pages A172–A173.
February 19, 1958, pages 2039–2041.

[From the New York Times of May 12, 1958]

A SOUND ATOM SMASHER

(Keith Randolph Symon)

MADISON, WIS., May 11.—Dr. Keith Randolph Symon, whose dream is to build the world's largest atom smasher, is a sound man.

The term, a colleague explained, means that when he comes up with an idea, chances are that it will be right. "And that," his colleague remarked, "is mighty important when you are dealing with hundreds of millions of dollars." At the age of 38, Dr.

Symon is a physics professor at the University of Wisconsin and technical director of the Midwestern Universities Research Association, known as MURA.

He is relaxed to the point of seeming diffidence. His coworkers describe him as the acme of level-headedness and reasonableness, and a theorist with an unusual amount of experimental experience.

Dr. Symon, a square-jawed, husky man, is a former Sea Scout skipper (equivalent of a land scoutmaster). He has built an 8-foot Eskimo-type kayak with room for himself and the smaller of his 4 children (2 boys, 2 girls). He paddles the kayak on Lake Mendota, 1 of Madison's 4 lakes.

AN OUTDOOR FAMILY

The Symons are an outdoor family, and often swim and picnic together.

Dr. Symon possesses a green thumb and, despite heavy shade, has raised a brilliantly green lawn that is the envy of the neighbors.

He is a moderate devotee of the home workshop, hi-fi (traditional classical music) and home movies. His home reading is mostly of scientific material. He wishes he had kept up with his tennis.

He's, however, a star on the physics department baseball team and can pilot a plane.

A current project is teaching himself Russian at home.

His manner is impassive until he warms up. Then he displays a quick sense of humor. He can explain his field to a layman in simple language without patronizing the listener.

His MURA office is on the second floor of a 40-year-old converted garage on University Avenue. The first floor is a jungle of equipment and machine shop tools. His office is closet-sized. The floor slants. There is no window, only a skylight. But there is the trademark of the atomic scientists, a blackboard covered with cryptic equations.

Dr. Symon ranks high among the designers of giant accelerators. But his reputation will not be firmly established until the MURA machine has been built—the Atomic Energy Commission and Congress willing.

However, there can be no question so far that this young scientist has moved steadily forward in an exacting field.

He was born in Fort Wayne, Ind., the son of a printing company owner, and grew up in Terre Haute, Ind.

He went to Harvard to become a lawyer, but turned to science after taking a sophomore physics course under Profs. Wendell H. Furry and Jabez C. Street. He is a Phi Beta Kappa.

Dr. Symon's A. B. degree was in mathematics and philosophy (chiefly logic). But he had studied enough physics credits to be a physics major, too.

TWO HARVARD DEGREES

He won his master of arts and doctor of philosophy in theoretical physics at Harvard in 1943 and 1948 respectively.

He married the former Mary Louise Reinhardt of Wheaton, Ill., a biology major at Radcliffe in 1943.

During World War II he was in the Naval Research Laboratory in Washington, first as a civilian and then as an ensign.

While teaching at Wayne University in Detroit in 1954 he conceived the design for the $100 million atom smasher. He came to Wisconsin in 1956.

Dr. Symon would like to see interuniversity scientific cooperation developed further. His ideal is a small permanent staff connected with the university and in close touch with graduate students. He would supplement this by a larger rotating staff of scientists who would be detached for a year or two from their regular academic duties at Wisconsin and other MURA universities.

Viewpoints on Defense

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. MARTIN of Pennsylvania. Mr. President, it is good for the Nation that the people are taking an interest in the reorganization of our Armed Forces. Regardless of our personal feelings, we should encourage consideration of that important subject.

The Pittsburgh Press of May 7 contained an able editorial entitled "Viewpoints on Defense." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VIEWPOINTS ON DEFENSE

Today we have the exhilarating example of two important and patriotic Americans who seldom think alike, yet here they act toward the same end. That end is unity and adequacy of our Nation's defense.

One is Representative CLARENCE CANNON, a Democratic lawmaker from Missouri who, as chairman of the Appropriations Committee of the House, has responsibility for the billions of dollars spent each year on defense. The other is President Eisenhower, an old soldier from Kansas, now President and leader of the Republican Party.

Says the President, with no dulcet tones: "From these changes (his Army, Navy, Air Force reorganization plan), I expect very specific results: A stronger, more efficient defense, and every spring, come appropriation time, a more rational, less noisy defense."

And says Mr. CANNON:

"It is high time we put an end to this insane bickering between the services, and eliminated billions of wastage, and begin to develop sufficient military strength to keep us out of war."

Speaking to the House, Mr. CANNON challenged to battle another influential man in Congress—CARL VINSON, Democratic chairman of the House Armed Services Committee. Mr. VINSON has accused the President of trying to set up a "Prussian-type General Staff."

Mr. CANNON has long been a critic of the Navy—Mr. VINSON's pet service. He blamed Pearl Harbor on the perpetual rivalry between the Army and Navy.

Mr. CANNON spoke disdainfully of "the obtuse admirals who never forget how the last war was fought and never learn how to fight the next war."

But his most effective attack on the opponents of the President's plan came with his charge that the Navy has "deliberately duplicated other military facilities at a waste of billions of tax dollars."

Since all the appropriations for the Armed Services go through Mr. CANNON's committee, he should know. And for the doubters he gave the following example of wasted billions:

"On the Potomac River in sight of the Capitol is the Army's Bolling Field. And right beside it, with only a line between, the Navy has the Anacostia Naval Air Station. Each has its own fire department with its firemen and equipment. Only one is needed. Each has its own ambulance service and its own hospital staff. Only one is needed. Each has its own chaplain, its own recreation facilities, and its own mess service. Army libraries and Navy libraries, Army officers' clubs and Navy officers' clubs, Army steam baths and Navy steam baths, Army post offices and Navy post offices, and other duplications too numerous to mention.

"There is a control tower for each field, a weather staff at each field, a communications staff at each field, and each field maintains its own ready crews and repair and maintenance organization.

"The cost of maintaining this unnecessary duplication in this one instance alone runs into the millions. And there are similar instances all over the country."

The Pentagon is a complex organization, and we don't profess to know all the answers. But, for our money, Mr. VINSON has got to talk a lot faster—and with more logic—to convince us that President Eisenhower and Mr. CANNON aren't talking commonsense.

Peace and the American Economy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. PROXMIRE. Mr. President, one of the questions which troubles us all, though we try to shunt it to the back part of our minds, is what would happen to the American economy if we really brought an end to the cold war.

No one knows the answer to the question, but it is too important to ignore. The Milwaukee Journal, a great and responsible newspaper, raised this question in a challenging editorial in its edition of Sunday, May 11. It is a disturbing editorial, and it ought to be read.

Mr. President, I ask unanimous consent that the editorial, entitled "Can We Afford Real Peace?" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAN WE AFFORD REAL PEACE?

There is a haunting worry about our strange, unnatural economy that goes deeper than recession. In cold-blooded terms: Can we afford real peace?

James Marlow, the Associated Press news analyst, has detected this question relentlessly staring at us from between the lines of recent remarks by President Eisenhower—though the President does not seem to have meant it to be there or seen it there.

His remarks were a plea, to both Congress and the Nation, for the whole $4 billion of foreign-aid money that he seeks. He departed from arguing the vital demands of our own security through strengthening of the non-Communist world, and put the plea on this basis also:

"I remind everyone that 80 cents out of every dollar that we spend for mutual aid does not go to foreign lands. It goes to work right here at home. That means hundreds of thousands of jobs for American workers. It means large outlays for American machinery, iron and steel, farm goods, chemicals, and motor vehicles."

See how pregnant this is with the unasked question, the awful one? If we dare not cut even part of the $4 billion lest thousands lose their jobs, how about the rest of the $40 billion that the cold war is costing us every year? How would our economy stand

UNIVERSITY OF MICHIGAN LIBRARIES

the shock if, say, a major disarmament agreement should cut off much of that support?

The desperate fact is that the economy is not at all a normal peacetime one. It is a war economy in almost every sense except the lack of fighting. And it has come to depend, to a frightening degree, on the colossal stream of military spending that is poured into it. And it is from even this kind of unsound, unconstructive basis that the economy has disturbingly receded.

It is vital, of course, for the Nation to get quickly over the recession and restore at least the 1956 type of full economy, to keep itself girded in the world struggle. It is at present inescapable, too, to continue a maximum defense effort, of which foreign aid is a key part.

Yet our right and only ultimate goal is real peace, and either it or annihilation must come. And with peace, what then? It is too easy to talk about all the other, better things the Government might do with $40 billion a year, to keep it underpinning the economy. But could it happen? Could the dreamiest dreamer turn any big part of the $40 billion into civil benefits without creating an all-embracing paternalistic state beyond all dreams? (Eisenhower couldn't get even a few hundred million to build schools.)

In the alternative, with 10 or 20 or 30 billions suddenly taken out of it, could the economy possibly escape grinding to a halt in the most racking depression ever? Some will say wishfully that it can and somehow would escape, but we ought to be doing a lot more worrying about how.

Proctor Dam Project

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. JOHNSON of Texas. Mr. President, it was my privilege last week to appear before the Civil Functions Subcommittee of the Senate Appropriations Committee to urge an appropriation to complete planning and to initiate construction of an important flood control and water conservation project in Comanche County, Tex.—the Proctor Dam project, on the Leon River.

I have now received the text of a resolution passed by the Comanche County Chamber of Commerce in support of this project. I ask unanimous consent that the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

SECRETARY'S CERTIFICATE

I, O. O. Brightman, secretary of the Comanche Chamber of Commerce, hereby certify that the following is a true and correct copy of a resolution passed at a special meeting of the board of directors May 2, 1958:

"Whereas the Comanche Chamber of Commerce has repeatedly endorsed the Proctor Dam project on the Leon River; and

"Whereas appropriations for continued planning are now under study by the appropriate committee of Congress: Now, therefore, be it

"*Resolved*, That we, the Board of Directors of the Comanche Chamber of Commerce, do hereby request the continued support of our Representative and Senators for the construction of the Proctor Dam on the Leon River."

In witness whereof I have hereunto set my hand and affixed the seal of the chamber this 2d day of May 1958.

O. O. BRIGHTMAN, *Secretary*.

Free Enterprise in Agriculture

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. MARTIN of Iowa. Mr. President, American agriculture is free enterprise at its best. Our farmers present a sharp contrast to the highly centralized agricultural production in Soviet Russia. We not only preserve the human values of individual initiative, but we also attain a much higher level of agricultural production.

I was most interested in the remarks made by the new Russian Ambassador, Mikhail A. Menshikov, before the Economic Club of New York on Tuesday evening, April 15, 1958. His statement shows that the Russians now realize that to achieve maximum agricultural production they must abandon their centralized bureaucratic control over agriculture. He stated that Soviet agriculture will now largely be patterned after our own type of farming in which tractors and other farm equipment are owned by the farmers themselves. While the Russians extol the virtues of communism, they use capitalist incentives to increase production. There is an obvious lesson in these remarks for our people.

Mr. President, I ask unanimous consent that the portion of Ambassador Menshikov's remarks to the Economic Club of New York dealing with agriculture may be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Now we turn to the progress of agriculture in the U. S. S. R.

The nature of this progress is shown by the fact that grain production in the U. S. S. R. now is 3 times above that of Russia in 1913. In the same period the production of cotton and vegetables increased sixfold. We had a threefold boost in sugar beet and that hardy staple, the potato.

In the course of our 40 years we have advanced from a primitive, backward agriculture with its ancient hand tools and wooden plows to a highly mechanized and scientific agriculture. Millions of tractors, combines, and other machines are at work today on the fields of our country. In the past 4 years we have carried out a sharp increase in agricultural production. It has witnessed great increases in the total yield of grain; much more livestock has come to market and the output of meat and dairy products is far heavier. We gained hundreds of millions of bushels of grain through the cultivation of about 90 million acres of virgin and long-fallow lands.

Our farmers are now working on the problem of rapidly increasing the volume of livestock products.

We are aware that American farmers have scored great advances in this field. Soviet farmers, backed by the entire nation, have made it their job to catch up with the United States in the per capita production of meat, milk, and butter within the next few years. Our population is somewhat larger than yours, so per capita production means more in the way of total volume of production.

We hope to succeed in this job we've cut out for ourselves. But we most earnestly trust that you won't hold it against us for trying. We like to think of it as a sort of friendly competition. And after all, it's for the benefit, for the good of men, women, and children.

Of course we'll be glad when other countries, including the United States, improve their own standards of living. This is how we understand the meaning of peaceful coexistence. This is how we want to get along together—by racing to improve the well-being of the people—by scoring progress in education, in science, in the arts. Who could argue about that?

The decision to reorganize the machine-and-tractor stations which was adopted at last month's session of the Soviet Parliament, the Supreme Soviet of the U. S. S. R., will undoubtedly make a real contribution to the further development of Soviet agriculture. Up to now, all agricultural machinery, tractors, and combines were concentrated at these stations. But this form of serving the nation's collective farms no longer met their needs in the face of the need to make greater and more rapid increases in production.

So, after a nationwide discussion with millions of the Nation's working farmers and urban dwellers taking part, the Soviet Parliament decided on a reorganization program under which the agricultural machinery will be sold to the collective farms.

This step will permit the more effective use of the machines, tractors and so on. It will give greater initiative to the collective farmers. It will help put agricultural production to higher levels.

I suppose that at this point, you as business people and economists, will be asking yourselves, "That's all right, but how can these peasants on the collective farms buy all that machinery?" Well, I have news for you. They have spot cash in thousands of cases. They have productive acreage in the rest and they'll do all right.

The decision to sell agricultural machines to the collective farms became possible because these farms are now economically strong. The annual income of an average collective farm in 1957 amounted to 1,250,000 rubles. That's only the average, and it's not hay.

At the present time, our collective farms have qualified workers and are able to make productive use of varied and complicated equipment supplied by our industry.

So there's no doubt that the reorganization of the machine-and-tractor stations, like that of industry's management, will soon show an even higher rate of economic development in the people's interest.

American Industry Must Be Protected

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the letter written by Hon. Donald Comer, chairman of the executive board of

Avondale Mills, Inc., to the editor of Fortune Magazine in reply to that publication's May issue editorial, National Interest Versus Tariff.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AVONDALE MILLS,
Birmingham, Ala., May 5, 1958.

EDITOR, FORTUNE MAGAZINE,
New York, N. Y.

DEAR SIR: I have just read in your May issue your editorial National Interest Versus Tariff. In this you suggest the elimination of the escape clause and liquidation of the Tariff Commission features in the reciprocal trade program.

Surely you remember that when President Eisenhower wrote to Congressman MARTIN asking his support of this measure, he promised that no American industry would be injured and mentioned as a guaranty of this the fact that the legislation carried these escape clauses with promised review by the Tariff Commission by any industry being hurt.

As I understand it, your philosophy is that there should be no tariff and that the consumer in America should buy wherever in the world he could buy the cheapest. We might disagree on why America today is so outstanding among nations but I would like to argue that the basic reasons is because of the protective tariff. We have paid high wages and have developed an industrial empire over here because the people who make what America makes have been paid wages high enough to buy the product their labor produced. The American wage is the highest in the world but we can claim no superiority in skill to Europe, or today even to Asia. During the early years, with the help of the machine, we were free from the threat of handmade things from Asia and the tariff protected us from Europe.

This letter is primarily concerned for the protection of our textile interest, though the threat today is very much broader. The Japanese have the same textile machinery that we have. As a matter of fact, a Japanese company has just offered to build for Avondale Mills a cotton mill in California and even lend the Japanese employees to start the mill off in case we were not quite familiar with their machinery. Of course, their argument was that they could build the mill so much cheaper than American textile people could build it.

If we should follow your philosophy, Japan and other Asian countries would quickly capture the American market and after our industry had been expended, I wonder who would guarantee the continuation of their low prices in our market.

We may never have another war, but we are spending $40 billion a year in our budget, just in case. Do you remember that the late Secretary Knox said that the textile industry was second only to steel in our country's defense needs?

I notice that you are critical of Mr. Phillip Reed, head of General Electric Co., for urging some tariff protection for his industry. In looking through your magazine, I see that General Electric carried, I think, nine pages of advertising. I am not arguing that an advertiser should control the editorial policy of a paper, but I am arguing that if you take his money and then pursue an editorial policy that he thinks is not for his best interest, but indeed threatens his very life, you should at least give your readers a chance to hear his side of the case—expressed by him or someone selected by him.

Among your list of advertisers, I notice Daniel Construction Co. and J. E. Sirrine Co., both of Greenville, S. C. Both of these companies have been very largely occupied in the past years in building and owning cotton mills. You carry an advertisement from the Southern Co., the company that controls all the power companies of the Southeast and supplies the power that runs our mills. You carry an advertisement duPont Co., from whom we buy our dyes, paints and chemicals of one kind or another. You carry an advertisement from Wellington-Sears Co., a part of the West Point Manufacturing Co.—one of the largest textile companies in Alabama. You carry an advertisement from the Tennessee Industrial and Agricultural Development Co. and from the West Virginia and Arkansas Development Co. These agencies are seeking for expanding industry in their respective States, but under your philosophy, they might as well close up because they would lose the industries they have already. I was interested that you had an advertisement from Excelo Shirts from New York. They wouldn't last long with the increased imports from Hong Kong.

For another side of this question, I would like to refer you to the May issue of American Mercury Magazine in which is reprinted a guest editorial from the Nashville Banner and an article by Senator GEORGE W. MALONE and others.

Don't you think that your advertisers who surely disagree with your free-trade policy are entitled to some consideration and should be invited to express their different opinions? This is not with any thought that this would change your editorial policy but only in the interest of fair play.

Yours very truly,

DONALD COMER,
Chairman, Executive Board.

The Role of the Soil Conservation Service

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. CHURCH. Mr. President, the role of the Soil Conservation Service in a myriad of contributions to the individual western farmer has often gone unmentioned. Where great expanses of the desert have become fertile and productive through reclamation, accompanying problems of soil preservation and management have required expert and technical solution. These answers have been competently provided by the Soil Conservation Service through a corps of dedicated soil scientists.

I ask unanimous consent to have printed in the Appendix of the RECORD a feature article from the Boise (Idaho) Statesman of May 5, 1958, the story of an enterprising farmer-homesteader on the Black Canyon reclamation project in Idaho. It graphically portrays the outstanding work being done by the Idaho farmer through our excellent soil conservation districts, and the superb assistance being afforded by soil conservation specialists. It also emphasizes the ability of the American farmer to learn and apply the practices which will assure the fertility of the soil for the generations ahead.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BLACK CANYON FARMER CHANGES DESERT LAND TO BLOOMING FARM

(By Denton Brewerton)

CALDWELL.—John W. Brown, farmer-homesteader in the Black Canyon reclamation project, first saw the 90 acres of land that later was to become the Brown home 7 years ago. It had never felt a plow and the native sod was broken only by scattered patches of sagebrush extending the length and breadth of the land. Today, the land tells a different story.

"Soil building is fun," he said, "but it takes patience and determination to enjoy the fruits of your labor."

He said it was a big thrill for the Browns when the first land-leveling equipment moved onto the farm.

"The high places were cut as much as 6 feet in depth, while fills in the low areas were made up to 9 feet deep in some places. It seemed like there was nothing left on the farm but bright colored subsoil," he added.

SOIL BIGGEST PROBLEM

From the start, Brown said he recognized the soil as his biggest problem. It was a burned-out desert soil nearly devoid of organic matter. Slick spots also were present throughout the farm. He said such spots are common in the Black Canyon and are characterized by adobe conditions with chemical problems to really make it tough for a farmer.

The water intake rate of the soil posed a problem.

"We turned from 4 to 5 gallons of water per minute down each corrugate," he explained. "And it seemed like every drop was wasted off the lower end of the field. We set the water on 700-foot runs for 72 hours and sometimes longer before enough water was taken into the soil to last until the next irrigation."

The Browns had taken nearly all of their cash reserve for a house, some livestock and the leveling and now had enough for seed and fertilizer. They had to beat the soil problem and make it pay.

FIRST CROPS PLANNED

The first crops were planned to provide green manure over as much of the farm as possible during the first season. In every grain crop, the homesteader included a generous seeding of white-blossom sweet clover, which was turned under in the early fall.

Orchard grass was seeded with alfalfa as a hay mixture to provide the soil-building qualities of the grass roots. Enough straw was baled to furnish bedding for the livestock during the winter and the rest was worked into the soil.

Brown had started his farm on the road to workability and a good harvest, but he still needed more and better management. He was inside the canyon soil-conservation district and requested assistance on the farm.

Technicians from the soil-conservation service studied the problems and helped Brown organize his plans. A soil survey was taken to show the different types of soil on his farm. The technicians helped him prepare a complete farm plan based on the ability of his soils to produce and to be used in the cropping program of the farm.

He started on a rotation plan for his farm, including alfalfa-grass hay for 2 years (the third crop of hay was plowed under for green manure on the second year) and row crops for 1 year.

On another type of soil on his farm he used a plan to include alfalfa-grass hay for 3 years, grain with red clover seeded in for green manure for 1 year, followed with grain and new seeding of alfalfa-grass hay the fifth year.

PLOW DISCONTINUED

Brown worked and talked soil building for the next several years. He discontinued

UNIVERSITY OF MICHIGAN LIBRARIES

using the plow except for plowing green-manure crops and located a chisel-type tillage tool that he worked from 12 to 14 inches deep to mix the crop residue with the soil instead of turning it under.

Soil-building practices are beginning to pay off for Brown, who also is chairman of the board of supervisors of the canyon soil-conservation district.

The time required for each irrigation has been reduced by two-thirds, while the interval between irrigations has been more than doubled.

Along with that, man-hour demands on the farm have been reduced, while the overall farm production has more than doubled since he started his soil-building work and long-range planning for the future.

Trade: A Weapon in a Real War

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Orleans Item of May 7, 1958:

TRADE: A WEAPON IN A REAL WAR

Without trade we stagnate.

Simply and bluntly, that is the way Speaker of the House SAM RAYBURN of Texas summed up the necessity for extension of the Reciprocal Trade Agreements Act by Congress.

"Mr. SAM," addressing the inauguration banquet for Mayor Morrison and the city council members here Monday night, laid some facts of economic life on the line:

Only $3 billion worth of United States imports last year could be considered in competition with United States-produced goods—this to be contrasted with the $19.5 billion worth of agricultural products and manufactured goods exported by the United States.

As opposition mounts to the importation of Japanese cotton goods, it must be remembered that Nippon textiles account for only 1.4 percent of the textiles sold in this country, and for this bagatelle we risk losing our greatest friend in the Far East.

Foreign markets buy up 20 to 40 percent of the United States cotton and rice crops.

Yet, even with the backing of such a powerful political figure as Speaker RAYBURN, everyone in Washington is willing to agree that the reciprocal trade program, due to expire June 30, is in more trouble than it has been at any time since its conception by Cordell Hull in 1934.

Paradoxically, the source of most of its trouble is to be found among the southerners in Congress, the men who represent the region that for 150 years was the citadel of free trade.

The President has asked for a 5-year extension of the Reciprocal Trade Agreements Act, which allows the United States to enter into freer trade agreements with foreign nations.

Congressional veterans who in the past decade have fought in the seven legislative battles to repeatedly extend the 1934 act, believe the President will be lucky to get a 1-year extension, and that, even then, the act is likely to be riddled with weakening amendments.

Rising unemployment and slowed production have thrown a scare into many Members of Congress who in the past have given support to the reciprocal trade program.

But the biggest single bloc of opposition today comes from certain areas in the South. According to David Koonce of the North American Newspaper Alliance, as many as 85 southerners in the House—20 percent of that body—and 16 southern Senators may be marshaled against extension of the act.

Back in 1934, not a single southerner in Congress voted against the original act. Why the change?

The answer lies in the great changes that have been talking place over the South, especially since World War II. What was once the cotton South is today the textile South.

Thirty-five years ago, North and South Carolina, Georgia, and Alabama grew about one-third of the Nation's cotton. In 1957, these States produced only about 2 million bales—the same amount grown last year in California alone.

On the other hand, the Carolinas, Georgia, and Alabama today spin, weave, and finish almost three-fourths of the Nation's textile goods.

Mr. SAM, after serving the cotton-producing State of Texas for 45 years in Congress, takes the longer range, worldwide view of the matter. Monday night he said:

"We must trade with Japan. If we lose Japan we lose the East. We must trade with Western Europe because if we don't, Russia will."

Russia has openly declared war on the West in the field of trade.

It is a war we cannot win if each segment of our great industrial potential runs to Congress for special protection—no more than we could have hoped to win the last two great world wars if each able-bodied man had attempted the same course of action.

And, the textile industry cannot be singled out in this matter. It only happens to be the latest to take up self-defensive arms—and at a crucial moment in the life of the reciprocal trade program.

In this economic war with international communism the West's most effective weapon will be free trade. If we do not forge such a weapon—well, let us quote Speaker RAYBURN once more:

"Russia may win the world without firing a shot."

Federal Assistance in Pollution Control

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. WILEY. Mr. President, within the next few weeks we will have the opportunity to discuss the appropriation for the Department of Health, Education, and Welfare for fiscal year 1959. This appropriation bill contains, among many other vital funds, a $45 million allotment for the necessary continuation of the Federal Water Pollution Control Act. I urge that all Members of the Senate give this expenditure favorable consideration.

As we all know, with urbanization and industrialization expanding more every day, pollution of our Nation's streams and rivers becomes a problem of rising importance. The United States Public Health Service, in cooperation with State and local authorities and with private groups, has been doing a yeoman anti-pollution job; but infinitely more must still be done, and it takes funds to do it.

Pollution of course endangers the physical well-being of citizens who use water from these streams for drinking, recreation, and other purposes. However, polluted water can be exceedingly harmful to the economic health of many areas of our Nation, as well. The areas to which I refer are those which are especially dependent on recreational activities for their livelihood. Fishing, boating, swimming, and many other out-of-doors recreational pursuits are dependent on pure water, free from pollution.

In my own State of Wisconsin, as in many other States of the Union, this latter type of water utilization plays a vitally important part in the economy. People from all parts of our great Nation have rightly made it a habit to come to Wisconsin in order that they may enjoy nature at its very best.

In keeping with Wisconsin's fine tradition of preserving her natural advantages, many communities have wisely taken first steps toward assuring continued pure water in their areas. Many communities have antipollution projects in blueprint stages, and lack only adequate financing to put the plans for sewerage-treatment plants into operation.

It is this type of financing which has made the Federal Water Pollution Control Act one of the most beneficial Government grant-in-aid programs.

I am in receipt of a letter and petition from Mr. James E. Spendler, secretary of the Wisconsin Division of the Izaak Walton League of America, Inc., the fine organization which has done so much to preserve and conserve our Nation's outdoor recreational areas. This petition is rightly in support of the Federal Water Pollution Control Act. I request that the petition be printed with my remarks in the Appendix of the RECORD.

There being no objection, the petition was ordered to be printed in the RECORD, as follows:

RESOLUTION 3, ADOPTED ON APRIL 19, 1958, BY THE WISCONSIN DIVISION, IZAAK WALTON LEAGUE OF AMERICA, INC. IN STATE CONVENTION ASSEMBLED IN DELAFIELD, WIS.

Whereas the major rivers in Wisconsin can no longer bear their intolerable burden of industrial waste and human filth; and

Whereas pollution of the State waters is a growing peril to industry, agriculture and to the welfare of thousands; and

Whereas the Federal Government wants to stimulate immediate employment; and

Whereas Wisconsin communities have $7 million of critically needed construction blueprinted and approved by the State pollution committee for sewers, sanitary plants, and improvements of existing plants to protect Wisconsin precious water supplies from pollution; and

Whereas if the Government is going to spur public employment, the cleaning up of the public waters would help in protecting public welfare, and aid industry and agriculture; and

Whereas the construction of such sanitary plants and sewers would result in employment in the State for unskilled labor, construction trades and stimulate employment in manufacturing plants of pollution abatement equipment: Therefore be it

Resolved by the Wisconsin Division of Izaak Walton League of America, Inc., in

State convention assembled this 19th day of April 1958, in Delafield, Wis., That the President and the Congress grant sufficient funds to enable this critically needed construction in Wisconsin and elsewhere; be it further

Resolved, That copies of this resolution be sent to Senators Wiley, Proxmire, and Theodore Wisniewski and all other persons and groups important to affirmative action upon its provisions.

Corporate Citizenship

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. MARTIN of Iowa. Mr. President, America's capitalism is a people's capitalism. It draws its strength from the voluntary participation of free citizens. Consumers exercising their right to buy or not to buy determine what shall be produced and in what quantity. Workers select the jobs which seem most attractive and which give them the maximum opportunity for self-expression.

More than 10 million Americans from all walks of life have invested directly in America's business enterprises. Another 100 million citizens indirectly participate in the ownership of our industry through insurance policies, mutual savings bank accounts, pension plans, mutual funds, or other forms of investment.

Not so many years ago the annual reports of most corporate enterprises were confined to financial and operating details. Today, management is well aware that corporate citizenship is a responsibility which is just as important as research, engineering, or marketing.

The 1957 annual report of the Standard Oil Co. of Indiana contains a most illuminating statement that outlines the manner in which this important industrial enterprise has discharged its responsibilities in the communities in which it operates.

I ask unanimous consent that this statement on corporate citizenship may be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CORPORATE CITIZENSHIP

Every corporation is, by law, a person in the courts. It can sue and be sued. But a corporation ought to be a person in a sense much broader and more meaningful than that. It should be a person in the sense of being a good citizen of the community, alert to its responsibilities.

Our company accepts as a guiding principle that it should be an upstanding person in that second and deeper meaning.

We recognize that we have a duty, along with all other citizens, to help, through organized agencies, in relieving the distress of the unfortunate. So it is that our companies and foundations created by them have contributed to community funds and the Red Cross.

We have been concerned that we should help in erasing or at least alleviating disease. So it is that we have given unrestricted grants to assist in various areas of basic medical research.

We have accepted it as our duty to help forward the education that is a mainstay of a dynamic democracy. We have underwritten generously the cause of education. In part we have done this by awarding scholarships and graduate fellowships. In part we have done it by contributing to the National Merit Scholarship Fund, through it giving scholarships for undergraduate study to the outstanding children of our employees. In largest part we have done it by making gifts without strings to the State and regional associations of private, 4-year, liberal arts colleges.

We have recognized an obligation to help train and inspire the youth of today, who are the leaders of tomorrow, to the ways of a good life. We have contributed both money and technical skills to the support of youth organizations—the 4-H Club, the Future Farmers of America, Junior Achievement.

We have acknowledged that we should share in the giving of time and effort, as well as of money, to movements for civic betterment. All who work for Standard have been encouraged to participate actively in such movements—church groups, the scouts, school boards, on down a long list. Thousands of our people, from directors to beginning junior clerks, have participated and are doing so now.

Basic as these responsibilities are, however, a corporation has obligations even more basic. To its customers, it must furnish good products at fair prices. To its employees, it must provide the conditions, opportunities, and rewards that promote and recognize loyal and efficient service. To its stockholders, it owes a fair return on their investment and a constant endeavor to protect and enlarge their property. To suppliers and all others with whom it has business relations, it has a responsibility for considerate and ethical dealings. Finally, to society as a whole it owes a fair accounting of its activities, and the articulate expression of its views and philosophy with the end in view of making available an adequate basis for evaluative judgment.

It is within this framework of good citizenship that we seek to function.

The Irish Cause

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include a letter concerning Ireland by a student of Irish history, Mr. William J. Conlon, 23 Breed Street, Lynn, Mass.:

Democracy cannot operate in secrecy. Dictators and would-be dictators and little men with totalitarian leanings know this well. They do their utmost to control the press, stifle public opinion, develop spinelessness, and buy off opposition. All the better to work out their scheming in the dark where the people will have no chance of checking on them. We are perilously close to that situation in Ireland today. It was an American statesman who said "You can't be crooked in the light." It's high time the Irish people understood this. It is time they made up their minds to end the crookedness in the dark. They still have the power. For how long we would not care to guess. We think if the truth were known about what is happening in Ireland today there would be an outraged cry from the Irish people all over the world, but the truth is not known. It is buried or else labeled propaganda.

Let us remove Nelson's Pillar from O'Connell Street in Dublin, and let's prove to the world our sincere desire to be a free sovereign state.

Consider these things: Our people in the north are being persecuted and crucified, whole areas are being turned into terror zones, prisoners are being tortured, and young men are in arms against tyranny. How much of this story is known? We would hazard a guess that Americans and others know more about what is happening in the north (albeit from biased sources) than the average citizen in the south.

Do the citizens of the south and 26 counties know what is happening in the 6 counties with the approval of the Dublin Dail? Among our tourist attractions we can now boast of a concentration camp at the Curragh, County Kildare, which comes under the supervision of the Dublin Government. We may not have a plan to end unemployment or emigration but we have a concentration camp at the Curragh, County Kildare, and we have semisecret trials. Indeed that is not the end of the list. We have a secret police force working in conjunction with Britain's security forces in occupied Ireland (namely, the six stolen counties of Ireland).

We have given the power to some minor police official to seize newspapers and to haul men off to jail, for the crime of putting up posters, demanding the release of Irish prisoners (Irish Republicans), and we have the shameless hypocrisy of men who pay tribute to our republican dead, while they jail and hound our republican living. There are men in this country with influence in high places who know these things, but who haven't the moral backbone to stand up and condemn them. There are men who march in processions under banners proclaiming their part in the struggle against the infamous Black and Tan regime almost 40 years ago. Have they spoken out for the youth of this generation who have taken over where they left off? Some perhaps have, but too many who march in processions to honor the dead of 40 years ago appear to have closed their eyes and stuffed their ears to the sights and sounds in occupied Ireland that was illegally stolen by England.

Colonel Topping, a successor of Sir Edward Carson, in the stolen 6 counties of Ireland, said, and is proud to boast that his R. U. C. commandos are a "Black and Tan terror force."

The London Times can open an article on occupied Ireland with the startling assertion: "The Irish border owes its existence entirely to the determination of the Sinn Fein movement to break the link with Britain." And yet politicians get away with the lie that it is the young men of Ireland today who are responsible for the present situation.

The Irish Times, hardly an organ of Republican opinion, was closer to reality on December 10 when it remarked editorially while commenting on the London Times article: "Throughout the free world is there a solitary country in which a third of the electorate is solidly opposed to the regime? Not merely as in normal democracies to the government but to the whole conception of the state as it stands?"

And again, after quoting the London Times sermon on the 26 counties resolution to remain under the Crown and to keep the Union Jack flying the editorial noted: "Something similar might be said of Algerian resolution to remain part of metropolitan France, but who would dare to say it?"

And is there outside Algeria a case comparable to that of Northern Ireland on this side of the Iron Curtain?

Is there, indeed? Isn't it time, the people of the 26 counties woke up to this fact?

Isn't it time they told their political leaders to stop being England's policemen in Ireland?

WM. JAS. CONLON.

LYNN, MASS.

UNIVERSITY OF MICHIGAN LIBRARIES

Talmadge Farm Plan

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled, "A Significant Plan," from the May 8, 1958, issue of the Atlanta (Ga.) Journal; the editorial entitled, "Talmadge's Farm Plan," from the May 7, 1958, issue of the Griffin (Ga.) Daily News as written by its editor, Hon. Quimby Melton, Jr.; and the column entitled "Talmadge's Farm Plan" written by Hon. Turner Rockwell, editor of the Valdosta (Ga.) Daily Times in a recent issue of that publication.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

A SIGNIFICANT PLAN

Senator HERMAN TALMADGE of Georgia may be quite junior in Washington, but as Doris Fleeson pointed out in her Journal column recently, he's mighty smart.

Miss Fleeson was writing of Senator TALMADGE's plan for farm price supports which combines the virtues of free enterprise with Government protection.

It would do away with the redtape and irritants of acreage controls and Government loans and let the farmer plant as much as he wants of any crop he prefers.

Here is where the protection factor enters. Each farmer would have a domestic production quota expressed in bushels, bales, etc. This quota would be worked out on the basis of national consumption of the commodity in question.

The farmer would do his own selling in the open market. This makes him a businessman again, rather than a Government ward. It also should reopen world markets to United States farm products.

If the price he gets is less than 100 percent of parity, the Government would pay him the difference on that part of his crop raised under the domestic quota. But only on that part raised under quota.

The farmer then, can stick to the quota and the Government umbrella. Or if he pleases he can exceed this quota as much as he wants at his own risk.

Here is another good feature. Payments would be limited to $25,000 on the amount of price support any farmer could receive. Shades of Soil Bank abuses.

The plan sounds good and looks simple. It restores the farmer's independence, but leaves enough in the way of Government props to save him in emergency. It's a completely moral double standard.

Georgia and the South will like it. And as Miss Fleeson points out, other sections may like it enough to restore the old South and West agricultural alliance that once ran things in Washington.

TALMADGE'S FARM PLAN

(By Quimby Melton, Jr.)

Every person in the United States is vitally concerned with the agriculture of this Nation. If it weren't for the farmer, where would the rest of the country be?

He raises our food and our fiber. He keeps the soil in trust for future generations. The trees which make the lumber which make the buildings which house us grow on his land. Without him, we'd be sunk.

Because of this vital interest of every American in the farmer, we particularly invite your attention to Senator TALMADGE's column which appears in the Griffin Daily News today, as it does every Wednesday.

Today the Georgia Senator has outlined his bold new farm plan for the United States. He particularly invites Georgia farmers to write and tell him what they think of it. We join in urging them to do so, because we know that the Senator will be guided by the wishes of the people of Georgia.

The Talmadge plan calls for letting the farmers farm. Anyone wo hever tilled the soil knows the wisdom of this. Farmers constitute one of the last bulwarks of independence in this Nation. But they are so tied up now with redtape and Government dictation that it almost takes a lawyer to plant a home garden in the country.

Senator TALMADGE has offered what seems to us a vast improvement over the present situation. We hope that you will read his column then write and tell him what you think of his plan.

TALMADGE'S FARM PLAN

(By Turner Rockwell)

Senator HERMAN TALMADGE, in a Senate speech a few days ago, offered a farm program which he feels will help solve many of the ills that beset American farmers and will remove the restrictions as to acreage planted to basic crops and others that have been major factors in the farm program under which our farmers have been operating for a number of years.

Senator TALMADGE feels that a farmer should be permitted to plant what he wants to plant and sell his crop for the best price he can get in the open market and then have the Federal Government pay him the difference between the prices he receives for commodities sold for domestic consumption and 100 percent of parity.

The way Senator TALMADGE outlines his proposed plan is this:

1. Eliminate all acreage controls and Government loans.

2. Assign each farmer growing basic commodities a domestic production quota to be expressed in terms of unit measurements (pounds, bushels, bales, etc.) which would be the same percentage of the national consumption of basic commodities that the farmer's historic acreage base bears to the total national acreage base.

3. Guarantee and pay to each farmer a sales price support of the difference between the price he receives for his domestic production quota and 100 percent of parity.

4. Require each farmer to submit a bill of sale with his application for sales price support payments.

5. Impose a maximum of $25,000 on the amount of sales price support payments which any individual farmer could receive.

Senator TALMADGE believes that such a program would tend to eliminate redtape and the accumulation of farm surpluses and let the farmer handle his operations as he sees fit.

The Senator feels that, since it is geared to domestic production, it would amount to no more than giving the farmer the same protection which labor gets with the minimum wage and industry with the tariff.

It is generally agreed by those who have studied the farm problem that any program to be workable must permit the farmer to farm and provide some way of guaranteeing to him a fair share of the national income for his efforts. However, there is no general agreement as to how this is to be accomplished.

It can be said for the Talmadge proposal that it is different from that which has been tried. Doubtless it has bugs in it and would not do the complete job, but it is worthy of study. Certainly, the answer to the farm problem has not yet been found.

Death of Maj. Gen. Hanson E. Ely

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. MARTIN of Iowa. Mr. President, on April 28, 1958, one of this Nation's most brilliant generals and one of the State of Iowa's most illustrious sons, died at the age of 90. He was Maj. Gen. Hanson E. Ely, whose heroic and unexcelled leadership of the 2d Brigade and later of the 5th Division in France during World War I, earned him an enviable reputation that will last long in military annals. I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the New York Herald Tribune for April 30, 1958, telling of General Ely's outstanding career.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENERAL HANSON ELY DIES: WAR I LEADER WAS 90

ATLANTIC BEACH, Fla., April 28.—Maj. Gen. Hanson E. Ely, 90, who emerged from World War I with a reputation as one of this country's most brilliant generals, died here Monday. General Ely, who retired in 1931, had lived here for many years.

The general won the first of five awards of the French Croix de Guerre for his achievements as commander of the 38th Infantry Regiment, leading his troops in the first and one of the most famous American assaults of World War I, the Battle of Cantigny.

The citation described him as a "brilliant soldier who * * * executed with great success an operation which netted numerous prisoners and gained important ground. He maintained the conquered ground despite several enemy counterattacks."

WON HEROISM AWARD

For his accomplishments in that battle, which occurred on May 28, 1918, he was promoted from colonel to brigadier general and placed in command of the 2d Brigade of the 2d Division. With this command General Ely won the Distinguished Service Cross for extraordinary heroism under fire during the capture of Viersey, near Soissons.

General Ely also led the 2d Brigade in the Aisne-Marne, St. Mihiel, and Mont Blanc offensives. He was promoted to major general in October, 1918, and given command of the 5th Division.

He won high praise from the late Gen. John J. Pershing for the esprit de corps of his division, which was under machine-gun, rifle, and shell fire through 27 of the final 30 days of the war.

HEADED WAR COLLEGE

Relegated after the war to his permanent rank of colonel, General Ely won his permanent star in 1921 and his 2 stars 9 years later. He was appointed commandant of the Command and General Staff School at Fort Leavenworth, Kans., and later served as president of the Army War College.

General Ely assumed command at Governors Island in December 1927, and served there until his retirement 4 years later.

General Ely was born in Independence, Iowa, November 23, 1867, and was graduated from West Point. He first served on the western frontier, then was teaching military science and tactics at the University of Iowa when he was recalled to line duty for the

Spanish-American War, serving in the Philippines.

He was one of the first officers sent abroad after the United States entered World War I, assigned to study Allied trench warfare methods.

Surviving General Ely are his wife, Mrs. Eleanor B. Ely; three sons, Col. Louis B. Ely, United States Army, retired; Col. Eugene B. Ely, United States Army, retired, and Maj. John A. Ely, United States Army, stationed at Fort Benning, Ga., and a daughter, Mrs. Julia Clocker.

General Ely will be buried in Arlington National Cemetery, Wednesday after services at 9 a. m. at the chapel at Fort Myer, Va.

Rise in the Status of Women Throughout the World

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. WILEY. Mr. President, one of the great social revolutions which has occurred in this second half of the 20th century is the welcome rise in the status of women throughout the world; particularly in the underdeveloped areas of the world.

The United States has contributed significantly to the progress which women are making in all fields of endeavor throughout the globe.

We, and our friends, welcome the increasing number of women who are entering into public life in many countries—in both elective and appointive offices.

We welcome the coming onto the statute books of many lands of provisions which, for the first time in history, have begun the move toward equalizing the status of men and women under the law.

We know full well, of course, that the most basic responsibility of women continues to be the maintenance of the home and of children. But we know from our own United States experience that there is no good reason why women should not likewise play an increasing role in the decisions which shape the future of mankind.

Perhaps Madame Vijaya Lakshmi Pandit of India best illustrates what a tremendous contribution women can make and have made for the betterment of their own lands and for the advancement of peace and good will.

Age-old discriminatory custom, age-old superstition, age-old unfairness of law against womankind's full role, must be revised if one-half the human race is to help meet the problems of the whole human race.

One of the important instruments of the United Nations in seeking these goals is the 18-member United Nations Commission on the Status of Women.

I send to the desk now an article which appeared in the May 1 issue of the Christian Science Monitor describing both the progress and the problems in women's status as faced by this important Commission.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U. N. COMMISSION STUDIES STATUS OF WOMEN
(By Paul Cremona)

GENEVA.—Major questions, affecting the status of women, including such matters as political rights, minimum age for marriage, access to women of education and economic opportunities, were considered by the 18-member United Nations Commission on the Status of Women, which for the third time held its yearly session in Geneva.

Its most important achievement was the adoption of a resolution calling for an international convention forbidding the marriage of girls below the age of 16. A report prepared for the Commission by the U. N. Secretariat shows that, while in a number of countries no minimum age is prescribed by law, in no fewer than 31 countries and territories girls may marry on reaching the age of 12.

In its review on the progress achieved toward recognition of political rights for women, the Commission noted with satisfaction that great advances had been made in this field during the last few years. Women had won equal political rights in 70 countries, and there was an increasing participation by women in public affairs.

For instance, Canada had appointed a woman as Secretary of State; in Denmark a woman was nominated Minister of Ecclesiastical Affairs; Egypt had elected 2 women to Parliament; West Germany elected 48 women to the lower house; India had elected 27 women and appointed 2 women as undersecretaries; the Netherlands had a woman plenipotentiary in the Council of Europe; and in the Soviet Union a woman had been appointed as chairman of the Presidium of the Communist Party.

POLITICAL RIGHTS DENIED

However, in some 11 countries no political rights had yet been granted to women and in a number of other countries where these rights were the law there existed major obstacles in the way of the actual exercise of these rights. There was still much prejudice against women in public life, even in many very advanced countries, Miss Minerva Bernardino of the Dominican Republic told the Commission.

Only 1 woman so far had presided over the U. N. General Assembly and only 2 women had been elected presiding officers of U. N. General Assembly committees.

Even some delegates to the United Nations did not recognize the equality of women, Miss Bernardino said, adding that only a few women were appointed by their governments as members of delegations to the United Nations.

INTERNATIONAL DUTY STRESSED

She insisted that there should be greater participation of women not only in national life but also in international organization.

In many countries women were not sufficiently educated in the use of their political rights. Only by accepting duties of citizenship and by participating actively in public affairs, the commission stressed in its report to the U. N. Economic and Social Council, "could women make full use of the right of suffrage in the countries where this right has already been accorded to them. By refusing to join the political parties in their respective countries, women were foregoing opportunities for political education and experience, renouncing their political responsibilities, and so failing to assume the active part which they ought to play."

PUBLIC SERVICE RENDERED

The most important aspect of political rights examined by the commission at its last session was the access of women to public offices and functions as well as the conditions under which they were exercising them. As long as women were relegated to secondary posts in the Governments and administrations, it was stated, there would be no equality in their participation in the Government of their countries.

With a view to making appropriate recommendations on this subject U. N. Secretary-General Dag Hammarskjold was requested to submit a full report on the access of women to and the exercise by them of public services and functions. The report will be examined by the commission at one of its next sessions.

The commission studied for the first time the important question of marriage age. In certain countries girls still are married very young, frequently without their consent and often without the formality of registration.

AGREEMENT REACHED

All representatives agreed that such practices ought to be abolished. However, during the discussion they failed to agree.

The French representative, however, thought that revolutionary stand should be taken without delay on so serious a problem and that laws should be imposed really giving women protection. If such laws existed, she added, they would help to alter customs.

The commission finally adopted a resolution requesting the U. N. Secretary-General to prepare a draft convention on the matter forbidding marriages of girls below the age of 16.

Health Conditions Among Refugee Orphans

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. NEUBERGER. Mr. President, legislation which I cosponsored and which has been enacted into law provides for the admission to our country of orphan children adopted by American families and also provides for admission, under strict safeguards, of persons, including orphan children, who are suffering with tuberculosis.

There has been some criticism of the law which provides for the entrance into our country of people with tuberculosis. The fear has been expressed that the admittance of adopted orphan children with tuberculosis constitutes a serious health menace.

Mr. President, Mr. and Mrs. Harry Holt of Creswell, Oreg., have performed outstanding humanitarian service in helping many hundreds of mixed-blood Korean orphans find good homes in the United States. They have freely expended of their time, health and funds in behalf of this worthy project. Since the enactment of the immigration law of 1957, a small number of adopted Korean orphan children have entered our country who are suffering, or are suspected of suffering, from tuberculosis. Many of these children have been treated at the National Jewish Hospital at Denver, Colo.

UNIVERSITY OF MICHIGAN LIBRARIES

Dr. Sidney H. Dressler, medical director of the National Jewish Hospital, and a nationally known authority on tuberculosis and chest diseases, has effectively answered the criticism leveled at the Holts with respect to the admission of tubercular and suspected tubercular orphan children.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the letter from Dr. Sidney H. Dressler which appeared in the May 6, 1958 issue of the Oregonian newspaper in Portland, Oreg.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NOT ALL TUBERCULOUS

TO THE EDITOR: I have learned that there has been considerable criticism of Harry Holt, of Creswell, Oreg., for bringing Korean-American orphans suffering from tuberculosis to our country for adoption. National Jewish Hospital is interested in this criticism because it has admitted 15 of these children for treatment.

As a specialist in chest diseases, it is my conviction that this criticism of Mr. Holt is not warranted. I believe the tuberculous children are being handled under such safeguards that they constitute no danger to anyone.

Under our laws, aliens suffering from tuberculosis must remain under hospital treatment until clinical reports and X-rays have been submitted to and approved by the public health authorities. The patient therefore is not discharged until he is no longer a source of infection.

Another important consideration is that most of the children are merely suspected victims of tuberculosis. Out of 12 admitted to National Jewish Hospital on February 1, only 5 actually had active disease. These 5 are responding well to treatment. The others need not have been hospitalized at all. They have been discharged.

The real danger of tuberculosis today lies in the unknown cases. It is estimated that there is at least one unknown case for every known one. We should concentrate our efforts on the menace of people who unknowingly spew their germs on family, friends and others.

Mr. Holt is doing a great humanitarian service by bringing abandoned offspring of American GI's and Korean girls to this country, thus giving them a chance at life. He should be encouraged.

SIDNEY H. DRESSLER, M. D.,
Medical Director, National Jewish Hospital, Denver, Colo.

Community Spirit Helps Teacher Training

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. OSTERTAG. Mr. Speaker, at this time when we are all concerned about the effectiveness of our school systems and efforts to strengthen them, I should like to call the attention of my colleagues here to a simple but effective program of aid to secondary schoolteachers which is being carried on at LeRoy, N. Y., in the 39th District which I have the privilege to represent.

I speak of this program here because of the very worthy attitudes and philosophy it reflects and the meaning it could hold for all our school districts. It illustrates a way in which local industries and civic organizations can do something today to help their own education systems by improving the quality of teaching in their secondary schools and giving more incentive to teachers to remain in their profession.

This is the program:

In each of the past 2 years, Mr. Lester A. Pridgeon, manager of the Jell-O plant in LeRoy, has presented a $1,000 grant to the LeRoy school district to enable one or more of the local high-school teachers to take advanced courses of study during the summer to improve their professional knowledge. The aim is to strengthen the school system by increasing teaching skills where most needed.

The school system administers the program, establishes its own standards, and selects the teachers according to the needs of the school system. Two teachers have been selected each year and two more will be chosen again this year by the school district.

To date, the program has enabled teachers to gain special training in science, guidance, retarded reading, and administration at universities of their choosing. But the benefits of the program have been evident throughout the entire school system.

Dr. Donald Horr, superintendent of the LeRoy schools, enthusiastically acknowledges that the program has paid dividends far in excess of its monetary worth. He explains that the program not only has enabled teachers to increase their knowledge and improve their skills in areas of need, but it also has demonstrated community appreciation for teachers and has benefitted considerably the morale of the entire school ssytem. Dr. Horr points out, too, that the program has particular impact because it is a local, personal award and not one endowed by a "Great White Father." It meets educational, financial, and psychological needs, he says.

Now, on the basis of this local success, the parent company, General Foods, has decided to expand this program to other plant communities. So this year 12 more plants in 12 more States are instituting this program in their local communities. It is a source of great satisfaction to me that this simple, direct, and effective program which originated in the town of LeRoy, N. Y., is now spreading to other communities across the country.

It does not require a vivid imagination to see the potential of this program if it were adopted by other industries or organizations. In my opinion it is this type of local, self-help program, operating with many variations throughout the communities of the Nation, which could have a very significant and immediate favorable effect on the secondary education of our Nation.

I wish to commend the leaders of industry and education in LeRoy who recognized this need and took steps to meet it. I commend also the General Foods Corp. for expanding this valuable program to its many other plants across the country. This is not a profound program, neither is it spectacular or costly, but it represents a commendable, straightforward solution to an immediate problem. Our Nation is stronger and better every time our people act directly and responsibly to solve such problems.

Summer Fellowship Program for Secondary Schoolteachers

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. KILBURN. Mr. Speaker, I was extremely interested in the remarks of my fellow colleague and neighbor, Representative OSTERTAG, from the 39th District of my State, when he referred to a high school teacher fellowship grant program which the Jell-O company originated and is sponsoring in LeRoy, N. Y.

I am interested, and also agree that this type of teacher aid is something which should be noted by us and by other industries and civic groups, as I feel any program to help high school teachers obtain advanced studies during the summer strikes directly at an area in education which needs to be helped the most.

I would like also to bring to your attention and to the Members that this same program, "The Summer Fellowship Program for Secondary Schoolteachers," is being initiated this summer in my own district at Fulton, N. Y., by the Birdseye Division of the same General Foods Corp.

I think that Claude Webb, the plant manager of Birdseye in Fulton, and his parent organization, General Foods, are to be commended in offering such a practical teacher-aid program to the profession at this critical time. I also commend this program to the attention of other industry and community civic organizations.

I know that this summer Fulton high school teachers will be able to take advantage of these grants for further study, and they will certainly be appreciated.

I join with Representative OSTERTAG in congratulating the Jell-O and Birdseye companies in New York for initiating such a fine and constructive program.

Necessity for Construction of Civil Defense Shelters

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. LESINSKI. Mr. Speaker, I am today introducing a bill to make an appropriation of $250 million out of money in the Treasury not otherwise appropriated to be expended by the Administrator of Civil Defense in making contributions to States for the construction of bomb shelters and other protective facilities.

For some time I have been very much concerned over the lack of action on the part of the Government to provide shelter facilities for our citizens in the event of an atomic attack. I have been exploring this problem thoroughly with local and Federal officials and believe that some immediate action is called for.

Although the top-secret Gaither report has not yet been released, that document is reported as portraying the United States in the gravest danger in its history. Faced with growing Soviet might and a powerful, ever-increasing Soviet economy and technology, the United States is daily becoming more and more exposed to political, propaganda, and psychological assauts on all sides. We do not know when actual armed attack might also come; we must therefore be prepared for it, as we must for the other assaults.

The Gaither report, in addition to recommending a rapid increase in spending for the military, has recommended that $5 billion a year for several years be spent for a civil defense shelter program. While the appropriation I recommend is not that high, I believe it would provide a good start on the program.

It is regrettable that the administration, in spite of repeated requests from the Civil Defense Administration and in the light of the Gaither report has not seen fit to include in its budget presentations a request for funds for such a project.

I am cognizant of the fact that such shelters may never be used; perhaps that may explain the reluctance of the administration to embark on the program. As a result of my study of the situation, I believe that structures can be built which would serve dual purposes—with appropriate modifications they could be used for civil defense purposes and for everyday community services. With the wonderful cooperation of the city officials of Detroit, Mich. I have explored, for example, the possibility of underground tunnels being utilized as shelters. A series of tunnels, approximately 15 feet in diameter, about 20 or more feet underground could be constructed with appropriate entrances and exits, air filtration plants, facilities for storing food, water, and other necessities, to be in standby condition until such time as it was determined that there would be no need for them. They would then be converted for use as sewers. The same principle could be applied to underground garages and other facilities; they could be constructed with appropriate modifications for civil-defense purposes and still serve other needs of the community.

Cost of constructing these facilities would be shared on a matching basis by the Federal Government and local governments. Authority for such participation already exists under the Federal Civil Defense Act; the only thing lacking is the money to go ahead on the projects. This I am proposing to take care of partially with the bill I am introducing.

The extreme necessity for the project at this time, not disregarding the employment opportunities it would create, is the fact that these shelters cannot be built overnight. It will take time to complete them and I am fearful that there may not be sufficient time. Neither I nor anyone else is convinced that we will not in the future be attacked. If, as we have been informed, from 50 percent to 90 percent of the enemy bombers penetrate our defenses, there will not be enough time to evacuate our cities and only a very small percentage of the population would escape. These shelters should be considered an integral part of our defense system, for by providing shelters to protect our people in main industrial areas, our Nation will preserve retaliatory power.

I am hopeful that both Congress and the administration will see the wisdom of immediate action in this field and will provide the necessary funds, as I have in part recommended, to commence work on shelter projects.

Tangle in Woolens

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. OSMERS. Mr. Speaker, as consideration of a renewal of the Reciprocal Trade Agreements Act draws near, it seems appropriate to place in the Appendix of the RECORD an editorial which appeared in Fortune Magazine in January of this year. This editorial describes a situation in the woolen industry which would appear to need corrective action. I ask unanimous consent for its inclusion in the RECORD.

The editorial follows:

TANGLE IN WOOLENS

The next few months will see a decisive battle between the forces of United States protection and trade liberalization over the administration's proposal to renew the Reciprocal Trade Agreements Act. All kinds of minor skirmishes are already going on, and one of the more intriguing and illuminating is the case of woolens and worsteds. For it indicates that the trouble with the United States tariff system is not just that in many cases rates are still too high. An equally big trouble is the system's arbitrary nature, which prevents importers from knowing where they stand. As one British trade organization recently argued: "No one wants to abolish the duty * * * just stabilize it* * * make it definite, predictable, workable."

The outcry in the case of woolens and worsteds is more than justified. Back in 1947 the United States ad valorem duty on these commodities was set at 25 percent under the General Agreements on Tariffs and Trade worked out at Geneva. But the United States at that time reserved the right to raise this duty up to 45 percent if annual imports exceeded 5 percent by weight of the average United States production over the 3 preceding years. At the time output of domestic woolens and worsteds was running at about 450 million yards per year so that importers in effect had a quota of some 21 million pounds, which seemed to give them a reasonable market in this country. Since 1947, however, domestic production of woolens and worsteds has drastically fallen, and in May of 1957 President Eisenhower felt impelled to invoke the Geneva reservation and to fix the United States import quota at 14 million pounds. By July the quota was filled and further imports had to pay not a 25 percent but a 45 percent duty.

The President may conceivably reverse his decision, which is not mandatory, but already it has tended to disrupt the whole woolen and worsted trade. Foreign manufacturers of cheap woolens rushed to get in under the quota. Importers of high-priced, less competitive woolens, which take time to produce, slashed their orders. Hence the United States woolen industry has gained little by its protectionist device while the United States consumer is sure to suffer. But more than this, the whole quota system is obviously an anachronism and does nothing whatever to cure the real troubles of the United States woolen industry. Those troubles arise from the fact that despite a huge rise in United States population in the past 10 years the industry has been unable to hold its own against domestic synthetic fibers. The cause of its grief is the United States chemical industry, and protectionist tariffs on raw wool imports. Woolen textiles are 1 more example of how easy it is to make foreign trade the whipping boy of failure to meet the iron law of American capitalism—namely, competition.

Community Facilities Act Projects

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. PROXMIRE. Mr. President, I have heard from Mr. John Bolgert, mayor of the city of Sheboygan, and Mr. John M. Katzban, village manager of the village of Whitefish Bay, in answer to my inquiry addressed to city officials in Wisconsin about the usefulness to their communities of the Community Facilities Act.

Both of these officials say that their communities can take good advantage of the act in financing much needed projects.

Mr. President, I ask unanimous consent that the letters from these two officials be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

UNIVERSITY OF MICHIGAN LIBRARIES

CITY OF SHEBOYGAN, WIS.,
OFFICE OF THE MAYOR,
April 22, 1958.

Hon. WILLIAM PROXMIRE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR PROXMIRE: I was indeed pleased to receive your letter in which you state that you were cosponsoring legislation in the Senate to make low-interest loans available to local government. Please accept my sincere apology for not answering at an earlier date but we have been going through an extensive survey on capital expenditures which has just been completed.

I have noticed that the Senate has passed your bill and has sent it to the House. I sincerely hope our Wisconsin Representatives in the House support it unanimously. The following are lists of projects that are facing us in the future: Storm sewer, $125,000; incinerator, $567,500; garage, $899,200; storage building, $46,800; total, $1,638,500. We recently passed an ordinance to float a bond issue in the sum of $3,600,000, for the construction of a high school in the south end of our city. According to our plan we wish to make available equal additional facilities for all our students, consequently a new high school at the north side at about the same approximate cost will have to be built.

Of course, the only method a municipality can use to finance a project as large as I have set forth above, at the present time, is through a bond issue. With your proposed legislation it would be possible for a municipality to receive a loan from the Federal Government at a reasonable rate of interest. I feel that this type of legislation would not only be of value to the city of Sheboygan but to every municipality in our State.

I express to you our gratitude in cosponsoring this legislation.

Very truly yours,
JOHN BOLGERT, *Mayor.*

VILLAGE OF WHITEFISH BAY,
OFFICE OF VILLAGE MANAGER,
May 6, 1958.

Hon. WILLIAM PROXMIRE,
United States Senate,
Washington, D. C.

DEAR SENATOR PROXMIRE: I have been directed by the village board to reply to your letter relative to our interest in a legislation you are sponsoring for public work projects.

Please be advised that we are interested in this legislation to the extent that we are preparing plans for the construction of a joint water system which will be shared with the neighboring communities of Fox Point and Glendale.

Thank you for your inquiry in this matter.

Very truly yours,
JOHN M. KATZBAN,
Village Manager.

Simple Solution of a Serious Situation

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the Appendix, I repeat a radio speech recently made by me in favor of my bill, H. R. 4835:

This is Congressman EUGENE SILER of the Eighth District of Kentucky speaking to you on the subject of the liquor evil and the desirability of having an effective law enacted by the Congress of the United States to ban the advertising of all alcoholic beverages in interstate commerce or through any medium that crosses the boundaries of our different States of the Union.

Congress can only take jurisdiction of this alcoholic advertising and banish it by law upon the theory that such interstate advertising does constitute interstate commerce within the meaning of our Federal Constitution. And, of course, the Supreme Court of the United States has repeatedly held that almost every kind of transaction or any transmission of anything between two or more States is in fact a form of interstate commerce. Therefore, my own bill, H. R. 4835, introduced by me in Congress on February 14, 1957, would make it an unlawful offense, within constitutional authority, to transport any alcoholic advertising, whether by publication or radio broadcasting or television transmission, across State lines and would provide a fine of $100 to $1,000 or a prison sentence of 6 months to a year, or both the fine and prison sentence, for offenders against such a law if it should become enacted by Congress.

It is a rather tragic and ironic situation when the great majority of citizens and homeowners in some areas of the country, for instance in my home county down in southeastern Kentucky, have voted themselves entirely dry and wish always to keep their areas and their homes dry like hickory chips, yet have to encounter alcoholic advertising wet like the Atlantic Ocean in their very homes and at their family hearthstones, morning, noon and night and at most of the periods in between.

A great many people all over America are interested in this subject. Several hundred persons have written or informed me of their support of this bill, and I am sure that thousands of others would have so informed me, except for the fact that it is generally known and very well publicized that I am for this bill with my whole heart and soul, and, therefore, it is adequately realized that it would be a pointless gesture to write me in support of my own legislative proposal, namely, H. R. 4835. All of these good people well understand that only through enactment of my bill can their home towns and home counties and their places of abode be truly free from this continuing liquor evil. For without this enactment, the slithering, slimy reptile of deceit that is called alcoholic advertising will constantly, consistently, and conveniently come right into their homes and whisper lies and misrepresentations into the tender ears of their children. "This is a man of distinction," says the bright-colored liquor ad, but genuine truth would say, "A man on skid row drank this liquor, and he now has delirium tremens and a chronic case of cirrhosis of the liver, and he won't be around here much longer." Also, the liquor advertising says, "This is Manhattan melody," but the unvarnished fact is that it should really say, "This is a funeral dirge of hell." Why do the liquor advertisers always tell so many lies and half-truths and send them into your homes? Well, the answer is that they worship that god known as mammon to such extent that the advertisers are willing to say anything or do anything to promote that pagan worship. But if my bill should become the law of the land by action of Congress, these untruths and misrepresentations would cease to transgress within the precincts of our American homes and among all of our growing families.

We are always quick to affirm our interest in crime prevention. But how interested are we in this great problem? I notice J. Edgar Hoover, of the Federal Bureau of Investigation estimated some time ago that our annual crime bill is $20 billion, and he further stated that about half of the arrests made each year were for drunkenness, drunken driving, and for other liquor-law violations. In Chicago, a police liaison officer stated that 80 percent of the disturbances that police were required to handle were traceable to alcohol causation. What a price the American people pay for alcohol products. And yet we continue to allow promotion of them daily through publications and radio broadcasting and television transmission. All of this could be prevented and stopped by a very simple law at the hands of the United States Congress. And yet we just go ahead year after year and permit a promotion of our own destruction and a wastage of our own resources—financial, physical, spiritual, and moral. When will the American people dry their tears and bind up their wounds long enough to demand that this evil, lying, injurious advertising of harmful products be stopped by act of Congress? Even after the advertising is stopped, the evil will still continue to be among us, but at least it will no longer be encouraged in a public manner, and it will not burglarize your homes with its criminality and all of its evil designs.

Many eminent physicians and well-known scientists have gone on record placing alcohol in the same category with narcotic poison. Now, of course, all of us would be truly shocked and repulsed if any kind of advertising of narcotics for daily consumption should come into our homes. Yet we constantly face this devastating alcoholic advertising of the different harmful forms of alcohol that comes into our family circles, and most of us do nothing about it whatsoever. Even though we know that alcohol is truly the handmaiden of narcotic poisons, yet hundreds of earnest, well meaning people will merely yawn and tolerantly thumb through the liquor ads in their magazines or they will smile complacently at the silly jingles of the beer advertisers as they flow into their family sitting rooms through television channels or by radio broadcasting.

Juvenile delinquency has become a tremendous problem here in America. It is said to have increased 28 percent in the last 6 years. Youthful gangs roam the streets of large cities like New York, and Detroit, and Chicago, and even in a number of smaller towns, and cities of our country. These gangs sometimes wear peculiar clothes, have strange haircuts, call themselves by fearful names, do the rock and roll throughout the night. Frequently they commit murder, rape, and robbery. Often they drive their teachers to distraction and some of them seem to take pride in presenting themselves as daily problems wherever they may chance to roam. Now, a prominent juvenile court justice in Boston made a statement in recent years that liquor was the greatest single factor in juvenile delinquency and that this liquor evil had led the youth of our land down the wide-open road to narcotics, immodesty and immorality. I am sure that the justice knew what he was talking about and I am equally confident that the banning of alcoholic beverage advertising in interstate commerce would go a long way toward helping to restore normal sanity and a wholesome outlook among our young people all over our country. Why should we wait or hesitate to use a good water bucket when the house is burning down? Likewise, why should we hesitate to promote and enact good legislation to help correct juvenile delinquency through banning the liquor evil from in front of youthful faces all over our land? Only this week a news item told of a group of boys that broke into a place and stole about $70 in order to have money to attend a movie. Then they attended the movie, but afterward they went back and reentered that same place of their theft and they replaced about $65 of the remaining stolen money. The movie they saw was The Ten Commandments. This incident is a forceful argument for our belief that young people are influenced and persuaded in a power-

ful way by what they see before their very eyes. It also means that constant alcoholic advertising will succeed in persuading young, impressionable minds that it is truly smart and desirable and entirely in good order to take up the alcohol habit. But if we should legally ban this form of advertising there would then be just that much less persuasion upon the American boy and girl towards adopting a social custom that first becomes an occasional habit and then changes from occasional habit to constant curse in a very subtle manner and in a short period of time.

By way of illustrating the foolishness of permitting legalized advertising of alcoholic products, some writer said: "Suppose there were 170 million cows in America. Then suppose there was a big industry selling Old Scarecrow hay made of locoweed, but described as soothing and mellow, resulting in the cows turning from their sober alfalfa to begin eating Old Scarecrow. And suppose this made the cows do silly things like running into fences or automobiles so that 500,000 were killed or injured every year. And suppose milk production was cut down because the Old Scarecrow users lost 50 million cow-days yearly. And suppose the cows' life expectancy was reduced 10 percent and that it made over 4 million so sick that they were useless much of the time and that for every one that was cured, the industry made 10 new addicts for Old Scarecrow. And suppose caring for all these sick cows required 80 percent of the farmers' time. And suppose, in spite of all of this, sellers of Old Scarecrow were allowed to advertise in every cow pasture proclaiming that cows of distinction use their stuff. How would you expect farmers to react? Don't you think all the farmers of the country would try to protect their cows by banning this false and harmful advertising? And now just suppose we cared as much about our children and our fellow men as we would expect the farmers to care about their cows. Would we not leave no stone unturned to help our children, our families, our neighbors through using our influence to persuade the Congress of the United States to pass a reasonable, simple, helpful law that would ban all alcoholic advertising in interstate commerce. How about it?"

We may not be farmers with cows, but we are supposed to be citizens with conscience and we should be willing constantly and consistently to fight for the right. And we do know that this is right.

Is There a Panacea?

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. McVEY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the La Grange Citizen, La Grange, Ill., entitled "Is There a Panacea?" Much mail comes to each Congressman on this subject, and many bills have been introduced into the Congress in an effort to alleviate the effects of the recession. It is refreshing to read an editorial of the type appearing in the La Grange Citizen. It reads as follows:

IS THERE A PANACEA?

A lot of brainpower is being devoted to development of ideas recommended to put United States economy back on the track.

The Halls of Congress are not the only places that resound with oratory favoring this or that scheme to put men and women back on payrolls, and to reduce buyer reluctance.

Unfortunately for all of us, the Members of Congress, especially those up for election in the fall, cannot ignore the fact that what they do and say might determine their fate at the polls. Tax reduction being the most popular panacea it can be expected to draw the greatest volume of oratory, if not the greatest legislative voting support in the final showdown.

"This recession or whatever you want to call it is not going to be leveled off by legislators. Sooner or later we will have to get out of our heads the notion that the law manipulators can solve all our problems by passing a bill or two.

"Or that the bureaucrats can wave a magic wand and shower blessings on all of us" is a bit of sense uttered by one suburbanite who retains the old-fashioned notion that individuals can better work out their salvation than the Great White Father in Washington can.

Not concurring completely with the individual salvation contention, another suburbanite argued:

"Individuality is a fine thing in theory. But we have all become so mass minded and so imbued with conformity that not many of us are individuals when it come to fitting in the economics jig-saw puzzle.

"We buy when everyone else buys. We stop buying when others do. Everyone buys the same thing and keeps boosting the price of it. We have a science and technique for everything but we do not have a science to teach us self control and personal opinion courage."

Interview of Herbert Lehman

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. PROXMIRE. Mr. President, on May 4 I had the pleasure of hearing one of America's greatest liberal statesmen discuss his philosophy of government in a television interview with one of our outstanding young television and radio journalists. This was an interview with the Honorable Herbert Lehman, formerly a Member of the Senate, by Martin Agronsky, of NBC Television, on the program Look Here.

Mr. Lehman gave his definition, or as he described it, his characterization of what "liberal" or "liberalism" means, in reply to a question by Mr. Agronsky. This is one of the finest and truist statements of what the great humanitarian spirit called liberalism is. Mr. Lehman cited four distinctive points which characterize a liberal. He said that a liberal is—

One who loves freedom and equality, exact equality;

One who has concern with the problems of the underprivileged;

One who has a passionate respect for justice; and, finally,

One who believes strongly in the universal brotherhood of man.

Mr. President, Mr. Agronsky and Mr. Lehman bring out in brilliant fashion the philosophical guidelines of the liberal spirit in politics and government. This interview makes a real contribution, in my opinion, to the art of government. I ask unanimous consent that it be printed in the Appendix of the RECORD so that others who did not hear Mr. Lehman may have an opportunity to read his remarks.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

Mr. AGRONSKY. Good afternoon; I'm Martin Agronsky. Welcome to Look Here. This is the Manhattan office of a man who has served his State of New York as Lieutenant Governor when Franklin D. Roosevelt was Governor; as a four-term Governor himself in the thirties; and more recently as Senator. And for his conduct of these offices the Honorable Herbert Lehman is regarded by New Yorkers as one of the great public servants of their State's history. And for his many good works he is one of their cherished citizens. Governor Lehman.

Mr. LEHMAN. Thank you very much, Mr. Agronsky; I'm very glad to be here with you today.

Mr. AGRONSKY. Well, thank you, sir. Governor, I can't help noticing all these boxers; are they related in any way to your public service?

Mr. LEHMAN. No, not a bit; but Mrs. Lehman and I were the first people to introduce the boxer breed to this country. We brought the first boxers over for breeding purposes 46 years ago and made the first American champion. I'm devoted to the breed and we've had a lot of fun in raising them.

Mr. AGRONSKY. Do you consider that a contribution, sir, in public service?

Mr. LEHMAN. I think it was a contribution to the happiness of a great many people.

Mr. AGRONSKY. Governor, you've just observed your 80th birthday. Now such a milestone I would imagine would give a man pause. Would it give one pause to reflect as much as when you turned 30 as a young man?

Mr. LEHMAN. Well, I did have an 80th birthday celebration. It was a very happy one. I was honored by my family and my friends and my associates. Mr. Agronsky, I've been asked whether I miss my work in the Senate. I want to say that I, of course, miss my work and I particularly miss my friends and associates from Washington, but I've kept just about as busy since I retired as I ever was before; and it has been a great source of satisfaction to me to know that I still can make some kind of a contribution to the welfare of the people of my State and Nation.

Mr. AGRONSKY. Do you find that over the years, sir, from the time you first entered political life and public service that your views and your philosophy have changed as much as the world has changed?

Mr. LEHMAN. Well, I know that the views and philosophy of many people have changed. As far as I'm concerned I was surprised when my wife in emptying our attic when we moved from the country to New York a year or two ago found some compositions which I had written 60 years ago in college in which I dealt with many of the questions now of interest—civil rights, immigration, and other questions.

Mr. AGRONSKY. When?

Mr. LEHMAN. When I was at college. And I found my views had not changed very greatly from that time to this.

Mr. AGRONSKY. That's a remarkable statement, Governor; how do you account for that? Were you so prescient?

Mr. LEHMAN. No, I don't think so, except I was brought up in a liberal atmosphere, and it had its great impact on me. My par-

UNIVERSITY OF MICHIGAN LIBRARIES

ents were liberals. My father was an immigrant, my mother was. They came over from Germany to find their new life here and to some extent to escape from the rigors of restrictions in their native country; so I heard continuously as a boy liberal points of view. And then later I of course became very much interested in liberal issues, questions and problems because my parents encouraged me to do so. So I don't think it's so difficult to understand why I have remained a strong liberal ever since. And there are other factors of course.

Mr. AGRONSKY. Governor, I wonder if we could talk about another of your interests and your obligations aside from liberalism and politics that you've assumed since you've retired as a Senator. You're now heading the American Committee for the 10th Anniversary of Israel. Do you think that Israel's problems are greater or less than they were 5 years ago or 2 years ago?

Mr. LEHMAN. Well let me speak to you about that for a minute. I think Israel has made almost miraculous progress in the past 10 years. It has become a strong industrial nation, the only industrial nation in the Middle East. It has developed its agriculture and its social consciousness to a marked degree. It has admitted twelve hundred thousand new immigrants, party people, devoted people, dedicated people, to Israel, who have been a great asset to Israel. There's no doubt at all about it that from the material aspect, physical aspect, and the social aspect Israel has made very great progress. But I don't want to give you the impression that I do not believe that Israel is in a very critical condition; it is, very critical.

Mr. AGRONSKY. And do you think that Israel can survive, considering the critical conditions?

Mr. LEHMAN. I think it's going to survive under any circumstances. But I believe that its difficulties will be tremendously reduced and the security of the world will be served without question if our country and the other great powers make it crystal clear to the world that Israel is there to stay under all the circumstances. And that they should take measures to assure the security of Israel within its present boundaries. If that is done I think there will be no grave danger there.

Mr. AGRONSKY. Well, by raising that point, sir, you, of course, indicate that there is some prospect that this will not be done. Do you think that is so?

Mr. LEHMAN. I don't know. I'm always an optimist and I hope that our Government will redeem the assurances which they have given time and time again to Israel. When I say our Government, I include other countries like Great Britain and France.

Mr. AGRONSKY. Well, what do you consider is the major threat to Israel's survival today? The Arabs?

Mr. LEHMAN. Well, I think obviously the major threat to Israel is the Arabs, but a new factor has entered into the situation, and that is the injection of itself by Russia into the Middle Eastern situation. Russia has encouraged almost fanatical nationalism among the Arab leaders and among the Arab people. And by doing so I think it has strengthened the intransigence of the Arabs to be willing we work together, live together, prosper together with Israel; and I think that if Israel prospers, I believe the entire Middle East will prosper; and I want to emphasize the fact that I believe the Middle East should be developed on a regional basis not only for the benefit of Israel but for the benefit of the entire Middle East, and if that is done I think our chances of maintaining security in the world and lasting peace will be greatly enhanced.

Mr. AGRONSKY. Governor, I wonder if you'd permit me to put a question—perhaps in the role of Devil's advocate. There are, after all, millions of Arabs in the area, more than 40 million; I believe it's 44 million, and so few Jews, just a little over 2 million. Wouldn't it be in the best interests of American policy, considering that particular ratio, that the United States should support Arab interests?

Mr. LEHMAN. No; I emphatically deny that.

Mr. AGRONSKY. Why do you think that, sir?

Mr. LEHMAN. Well, because in the first place, I don't think you're going to placate the Arabs by making concessions. In the second place, I've never known a country permanently for any great length of time to prosper unless they maintain principles. I believe that if we continue to yield and yield and yield to the demands and to the representations of Nasser and some of the Arab leaders we may very well find ourselves in the same situation that we did when we placated and yielded in every degree to Hitler. If the great powers of Europe had stood up firmly for principle, for agreements, for understandings in 1935 and 1936, I doubt if we ever would have had a Second World War.

Mr. AGRONSKY. You think then, Governor, that in the situation that Israel is in today in relation to the United States that the issue is one between principle and expediency again?

Mr. LEHMAN. I think the issue is between principle and security in the first place, but in the second place—and I think that that must be taken very greatly into consideration and I hope it will be by our Government—is that the security of Israel is directly connected with the security of the United States and of the entire free world. If you have an explosion in Israel—and it's the most explosive and critical situation in the entire world, the Middle East—it will inevitably, in my opinion, affect the security of the entire peace-loving world.

Mr. AGRONSKY. Governor, can we return again to your own career? You entered public life, sir, under rather unusual auspices for a middle-aged Wall Street banker, under the Democratic-Liberal banner. I wonder if we could look back a minute? How did it all begin? What brought you into public life under those auspices?

Mr. LEHMAN. Well as I said before, Mr. Agronsky, of course, my parents were liberals. I grew up in that liberal atmosphere. I had a teacher at school, Frank Irwin, who was very much interested and for whom I had a very high regard and who was very kind to me; and he and my father used to take me down to the slum areas and I saw how the people down there lived and it was terrible. I saw the work shops, the sweat shops in which all decent conditions were completely disregarded. I saw men and women working for 12 and 14 hours a day for miserable pittances. You can't even call them wages.

Mr. AGRONSKY. Let's set a date on that, Governor.

Mr. LEHMAN. Well that was about 1892 or 1893, one of those years. And then I also was very much influenced by a great settlement worker and I think the settlement houses had great influence on the entire liberal movement in this country. Lillian Wald who was head of Henry Street and who I knew for a long time, and as a matter of fact I later became very closely associated with her. For many years up to the present time I'm still a director of Henry Street. I became connected with many other settlement houses. Then I became acquainted, and in some cases made strong friends of some of the liberal legislators such as Al Smith and Robert F. Wagner and Jim Farley and others of like views. That affected me very much.

Mr. AGRONSKY. And they brought you into politics?

Mr. LEHMAN. Then I became acquainted with a great many of the social and labor leaders of the State and of the country as a matter of fact; all those things strengthened my determination and my inclination to take as strong a part in the liberal movement as I possibly could. It's an amazing thing how I was able through their eyes possibly under their guidance to see the real conditions with which the average young man did not have an opportunity to become acquainted with.

Mr. AGRONSKY. Governor, you raised the name of Al Smith. It has been 30 years since Al Smith was defeated in his effort to become President of the United States. Do you think, Governor, that our country has matured in the intervening period to a point where such a man—when I say, such a man I mean a man of Catholic religion—could run without jeopardizing his party's chances?

Mr. LEHMAN. Well I think the situation has very greatly improved. At that time it was a tragic period. I was very active in that campaign. At headquarters we had a room and on the wall of the room we pinned up, pasted up many of the cartoons and editorials attacking Al Smith because of his religion, and it was a terrible, terrible tragic situation which affected me very deeply. I think a great deal of that has disappeared and I think a great deal of the opposition to a Catholic candidate would be lessened today.

Mr. AGRONSKY. You do. Do you think that the country then has become more tolerant?

Mr. LEHMAN. I think it has become more tolerant, very definitely.

Mr. AGRONSKY. Governor let me ask you perhaps a mean question. Suppose you lived in Mississippi or Alabama—and at one point in your life I believe you did live in Alabama—what would you do at election time? Would you vote Republican as a protest vote or would you vote Democrat in the hopes of getting a little accomplished through your own party, or would you not vote at all these days?

Mr. LEHMAN. Well let me put it this way. I'm going to be very frank. If I were a politician, an officeholder whose whole life depended on his holding office I'm not sure that I would have courage enough to vote against the views of my constitutents. But if I were a citizen I'm certain that I would have no hesitation in voting on the liberal line; in other words, to do away with all disabilities and all civil deprivations that have been exercised for so many years against Negroes.

Mr. AGRONSKY. You would leave your party on that?

Mr. LEHMAN. I would if necessary leave my party. At least I hope I would have courage enough to do it. I've never lived in Mississippi; I've never lived in Alabama, although my parents lived there for many years. I hope I would have courage enough to do it and I believe I would. But I want to say this in justice to some men in the Senate who are liberals in every other way except on civil rights. They do realize that an adverse vote against their constitutents would mean their complete annihilation from the political field, and it takes a tremendous amount of courage to do that.

Mr. AGRONSKY. Are you prepared to justify their political schizophrenia on these grounds?

Mr. LEHMAN. I'm not prepared to excuse it but I believe I'm realistic enough to know that it must have a great effect on them. You're talking now about people whose career, whose life depends on their political careers. It's not a noble thing to do but I believe that some of them probably are affected by that.

Mr. AGRONSKY. Well Governor, perhaps it helps to have independent means then when you're in politics?

Mr. LEHMAN. I think it does to some extent help. On the other hand I think it's sometimes a handicap. It's a help because any

man of independent means can be much more independent of his own job——

Mr. AGRONSKY. As you've indicated.

Mr. LEHMAN (continuing). Than otherwise. It's a handicap to the extent that I think many times men of means have to vote or are confronted with the problem of voting against their own interests in order to uphold their own principles. I can say that from a matter of experience.

Mr. AGRONSKY. Yes. Governor, you've just laid down very vigorously a policy of independence and liberalism. Now you are a 4-term Governor of your State as a Democrat, and former Senator as a Democrat. You're an elder statesman. Now you said, too, you'd be prepared to leave the Democratic Party on this particular issue of principle, on this issue of racism in effect. Now does that mean, sir, that you are a liberal first, and a Democrat second?

Mr. LEHMAN. I would say so, although I've been a very loyal Democrat. I have voted for—I did vote for—Theodore Roosevelt because I thought the principles which he espoused and for which he fought—and they were important principles—were just and right and in the interests of the country. I believe if I had to face that issue I would say, "Well, I'm a liberal first and a Democrat second." And I say that not because of differentiation between liberalism and party affiliation but because I believe that the liberal faith is the right faith. I believe we have to have it in this country. I think that liberals have to stand firm. I think that the things that they have espoused are sound and right and will help the country. I would rather put it on the ground that I'm going to vote for what I think, and stand by what I think, is of the interests of the country than the interests of any differences between one particular point of view and philosophy.

Mr. AGRONSKY. Governor, I think you'd probably accept that that's a rather unique way for any man in political life to talk. I wonder if you'd give your definition of a liberal?

LEHMAN. Mr. Agronsky, it's awfully hard to give a specific definition of a liberal or of liberalism because there's neither dogma nor doctrine in liberalism. So I would rather characterize it than try to define it. I believe that the liberal movement is a great humanitarian spirit. It differs—the interpretation of that humanitarian spirit of liberalism of course differs among different people. But, so far as I'm concerned, I interpret a liberal as one who loves freedom and equality, exact equality, one who has concern with the problems of the underprivileged; one who has a passionate respect for justice; and, finally, one who believes strongly in the universal brotherhood of man.

AGRONSKY. Well, I think that's a very stirring definition, Governor. I wonder, looking now at contemporary political life, who in public life today do you think would best reflect such qualities as you speak of?

LEHMAN. Well, I can't answer that question because I believe there are a great many people who would fit that description; and I wouldn't want to mention a few particular individuals, for fear of omitting others who deserve that characterization as much as any.

Mr. AGRONSKY. Well, I accept that, Governor. I won't press you on that. I wonder if we can return then to liberalism in the general sense. Wouldn't you say that liberals are really a marginal force, though, in our national politics today?

Mr. LEHMAN. I think they're absolutely necessary.

Mr. AGRONSKY. But marginal, sir? Certainly in the great minority.

Mr. LEHMAN. Oh, very great minority. There's no doubt about it. Well, the militant liberals are in a great minority. I believe that the great mass of the American people are liberal. I wouldn't have been elected as often as I have been elected to office if that wasn't the case, because I wasn't elected exclusively by Democratic votes. Of course, they helped, but I was helped by a great army of independents, Republicans of liberal point of view, and of members of the Liberal Party. I believe that the great majority of the American people are liberal at heart and in mind, and so far as they have an opportunity in expressing themselves.

Mr. AGRONSKY. Governor, let's take your own experience in the Senate as a liberal and as a Democrat. Invariably when issues came up, various legislative measures arose that required that you compromise in order to be on the winning side or to get the legislation passed, invariably you refused to compromise, and I've often wondered, didn't this reduce your own effectiveness as a Senator?

Mr. LEHMAN. I don't think it lessened my effectiveness as a Senator and as a leader—political leader. I use the world "political" in the broadest sense. I think probably it lessened my chances of getting legislation through very frequently. I took that chance. I had to make the choice when I went to the Senate of going out for the whole loaf or only a slice, and I decided to go for the whole loaf. Now, I think there may be instances where a legislator should compromise to some degree, but I think he should do so only after the case has been completely presented to the people of the country.

Mr. AGRONSKY. Then what is the function of the liberal, to get the whole case presented? Is that it?

Mr. LEHMAN. Well, yes. I think this, my feeling is this, that I think the liberals should not concern themselves nearly so much or exclusively at least with exerting power as with upholding principle. I think that's the important thing. I think somebody has got to uphold principle unless this country is going to revert to a situation which now exists, would have existed unless we had had some liberal leaders and which does exist now in many countries of the world. I believe he has to uphold principle. I think that has been one of the great difficulties of our country both in their domestic and in their foreign policies. We haven't sought to uphold, we haven't fought to uphold principles.

Mr. AGRONSKY. Governor, can you cite an occasion along these very lines in which insistence on a whole loaf won the day in legislation?

Mr. LEHMAN. Oh, I could if I had time, cite many examples. I'll cite one in my own experience. This happened in 1935 and 1936. When I was Governor I recommended the enactment of a social security act by the Legislature of the State of New York. The Republicans strenuously opposed that. I fought for it in 1935 and again throughout 1936. I appeared before joint sessions of the legislature three times. I sent many messages to the legislature; I appeared on the radio—it was before television—and I didn't win; but I made it a main issue in the campaign that year. I was elected by a vote so large that people considered it a mandate and the bill went through after 2 years struggle almost by unanimous vote. That is why I say no problem is beyond hope of redemption.

Mr. AGRONSKY. Good for you, Governor Lehman. Thank you, Governor Lehman. Since last September it has been my privilege to conduct Look Here at this time, and this is the last program in the current Look Here series. I would like to express my thanks to all of you now who found these interviews worthy of your time and your interest. Good afternoon.

A Tribute to the Boston Globe

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, it is a pleasure to join in the tribute to an outstanding newspaper, and include herein congratulatory statements by leaders in the Boston area.

REMARKS BY SIDNEY W. DAVIDSON OF THE LAW FIRM OF DAVIDSON, DAWSON & CLARK

The Boston Globe has been a partnership for over 85 years between members of two families—the Taylor family and the Jordan family.

The original partners were Gen. Charles H. Taylor and Eben D. Jordan. Each of them had a rich inheritance of New England ancestry running back to early colonial days. Each of them had to start at scratch without the benefit either of education or of capital.

General Taylor was a city boy, born in Charlestown on July 14, 1846.

Eben D. Jordan was a country boy, born on October 13, 1822, on the farm of his father in the town of Danville in the State of Maine. Danville is in Androscoggin County and once rejoiced in the name of Pegypscot.

Mr. Jordan was descended from the Reverend Robert Jordan, a clergyman of the Church of England who was born in England and who settled about 1641 on Richmond's Island, opposite Cape Elizabeth, Maine.

At the age of 7, Eben Jordan was fatherless and penniless. He worked for a while on a neighbor's farm in Danville, and came to Boston in 1836 at the age of 14. He was the first of his line to start his career outside of Maine.

Five years later in 1841 when he was 19 years old, he established his own dry goods store on Hanover Street, not far from the present entrance of Sumner Tunnel.

He advertised that he sold dry goods cheap for cash. That slogan had a special meaning. Ships from the State of Maine docked at the foot of Hanover Street near his store and brought potatoes and other produce which the captains of the ships were accustomed to barter. Mr. Jordan's advertisement demonstrated that he would not barter, but would sell for cash only.

The firm of Jordan, Marsh & Co. was founded in 1851, and grew out of Mr. Jordan's first store on Hanover Street. Mr. Jordan became the foremost merchant of his day. He accumulated the capital which enabled him to finance General Taylor, who was 24 years his junior, in the operation of the Globe which had started on March 4, 1872.

Mr. Jordan died on November 15, 1895, at the age of 73. He owned 80 percent of the stock of the Globe. He arranged that upon his death, General Taylor would have the right to buy enough of his stock to make the general an equal owner in the Globe. The general bought that stock and since 1895 the Taylors and the Jordans have divided equally between them the ownership of the Globe.

One half of the stock is now held by trustees for the benefit of descendants of the general, and the other half is held by trustees under Mr. Jordan's will for the benefit of his descendants.

NOW SENIOR TRUSTEE

In years of service I now have the honor to be the senior trustee under Mr. Jordan's will and the senior director of the Globe.

UNIVERSITY OF MICHIGAN LIBRARIES

My cotrustees of the Jordan trust are Ralph Lowell and William Davis Taylor. Davis is also a trustee of the Taylor trust. He is the son of the late William O. Taylor and a grandson of the general.

Ralph Lowell and I had the great privilege of serving with William O. Taylor as trustees of the Jordan trust and as fellow directors of the Globe.

Mr. Jordan's investment in the Globe would today be called a use of venture capital. At the outset, Mr. Jordan furnished the capital and General Taylor furnished knowledge of the newspaper business.

This partnership between the Jordans and the Taylors has already continued for a period of 86 years. In the annals of American business it is extraordinary if not unique. It is destined to continue indefinitely—and happily.

Each director of the Globe is proud of his heritage. Under the direction of the Taylors, the Globe has abundantly discharged its duty to the public of Boston and of New England.

It still carries out the ideal of its founder to enter the home as a kindly, helpful friend of the family and to help men, women, and children to get some of the sunshine of life, to be a little better and happier because of the Globe.

Ralph Lowell and I, as trustees of the trust under the will of Eben D. Jordan, now wish to pay tribute to the descendants of General Taylor who are now on the Globe. Three of them, grandsons of the general, are cousins and are in the third generation: Charles H. Taylor, namesake of the general; John I. Taylor; and William Davis Taylor. Finally, we have the first representative of the fourth generation, William O. Taylor II.

REMARKS BY MOST REVEREND RICHARD J. CUSHING, D. D., ARCHBISHOP OF BOSTON

It was almost 90 years ago that a group of local businessmen established the Globe. From many points of view those days were very different from the days in which we are living. The Civil War was over and the enormous work of reconstructing the Union was in progress. In our own city the newer immigrants were discovering the special responsibilities of their new citizenship.

Boston, itself, was expanding with the addition of Dorchester, West Roxbury, Brighton and the rest. They were certainly interesting times and all of us have been pleased to read about them in the recent series of Globe articles by Willard De Lue. He has vividly described the happenings of yesteryears as well as the vicissitudes of the Globe beginnings.

People, however, do not change very much from generation to generation and as I have been reading the stories of Maturin Ballou, the first editor, and even more especially the story of Charles Taylor, the real founder of the Globe, I cannot help feeling that the paper as we know it today is really the product of one man and one man's family.

This is not to suggest that many gifted personalities and many impressive human characters have not in times past, and in times present, made their contribution to the present success of this great newspaper. What I intend to say is that with all its varied excellence it carries the stamp or, if you prefer, the spirit of a great name and a great family.

General Taylor was a many-sided man, gifted with political acumen, literary judgment, and a keen sense of business. But, above all of this, he had a remarkable sense of public responsibility, he realized what it meant to be invited each day into the homes of the community by way of his newspaper and to become, in fact, part of the family conversations. His own credo was well known and it has become a kind of guidebook for the later generations of Globe publishers.

"My aim," General Taylor declared, "has been to make the Globe a cheerful, attractive, and useful newspaper that would enter the homes as a kindly, helpful friend of the family. My temperament has always led me to dwell on the virtues of men and institutions rather than upon their faults and limitations. My disposition has always been to build up rather than to join in tearing down. My ideal for the Globe has always been that it should help men, women, and children to get some of the sunshine of life, to be better and happier because of the Globe."

No one, I suppose, has ever expressed in more human terms the aim, the temperament, the disposition, the ideal that makes a great paper.

When I speak of the Globe family I refer, of course, to Davis and his cousins, Charles and John I. Taylor, who now bear this great name and are intimately associated with its present success. However, I mean also the Globe employees who make up what we must also call a family. Like members of a family they are all bound together in a common ideal, they all work for a common cause, they all share a common spirit and, however large or small their contribution may be, they feel themselves part of a great common effort.

To be sure, we can say that there are many Globe families; people who have been with the paper for several generations. This itself is a sign of strength and stability. But everyone who is associated in the making of this paper from the oldest worker to the newest office boy is part of the Boston Globe family.

Perhaps this is another reason why the Globe has always recommended itself to us as a family paper. We have many good papers in our city and each one has its own distinctive flavor.

The quality that is first associated with the Globe is this one of family reading. It is a wholesome as well as a handsome paper; it forms the character while informing the mind; it edifies even while it enlightens and it relaxes while it enriches daily life. Calm in reporting the news, conservative in interpreting the times, constructive in the presentation of progress, it is a welcome visitor to the New England home.

Some people may feel badly that the paper is leaving the downtown area. All of them are gone now from old newspaper row. Gone, also, are the news bulletins and the newsboys' cries of "Extra—Extra." Gone, too, are the sidewalk editors and the news commentators and the occasional appearance of pressmen with their unique newspaper hats.

There is a kind of nostalgia in changes like this, but we cannot allow sentimentality to strangle the course of legitimate progress. A great newspaper like this one must move with the times. The years have changed, and we must change with them.

At the same time it is not inappropriate to mention, as you move into this extraordinary new plant with its latest equipment and conveniences, that the success of the days ahead will be measured by your fidelity to the great traditions of the years that are now past. Keep your confidence in the family newspaper because the strength of the family stands, and must stand, at the heart of America.

May God bless what you begin today, and may your efforts redound always to His glory, to your happiness and to the welfare of your countless readers, for we also are proud to belong to the family of the Boston Globe.

INVOCATION BY RABBI MEYER J. STRASSFELD OF CONGREGATION AGUDATH ISRAEL, DORCHESTER

Omnipotent God, Father of all mankind.

At this solemn and joyous moment of the dedication of the new home of the Boston Globe, we raise our voices in prayer and thanksgiving unto Thee.

We thank Thee for enabling us to reach this great moment of happiness and progress. We look back with pride upon the years of our past that witnessed the growth and expansion of our paper—years that accomplished the ideals, dreams, and principles as enumerated by Gen. Charles H. Taylor in his famous cornerstone of the Globe:

"My aim has been to make the Globe a cheerful attraction and useful newspaper that would enter the homes as a kindly, helpful friend of the family.

"My temperament has always let me to dwell on the virtues of men and institutions, rather than upon their faults and limitations.

"My disposition has always been to build up, rather than to join in tearing down. My ideal for the Globe has always been that it should help men, women and children to get some of the sunshine of life, to be better and happier because of the Globe."

At this glorious moment, we look ahead with hope and confidence, and with faith in Thee that Thou wilt guide us to emulate and strengthen these principles.

Grant us therefore, O Lord, we pray Thee, to serve our people in all times; to fight courageously for the ideals of democracy, decency, and human dignity through an honest truth-seeking, dedicated press.

May we be permitted to serve as a beacon of light, illuminating the paths of righteousness, justice and brotherly love. May our progress for universal peace and tranquility be fulfilled in our days.

Amen.

REMARKS BY REV. JOHN JOSEPH ALBERT, RECTOR OF ALL SAINTS' CHURCH, WYNNEWOOD, PA.

I will ask you to remain seated and unite your hearts and thoughts in our common hope and prayer that the one God whom we all worship, may bless and prosper this newspaper. That as it begins this era of wider service to the people of Boston, this commonwealth, and our beloved Nation, it may ever be sustained and guided by that divine assistance which is the source of man's freedom and his knowledge of truth.

Eternal God, who alone at the fountain of wisdom and understanding, and without Whom there can be unity of purpose, brotherhood or peace in the councils of men; we ask Thy blessing upon this newspaper, and all who labor in its far-reaching industry. So lock their labor and actions in the deepest bonds of friendship and loyalty, that the work of their hands and minds may ever set forth a right understanding of the events that touch the lives of men.

Grant to them pure purposes, soundness of speech, and such clarity in the written word of truth that men will be enabled to form their own opinions freely, uncluttered by the distortions of blind partisanship or personal aims, ambitions, and enmities.

Save them from false judgment, the carelessness which takes no heed of great issues, and from the fear that will not grapple with problems that may be too hard for them.

Keep alive and fresh the wonderful spirit that has made this paper great and has brought it to such a position of responsibility and public trust, the courage not to hide from controversy and the care never to print a piece of news that would injure an innocent person. The freedom not to be so encumbered with hindsight as to fail to do the unusual, not to be bound to traditions so tightly as to lose the daring to do what has not been done before, to be a messenger of fact to the great events, issues and affairs of the world of men, yet never to lose sight of the interests and experiences of people next door. In controversy an adviser rather than a dictator; an interpreter of news than an advocate. So may this paper grow and prosper and be an instrument of ever-wid-

ening service to Thee and all Thy children. Amen.

Emerson once said, "Every human institution is lengthened by the shadow of a man." This phrase was used by the biographer of Charles H. Taylor in describing his contribution to the Boston Globe. I am sure General Taylor would be the first to agree that in respect to the Globe these words could be voiced in the plural, the shadow of men.

I will now ask you to stand for a moment of silent tribute to those loyal men (and women) whose labor and service have lengthened the Boston Globe, especially remembering Gen. Charles H. Taylor, Charles H. Taylor, Sr., William Osgood Taylor, and Eben Jordan and will you remain standing for the closing prayer in their memory:

O God, who bindest us to life by holy and tender ties; we recall all those who have gone before us in this enterprise and all that they stood for. May we live even more constantly in the spirit which they imparted, and carry out, in the old spheres in which we together moved, so much of their purposes as we can. May we be kind to the friends and families they loved; devoted to the community in which they lived; loyal to the causes they served. Thus in our lives, and in the spirit of this newspaper, may they still live on, to our own strengthening, and the welfare of the world; and this we ask through Jesus Christ our Lord. Amen.

The Natchez Trace Parkway

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks I include a copy of Senate Concurrent Resolution 150 of the Mississippi State Legislature:

Senate Concurrent Resolution 150

Senate concurrent resolution memorializing the United States Department of Interior to expedite and do all things necessary toward the further programing and planning leading to ultimate construction and completion of the Natchez Trace Parkway, and for related purposes

Whereas the Natchez Trace Parkway, as planned and laid out, extends through the State of Mississippi in such regions and areas so as to expedite and accelerate tourist travel through various scenic and historical spots and has now become an attraction to all motorists who visit our State; and

Whereas the United States Department of Interior has endeavored to make the Natchez Trace Parkway inviting to all who visit our State and has done much in the construction of said parkway; and,

Whereas the State of Mississippi has already acquired about 50 percent of rights-of-way mileage and has implemented legislation for the acquisition of all right-of-way incident to the completion of said Natchez Trace Parkway; and

Whereas it is felt that the United States Department of Interior should now do all things necessary, within its authority, toward programing leading to the completion of said parkway: Now, therefore, be it

Resolved by the Mississippi State Senate (the House of Representatives concurring therein), That the United States Department of Interior be memorialized to expedite the programing, constructing, and doing all other things necessary leading toward the completion of the Natchez Trace Parkway; Be it further

Resolved, That a copy of this resolution be properly engrossed and forwarded to the United States Department of Interior, Washington, D. C., and copies be furnished to the Mississippi delegation in the National Congress.

Adopted by the senate, April 24, 1958.

CARROLL GARTIN,
President of the Senate.

Adopted by the house of representatives, April 30, 1958.

WALTER SILLERS,
Speaker of the house of representatives.

The Shackled Railroads

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I would like permission to insert a few remarks relative to the plight of the railroad industry today as well as a splendid editorial appearing in the Chicago Tribune of yesterday, May 12. A friend of mine, Joseph Ator, has been doing a series of articles about railroads recently and I commend him for bringing the serious situation of the railroads to the attention of the public.

Today I am introducing a bill which I believe is a big step in an effort to give this industry help.

It is time that we recall the brilliant and inestimable contribution the railroads have made to America. Every possible endeavor must be made to put into effect fair policies needed for the railroads to continue to play the important role they have long had in our Nation's history.

Eleven railroads serve my district and I believe an industry who has done so much is deserving of a fair deal. Let us take off the shackles.

THE SHACKLED RAILROADS

Last Thursday the Tribune published the last of 18 daily articles by Joseph Ator on the plight of United States railroads. The series was intended to interest especially the limited number of readers who are concerned with railroads and with Chicago's future. As the Nation's railroad center, this city is vitally affected by the health of the railroad industry.

As Mr. Ator reported, the railroads' health has been none too good for more than 40 years. Their illness is explained largely by errors of the past—mistakes of policy and public relations which today's management is doing its best to correct, but which can be corrected only slowly and at great expense. As evidence of the railroads' good intentions, Mr. Ator reported, they have shifted almost entirely from the old steam engine to the more efficient diesel; they have mechanized their upkeep where possible, and have put electronics to work in such fields as safety and research. They spent more than $1 billion last year on equipment, compared with a 1926–40 annual average of $170 million.

In their defense against competitors, however, the railroads have been hampered by outmoded union rules and Government regulations. Neither can be cured as long as people persist in the 19th century notion that railroads are a gigantic monopoly. This is the theory of the Interstate Commerce Act, passed way back in 1887.

The fact is that the railroad monopoly began to wane after World War I. Less than half of cross-country freight now goes by rail, the rest being carried by truck, pipeline, or barge. The railroads' share of commercial passenger traffic has dropped to less than one-third because of competition from buses and airlines. If private automobiles are considered, the railroads would show even a sharper drop. This can hardly be called a monopoly.

But while its competitors are relatively free of Federal regulation, the railroads are required to maintain costly facilities, schedules, and rates. Changes in rates are often denied simply because they would upset the balance between railroads and a competitor.

The rate of return on the railroads' investment last year was only 3.3 percent, Mr. Ator found, compared to the Interstate Commerce Commission's own yardstick of 5¾ percent as a fair rate. In other businesses a rate of 10 percent is common. Railroad taxes have tripled since 1929, and public funds are being used to build highways, airports, and canal and harbor improvements. This puts the railroads in the position of paying taxes to finance their competitors.

Many railroad men, Mr. Ator found, are willing to keep some degree of Federal regulation in order to prevent suicidal rate wars among themselves. But at present they are often denied even sensible rate reductions.

An essential step toward curing this ill is the Smathers committee's recommendation that the ICC be forbidden, when weighing a requested rate change, to consider how it would affect other modes of transportation. A railroad's great asset is its ability to carry a large volume of most commodities over long distances at less cost than other land transportation. The fact that the railroad can expand its services rapidly is of the greatest value in time of emergency. Preventing it from taking advantage of these assets is no more sensible than telling a trucker that he can't go any place not equally accessible to a railroad. And the sufferers are not only the railroads, but their customers as well.

Known But to God

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. REED. Mr. Speaker, there appears in the May issue of 1958 of the Reader's Digest, a timely article by Don Wharton entitled "Known But to God." It is well for every American citizen to review the facts presented in this article before Memorial Day. I extend this as part of my remarks.

The article follows:

KNOWN BUT TO GOD

(By Don Wharton)

In the impressive ceremony honoring our Unknown Soldiers of World War II and Korea our Nation will once more pay homage to the heroes who have preserved its freedom and honor.

On Memorial Day the eyes and hearts of all America will be centered on our national cemetery at Arlington. There in the after-

UNIVERSITY OF MICHIGAN LIBRARIES

noon the Nation will honor two unknown servicemen, who will be buried in new crypts close to the Tomb of the Unknown Soldier of World War I.

The two hallowed dead, one from World War II and one from the Korean war, cannot properly be called Unknown Soldiers, since it is not known which branch of the Armed Forces they represented. Actually, the Unknown Soldier himself may not have been a member of the United States Army. But in the years following the impressive burial ceremony at Arlington in 1921 the phrase gained acceptance by the American public, and the tomb was completed with its beautifully worded inscription: "Here Rests In Honored Glory An American Soldier Known But To God."

All wars produce unknown soldiers. At Arlington you can see a massive monument erected in 1866 over the common grave of 2,111 bodies gathered from the fields of Bull Run and the route to the Rappahannock. But graves such as this are simply burials of unidentified dead; there is no symbolism. In contrast, the idea of the Unknown Soldier was that any mother who had lost a son, any wife who had lost a husband whose body had not been identified, could stand at the tomb and think his body might be there.

Whence came this noble idea? It all goes back to a printer in the French town of Rennes. In the dark days of 1916 Francois Simon lost a son in battle. Another son was gravely wounded, and on several occasions Simon organized honorary escorts for the burial of bodies brought back to Rennes from the front. He got to thinking of soldiers whose bodies were not recovered and of recovered bodies which could not be identified.

That November, when his city had a ceremony honoring its war dead, Simon asked, "Why doesn't France open the doors of the Panthéon to one of her unknown warriors who died in the defense of his country? The grave should bear only two words, 'A Soldier,' and two dates, '1914–19—.'" The idea was taken up by a French Deputy, pushed by the press, and in 1919 given its first official approval in the French Parliament. Such was the beginning of a concept so exquisitely right that it swept halfway round the world.

A few days before the ceremony on November 11, 1920, the French decided not to bury their soldier in the Panthéon, but to give him a shrine apart—beneath the Arc de Triomphe, a place of honor which even a Napoleon could envy.

The scheme whereby the unknown poilu was selected established a pattern which has been followed elsewhere ever since. Unmarked coffins containing unidentified bodies selected from the major battle sectors were shipped to Verdun, shifted several times after arrival to prevent identification with any one area. The honor of making the final choice was given to a young infantryman, Pvt. Auguste Thin, chosen because his father was among France's unidentified war dead. Private Thin was handed a spray of red and white carnations picked on the fields of Verdun. High Government officials watched and soldiers stood at attention as he walked down the flag-draped row of caskets, stopped before one, placed the flowers on it.

While a train carried this coffin to Paris to be invested with glory never before accorded a "plain soldier," a British destroyer, H. M. S. *Verdun*, was bearing another body across the channel to England. No one knew whether he was soldier, sailor, or airman, whether he was British or from the Dominions. He had died in France and been buried in an unmarked grave. In a solemn ceremony at Westminster Abbey, he was reburied in French soil—100 bags filled with earth from the battlefields around Ypres. Similarly, a year later, when America's Unknown Soldier was brought home, his tomb at Arlington was constructed so that the casket rests on a 2-inch layer of French soil.

No President, no national hero ever went to his final rest with the honors given our Unknown Soldier at Arlington on Armistice Day, 1921. To him went the Congressional Medal of Honor and Distinguished Service Cross, plus the highest military decorations of Britain, France, Belgium, Italy, Rumania, Czechoslovakia, and Poland. Three Presidents did him honor: Harding, Taft, and Wilson—the latter a dying man. Gen. John J. Pershing, commander in chief of the American Expeditionary Force, walked behind the gun carriage which bore the casket; Marshal Foch, Allied Supreme Commander, was there, and Admiral Beatty, the British sea lord.

Today, of all the 95,000 warriors' graves at Arlington, only the tomb of the nameless one has a sentry. It has been said that it is easier to get into West Point than to become a member of the Honor Guard that performs this 24-hour-a-day duty. First a soldier must be accepted in the 1st Battle Group, 3d Infantry (the Old Guard)—the crack regiment and oldest outfit of the United States Army—stationed at nearby Fort Myer. Then he must survive two selection processes to become a member of the Honor Company. Finally he must gain assignment as sentinel at the Chief of Staff's quarters and handle that duty well before he is even considered for the Honor Guard itself.

He must be 5 feet 11 inches to 6 feet 2 inches tall, of commensurate weight and build, and have no physical eccentricity that detracts from his appearance. No man with any disciplinary action on his record may walk this post.

Each sentinel patrols an hour at a time in the daytime, 2 hours at night. During each hour he walks his post, at strict attention, exactly 42 times. Every move is precisely timed: exactly 27 steps from one end of the post to the other; exactly 20 seconds facing the city of Washington; exactly 20 seconds facing the tomb. The guard carries a highly polished rifle with fixed bayonet, keeping it always on the shoulder away from the tomb—symbolizing that he has placed his body between the tomb and all danger.

Millions of tourists have seen the change of guard—a precise military ceremony performed every hour on the hour during the day. At night, when Arlington's gates are closed, the operation is equally exact. Suddenly in the dark the voice of the sentinel rings out: "Halt. Who is there?" Back comes the reply, "A relief commander and one sentinel." Then the first sentinel's voice rolls again: "Advance, relief commander only, to be recognized."

The two new crypts will necessitate only one minor change: moving the sentinel's post a few yards to the west. After World War II there were proposals to place a second body in the tomb, and even to rephrase its lovely inscription. In 1949 the Commission of Fine Arts actually recommended the construction of a second tomb. Happily, such elaborate undertakings were abandoned in favor of simplicity. The World War II body will rest in a crypt marked simply "1941–1945," and that from Korea, "1950–1953." The dates "1917–1818" will be cut in a stone at the base of the present tomb, and its inscription will serve to speak for them all.

Since all of the unidentified dead from Korea were buried in Hawaii, the task of selecting one is not complicated. On May 15 the choice will be made by an enlisted man with a distinguished battle record in a ceremony at the National Memorial Cemetery at Honolulu.

But the unidentified dead of World War II are buried in more than 400 cemeteries on 5 continents and scores of islands. Under the plan developed by the Quartermaster General 4 bodies will be disinterred from the United States cemetery at Manila, airlifted to Hawaii, and at Hickam Air Force Base will join 2 more World War II bodies from our cemetery in Hawaii. From these 6 identical caskets an enlisted man will, on May 16, choose one. Meanwhile, from each of the 13 American cemeteries in Europe and north Africa, an unidentified body will be sent to Epinal, France, where in 1944 the Allied forces from the landing in the south joined the troops driving eastward from Normandy. One of the 13 will be chosen, and 2 weeks later this casket and the one from the Pacific, identical and indistinguishable, will be resting beneath flags on the deck of the cruiser *Canberra*, which will be proceeding northward from a naval rendezvous at Guantanamo Bay, Cuba.

Off the Virginia capes a Navy man wearing the Medal of Honor will march up to the caskets and make the final decision. One body will be given the time-honored burial at sea. The other will be transferred, together with that from the Korean war, to a destroyer for the run up the Potomac.

Then will come the reception at the Washington dock, the escort to the Capitol, the 48 hours of lying in state, the procession to Arlington, the continuous salute of minute guns, the award of military decorations, the address by the President, the volley by the riflemen, the mournful sound of taps. And then, surely, before the sentinels resume their perpetual march, the Nation's grief will give way to prayers that this will never be necessary again.

This Web of Life

EXTENSION OF REMARKS
OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1958

Mr. EDMONDSON. Mr. Speaker, the other day I met a remarkable lady who was once a pioneering citizen of the Southwest, and who recently celebrated her 91st birthday by writing the moving poem reprinted below.

In This Web of Life, Mrs. Ida Miller Bradford has eloquently expressed the thoughts and the feelings of one who has keenly observed the events of more than nine decades, and who retains the same keen interest in current events today.

THIS WEB OF LIFE

This web of life, long since begun,
Is incomplete at 91.
The visions wrought through many days
Have brightly burned, and still they blaze.

The slender threads, though worn and thin,
Still hold the strength of life within;
The sweep of time does not efface
Its patterned dreams, nor mar its grace.

And yet they grow, as round on round
New visions form, new thoughts, new sound:
The world in turmoil—even space
Included in man's frenzied race.
Must we discard the quiet scene
That youth once pictured on life's screen,
And watch through age the fast decline
Of principles we hold divine?

Within this web the woven past
Holds memories that ever last.
Awhile they fade from out our ken
But, like the tides, return again.

And so we watch them come and go
Upon life's vast, unbroken flow—
The good and evil, side by side,
Converging on the moving tide.

The years slip by; the web begun
So long ago, is almost spun,
As round on round with shaking hands
We gather up the broken strands.

But place them how or as we may,
Our patterned form is yesterday;
And to the ever-present past
The golden strands are woven fast.

—*Ida Miller Bradford.*

The Illogical Argument

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled, "The Illogical Argument," from the May 12, 1958, issue of the Wall Street Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ILLOGICAL ARGUMENT

The House Foreign Affairs Committee has reported out a foreign-aid bill for fiscal 1959 totaling $3.6 billion. In doing so, the majority warned that any serious reduction from this precise figure would inevitably mean that we would lose the cold war.

This figure, though, is $339 million less than the administration requested. And when the administration made its request, it also warned that if the Congress did not give as much as it asked the Nation would be in danger of losing the cold war.

So the same argument is made that we will all be in danger if the dollar amount is reduced, though the administration's danger dollar is not the same as the committee's danger dollar.

But it seems to us that if the House committee thinks the administration was wrong in its estimate of how much is needed to prevent a loss of the cold war, Congress may reasonably question the sum that the House committee reports is necessary to spend in order to save us. For the committee may be just as wrong as the administration was wrong in its guess. And guesswork, actually, is all any such figure can possibly represent—as four members of the House committee took the trouble to point out in a minority report asking even deeper cuts.

Aside from this very unconvincing argument that X amount of dollars will save the world but X minus 1 amount of dollars will lose it, there is another argument that certainly warrants a long, hard look at the whole proposition of foreign aid.

This argument, joined in by both the administration and the House Foreign Affairs Committee, runs like this: Foreign aid money provides business for American firms and jobs for some 600,000 Americans. If foreign aid is cut substantially, an unestimated number of these 600,000 jobs will be endangered.

What the adherents of big giveaways are saying here is that foreign aid is a make-work project for Americans. They argue on the one hand that the Nation must be unselfish enough to help overseas countries overcome their troubles, and on the other that we must use foreign aid for the selfish purpose of keeping the domestic economy on a less unstable keel.

The trouble with those two arguments is that, so far as the altruistic one goes, we've already poured some $60 billion into uplift with hardly notable success. And so far as the other is concerned, it would anchor into the economy a policy that is nothing but an international W. P. A. That countries can be induced to stand on their own feet when they are told the United States economy itself rests on their continuing inability to do so, is something logic cannot accept.

And inasmuch as nobody yet has offered any acceptable facts to prove that either the world or America will go to pot unless we annually ship billions of dollars overseas, we hope Congress will not accept the arguments, either.

Pugwash Pollyanna

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. PRESTON. Mr. Speaker, I want to add my voice to that of our colleagues who have expressed righteous indignation at the scurrilous attack which the Ohio industrialist, Cyrus Eaton, made upon the Federal Bureau of Investigation during a nationally televised program last weekend. Mr. Eaton, of course, is entitled to his opinions. Anyone who makes public utterances, however, has a responsibility to be certain his facts are accurate. Herein lies a great and oft-recurring weakness of Mr. Eaton.

Those of us who know the FBI as a highly efficient and impartial investigative agency find it impossible to fit J. Edgar Hoover and his associates into the picture which Cyrus Eaton has attempted to paint of them. This, however, is a common experience with persons familiar with Mr. Eaton's strange proclamations.

In recent years, Cyrus Eaton has won an eager following of Iron Curtain officials. He has entertained Soviet representatives at his country estate and has provided quotations for the Communist propaganda mills. Not only has he ingratiated himself to the Soviets by echoing and reechoing their hollow slogan of peaceful coexistence, but he also has accused the United States of baiting the Russians and being primarily responsible for the tension which exists between our two countries.

Mr. Eaton's blindness to the true nature of the international Communist conspiracy prompted the Cleveland Plain Dealer to publish the following excellent editorial on May 6, 1958:

PUGWASH POLLYANNA

We wish we could live in that best of all possible dream worlds, the one Cyrus Eaton, the sage of Pugwash, lives in.

What a happy world that must be, as Eaton described it on television when interviewed by Mike Wallace Sunday evening. There communism is not a threat to anyone, and everyone lives in peace. Korea never happened. Budapest is just a town where some misguided freedom fighters happened to get in the line of fire of some Russian tank guns. When Lenin said that communism and capitalism could never exist peaceably side by side, that one must conquer the other, he didn't really mean it.

In this Eaton dream world it is folly to believe that there is anything frightening about communism, or to oppose it, for Communists are harmless. When they infiltrated the Government they were merely seeking to strengthen it. When they infiltrated the labor unions, all they wanted was to improve the lot of the workingman. When they nearly succeeded in stampeding the Democratic convention into nominating Henry Wallace for Vice President in 1944, they were just exercising their democratic rights.

In Eaton's dream world there would be no trouble with Communists at all if we, ourselves, didn't make it. It was preposterous, for instance, for John Foster Dulles to use the words "massive retaliation" because that implies we would fight back if the Communists attacked us.

But, alas, there are some annoyances in the world Eaton lives in, and one of them is the FBI. Hitler in his prime never had anything like it.

Well, now, we never knew things were as bad as all that. We've heard of the midnight knock on the door, the arrest without warrant, the torture chamber, the forced confession, the trial without jury, the bullet in the head and so on, but we always attributed that kind of stuff to the Gestapo and the MVD. However, we must remember that Eaton was talking about his own special world, and that world bears no relation to reality.

Last week Cleveland's American Lithuanian Council mailed to Eaton a copy of J. Edgar Hoover's book, "Masters of Deceit." We recommend to Eaton that he read it, and that he should also study what happened to the people of Lithuania, Latvia and Esthonia after their governments entered into treaties of friendship with the Soviet Union.

We also suggest that Eaton should read a study of Communist postwar strategy by Prof. Robert Strausz-Hupe in Orbis—A quarterly journal of world affairs, wherein he will find this statement:

"Our society does not subordinate all its aspirations to considerations of power; Communist-dominated societies do. And the struggle being what it is, namely, a revolutionary one, communism presses all men and all things into the service of one cause: The overthrow of the existing social order and the establishment of a Communist society."

Mother

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include a most inspiring poem dedicated to mother, written by Henry Gillen, which appeared in the Boston Sunday Globe on May 11, 1958:

MOTHER
(By Henry Gillen)

Oh, she's more than just a woman
Cooking, sewing, smoothing beds,
Getting breakfast for the broodies,
Tucking in the sleepyheads;
She's the sunrise of their morning
And the sunset of their day,
And the preacher slowly teaching
Little hands to fold and pray;

UNIVERSITY OF MICHIGAN LIBRARIES

She's the doctor working wonders
With a cure in every kiss,
And the haven for the harried
When there's anything amiss;
She's the voice of angels singing
Olden, golden lullabies,
And the magic storyteller
Who can close a baby's eyes;

She's a Merlin, she's a Mary
With a lot of Nancy Hanks,
Who is paid in arms that capture
With a tiny bit of thanks;
She a nursery Clara Barton
And a kitchen door Jeanne d'Arc,
And a backyard garden Burbank,
And the starlight after dark,

She's a headrest for the weary
And a patience for the plaint,
And a planner and a doer,
And a soldier and a saint,
She's the moonlight on the mountain
And the lighthouse by the sea,
And a confessor and comfort,
And faith, hope and charity;

Though no subject of the headlines
In the capitols or marts,
And she wears no crown of diamonds,
She's the lovely queen of hearts.

The Staff Horror

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. MULTER. Mr. Speaker, the following article by Joseph Alsop, which appeared in the New York Herald Tribune of May 4, 1958, is worthy of the attention of our colleagues:

THE STAFF HORROR
(By Joseph Alsop)

WASHINGTON.—The President himself has now described one of the main causes of his administration's curious inability to take rapid and decisive action on great and urgent matters.

"I do not believe," he said at his press conference, "that any individual * * * can do the best job by just sitting at a desk and putting his face in a bunch of papers."

"Actually the job when you come right down to it, when you think of the interlocking staffs and associates that have to take and analyze all the details of every question that comes to the Presidency, he ought to be trying to keep his mind free of inconsequential details * * * so that he can make clearer and better judgments."

Through the tangled thicket of Eisenhower syntax, one can dimly discern the fearful shape of the Eisenhower staff system. This vast machine has been developed to relieve the President of the burden of inconsequential detail and the bother of putting his face in a bunch of papers. In these respects, it certainly works to perfection. But consider its effect on America's policy and posture, and you cannot conclude that the famous staff system works very well, if indeed it can be said to work at all. At this moment, for example, there are a whole series of moves the American government could make, in order to capture the initiative in the miserable maneuvering toward a summit meeting. The simplest would be a one-sentence letter from the President, declaring his readiness to discuss disarmament at the summit, anywhere and on any terms, within two weeks after the Soviets have given solid proof of their willingness to accept serious inspection and control of disarmament. That would be a real blockbuster.

Because of the staff system, however, no such letter can be written, and presummit initiatives must always be left to the Soviets. You cannot recapture the initiative, as Secretary of State Dulles once boasted he had done, if you do not know your own mind. And the plain and awful truth is that even today, the American government does not know its own mind on disarmament.

Our positions have not been firmed up yet, is the official way of putting it. Without giving any positive guidance about the positions he would like to have outlined, the President has turned the whole gigantic complex question over to a gaggle of high officials—Secretary Dulles, Admiral Strauss, Secretary of Defense McElroy, and Dr. Killian are the chief interested parties.

The high officials have, in turn, passed on the poisoned chalice to subordinate officials, who, of course, fully reflect the bitter disagreements of their chiefs. In meeting after meeting, the areas of disagreement are being pinned down in reams of highly classified documents. But no decisions are being taken except on the issue of suspension of nuclear tests. And on this issue, John Foster Dulles has contemptuously bypassed the staff system. He has made his own decision in favor of eventual test suspension. And he is boldly preparing to implement it.

Very little gets done, in truth, except under the absolutely irresistible pressure of events, or when a single member of the Cabinet simply forges ahead on his own. Even the defense reorganization bill, universally described as "the President's own baby," does not really constitute an exception to the rule.

In this case, the President merely indicated he wanted a plan of defense reorganization which would eliminate the evil influences of interservice rivalries. His Secretary of Defense was brand new at his job. The President had spent all his prepolitical working life in the war and Defense Department. But when Neil McElroy and his working group, headed by Charles Coolidge, tackled the problem of defense reorganization, they received no detailed specifications of any sort from the White House. As a result, the defense reorganization plan is really a McElroy-Coolidge baby, and not the President's baby in any normal sense of the phrase.

In this case, the result was good. But in the vast majority of cases, the result is something close to paralysis. Ours is a Presidential government. It puts an appalling burden on the occupant of the White House. But this kind of government does not and cannot function when the man in the White House delegates nine-tenths of the vital process of decisionmaking to a Rube Goldberg machine called a staff system.

More Ford Money Misspent

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Tablet:

MORE FORD MONEY MISSPENT

Americans are proud of the Federal Bureau of Investigation. Year after year it apprehends murderers, robbers, kidnappers, counterfeiters, dope fiends and other criminals who break our laws and threaten the safety of our people. It also has successfully exposed and been a help in convicting hundreds of plotters, agents of foreign governments intent on destroying our liberty and threatening our Republic.

The head of the FBI, J. Edgar Hoover, has won the plaudits of the American people and the approbation of each succeeding administration. He has been an effective power in law enforcement, a strong guardian of our Nation's freedom. Only recently Archbishop Cushing of Boston, in the name of many Americans, saluted Mr. Hoover's work and recommended his most recent book, Masters of Deceit, as a must for this generation to read and spread as a service to our Nation against the Communist menace.

Last Sunday evening Cyrus S. Eaton, of Cleveland, who appears to have given leadership to what some call Russia First, appeared on the Mike Wallace radio program and, following what might be best described as the party line, bitterly assailed Mr. Hoover and the FBI. He charged science had been retarded by the FBI—perhaps the Red science of stealing United States information—and, he added, there were no Communists in the United States to speak of, except in the minds of those on the payroll of the FBI.

The industrialist declared the FBI had sold itself in a marvelous way. He said its importance was enormously exaggerated. "They make no contribution to the upbuilding of this country and its respect abroad," he asserted.
